
actuality the central government at Washington comes nearer to carrying out the view of Alexander Hamilton. The platform of the National Democratic Party has no more resemblance to the political ideals of Jefferson than the Queensbury rules have to the Ten Commandments.

At the next annual Jefferson Day dinner, sponsored by the Democratic Party, there should be read the following letter written by Thomas Jefferson in 1825, less than 7 months before his death:

"I see as you do with the deepest affliction, the rapid strides with which the Federal branch of our Government is advancing toward the usurpation of all the rights reserved to the States and the consolidation in itself of all powers, foreign and domestic; and that too by construction which if legitimate, leaves no limit to their power. Take together the decisions of the Federal court, the doctrines of the President, and the misconstruction of the constitutional compact acted on by the legislature of the Federal branch, and it is too evident that the three ruling branches of that department are in a combination to strip their colleagues, the State authorities, of the powers reserved by them and to exercise themselves all functions, foreign and domestic. Under the power to regulate commerce, they assume indefinitely, that also over agriculture and manufacture and call it regulation to take the earnings of all those branches of industry and that too the most depressed and put them into the pockets of the other, the most flourishing of all. Under the authority to establish post roads, they claim that of cutting down mountains for the construction of roads, or digging canals and aided by a little sophistry of words, 'general welfare,' a right to do not only the acts to affect them, which are specifically enumerated and permitted, but whatsoever they think or pretend will be for the general welfare."

At this dinner, let them read what Woodrow Wilson in 1890 wrote: "Government . . . is the organ of society; its objects must be the objects of society. . . . It is an organized association of individuals for mutual aid. Mutual aid to what? To self development. There must be constant adjustments of governmental assistance to the needs of a changing social and industrial organization. Not license of interference on the part of government but strength and adaptation of regulation. The regulation I mean is not interference; it is equalization of conditions so far as possible, in all branches of endeavor, and the equalization of conditions is the very opposite of interference."

If our National Government continues its present trend by becoming Socialistic in nature, or using the sugar-coated phrase "welfare state," the historians of the future will probably attribute the cause to three things: First, the change in electing United States Senators, from election by the State legislatures to that of popular vote by the people; second, granting to Congress the power to levy an income tax without limit; and third, the construction by the Supreme Court of article 1, section 8, paragraph 1 of the Federal Constitution as to the power of Congress to levy taxes for the general welfare. When the framers of the Constitution adopted the provision regarding the election of Senators by the legislatures of the respective States, they did so on the correct premise that each State would be equally represented in Congress, and the Senate would be a check rein on the legislative action of the House of Representatives—the Senators would represent the States in their relation to the Federal Government and the lower House would represent the people. In electing Senators by the people of the entire State, the candidates for that office now have to be all things to every various and diverse group in the State, and the chances are that more demagogues will be elected to the Sen-

ate than to the House. When the States ratified the income-tax amendment without restriction as to the percentage of levy that Congress could impose, they placed it in the power of Congress to tax 100 percent of your income. With this unlimited source to tax, is it any wonder that a candidate for Congress promises, if elected, to vote public funds for every conceivable plan of subsidy and grant? When the Supreme Court held that when Congress determines what causes and necessities require Federal aid and assistance under the power to tax for general welfare, the States cannot be heard to complain, and the courts are powerless to interfere unless the congressional action is plainly arbitrary, it turned Congress loose to expend public funds for every conceivable project or scheme. The result of this ruling will be, as Justice Roberts said in *United States v. Butler* (297 U. S. 1). The obliteration of the individual States and "the United States converted into a central Government exercising uncontrolled public powers in every State of the Union, superseding all local control or regulation of the affairs or concerns of the State" (p. 77).

There exists today big business, big labor, and big Government. The small-business man and average wage earner, professional or otherwise, is being pulverized like a grain of wheat in a roller mill in the contest between labor and management, with the Government, though solicitous for the welfare of the thrifless but unconcerned about the frugal who pay most of the tax, following the policy of compromise and appeasement.

Let us take a look at big Government. Today the Federal Government owns in the continental United States 412,000,000 acres of land, or the equivalent of the territory of the five smallest States of the Union; at the end of the calendar year 1950, the number of civilian employees on the Federal payroll exceeded two and a half million persons—more in number than all the people in the States of Arizona, Nevada, New Hampshire, New Mexico, Vermont, and Wyoming. There are so many agencies of the Federal Government scattered over the United States that even Congress itself does not know the number, the amount of its credit in the form of loans or guaranty of loans, exceeds that of the 10 largest banks and insurance companies of the United States. It is the sole umpire in the adjustment of disputes between labor and management of 60 percent of the industrial and business enterprises of the Nation. When the Government reaches a point where it tells a business how much it can charge for its products or services and how much it must pay to its employees, and what it must do with its profits, if any, the next stage is ownership of the business.

III

At the time of the adoption of the Federal Constitution we followed, in all the main essentials, the form of the English Government. The economic philosophy of Adam Smith, and the common law of England as portrayed by Blackstone, were the basic principles inherent in the foundation of our Government. Under that system, the natural rights of men were deemed to outweigh the divine right of kings, or the despotic power of Parliament. Man was free to acquire or produce property and carry on his business or trade in a free competitive society, without restraint or interference from any one except where his actions might injure the public. Under that system developed what is known as the American system of free enterprises, or what is commonly called the capitalistic system. As evils or hurtful practices which were injurious to the common welfare appeared, the State or Federal governments, by legislation, regulated and controlled these harmful trends. All of this being done without the Government becoming the competitor of private business or adopting rigid control over

the demand and supply of commerce, industry, agriculture, or labor. Under this system, the Nation has survived 10 major economic depressions, 5 foreign wars, and 1 internal war. Today it is the strongest and most powerful nation on earth. Financially and industrially, it is supporting other nations all over the globe, most of whom are socialistic in their form of government. Since July 1, 1945, we have aided them in the sum of more than \$30,000,000,000. The Socialists and Communists who claim that the American economic system is a failure cannot point to a single communistic or socialistic system existing today that has a longer existence than 30 years. The proof of the success of the American system may be found in its continuous life of 164 years.

Not until 1933 did the doctrine of State paternalism take an appreciable hold on the American system, and then only after the individual States had defaulted in their duties and obligations did the National Government step in and assume whatever obligation local governments owed to the unemployed, the aged, and the indigent. Then followed grants of financial aid and assistance by the Federal Government in the construction of schools, hospitals, airports, dams, and other local public projects that were primarily obligations of local government; then came subsidies to agriculture and processors of agricultural products; establishment of housing authorities, financing of rural electrification, and then followed the control of labor relations; and of wages and hours between practically every class of employees and employers. Practically all of these matters were essentially local in nature, yet the States without any concerted action or opposition permitted, and in some instances abetted, this whitewashing away of States' obligations.

The proponents and purveyors of a paternalistic theory of government, in advocating the golden ideal of universal freedom from ignorance, poverty, disease, and insecurity, have led this generation to believe that these goals can be achieved without sacrifice or work, when in truth and fact the cost must be borne by the people themselves. The slogan seems to be, "Don't worry about tomorrow."

Public education has traditionally been thought to be a matter for local governments—for village, town and county. What has happened in Georgia is typical of what has occurred in many States. First the State took over the financing of elementary schools and high schools. The local communities then levied taxes for schools and looked to the State to supplement the teachers' salaries and provide free textbooks. The result has been that the eight large counties now provide 40 percent of the revenue used for the operation of local public schools. In setting up a State-wide standard of pay for teachers and a sound educational program, the cost of the State-operated public schools of Georgia has increased from \$25,000,000 to more than \$40,000,000 in 15 years, and today it is said that to maintain the required minimum standard for common schools a sum exceeding \$85,000,000 will be necessary.

The general assembly of 1949 submitted to the voters of the State a question, among others, as to whether the people wanted the general assembly to raise or add new taxes which would be sufficient to raise enough revenue to maintain the minimum standard program, which would require an increase of approximately \$40,000,000 a year. This referendum was overwhelmingly defeated by the voters, not on the basis that the people did not want better schools and better teachers, but one of the controlling factors in this result was the feeling that it would not be long before the Federal Government would provide the necessary grants of financial assistance to the State educational system that would answer this need. The

electorate apparently were ignorant of the fact that for every \$5 sent to Washington, less than \$1 comes back to the State. In the words of ex-Congressman Summers, of Texas: "We send a shirt to Washington and get a shirt tail back."

We cannot escape the conclusion, from a study of what the makers of the Constitution conceived to be the relationship between the several States and the Federal Government, but that the Central Government in Washington today is exercising many powers and functions that belong to the States. Nor can we place the blame solely on the Federal Congress, but the primary cause has been the Supreme Court and its interpretation and construction of Federal powers. The Federal court today is not the judicial branch of the Government that Hamilton, Madison, or Mason, nor its carpenter, John Marshall, thought it would be, namely, the ultimate, unbiased, and independent umpire of the validity of the acts of the executive and legislative branches of the Government. We are fast receding to the condition that the makers of the Constitution sought to prevent: that of making Congress the supreme authority on the constitutionality of their laws. If the Court is to follow the theme that the acts of Congress are presumed to be the Alpha and Omega as to what is best for the people, and Congress considers it to be its duty to pass bills that are drafted by the executive head of the Government as must bills, and the President's justification is that the bills represent what he promised to get elected and, therefore, are mandates of the people, then we have neither a republican (representative) form of government nor any need for a written constitution. If a law is to be sustained or rejected according to the tabulation of votes at the last Presidential election, then, as Lord McCauley predicted in 1857, our Constitution is "all sail and no anchor."

The slogan of States' rights has now become a feeble cry, and when some political statesman raises his voice to plead the rights of the States he is shouted down by those who have no conception of our constitutional history. The disappearance of States' rights and the assumption by the Federal Government of the powers and duties of the States over local matters is chiefly due to the fault of the States. During the last 40 years the States have sold their birthright for a mess of pottage. Beginning with the construction of national highways, they have constantly gone to Washington with hat in one hand and an empty purse in the other, begging for financial assistance. They have never hesitated to seek financial aid for needs that are local, such as support of the poor, the needy, unemployment, health, farm subsidies, education, etc. All of them being matters which are of local concern and over which it is the duty of the local governments to administer. In defaulting in their own duties, they have in effect acquiesced in permitting Congress to take over ungranted powers. They have protested only in those matters that affected them in political and social matters, such as elections, administration of criminal laws, and attempts to change their social customs. The Southern States have never failed to take hand-outs from Washington, or refused to take help, on the basis of States' rights, so that today when they protest against economic or social legislation, the rest of the Nation think they are talking only of civil rights, and place little weight on the cry of States' rights.

IV

Now, when we find our National Government controlling and regulating nearly all phases of local economic and social relations and raise our voices against the trend toward a socialistic state, we have got to do more than merely "shout" about States' rights. The protest must be planted on the sound and fundamental ground that our

National Government exists by virtue of a written Constitution which was brought into existence by the express consent of the States, and that the Constitution does not authorize a change in the nature or form of our Government except by consent of the people; and if the people of this Nation want to change or not change the form of their Government, they ought to be given an opportunity to say so.

Demagogic office seekers, in order to get elected, promise every kind of free service, and when elected urge and promote all sorts of fantastic legislation, that has encouraged gullible and unthinking people to believe that they can get something for nothing. What is needed in this country is a movement back to honest thinking and honorable leadership. Back to the basic common morality that one is entitled only to what he earns.

The States formed the Union. The Federal Constitution was of their making. If we are to remain a Federal union of independent States, it will be through the will of the States. If we drift into a paternalistic nation of subservient and puppet States, the fault will be that of the States.

What we need today is a great awakening among the States and the assumption on their part of their duties and obligations as to government in local matters.

Finally and foremost of all, we need a spiritual awakening. We need leaders who have the exhortative energy of Amos; the crusading spirit of Saint Paul; the fervent faith of St. Augustine; the devotion to duty of Robert E. Lee; the rugged righteousness of Grover Cleveland, and the dauntless defiance of Patrick Henry.

Russia

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. MARTIN of Iowa. Mr. Speaker, I have done considerable research over many years regarding the position of Russia in the family of nations. One of the most interesting discussions of Russia I have read is contained in a special bulletin dated March 15, 1951, and prepared by William J. Baxter, of the Baxter International Economic Research Bureau. The subject of this special bulletin is *How Strong Is Russia*. Because this bulletin was marked confidential I secured written permission from the Baxter International Economic Research Bureau to place this report in the CONGRESSIONAL RECORD. Therefore, under permission granted by the House of Representatives, I present this article for the information of all Members of Congress:

How Strong Is Russia?

(NOTE.—This survey on Russia is a condensation of an exhaustive series of reports on Russia originally sent to clients.)

The greatest fraud perpetrated on the American people during the past several years has been the build-up that has been given Russia both as a military and an economic power. Is it any wonder that the people have been scared out of their wits at the thought of war and the seeming inevitability of defeat at the hands of Russia and its satellites?

Well, before World War II had ended I realized that Russia would never cooperate with us or the Western World. She considered the period of peace nothing but an armistice before the beginning of world war III. Nevertheless, I also felt that Russia was far from being prepared for any world war III and that while she would make every attempt to get something for nothing, she would definitely halt short of a major war. That country of almost 200,000,000 people saw the American machine in action; saw it defeat the two major industrial powers of our civilization—Japan and Germany. Joe Stalin himself recognized the enormous power which we had generated when we came to his aid. Stalin's recent statement is especially noteworthy in one of his rare public utterances that war was not inevitable. Russia's direct and indirect threats have fooled no one, least of all Joe Stalin himself, as to the comparative industrial strength and war potential of the United States and Russia with all her satellites.

LET'S DISTINGUISH THE FOREST FROM THE TREES

What a road we have traveled since 1914 when the American people were relatively a tax-free and happy people, the envy of the entire globe. The people, especially our youth, may ask—what is it all about? Why are we and the world involved in these constant wars? Everyone knows that in the last century Britain was the most powerful empire in the world and her Navy ruled the seas. Toward the end of the last century, however, it was quite evident that the British were slipping badly and that other Europeans, particularly the Germans, were capturing one market after another from British business. This was due to a combination of forces, including the greater energy of the Germans, their ability to excel in science and mass production, and also the fact that the British were tired out after a long period of domination. German shipping was challenging the British merchant marine. By 1914 the powerful German steel industry had not only caught up with the British steel industry, but were edging ahead of it.

History teaches us that when the dominance of a great empire is threatened the result is war; and so a war broke out between Germany, France, and England. We became involved in that war with the promise that Europe would reform and that Wilson's 14 points for a better world would be adopted by the various European empires. Our victory in that conflict temporarily set Germany back and postponed the breakup of the British Empire. In its management of the American people and in indirect control of our State Department's policies during that period, the British Foreign Office showed the genius that has always been the product of its endeavors for the British Empire. When the war was over, Clemenceau and Lloyd George threw the idealistic American program out the window, and we were rewarded for our efforts to save the British Empire with taxes and debt.

THE SECOND CHALLENGE: GERMANY AND JAPAN

I have always maintained that no power or group of powers could stop the forces of Nature. I have said (even when the view was most unpopular) that during the industrial age there were three powers in the world that showed that they were the leaders in conforming to Nature's requirements in scientific mass production. Why nature picked these three countries from all the other 80 in the world and gave them this genius, we do not know. We do know that Germany has consistently been the outstanding nation in Europe in our time in the science of mass production and in scientific achievements both in peacetime and in wartime projects. We also know that of all the peoples of Asia, in this mass-production period, for some reason or other, only the Japs

had the "know-how." I have said that one could destroy all the motor factories in Detroit and all the machines in them, but if the American people still had their engineers with their "know-how," the buildings and the machinery would soon be replaced and new records and achievements made.

And so, in the twenties and thirties it was quite evident, after you compared English production with the new production of Germany, that the defeat of Germany and the "victory" of the British in World War I hadn't changed any basic trend. In world trade and in world production the Germans were going ahead and the British, year after year, were declining and actually living on past savings. There was no physical evidence that the first great conflict had changed any basic trend at all amongst the major nations of the world.

By 1939, then, the British Empire was challenged for the second time, not only by a powerful Germany but by a new empire in Asia—the Japanese empire. Throughout Asia and many parts of the world the Japanese were so efficient that they undersold almost everybody. All the European empires of Asia, including the British, the French and Dutch were in jeopardy as the Japanese merchant marine and Japanese industry marched ahead. Few appreciate the size and importance of the British Empire or the fact that one-third of the world's population is directly or indirectly under its control. This time the threat to the empire was a double-edged sword—that of Germany in Europe and the Japanese in the Pacific. Once again the American people came to the rescue and with their fantastic mass-production machine defeated the other two scientific powers of the world—Japan and Germany—while at the same time conducting a record internal boom at home and supplying scores of allies with all types of money and materials. One of our so-called partners was Russia, with the result that the very people now in the State Department encouraged the American people to believe in such phony propaganda as the motion picture, *Mission to Moscow*, etc.

WHY AMERICA OUTSHINES RUSSIA

At this point we would like to review the history of Russia throughout the entire industrial age in the past 150 years and see if it means anything that throughout this revolutionary period in world history no government has ever been able to make Russia a paying proposition. Only recently, we listened to a leading banker in almost semi-hysterical terms state that Russia was stronger than we were today. Isn't that an amazing and rather foolish statement to make, considering our strength in science, industry, and agriculture as a result of 150 years of work and steady progress? It is recognized that Russia had very little when the Communists came to power in 1919. Therefore, if as a result of 31 years of their system they could accomplish as much as we have in one-fifth of the time, one would then have to admit that their system was better than ours today. Of course, this is nonsense. In this report I would like the readers to keep in mind the date of the American Revolution in 1776, and the beginning of the industrial revolution at about the same time. We shall show you that practically every social experiment conducted in Russia since 1919 was already tried in the United States long before the Russians tried it. We shall show also why during this glorious period of industrial expansion that the standard of living of the American people went to the highest in the history of civilization and that Russia had, on the contrary, been a consistent failure. We must also call your attention to the fact that every bit of progress in Russia in this last period had been dictated by either British, American, or German engineers. Today, as for some years, neither the British nor our-

selves is contributing and the German help is coming only from the pressure being exerted on the individuals who are operating only under duress—a very poor basis for a program of development.

There was a period in history when wars were always won by countries with the greatest number of land soldiers, no matter how illiterate and undisciplined these soldiers were. The progress of industrial civilization has been carried to the point where wars are now fought by scientists and by industrial machines, and not by "strong backs and weak minds." It can be definitely proven that the Russians have never come up to the definition of an industrial power by making the changes "that transformed a people with peasant occupations and local markets into an industrial society with world-wide connections." If you doubt this, simply glance at the records of the Japanese people in transferring their peasants into industrial workers and building up a huge world-wide business. Why is it, you will ask, that Russia has been so far behind the world procession that it isn't even funny. Nature has played that big part in this matter. Everyone knows that the Torrid Zones of the Equator are not great industrial areas and it is just as bad in an industrial age when a country is located in an area that is too cold both for vegetation and for human energy. Do you want proof of this? Well, if you took a map of the world and took the record of the unit of automobiles, steel, and other products produced, you would find many interesting facts, some of which are:

1. That the greatest area of production of wealth in the entire world has been around the Great Lakes of the United States where it is not too hot and not too cold but rather a moderate, vigorous area of high energy for human beings and of soil fertility.

2. You would find that above 45° north latitude that as you go north the standard of living declines. For example, the northern part of Canada has been of little or no value to Canada in the actual production of wealth during the industrial age.

It is a provable fact that throughout the whole period of the industrial age the real production of wealth had taken place in a limited climatic area of the world, and you should always remember that the same factories that produce peacetime products in terrific quantities can also be turned into enormous giants that make the death-killing instruments in time of war.

THE HISTORY OF RUSSIAN FAILURE

It is impossible to overstress the part that revolution and transportation have played in the history of countries. If one will review the period of time when Russia was a great power and examine the reasons for her decline, one could more easily understand her limitations. In the 11th Century when the remainder of Europe was getting nowhere, Russia was a dominant figure in world trade which at that time was chiefly carried out by caravans. Its geographic position was such that the caravans from the east bringing spices and fine clothes from the Orient had to traverse the broad expanse of her land and use her waterways to reach the merchants from the western lands. It is hard for the younger generation today to believe that there was a time in history when the cheapest and most efficient way to get goods from Asia to Europe was by horse caravans across the enormous Russian land areas. But in that period of "horse civilization" Russia was at the crossroads and became the market place of that traffic. Kiev, as its center, was a rich and splendid city of the "horse civilization," but by the 12th Century Russian traffic declined. The center of energy in Europe was transferred to Italy under the stimulus of the crusades and the change of the method of transportation to ships instead of caravans.

RUSSIA: THE WORST CREDIT RISK IN THE WORLD

We can perhaps understand the financial headache that Russia has always had if we study the past financial problems of Canada. The geographical position of Canada and the type of people are, of course one thousand times different than that of Russia. But, like Russia, Canada has always suffered from a serious economic cancer—that cancer being the fact that Canada would be better off if she could do away with half of her territory and be a smaller, compact, and more efficient, economic body. Even to this day, Canadian credit has never recovered from the stigma of the Grand Trunk Railway failure a generation ago. Why did the Grand Trunk fail, and why has Canada's railroad system always been a financial burden to that country? Look at the map and you will see that after trains leave Niagara Falls that the number of cities from which they can collect paying cargo is very few indeed, all the way to the Pacific coast. Now the same thing has been true in Russia. The country covers two continents so that no one has ever been able to make Russia a paying proposition. As a matter of fact, the Russians have never been able even to build a decent railroad, but time and again have had to call in French capital and engineers and German aid. You can produce, for example, the finest pair of shoes in the world in Moscow and by the time you get them on the inefficient Trans-Siberian Railroad to Asia, the shoes will cost so much that nobody could buy them. In other words, it is important for you readers to remember that the very factor the Russians brag about—their immense size—has always been the biggest drawback to the finances and stability of Russia. Whenever her national finances have been subjected to even the slightest strain, they have collapsed. From the time of Peter the Great, the tendency has always been for Russian debts to accumulate faster than revenues were collected.

RUSSIA SEEKS SEA OUTLETS

Strengthened by the flow of foreign loans, the Russians felt themselves strong enough to attempt to round out their empire by acquiring sea frontages and ports at the expense of some of her weak neighbors. To gain outlets to the sea, Russia waged wars. Internally she had expanded without much difficulty as, in most cases, her people merely settled on lands that had been occupied by wandering tribes intent on finding grazing land. But to find outlets to the sea, she had to engage in battle, twice with the Turks and then in the First World War. Her war in the Far East with the Japanese can also be said to be waged for an outlet. These were the four major wars that the Russians engaged in between 1848 to 1914. All others were minor, but these four were bloody, costly, and very humiliating to Russia.

After 1848, Czar Nicholas I, feeling assured of the aid of England's assistance in partitioning of the possessions of the "sick man of Europe," launched the Crimean War. At first successful, the Czar was to find out that he did not have the support of England and the rest of the Continent. Such aid went, rather, to the Turks, as the European countries feared the consequences of Russia's conquests in the Baltic. But deprived of Europe's support, Russia made a very poor showing in this war. Her armies were poorly supplied and hampered by poor transportation. The inefficiency of the whole Russian administration was glaringly exposed and the consequences were that Russia had to accept an humiliating peace treaty in Paris in 1856, whereby she gained nothing and lost much. Financially this campaign against the Turks left the Russians exhausted once again. In 1855 her debt reached 262,000,000 rubles, and at the peace table in Paris in the following year, her paper currency amounted to 735,000,000 rubles in spite of the fact that 321,000,000 rubles had

been extorted by a levy on all businesses and institutions with funds in the empire.

Czar Nicholas II, who ascended the throne in 1855, waited 21 years before tearing up that humiliating treaty of 1856 and renewing an attack on the Turks. He thought that the turmoil in Europe, occasioned by the Franco-Prussian War in 1870, would prevent the European nations from interfering and aiding the Turks. Turkey in 1877 was massacring thousands of Bulgarians and Yugoslavs who were revolting under her rule. This time neither England nor France raised a finger to prevent the allied Russian and Rumanian armies from marching up to the outskirts of Constantinople and dictating the peace of San Stefano on Russia's own terms. But this victory soon fell out of her hands. Her finances plagued her. Paper issues of her currency now amounted to 1,200,000,000 rubles and her bonds were selling in the markets of Europe at a discount of 26 percent. No sooner had the peace of San Stefano been signed than England and France stepped in and insisted that the treaty be revised. The Treaty of Berlin of 1878 that supplemented the earlier treaty, compelled Russia to give up her control of Bulgaria, allowing her only to take a part of Armenia and of Rumania. After this second turn of events for Russia in her attempt to get an outlet through the Dardenelles, Russia never attempted to attack Turkey again, confining herself to gaining control over the Balkans by intrigue and diplomacy. The longing for an outlet was still there, but it had to remain unsatisfied, as neither her finances nor her capabilities permitted her to wage a war which would involve the more energetic and resourceful nations of Europe.

Due to a peculiar combination of circumstances which are attributable to her huge size, her unwieldiness, her geography, and the temperament of her people, no Minister of Finance in Russia, whether in peace or in war, was ever able to keep the cost of government within the funds of the revenues. When Vycknegradsky, Count de Witte's predecessor took office in 1887, another crisis was reached. A panic broke out in 1888, as the ruble fell 50 percent; and had it not been for an unusually abundant harvest, a complete collapse might have occurred.

Nevertheless, at this critical stage of finances, an unexpected turn of events occurred which favored Russia financially, though she had not contributed anything to bring that condition about. Capital began to flow into Russia at an increasing rate. The French, after the Franco-Prussian War and the resulting consolidation of the German states into a Germany of the First Reich, felt herself isolated and vulnerable without an ally on the Continent. To get an ally, France loaned money to Russia. From 1888 to 1897, a total of 1,000,000,000 rubles were invested by the French in Russia, half of which was invested in the railroads. France had been making loans to Russia before 1888; in fact, ever since the Franco-Prussian War. This source of capital will be taken up again when the industrial development of Russia will be discussed. But, notwithstanding all this inflow of foreign capital, the Government budget continued to show deficits. In 1900 that deficit amounted to 160,000,000 rubles (\$80,000,000). The budgets of that period were made to show a surplus although the debt continued to climb each year. Count de Witte is credited with reforming the Russia governmental finances. Actually, he was only favored in being the Minister of Finance in Russia at a time when the flow of capital from France was the greatest. He could borrow money from France at a time when France was most anxious to loan money to Russia, hoping thereby to gain an ally.

Japan declared war on Russia in February 1904, but the Russians felt sure of an easy victory. A dwarf, with 45,000,000 population, was trying to scare a giant of 130,000,-

000 population. Painful indeed was Russia's surprise when her armies in Manchuria, where all the fighting took place, were defeated time and time again with terrible losses. The supposedly impregnable Russian fortress of Port Arthur, in Manchuria, was forced to surrender. A large Russian fleet, which had sailed around the Cape of Good Hope to the Far East, was totally destroyed. The Russians had difficulty in transporting troops and supplies across thousands of miles of an inadequate and poorly constructed railroad. The military system was unbelievably inefficient. Stupidity and carelessness were revealed on the part of both officers in the army and civil officials. Russia was glad to accept an invitation from President Theodore Roosevelt for peace negotiations at Portsmouth, N. H. That peace was a blow to Russian pride, since she had to give in to a little upstart. All hope of acquiring Korea was abandoned, and the southern part of Manchuria was handed over to Japan. This was the third of three great conflicts in which Russia had engaged. Each one had ended disastrously and humiliatingly for Russia.

The people in Russia, after their humiliation before the world, blamed the autocratic Government. Nearly all sections of the population were now discontented with the ruling regime. They were to be found among various conquered nationalities; among the intellectuals, the professors, and the writers whose radical theories the Government had failed to stifle, among the peasants who had received some concessions but wanted more, among the industrial proletariat which was inclining toward socialism, among the capitalists and the middle class who desired a constitutional form of government, and there was even some discontent among some of the nobility who promoted liberal ideas. Thoroughly alarmed by all this opposition, the Czar issued his manifesto of October 1905, in which he promised freedom of conscience, of speech, of assembly, and of union, and also proposed a new Duma to be elected by all classes of the people. With this manifesto the Czar forced a breach in all the opposition to his rule, as it failed to satisfy only the revolutionary peasants who wanted land and the industrial workingmen who wanted socialistic reforms. These two classes continued their struggle alone and increased their opposition after 1907, when the new reforms of the Czar were put into effect. The peasants began to form cooperative associations and the industrial workers organized strikes. By the summer of 1914 there was a great strike in Petrograd, and it seemed that the discontent was so great that it almost seemed like 1905, when the Czar faced the opposition of a whole nation. The Government seemed to have no way of meeting this growing opposition.

At that time, a series of shots were fired in Sarajevo, in Serbia, then a part of the Austro-Hungarian Empire. Those shots reverberated in every capital in Europe since the heir to the Austro-Hungarian throne had been assassinated. All this gave Russia an opportunity to champion the cause of the Serbs, a Slav race, in order to solidify race feeling at home and abroad. She made her demands on Austro-Hungary and brought a barrage of demands of all European powers on each other. At once the great World War was started with its world-convulsing results.

But before that war ended, Russia was completely exhausted and the government collapsed. The Bolshevik Revolution ended a dynasty and a new regime rose to power on the discontent of the peasants and the industrial workers. An unwieldy empire, ruled by an autocrat who had dominated a sluggish people, disappeared. The result was a complete liquidation of all the billions of rubles of foreign loans that had been made to Russia. In the place of that regime arose communism, a new experiment, that had

been idealized by philosophers, but had had little practical trial. The form of government changed, but the country remained the same in size and in unwieldy bulk and the people also remained the same, temperamentally and racially.

Long prior to the outbreak of the Korean war, in fact, by the fall of 1949, I was convinced that Russian propaganda was successfully scaring the world and convincing everyone that she was ready to take on the United States any time and that she had a vast and efficient machine to do it. The amazing thing to me was that this conviction had permeated the highest levels in Washington, including the State Department. What better evidence of confirmation of the success of the Russian propaganda could we have than the spectacle of the heads of the governments of Great Britain and France flying to the United States to beg our leaders not to take the retaliatory step of bombing China when she had sent hundreds of thousands of Chinese soldiers across the Manchurian border into Korea in the fall of 1950. The European statesmen feared Russia and, through the United Nations, tied the hands of our military leaders in Korea. In order to get the real lowdown on this supposed strength of Russia, we sent our own men to Europe a full 7 months before the Korean war. A second on-the-spot appraisal was completed only recently. Many months were devoted to the gathering of important data and material that was not otherwise available.

Before going into these excessive and extensive findings which I will summarize in this section as briefly as possible, I would like to review the long and continued failure of Russia and the Russian people.

RUSSIA IN A JET-PLANE AND DIESEL-ENGINE AGE

We have seen how in the days of horses Russia was a great power and how her decline began when it became cheaper for maritime powers to ship goods. In the early stages of the industrial revolution, England became the greatest power in the world due to a number of factors including the possession of enormous amounts of coal and the invention of steam power. She also had favorable political institutions and advantages of climate and geographical position to help her in the exploitation of this coal. But the greatest factor in making England a top power was the invention in 1769 by Watt, making steam the servant of man's will. By this invention of the separate condenser he produced a new type of engine. This was followed by the invention of the power loom by Cartwright in 1785. In addition, two Englishmen named Darbys and Cort created a revolution in iron by inventing methods of using coal instead of charcoal in blast furnaces and forges.

The nineteenth century was the century of steam, but the Russians remained dormant throughout this period. Before its close, man had discovered in electricity an even more valuable servant. Later we entered the age of gasoline engines, Diesel engines, and, finally, jet-propelled engines. The progress of Russia in any of these fields during this entire period of industrial revolution was very small indeed. It was proven time and again that the Russian peasant was all right in the age of horses when he worked with his hands, but that his very mentality was not equal to the fast development of the machine age. Another contributing factor was the fact that Russia's oil resources were not sufficient for the development of a great industrial power. An example of the difference between American oil reserves and production is seen in the fact that there are single American oil companies that produce more oil in a single year than the entire production of all of Russia.

The experience of our own military men during World War II was a convincing proof of the inability of the Russian peasant to

understand modern machinery. So much material, trucks, tanks and planes were being ruined by inefficient and incompetent servicing, that the British and ourselves were forced to send in maintenance crews to insure continued operations of the instruments of war we were furnishing the Russians.

THE INADEQUATE RAILWAY SYSTEM IN THE SOVIET UNION

The Soviet Union has 71,790 miles of railroad. This is somewhat less than one-third the mileage of the railroads in the United States. The Soviet Union has, however, more than three times the amount of total land area of continental United States. The Soviets point out that railroad building in Russia started only 2 to 5 years after it started in the countries of Western Europe. But the first railroad in Russia was a 10-mile road that was built in 1837 and ran between St. Petersburg (now Leningrad) and Transloge Selo (now Pushkin). It was hardly anything more than a short commuter line. Their railroad building took place between 1868-74 when 7,473 miles of track were laid and also between 1891 to 1900 when 13,552 more tracks were laid. These railroads were almost entirely built with foreign capital and owned by foreign investors. Foreign capital continued to flow into Russia up until the outbreak of the First World War. French, Belgian, German, British, Canadian and United States (in the order of their amount of investment) financiers and industrial concerns provided credits and organized industries at an accelerated rate during the 5 years preceding 1914.

We have tried to analyze the amount of railroad construction in various epochs of economic life in Russia. The Soviets do not give statistics and write their economic history as if the railroad system in Russia had greatly expanded and improved. We have discussed this matter with two Russian engineers, one of whom was a construction engineer on the railroads prior to 1917, and uncovered the following facts from them:

	<i>Estimated mileage</i>
By 1917, the total in Russia was-----	41,000
There was also under construction and nearly completed in 1917 (the time of the Revolution)-----	10,000
Built under the plans and direction of the Soviets between 1917 to 1940, before the Second World War were-----	13,000
Built during the Second World War were -----	4,000
Built after the Second World War to 1950 were-----	3,790
Therefore, total in 1950 is-----	71,790

RUSSIAN RAILROADS ARE STILL INFERIOR

Let us jump to the year 1939 when Hitler and Stalin had signed an agreement of collaboration, and see what the condition of the Russian railroads was at that time. By that year no new main railroads had been built toward the west. Those for which the Soviets claim credit had been started and almost completed before 1917. These are among the 10,000 miles of roads that had been nearly finished before the 1917 Revolution, to finally total 25,000 miles. To show you the difference in railroad management, when the Germans met the Soviets at the 1939 Russian frontier, the Germans had 30 different railroad lines with 50 tracks to link up with only 15 Soviet railroads running on 20 tracks. In the 23 years since the revolution, 13,000 miles of track had been added to the Russian railroad system, whereas in the 23 years before the 1917 revolution, 28,000 miles of railroad had been built. During the last war, the Soviets lost through destruction by the Nazis, 15,800 or 55 percent of the locomotives; 428,000 or 45 percent of their freight cars, in addition to 15,000 bridges and 4,100 damaged railroad stations.

Most of the Soviet's railroad system is antiquated. Most of the freight cars are of the small two-axle type, of 15- to 16½-ton capacity, only one-third as much as American cars. The Russians are now building four-axle freight cars at Sverdlovsk of 60-ton capacity. We have been told by an observer that whole trains of such empty new cars went eastward to points beyond the Urals last year. In 1949 Russia claimed to have produced 190 locomotives, the United States built 1,487. There are no Diesel locomotives in the Soviet Union. The older locomotives and some of the new ones are not powerful. Few trains run faster than 30 miles an hour. There are some electric locomotives for the electrified parts of the railroads. Of the 11 lines running out of Moscow, 4 are electrified; the one to Yaroslavl for about 50 miles, the others to Trans-Siberia, Baku, and the Crimea for shorter distances. Out of Leningrad, one road is electrified for a short distance. There are also other short stretches as at Sverdlovsk, and in a few parts of Asiatic Russia. The newer types of Russian locomotives are known as the IS, FD, and the SO types, with an axle load of from 15 to 20 tons. The most powerful new locomotive is the LOK, made at Kulbeyhev, of which about 200 were made to 1948 and 1949. These are mostly used on the Trans-Siberian road and on the faster trains. The construction of passenger cars is negligible. Russia never had many passenger cars comparable to the most ordinary American coach. We understand that the passenger cars on the faster trains are of foreign origin.

HIGHWAYS AND ROADS IN THE SOVIET UNION

The Soviet Union, with over three times as much land as the United States, has 480,000 miles of roads, of which less than 10 percent are paved. The others are hardened gravel surface or ordinary dirt roads. The United States has 3,250,000 miles of roads, of which over half are paved, either asphalt or concrete. But we have been told by competent Russian engineers that of the 480,000 miles of roads in the Soviet Union, only 40,000 have been built by the Soviets since the time of the Revolution in 1917 to the present time. In the latest 5-year plan, it was proposed to build about 1,500 miles of roads each year. The following are among the paved roads in the Soviet Union:

	<i>Approximate miles</i>
To the west:	
Moscow to Minsk (concrete)-----	700
Moscow - Kiev - Kamenetz-Podolsk (concrete)-----	1,200
Moscow-Slutsk (asphalt)-----	800
To the north: Moscow-Leningrad (asphalt)-----	800
To the south:	
Moscow-Kharkov-----	900
Moscow - Gorky - Kuibyshev (this part is new)-----	1,200
Leningrad - Vitebsk-Kiev-----	1,500
To the east: (Partly hard-surfaced)	
From Gorky-Kazan-Sverdlovsk- Omsk-Novosibirsk-Tomsk-Keme- revo to Lake Balkal-----	5,000
Also unconnected with European highways in the area of the Aral Sea to Alma Alta-----	2,000
Grand total-----	17,100

(The other paved roads of about 20,000 miles are in scattered parts. All distances of above roads are estimated in an air line rather than exact mileage.)

North of the Trans-Siberian Railroad, which runs approximately at the fifty-fifth latitude in Asia, there are hardly any roads to speak of. Even if there were roads here they would be of little value to the economic life of the area, as they would be covered by ice and snow for the greater part of the year. The paved roads are narrow, hardly wide enough to permit two cars to pass each

other without turning out. It is only where they run close to the larger cities that the roads become somewhat wider. In the area around Moscow the roads widen out into three lanes. These have been widened merely by adding the hard-surfacing material to the sides of the original paved road. Such work has generally been done since the end of the last war by German prisoners of war.

In her system of highways, the Soviet Union has the same handicap that she has in her inland waterway transportation system. Most of the country lying north of the forty-fifth latitude means that the roads are not open and passable for the entire year. Snow and ice make the roads not only hazardous but to a great extent impassable. The unpaved roads of which some are hard-surfaced and the others just plain dirt, are notoriously impassable in the thaws of the spring and the rains of the autumn when wagons, trucks, and cars sink into the mud. There is clear evidence of a shortage of road building and maintenance machinery in the small amount of road building that is being carried on at the present time. Before the embargo on shipments from the United States to the Soviet Union, 38 percent of all Soviet purchases in the United States represented road machinery. Since then, shipment has stopped. The Soviets are having difficulty in meeting the small quota of 1,500 miles a year.

AUTOMOBILES IN THE SOVIET UNION

The Soviets claim that motor transportation in the U. S. S. R. was created under the Soviet power when, as a matter of fact, the use of automobiles in the Soviet Union experienced the same evolutionary growth that it did everywhere else in the world, only at a much later date than in the great nations of the Western World. In 1914 there were about 9,000 automobiles in Russia and when the first 5-year plan was put into effect there were 19,000. All of these cars were of foreign make, as it was not until about 1930 that the first automobiles were made in the Soviet Union. In 1938 the number of automobiles in use totaled 760,000 and by the end of the present 5-year plan in 1950, the number is expected to reach 1,700,000. Actually, at the end of 1949 the number in use totaled 1,300,000 of all types. The number of automobiles and trucks registered in the United States today totals some 48,000,000.

In 1949 the Soviet production of trucks and passenger cars totaled 250,000 as compared with a production total of 6,000,000 in the United States. As is to be expected the production of trucks exceeds that of passenger cars. Soviet automobiles are produced at the Stalin automobile plant in Moscow, the Molotov automobile plant in Gorky and at another plant in Yaroslavl. Soviet plants produce the following trucks: The 1½-ton GAZ; the 3-ton ZIS; and the 5-ton YAG and the following passenger cars: The M-1, a Soviet version of a 1933 Ford for the low-priced field; the Pobjeda (Victory), a four-cylinder car which was sold in 1949 for 18,000 rubles or \$3,600, at the then prevailing rate of exchange. Some 1,600 of Moscow's taxis are of this type. The ZIS-110 is a copy of the American Packard. Virtually a custom-built car, its price is so high that it is only used by officials. The Soviet 5-year plan envisages construction of three new automobile factories, completion of three others now under construction, and enlarging of four additional plants. The Stalin works in Moscow produce the 4-ton ZIS-150 truck and passenger cars. The Gorky automobile works, which formerly manufactured the 2½-ton GAZ truck, will produce passenger cars also. The automobile factories at Jaroslav now make the 7-ton JAS-200 and have begun manufacturing of a 45-ton truck which is made with one or two trailers. The 5-passenger Pobjeda, the 7-passenger ZIS-110 and the Moskvic are the passenger cars now

in mass production. The Moskvic accommodates 6-passengers and will be cheaper than the ZIS-110.

We have been told by competent persons who are familiar with Soviet automobiles that they tend to be inferior to American and other cars and that this is especially true of the lower-priced car. Their average life is 10,000 miles after which time a complete overhaul is necessary. As much as 30 percent of all cars are continually laid up for repairs at any given time. The demand for spare parts has never been satisfied in Russia. Another drawback of the Soviets is the quality of their gasoline. Their best gasoline is comparable to American third grades. The boast of the Soviets that their output of gas-generator vehicles is increasing, is an admission that they are confronted with a shortage of gasoline. The Soviet Union is so short of oil that even with the small amount of automobiles in use, as of the present, she is not able to keep abreast in her production with the demands; and the scarcity of lubricants, in particular, has led to extensive efforts to save and refine motor oil.

The dependability and the efficiency of Soviet automobiles is best shown in pointing out that in the last war, if the Soviets had not been given trucks and cars under Lend-Lease, the troops of the Western Allies would have overrun all of Germany from the western to the eastern borders of the Reich long before the Red army would have been coming along charging on horseback or chugging along in their own cars.

AIR TRANSPORT IN THE SOVIET UNION

Naturally, transportation by air in the Soviet Union means something quite different than in the countries of the Western World. Air transportation, used by civilians in preference to other modes of travel, does not exist in the Soviet Union. That form of travel is confined to official use and to cargo-carrying of needed materials to centers of production, when the time factor is important. The ratio of freight carried in relation to passengers is much higher in the Soviet Union than in the United States. One outstanding item that is shipped by air freight, which has little bearing on industrial production is furs. In this case air transport is used as these are brought in from northern Siberia, an area far removed from the Trans-Siberian Railroad and where there are few roads, probably none of which are paved.

Air transportation radiates from only one hub in the Soviet Union. A glance at the map of air routes shows that there are at least nine routes from Moscow and two additional ones to points in the Arctic Ocean which operate irregularly. At no point does it seem possible to fly from one to another point directly unless Moscow is either the point of arrival or of departure. The air route map of the Soviet Union clearly shows that Moscow is the nerve center for the whole of the Soviet Union and substantiates an observation frequently made that Moscow is the "push button" center for the whole Soviet Union, and that no section of the far-flung union is either in touch or familiar with any other part of the union except through the central head. The planes that are used on these routes are those that constitute the reserve planes of the Soviet Air Force. Numbering upward of 10,000, many of them are wooden planes. Contrast this picture with our own in which every town of even medium size has its own airport and its regular traffic. Contrast this picture with the story of our development of jet planes, our international air traffic, and even our organized air express traffic. The comparison is ludicrous in the extreme.

Let us study an interesting angle of the reasons why Russia has been such a complete failure in this industrial age. Every one of you remembers the great conflict between science and religion a generation

ago. The religious leaders, in many cases, stated that science was anti-Christ and that in time the spread of scientific education would create a Godless nation. But here indeed is one for the book. The Russians in copying American forms of industrialization did away with the religious aspects of the American community. Wouldn't you naturally think, then, that the Russians would have started all types of scientific schools throughout Russia to educate her young men to become chemists, engineers, mathematicians, etc.? Fortunately for western civilization, she did no such thing but rather, as I shall show later in this series, concentrated all of her efforts on creating political scientists and hotheaded revolutionists. We, the religious people, tripled and quadrupled our investments in such brilliant institutions as the Massachusetts Institute of Technology, Carnegie Tech, California Tech, to mention but a few of the many wonderful scientific schools of learning. In other words, the religious nation developed scientific education, whereas the irreligious nation was dumb enough to overlook its importance in peace and war when manpower is worth almost nothing in comparison to scientific brain power. Possibly the basic reason for this was that the Russian student never had the aptitude for this type of learning and neither the Russian Government nor Russian private business had the money to buy the equipment and carry out the experiment. We have found out in our work that there are American corporations that spend more annually in research in industry than does the entire Russian Government itself. It is not improbable that most of the Russian leaders, who have never been outside of Russia, haven't the slightest conception of American scientific growth which has been so great that we have even solved the problem of distance—so fast is the American flying equipment of today.

DID THE RUSSIAN LEADERS WALK INTO A TRAP?

During this period of war crisis you undoubtedly will hear more and more as to how strong and smart the Russians are—and as proof of this claim you will hear a great deal about how much territory they control in Europe and Asia. I have said before that the very thing the Russians brag about—their size—is Russia's greatest weakness. We are convinced that Stalin and the Russian Government have just been plain everyday "suckers" for walking into a trap and getting so overextended all over the world. It is a smart man who knows his own limitations and does not spread out too thin. It is also a smart man who has sense enough in any program he undertakes for his country not to "take on" as opponents every single religion in the world. It is bad enough to have as one's opponents the most powerful nations in the world and the business interests of the world, but if for good measure one attempts to take on all the religions of the world, he deserves to have his head examined. Every one of you readers knows what has always happened in Europe whenever one individual got "too big for his breeches." It is an old, old story from that point when almost everyone begins to gang up on him—and that is exactly what is taking place in Europe.

Now, if the Communist civilization had been a whole of a success and also a higher type of culture than that of the other countries the Russians have occupied, it would be one thing, but the provable fact is that we have the biggest failure in Europe—Russia—trying to impose her system on countries with a higher culture than Russia. In the dairyman's terms, Russia represents grade D milk that is being mixed with the grade A of central Europe with a result that they are getting all grade D milk. In other words, the occupation of these widespread areas in Europe, whether it be Germany, Poland, Czechoslovakia, Hungary, Finland, or Rumania, has not increased the

standard of living of either the peasant or the industrial worker but, on the contrary, it has tended to bring the living standard of these countries down to the animal level of the Russian peasant. Consequently, there is a paralysis of trade in these areas and the creation of a very great feeling of hatred for everything communistic. So let no one tell you the fact that Russia's size—which really means that she has spread out so thin and making enemies everywhere—is an asset for the Russians and something we have to be afraid of. That type of dumb management we simply do not have to fear.

THE LIFE OF THE RUSSIAN PEASANT AT THE PRESENT TIME

To find out what the life of the Russian peasant is after an entire generation of Communist management, one of our staff interviewed, at the border area of the Red zone, individuals who had recently come from Russia and were in a position to give factual account of conditions. We particularly tried to get interviews and information from those who had technical training. An interview with one individual in his middle thirties, who had been a student of economics and who had also been employed as a sort of efficiency expert in a coal mine in the Donetz Basin, was particularly enlightening:

"The village of Schachtynsk has several general stores which sell meat, textiles, cosmetics, toilet articles, and other similar articles, in a sort of general fashion. Bread, however, is still to be bought only in special stores and is in short supply.

During the daytime there is not much life in the village as a great number of the inhabitants are at work in the mines. Heavy drinking is the great joy and solace of the Russians. Beggars are to be found outside of every store, among them the old people, no longer able to work.

"The principal diversion in the evening is a visit to the local clubhouse, situated alongside of a small park, which is the center of the whole social life of the village. It is the largest building in the village, but it does not have a toilet in it.

"Placards, exhorting the worker to work harder and to work for greater glory of the state, in many colors, are found in the most conspicuous places.

"Thirty kilometers away is the city of Schachty. There is one trolley line in that city, but as late as 1947 the cars were still very old and without any panes of glass.

"The houses are all little blockhouses of wood. Furniture and furnishings are primitive. A bed is only found in the house of the more well-to-do. Generally, there is one table and some benches. The most interesting fact is that in all the houses there is an ikon corner, decorated with pictures of the Virgin and other saints. When one sees villages of this type for the first time from a distance, with their dilapidated thatched roofs of straw and their broken and patched-up windows, they look as if they were abandoned huts. It is astonishing that they are inhabited, and beneath their wretched roofs and forlorn exteriors, an active life goes on.

"In Russia everyone has to work in order to live. I have seen women in advanced stages of pregnancy, bending and lifting while at work. One I saw was digging the hard ground with a hoe. When I asked her why she did such work she answered by saying that she had to work to live. For her work this woman was paid about 400 rubles a month."

Our informants told us that when the Russian people are alone they compare their lot with that of the Germans, who they look upon as well-fed, who lived in better houses, who had better clothes, and above all who are doing so in the economy of a defeated nation. The Russians, who themselves regard the result of the war as a victory for Russia, live in misery. The dyed-in-the-wool Communist is the only one who speaks

differently. Russian peasants still refer to the era of the Czars as good times, when so much could be bought for so little.

Old newspapers are a particularly valuable commodity, not only as newspaper, but as cigarette paper. This is not just an occasional matter. The price of a daily newspaper is 15 kopecks (0.15 rubles). When a Soviet worker cannot buy a current newspaper, he buys an old one. The price of the old newspaper, however, is not 15 kopecks but a whole ruble. It is a well-known fact that officers in charge of German war prisoners withheld newspapers from them for weeks at a time and sold these newspapers for a ruble apiece, rather than deliver them to the addressees.

Every one of our informants assured us that what they told us were facts from their own observations, not what they had heard or had been told. They insisted that everything they said had been lived and experienced by themselves and by themselves alone. When you get reports of this type first hand and when the people who are giving them to you are so obviously sincere, you naturally wonder why the people themselves continue to put up with existing conditions.

The answer is an obvious one. The Russian people have been under the heels of their rulers all during their national history. They have, under the force of circumstances, never developed the independence of thinking that characterizes the American and live in fear of the bureaucrats who are their present rulers. The Russian people are like sheep and live in constant terror of the "wolf." They neither know how to do anything to help themselves nor do they have the inborn courage necessary to do anything to better their situation. Only those few who, members of the Russian armies, have seen how the outside world lives can clearly see the failure of communism at home. They have proven so dangerous that upon their return home from garrison duty in Germany and Austria their units are immediately split up and the individual soldiers scattered, so as to keep them under close surveillance at all times.

Let us start, then, in 1919 with a Russian Government having absolutely no debts of any kind. There was not a country in the world in so enviable a position. Suppose, for example, either the city of Chicago or the city of New York were to go into bankruptcy, thereby wiping out all its obligations and starting with a clean slate. It is obvious, then, that from that point on you could have the worst management in the world in charge of any of those cities, and the managers could not help but make what appeared to be a brilliant record for a number of years. Or, even the dumbest businessman can, for a time, make a success under favorable conditions, and so the very same thing applies to a country. It would not make any difference as to what type of system ran the country. When you come into office after a country is down to zero and been through the wringer, you can only go in one direction, and that is up. And so in the earlier years of the communistic experiment there was some improvement and it appeared to many social reformers that here at last mankind had found a practical application of the Golden Rule in everyday life. But after the picture unfolded theoretical economists and liberals all over the world became disillusioned, and finally now in the year 1950 we have the Reds deserted and practically hated by the liberal writers of all the neutral countries.

A CONFESSION OF BANKRUPTCY

If one needed any further proof of the bankruptcy of the Russian system let him but note what happened in Russia in December of 1947 when their Government devalued their currency by 90 percent, thereby repudi-

ating most of the debts that they owed their own people. Many reformers used to say that the Communists in 1919 could do nothing with the people who had been brought up under the old system. These people's minds were too rigid and so the whole program had to be based on starting over with the youth of 1919 who had open minds and who could be trained to be real friends of the people. And so let us assume we have a boy of 15 under the Russian system of 1919, inspired by all the fanatic enthusiasm in the world to help his country and his people. Nearing 50 years of age now, this individual has lived a lifetime during which every year he has been promised utopia and the millennium. If he saved his money and bought Russian Government bonds he found in December 1947 that even these were repudiated. He now finds that he is eating less than what he did a generation ago. He finds that after he had been promised a new home, new consumer goods, new automobiles, he is now practically an old man too cynical to listen any longer to promises of pie in the sky bye and bye.

While this has been going on the American worker has had an entirely different experience. As contrasted with the Russian worker, the American worker has the know-how—and it is almost an insult to American intelligence to state that Russia is stronger than we are and that the Russian system will sweep the world. Besides, the inexorable laws of nature have played a very important part in preventing the poor Russian peasant from rising above the existence of an animal due in a large part to the dispensation of rainfall, winds, storms, and all that goes to make up climate generally. One-sixth of the earth's land or at least the greater part of it is prevented by high mountains from receiving the benefits of favorable winds that bring moisture to growing crops. No government, however, can do much about changing such a condition. Thirty years ago the harassed Russian peasant did not realize this and thought that any change would bring about an improvement.

Let us start off with a few simple ABC facts. Everyone knows that not a single industrial plant was destroyed in the United States as a result of World War II. Actually, we calculate that in 11 years from 1939 to 1950, American industrial capacity was increased at a rate which in peacetime would have required 27 years. Now, if you will understand that just the opposite situation took place in Russia, you will readily see through the colossal industrial bluff she is now putting on. Most people have forgotten that when the Germans invaded Russia that the Soviets themselves advocated a "scorched-earth policy" and told their own people to destroy factories, machinery, railroads, etc. The Russians themselves even partly crippled the great Dnieper Dam. Some of the lighter machinery in the Russian plants was removed and sent to the other side of the Urals.

But the real destruction of Russian industrial capacity as well as agricultural capacity, came when the German generals decided to get out of Russia. According to Nikita Khrushchev, one of the fourteen members of the all-powerful Politburo, it will take at least until 1955 to completely replace this destruction. The losses in factories, farm machinery, and livestock was enormous. The railroad system came out of the war shattered. An unbombed station was a curiosity. A system that was never adequate for a modern industrial nation had to have 9,000 miles of rail replacement and 1,800 bridges rebuilt and a great amount of locomotives and rolling stock replaced, which had been damaged or taken away by the retreating Nazis. Just before they left, they razed the Dnieper Dam to its foundations and blew up all nine of the giant turbines. The steel mills of the Donbas had to be rebuilt. But all this reconstruction has

been retarded because of the lack of transportation to carry the necessary coal, iron ore, and machinery.

Remember this statement about the devastation caused by the war was not made by an enemy of Russia but by one of the 14 powerful members of the Russian Government. In other words, the Russian Government, which was weak industrially back in 1939, has not even made up these losses whereas in the United States the war gave an enormous impetus to our ability to produce.

OIL PRODUCTION

Under the current 5-year plan, a total oil production of 35,400,000 metric tons is expected by the end of this year. Of this amount, 17,000,000 metric tons is expected from the Baku area alone. Even if achieved, this would be well below the 22,000,000 tons estimated to have been produced in that area in 1940. The Soviets say that production in this area fell during the war, mostly as a result of the cessation of most new development work while greater emphasis was put upon increasing the output of oil in areas farther to the east.

But, while the Baku area is behind in technological progress, the geological explorations in the newer areas to the east is not proceeding satisfactorily. Soviet efforts to tap petroleum by sinking wells under the Caspian Sea has not been successful. Undoubtedly, the Government of the Soviets is looking everywhere for oil, but the total that they are obtaining at the present time is no more than 33,000,000 metric tons from their whole vast area of land. Currently, the United States is producing upward of 315,000,000 metric tons of oil each year, or about 10 times as much.

Imagine one company, the Standard Oil Co. of New Jersey, produces more oil than all of Russia and its satellites combined. The same can be said for United States Steel, only one of our big producers in this country.

THE SOVIET INDUSTRIAL SUPPLY SYSTEM

The supply system in the Soviet Union is operating poorly, causing serious hindrances to production. In a recent article in *Leninigradskaia Pravda*, a factory director complains of the harm done to production. Needed materials often arrive late, forcing factories to cease or partly curtail output. Raw material and semifabricated goods frequently do not meet specifications, so that they cannot be used at all. In Leningrad, according to the article, hundreds of government offices employ thousands of persons who are supposed to facilitate necessary transactions between different enterprises. But these work so poorly and are of so little help that many factories have to spend time looking for the items with which their work can continue. The situation is so bad the director complains, that to meet its need for electric lamps, motors, transformers, optical equipment, and forgings, his factory has had to start production of these items itself. Yet, at the same time, in Leningrad, itself, there are large factories producing all these items.

Anyone who is worried about over-bureaucracy in this country should learn more about the tremendous bureaucracies and inefficiency that operate in Russia proper. Our staff went to the trouble of studying the industrial supply system.

For this condition, the director blames the overly bureaucratic organization of the Soviet industrial supply system. Factories adjacent to each other are not allowed to supply each other's needs if they belong to different ministries. These and other restrictions tie them hand and foot, the director complains.

A similar situation exists in the local consumer goods industry in Moscow, the *Moskovskaya Pravda*, complains. In Moscow, the supply system is working so badly that it is estimated that they will fail to receive about

600,000,000 rubles worth of raw materials, which is about one-third of their total needs. Because of the lack of materials, these enterprises will not be able to achieve this year's output plans for such goods as furniture, phonographs, children's bicycles, aluminum utensils, and knitted goods. To get around supply difficulties, some factories in Moscow do not produce articles for which they are best fitted, but only articles for which they are able to obtain materials.

This lack of coordination, causing a stagnation in industrial production is due to other reasons besides the one that the director of the Leningrad factory complained. It is indeed true that the bureaucratic organization of the Soviet industrial system takes all orders from Moscow for everything that is done anywhere in the Soviet, whether it may be in consumer goods or in enterprises more directly concerned with national welfare. The whole is set up as a "push button" economy, with no tie between industrial units that are interrelated.

But there is still another reason. And that reason has only become an issue and a factor since March 1948, when the American ban on the export of all articles that are strategically important went into effect. Dr. Nicholas Nyaradi, former Hungarian minister now in exile states that he observed how important Czech and Hungarian war plants stopped the production of tanks, army trucks, and railroad engines for lack of ball bearings, and there are numerous other cases where the Soviet war industry was slowed down because of a lack of parts that had come from the United States. This condition not only affected war industries, but it naturally also effected the production of all capital goods and heavy industry, as well as consumer goods. While this factor will not cause a standstill of all Soviet production, it is a mighty deterring factor in an all-out effort. Even if the flow of goods had not been shut off, the distribution of all kinds of goods and materials would still run into difficulties. It just seems that the country and the people as a whole lack the ability to run any distribution system with any degree of efficiency.

After 31 years of operation the fact is that the Russian people are at least as badly off as in the days of the Czar. A system which has been working even under more ideal conditions has been a colossal failure in Russia. Every attempt has been made to cover up the facts, but the failures of industrial production have been so great that it has been impossible to keep such failures out of even the Russian press.

The Russian newspaper, Pravda, has continually reported disciplinary action against plant managers who seem to be the chief scapegoats for the Russian failure.

The chief engineer in a bicycle plant was sentenced to 5 years for producing bicycles of low quality.

The chief of the technical control department in one of the coal mines was sentenced to 6 years imprisonment for dispatching substandard coal. The deputy chief of loading at the same plant was sentenced to 5 years' loss of liberty.

Similar towns with respect to production of low-quality footwear, low-quality bread, clothing of inferior quality, cultivator wheels and parts, cigarette tobacco, and practically every other commodity produced in Russia, have appeared in the news in increasing numbers during recent years.

EFFICIENCY OF SOVIET WORKERS

But even allowing for the "boon-doggies," who are the surplus workers on the collective farms, and contribute hardly anything to agricultural productivity, it soon becomes apparent that the productivity of a Soviet worker, whether in agriculture or in industry, is low in comparison with the productivity of the workers of other countries. The United States, with a farm population

of one-third as much as the Soviet Union produced more net farm output than the Soviet Union by 50 percent. For the industrial workers, the showing is hardly any better.

Reading Soviet reports about the productivity of workers, one receives an entirely erroneous impression. To read of the feats of a Stakhanovite worker, one would think that these were supermen, performing unheard amounts of labor and producing great amounts of material. Naturally, there are some who work faster and better than the average, but that is something that is not unique to Soviet Russia. It is a common experience everywhere.

HOW GOOD ARE THE RUSSIAN SCIENTISTS?

It is a known fact that this country has practically a monopoly on the industrial scientists of the world, and as a result, a monopoly on industry. The greatest mistake made by the Russian revolutionaries was the liquidation of most of the scientists that they inherited in the technical schools established by the Czars. Lenin and Stalin, as well as other Russian leaders, as former revolutionaries, were far more interested in developing political scientists and did not devote too much time to industrial or other real scientists. Their success in political science is well known to the world, especially since they have succeeded in their propaganda in carrying such a tremendous bluff to the point where they have convinced international statesmen and world leaders that they have the stuff.

Our staff investigated fully not only the methods used in the Russian educational system but also checked carefully on the number of scientists that Russia has within its borders. A good many people feel that Russia was successful in capturing the German scientists and putting them to work to improve the living standards of the Soviet Union. Here is what we found on the German scientists:

NUMBER OF GERMAN SCIENTISTS BEFORE THE WAR

From the following table the detailed number of German scientists are given for each profession for the year 1940. This list gives a total of 7,308 men of science in Germany in 1940. This number only includes the number of top men in science. These men were outstanding authorities in their respective fields and had important positions in research or in the higher schools of learning.

Prewar Germany had 60,000 engineers (Walter de Greneyter, Berlin), comparable to the level of an American or a British holder of such a title. Kurschner's "Gelehrten Kalender" enumerated 14,000 names of the holders of high degrees in all branches of learning. In this list the following is the number of those holding high degrees in all the sciences, as distinguished from the academic subjects:

Astronomy and astrophysics.....	72
Biochemistry.....	284
Botanists.....	240
Chemistry.....	526
Forestry.....	108
Geodetics and mine surveying.....	64
Geography and cartographers.....	120
Geologist.....	220
Geophysics and meteorology.....	121
Irrigation.....	86
City planning.....	52
Agronomists, general.....	28
Agriculture and plant culture.....	117
Agricultural chemistry.....	60
Drainage engineers.....	19
Agricultural management, economy..	39
Agricultural machinery.....	22
Dairy management and bacteriology..	29
Veterinarian.....	74
Mathematics and theoretical mechanics.....	274
Medicine:	
General.....	18
Anatomy, histology.....	119

Medicine—Continued

Eye specialists.....	92
Bacteriologists.....	186
Surgeons.....	288
Social medicine.....	57
Medical history.....	34
Gynecologists.....	121
Throat, nose, and ear specialists....	98
Skin and venereal disease specialists.....	94
Internal medicine.....	312
Pediatricians.....	82
Pathologists.....	111
Physical therapy.....	140
Pharmacology.....	71
Physiology.....	221
Psychiatry.....	164
Dental specialists.....	102
Mineralogy.....	109
General natural sciences.....	61
Pharmacosis, chemotherapy.....	78
Physicists.....	342
Physical chemistry.....	122
Technology:	
General.....	8
Construction.....	311
Mining.....	128
Transportation.....	16
Electro-technics.....	159
Technological history.....	15
Machinery.....	252
Sanitation, motors, marine, and aircraft:	
Mechanical.....	130
Photography.....	33
Textile technology.....	182
Hydraulics.....	35
Industrial technology.....	60
Veterinarians.....	108
Military science.....	99
Zoology.....	144

Total of all German scientists... 7,308

The countless numbers who left Germany in the first wave that commenced shortly after Hitler came to power is not included in the above list. We have been given to understand that they were easily 10 percent of the number on the 1940 list. The greater number constituted a gain for the United States as none went to Russia.

WE GOT THE CREAM OF GERMAN SCIENTISTS

While all this was going on you would naturally ask what were the American authorities doing? You never hear anyone come up to you in the street and say, "The United States will knock the stuffing out of the Russians because we got not only one but two major groups of German scientists." As I mentioned before we practically got all of the scientists that left Germany just before or after Hitler came into power, and we are very happy to tell you that at the end of the last war, the United States was "Johnny on the spot," and did an excellent job of getting far more German scientists to come to the United States than the Russians did.

It was but natural that a great amount of red tape had to be unwound before these German scientists could be brought to the United States. First they had to be screened for their political opinions. Some had to be "denazified" while for others this procedure was bypassed. Then there was an understandable amount of resentment among Americans against bringing in the nationals of a former enemy country. And lastly, there were immigration laws, forbidding the migration of enemy nations. This proved a formidable obstacle, and the first comers entered the United States as employees of the military and occupation forces. There is no doubt that the numbers of German scientists who wanted to come to the United States would have been greater had these obstacles not been so formidable. As it was, the first comers were not paid any salary for their work in the United States. They received only subsistence and their salaries were paid out to their families in

Germany. These families were lodged in two villages in the Black Forest, all the inhabitants of which had previously been removed elsewhere, so that the families of the German scientists could be kept apart from the rest of the population, as far as possible. These families were also amply supplied with food and were generally spared the rigors that the rest of the Germans had to put up with after their country's defeat.

Unlike the Russians we did not shout to the world that we were taking the German scientists. This whole matter was handled by the Americans very furtively, and perhaps overly so. The Russians, on the other hand, in their part of Germany went about this matter very openly. They tried to lure the German scientists with promises of higher pay than what had been paid to them before and during the war with attractive promises to take care of the scientists' families, although these promises have only been partially kept. However, it is very evident that the lot of the former German scientists in the Soviet Union is not good today, as we found their infrequent letters are very guardedly written and betray a hope of some day returning to Germany. However, with

all their efforts and their promises, the Soviets were not too successful in recruiting the German scientists. They were certainly not successful in getting them in any great number voluntarily. We will now examine to what extent they were successful in getting the German scientists involuntarily.

Forschung und Forschungsinstitute of Joseph Bader (Munich 1941) lists 66 institutes of research at government level in Germany in 1940. Included in this number are 32 Kaiser-Wilhelm institutes for various kinds of scientific research and four for academic sciences. Of the remaining 30 institutes, the greater number were small and connected with some university. There were two large institutes in this last group—the one the Physikalisches Technische Reichsanstalt in Berlin, had six departments with a total of 121 scientists and 142 specialists, and the Deutsche Versuchsanstalt fuer Luftfahrt (German aviation experimental stations) with a total stated personnel of 1,581 for the year 1936, (figures for later years not given for military reasons) and distributed in all parts of Germany.

The following Kaiser-Wilhelm institutes were located in the Soviet zone of Germany:

	Location	Scientists	Specialists
Kaiser-Wilhelm Institut fuer Leder (leather)	Dresden	51	17
Kaiser-Wilhelm Institut fuer Bastforschung (research, textile)	Sorau (now Poland)	(1)	-----
Kaiser-Wilhelm Institut fuer Bio-Chemie	Berlin, Dahlem	15	20
Kaiser-Wilhelm Institut fuer Zuechtungsforschung (plant culture)	Muencheberg	36	-----
Kaiser-Wilhelm Institut fuer Chemie	Berlin, Dahlem	22	17
Kaiser-Wilhelm Institut fuer Physikalisches Chemie und Electrochemie (physical and electrical chemistry) ²	do.	40	60
Kaiser-Wilhelm Institut fuer Physik ³	do.	(1)	-----
Observatorium des Sonnenblichvereins und das meteorologische Institut der Kaiser-Wilhelm Gesellschaft (institute for sunspots and meteorology)	Nauzig	(1)	-----

¹ Not given.

² This is the institute in which atom research was conducted under Professor Thiesen.

³ This institute was founded in 1937. The Rockefeller Foundation made a grant of 1½ million reichsmarks, direction of Professor Dilge.

These are the principal German research laboratories, at the Government level, to which the Soviets had access in 1945. Out of 32 Kaiser-Wilhelm Institutes, we were able to locate 25, and of that number 10 were accessible to the Soviets. Of course, it was but natural that a great number of the Government research institutes should be located near the capital city, and as the Soviets were the first to enter the Capital after the German capitulation, they were in a position to take a first pick. But that pick principally consisted of the installations, as the scientists and top specialists generally fled. Those who elected to stay and are now working for the Soviets will be discussed a little further on in this study.

We found that at Aachen none of the staff went to the Soviet Union. Back in 1938 Prof. Josef Harich went to Moscow as an instructor in physics and is still there. Prof. Josef Mathias, textile technology, went to Prague and has been trying to come back. At Darmstadt none of the professors went to the Soviet Union, but several are in the United States. At Karlsruhe not any of the professors went to the Soviet Union, but several went to the United States, among them Professor Hildemann, who is at Silver Spring, Md., and Professor Sperhake, who is in Washington. At Munich no one left for the Soviet Union. One went to Vienna and one is in the Tyrol. Professor Thomasch went to England and Georg Joos is in the United States. At Stuttgart none went to the Soviet Union. Professor Ewald is in England; Professor Bonnetz is in Turkey and Professor Madellum and Kamm are in America. At Berlin the technical high school, is now called the technical university, and is not located in the Soviet sector. From here only Professor Vollmer went to the Soviet Union. At Hannover one professor went to the Soviet Union.

The eighth technical school at Brunswick we did not visit. It lies between Berlin and

Hannover, and there is no reason to believe that it would show up any differently in the number of its teaching staff. With reference to the two technical high schools now in the Soviet zone it is not possible to obtain any specific information. It is certain that neither of these two schools have had any additions to the staff from either the western zones of Germany or anywhere else in the Western World. On the contrary, we found that in the university town of Goettingen in the British zone, there is a registry bureau for teachers and professors at which there are applications for placement from some 300 professors now in the Soviet zone, who want a professorship in a university or technical high school in Western Germany.

SCIENTISTS IN PRIVATE INDUSTRY

The Zeiss optical works at Jena was the largest single industry in Germany, and as it is located in the Soviet zone, it is now being operated as a Soviet trust. To get the facts about what happened to the Zeiss optical works, one of our men went to Oberkochen in Bavaria, where the remnants of that industry have reestablished themselves in a former Nazi war production plant. Here 1,400 are now employed, which is just a fraction of the number that were employed by Zeiss at Jena, where in 1937 the total number employed amounted to 6,000. From Dr. S. C. Meyer, the director of the plant, we learned that when the war ended the Americans took about 60 percent of the top men of the whole Zeiss industry out of Jena to Oberkochen, that 10 percent went elsewhere leaving 30 percent of the top men at Jena. The plants and installations were twice dismantled, first by the Americans and then later by the Russians, and 94 percent of the total installations were removed in both dismantlings. The Russians took about a third of all Jena installations to Krasnororsk, near Moscow, together with a great number of

the technicians. The Soviets also took a great amount of the Schott optical plant, which manufactured optical glass for the Zeiss plants.

Dismantling of the Zeiss plant was stopped by the Russians on October 22, 1946. From then until April 17, 1948, the Russians rebuilt the plants at Jena, allegedly to bring about German reconstruction. We learned that on the night of April 17, 1948, the Russian administration of the Zeiss plant told the top men among the German technical workers to come to a celebration for production achievements. While this took place, the doors were locked and that night some 300 of the remaining top Zeiss specialists were forcibly transported to the Soviet Union, together with their families. Today, Jena is known as V-E-B or Optik Carl Zeiss Volkseigenes Betrieb. It is a state industry, employing some 12,000 men which is twice as many as were at Jena in 1937 but not as many as in wartime. We found that among the 1,400 now working at Oberkochen were a high percentage of the specialists of Jena. This number is in contrast to the 300 specialists that the Soviets took to the Soviet Union. The Americans got the greater amount of the installations and the greater amount of the key men. The Soviets got about a third of the original installations. While this gain is important to the Soviets, an indication of the caliber of their output is that the Leica cameras of Soviet make are greatly inferior to the Leica cameras of German make. Their relative merits we found are easily ascertainable.

GERMAN SCIENTISTS IN THE SOVIET ZONE

In atomic warfare one of the most important groups of scientists to have is physicists. There were 342 physicists in Germany in 1940. This is but a drop in the bucket compared with the physicists in the United States. Our staff found that the Russians got about 12 percent of the German physicists. We found the names of these 38 men given below and made a careful check wherever possible as to the abilities of these men the Soviets obtained. We made no attempt to get the list of German physicists that came to the United States although it was larger than the following list: Prof. F. Hertz, Dr. Riehl, Professor Vollmer, Dr. Born, Dr. Farber, Dr. Gutscher, Dr. Kuehne, Dr. Riewe, Dr. Schuetz, Dr. Winkler, Dr. Schutz, Dr. May, Dr. Bushbeck, Manfred V. Ardenne, Dr. Fritz, Professor Habann, Dr. Lertes, Dr. Roetger, Dr. Tonnlvy, Dr. Wolf, Dr. Orthmann, Dr. Steenbeck, Dr. Boegehold, Dr. Capeelen, Dr. Critz, Professor Haeuser, Professor Lubeck, Dr. Tronsdorf, Dr. Slegmund, Dr. H. Straubel, Professor Pose, Dr. Stendal, Dr. Boegel, Dr. Caties, Dr. Gorlich, Dr. Kotowski, Dr. Papello, and Dr. Schuhmacher.

Professor Hertz is one of the great gains for the Soviets. He was a Nobel prize winner who had been in charge of the Siemens Research Institute in Berlin. He was one of the few who did not get out of Berlin, but preferred to stay in his institute at Berlin-Charlottenburg. Hertz, in the later years of the war, was not in accord with Nazi principles and had collected a small intellectual group about himself who were in sympathy with communistic ideas. Similarly minded also was Prof. Peter Thiesen, whom we have already mentioned as having been in charge of the Kaiser Wilhelm Institute of Physical and Electrical Chemistry in Berlin-Dahlem. He is known to have been in opposition to the Nazi Party as early as 1943, and to have been associated with the group around Prof. F. Hertz. He left his chemical institute intact for the Russians and he, his assistants, and equipment were transported to Sukhum in Georgia, Republic of the Soviet Union.

The third well-known figure among German scientists now in the Soviet Union is Manfred V. Ardenne, a young man whose renown has extended beyond Germany as he

was referred to as the "German Edison." His specialty was radar and he had made a giant spectograph that is useful in uranium experiments. His name frequently appears in American newspapers and magazines, especially since President Truman announced the Russian atomic explosion in September 1949, as being an outstanding researcher in atomic energy. However, from an interview that we have with Prof. Werner Heisenberg, who was the first to make an atom bomb for the Germans and is a coworker with Prof. Otto Hann, a Nobel prize winner and the discoverer of the feasibility of smashing an atom, in Goettingen, we gather that Manfred V. Ardenne is not considered as a top scientist by other German first-grade men, but rather as adept at ballyhoo.

But Professor Heisenberg rated two others, now in the Soviet Union, quite highly. They are Dr. K. Riehl and Dr. Bevilgua, who worked on refrigeration at the Kaiser-Wilhelm Institute in Berlin-Dahlem and has also done valuable work in the making of bombs. Another pupil of Heisenberg, Professor Doppel, is working for the Soviets in collaboration with Professors Berthard and Steinbeck. Also working on atomic research in Russia are said to be Dr. Felix Hammer-schmid, Dr. Franz Lerchner, Dr. Hans Ohnesorg, and Dr. Hans Joachim Born. Dr. Everst, who had worked on mercurial lamps of very high capacity, is also said to be helpful in this field.

Second only to atom bomb research in general interest is the role played by the German scientists in submarine boat development for the Soviets. The snorkel-type U-boat fell intact into the hands of the Soviets. Here the Soviets have the assistance of Professor Vollmer of the physical chemistry department of the Berlin Technical High School. Dr. Heinz Froehlich, specialist in submarine accumulators and storage batteries is said to be living near Moscow and to be engaged at an institute of the technical high school there. Work on the Soviet submarine is being done at Leningrad. The type of snorkels that the Soviets found at Stettin were the latest German models. They were capable of remaining under water for 22,000 miles. In the first 3 years since the end of the war, Life has estimated that the Soviets have built over a hundred boats of this type.

However, here in the United States, Chief of Naval Operations Admiral Forrest P. Sherman's announcement about an atomic-powered submarine indicates that a revolution in ship propulsion is taking place. The Snorkel's larger batteries, and more powerful engines have made the submarine a powerful strategic threat. Atomic power will give submarines and ships generally practically unlimited cruising endurance and great speed. Submarine troop-carrying, cargo ships, and missile ships are now part of the United States Navy and antisubmarine submarines are under construction. The Saturday Evening Post issue of July 22 has a wonderful article about atomic submarines, by Vice Adm. Charles A. Lockwood, former commander of submarines in the Pacific.

Dr. Werner von Braun was the original builder of the V-2 for the Germans. He himself is at White Sands, N. Mex., where he has a team of about 150 German specialists working with him. We found that a few of his assistants are, however, working in the Soviet Union.

The exact total of German know-how in the Soviet Union is not known. It is very evident, however, from our analysis that the number is not anywhere near as high as guesses of between 20,000 to 50,000 that appear in the American press from time to time. Even the lower figure is too high, if the number of German scientists in the Soviet Union should include the level of engineers, technicians, and master workmen.

Such estimates cannot be reconciled with the number of people engaged in technical work in any part of Europe. European countries are small in comparison with the United States and even Germany never had industrial plants or research organizations that were at all comparable in size to similar organizations in the United States. The largest industrial plant in Germany, Zeiss at Jena, had a peacetime working force of 6,000 men. A plant having that many employees in the United States is not rated as one of the giants. All Germany only had 7,308 top men of science.

Of the level of engineers, technicians and master workmen, the number, according to our best estimates, in lieu of Soviet statistics, is between 10,000 to 15,000 which is a greater number than we have from Germany of that level. But of scientists and specialists from Germany, the United States has the greater number, as we have shown that the tendency for the top level was to leave their place of work, if there was danger, and to flee toward the west. The engineers and technicians that the Soviets did gather up they used first in the repairing of the damaged German installations in what is now the Soviet Zone. This happened in the case of the rocket experimental station of the B-M-W at Zuehlisdorf near Berlin, where already by the summer of 1945, experiments were being carried out on an extensive scale on the testing platforms. At Halle the Russians used a former aircraft plant for the making of rockets, employing most of the staff of Junkers Aircraft from Dessau and Kothen. The German technicians here were told by the Russian plant director that they would remain in Germany. The pay was high, according to German standards, the technicians earning from 2,000 to 8,000 Reichmarks per annum and good food rations. The Oberspeck Cable Works, in the eastern part of Berlin, became the gathering point for the atomic, radio, and electrical specialists. The V-1 and the V-2 rocket experts remained at Peenemunde, on the North Sea. The optical experts were gathered at Jena and Chemnitz for the textile industry and Stettin was the place of assemblage for the submarine workers.

GERMAN SCIENTISTS WHOM THE SOVIETS DID NOT GET

As we have already shown, the Soviets began looking for the German scientists as soon as they came into Berlin and that they began their round-up in May 1945. With names and lists that had been supplied by their secret police, they hunted up the ministries of the German Government in the different institutes and searched through such files that were still intact. But the results were far from gratifying to the Soviets. Those in charge of the search, found that the police lists were incomplete and inaccurate and the majority of the scientists were not to be found.

One of the top men gave us the following account of the frantic Russian search for the German scientist Saenger:

"Among the material gathered at Peenemunde was a treatise called the Saenger-Project. Copies of this treatise were also found in Berlin and Halle. It contained physical, mathematical, chemical and gas-dynamical data about a stratosphere rocket bomber, whose speed, radius of flight and carrying capacity exceeded all previous marks. It was claimed to be capable of making a non-stop round-the-world flight.

"Soviet scientists admitted that it was possible to build such a bomber. Orders were given to look for Saenger. A special plane flew in vain to Vienna as he was known have lived and worked there. The search was fruitless. The Soviets also looked in vain for Saenger's capable assistant, Frau Bredt, an outstanding mathematician. Stalin seemed disturbed that Saenger was not found and called Berlin on the long distance telephone, ordering the search contin-

ued and said to the effect that 'We need planes of the Saenger type. If we are able to bring this project to a realization we must by all means do so. If we had planes of that type, it would be much easier to deal with Truman.'

We were told that when the Soviet officer who was assigned to look for Saenger got back to his post in Berlin, he and his family took the first opportunity to flee. He got away safely and is now far from the Soviet Union. We were told that there were in all 60 copies of the Saenger-Project, of which the Soviets have three. Others must have been found in other parts of Germany and are very probably in the hands of the Western powers. Saenger is now in France working with the Georgi group. Frau Bredt is, we believe, in Sweden. Our informant added that he thought the Saenger-Project was feasible, but that the Soviets would not be able to use the plans of the Saenger-Project as they do not have the ability.

France: Besides Saenger, France has acquired a number of German scientists and specialists on jet and rocket motors. Among them were the directors of the B-M-W in Berlin-Spandau on jet development. Dr. Oestrich is also in France with the greater part of his staff and Deplom-Ing. Schneider, the head of the research department for rocket development. Schneider was also with B-M-W, but from the branch of the company at Allbach near Munich, Bavaria. Also in France are Professors Nallinger and Wieberer of the Vienna Technical High School. These last two are a further illustration of the tendency of scientists to flee from east to west, as Vienna is now under Soviet influence.

England: In England, some 100 Germans work in the Royal Aircraft Establishment at Farnborough, in the rocket experimental station at Wascott and Bucks and with various industrial firms. The rocket specialists are the most in demand. The outstanding one in this group was chief engineer of design, Schmid, of the Walther Rocket plant at Kiel, who, however, was killed in 1948 in an explosion with several of his German coworkers. There are also aerodynamical German engineers and German metallurgists working in England.

Australia and Canada: In Australia, German scientists are working on rocket experiments with native scientists on projects that are so gigantic that they will require the services of some 20,000 workers in industry. There are some 200 specialists in Canada. Among them is Professor Bergold, biochemist of the Max Plank Institute. His work on the chemical destruction of insects is so important that his Canadian assistants rate his contribution to Canada as worth millions of dollars every year.

GERMAN SCIENTISTS IN THE UNITED STATES

Of the number of German scientists and specialists who went to the United States, one estimate states that 500 went to the United States until 1947, and thus the number now is 2,000 for both scientists and specialists and top technicians. At the time of the Fuchs case in February 1950, a witness testifying before the National Defense Committee stated that there were 600 German scientists in the United States engaged in the development of military science. Of these, 93 were returning to Germany and 362 had then taken out first citizenship papers and the relatives of 233 of these scientists had also taken out such papers. That figure included only those in military work. A great number, however, are otherwise engaged. Scientists are still leaving Germany at this time, principally for France and the United States. So that the estimate of nearly 2,000 top German scientists in the United States at the present time is very probably correct.

The value of the German scientists to the United States has been variously estimated.

The Army has stated that in rocket research alone, the United States has saved \$750,000,000. The magazine Time has placed a value of \$1,000,000,000 on the work of the German scientists. General Putt of the United States Air Force estimates that the total gain to the United States in their work in addition to the captured plans amounts to several billions of dollars. It has been said that the United States knowledge of rockets leaped 10 years by the know-how gained from the rockets of the German scientists.

The Moscow radio on July 2, 1950, proclaimed that: "At the beginning of 1946, 18 Japanese specialists were sent to the United States—bacteriologists, who zealously handed over to their new masters all their material on the production of the bacterial weapon."

It stated that the work was being carried out in secret laboratories in Maryland and in the bacteriological detachments of the American Army in Massachusetts and Utah.

GERMAN SCIENTISTS STILL IN GERMANY

The great number of the German scientists remained in Germany. In general it may be said that those who had a job and were not otherwise forced remained. That accounts for the high number among the schools of higher learning who remained in Germany. Those who left Germany generally worked for the government and had ceased to operate for private industry that had been either bombed out or dismantled. But even among those who lost their connections there were a great number who remained in Germany. Some have turned down the most tempting offers to leave the country. Among those who remained are Prof. Otto Hahn and Prof. Werner Heisenberg, the first of whom is the father of atomic energy research and the other was the first to apply the principle at atom-smashing. Both are at the Max Plank Institute in Goettingen. They are established in a new, modern institute and were very happy in their work when we visited them. A Professor Reppe preferred to stay in a detention camp in Germany when asked to go to the United States. When Professor Butenandt, who pioneered in synthetic rubber, turned down an offer to go to Switzerland, the students of the University of Tuebingen staged a large torchlight parade in honor of the renowned scientist, also the holder of a Nobel prize.

We have shown that in the early part of this chapter that on the basis of a breakdown of the industrial population of Western Germany, as against the same type of population in the eastern part of Germany, that there must have been three times as many scientists in the western part. Therefore, out of a total of 7,300, there are some 1,800 scientists in the eastern zone. As a great number fled out of the eastern part before the Soviets came in from the east, it is hardly possible that the number of top men that remained for the Soviets was more than one-third of that number, or 600. From our observations covering months of work over there, even one-third can be said to be a high average. In the case of the Zeiss experts, it was a whole lot less. And that was the largest industry in Germany in one place. The total number who went to France, England, Canada, Australia, Switzerland, in all probability reach 600. The testimony at the Fuchs investigation in Washington stated there were 600 scientists in the United States from Germany who worked in military plants alone, and that it was possible that the total German scientists in the United States at this time amounted to 2,000. This total of 600 for the Soviet Union, 600 for all the other countries of the Western World, and 2,000 in the United States would leave 4,108 scientists as still in Germany without any deductions for deaths or retirement.

This estimate of over 4,000 scientists still in Germany is confirmed, we estimate from a

source that has just been made available. One of our German correspondents writes us that a new handbook of German scientists has just been published listing 7,000 scientists as now employed in all German technical universities, music and art, colleges, scientific institutes, societies and periodicals. Evidently this new handbook includes professions and grades of teachers that we did not include in our table. However, the number listed in this new handbook confirms our estimate of over 4,000 German scientists, at the level discussed in this chapter.

Our estimate of 600 German scientists now in the Soviet Union is a figure that is arrived at after the sifting of a great amount of material and checking of data, in lieu of actual statistics. It is an answer to those who say that the Russians have the German scientists, whenever the weakness of the Soviet educational system is shown and wherever the quality of Soviet science is demonstrated. We have here shown that the number that the Soviets gained approximated the number that were gained by all the western powers, excluding the United States whose own particular acquisition therefore represents a clear advantage to the western powers, without any offsets. Then, when it is remembered that the gain by the United States is over and above what was needed, as the United States on its own possesses a preponderance of world know-how, it becomes unforgettably apparent how puny was the gain that the Soviets achieved through the German scientists.

The informant in Sweden says: "There are three Atomgrands. The one in the Kusbas region, the other near Lake Balkal, near the borders of Outer Mongolia and the third east of the Urals northwesterly of Magnitogorsk. The plants are underground. The Swedish sources claim that here laboratory bombs are produced under forced conditions under the orders of the Politburo, who are insisting on speed. But these sources say that the bomb the Soviets finally succeeded in making was not the bomb that had been used by the United States on July 15, 1945, at the Alamogordo Air Base in New Mexico and later against Japan. The Soviets lacked the knowledge of the proper amount of U-235 needed to touch off a fast chain reaction by the neutrons. So they developed a bomb that was similar to the one that the Germans had made experimentally during the war, using deuterium or heavy water. The Soviet bomb explosion of July 1949 does not prove that the Soviets now know as much as the western powers about the atom bomb. It does prove, however, that the Soviets are desperately trying to catch up to the knowledge that the western powers have of the atom bomb by taking short cuts. That explosion proves that the Soviets are at least 4 years behind and that the time lag is likely to continue, it may even increase, as the Soviets have the hardest work ahead of them in atom bomb production. It was harder for the United States to put the bomb into production than to find out how to make it. But the United States has solved the production problem. The Soviets must still start quantity production of uranium 235. Until she has a stockpile of the fissionable raw materials she will not have a single bomb, much less a stockpile."

RUSSIA AS AN INDUSTRIAL POWER BELONGS IN THE MINOR LEAGUE

Rather than rely on false Communist statistics we were interested in getting firsthand data on conditions in Russian industry. We thought it would be a very difficult job at the beginning to locate any great number of individuals who had recently left Russia and were in the states bordering on Russia. We found, however, that there were thousands of such individuals and our task was nowhere as difficult on this matter as we expected. As a matter of fact, any client himself, if he knows these languages, can

easily do the same thing we did to find out basic facts. We did not find a single person who was at all impressed with Russia's accomplishment in industry. What few good things she has are practically all imitations of the products of western countries, particularly Germany and America.

As an industrial power we found Russia about where the United States was in 1890 and 1900. As compared with either Germany or Japan, Russia's position is indeed pathetic. Most of the people interviewed were dumbfounded that Americans believed that Russia was making a real progress in industry. It is true she is making a few reasonably good armament products such as tanks, artillery, and certain types of short sawed-off guns. In modern warfare to succeed (as both Germany and Japan found out) one must be an all-around power and not have a few good specialized products.

Even a third-class industrial power can pull a surprise attack in a distant area of the world like Korea and look fairly good for a short time. But after the element of surprise is overcome then the inherent facts will come out that she simply has not got the stuff to play in the big league.

WE HAVE NO REASON TO FEAR RUSSIA OR CHINA

Just what goes on in the mind of the average American when he thinks of the United States fighting the 470,000,000 people of China? First, he has been sold a propaganda of fear so that the very thought frightens him. He reads detailed accounts about the wonders of the "crack" Fourth Route Army which the Chinese Reds propose to fight us with. Well, I have read account after account about the "crack" Red Chinese divisions, and you would gather from these accounts that practically every one of these Chinese soldiers was a West Point graduate. By what stretch of the imagination can one classify the Red Chinese divisions as crack divisions in western terms? Whom did they ever fight? Could it be that they got their reputation by running after the broken-down Chiang Kai-shek troops and that they proved themselves to be the better runners? Could it be that a miracle has been accomplished and that suddenly the illiterate Chinese are able to handle the modern machinery of modern war, thereby becoming fighters capable of getting "in the ring" with big timers?

Actually, I believe the attempt to scare the American people to death because of the prospect of fighting China calls for the belly laugh of all time. Here we have a country that has taken on and at the same time defeated the two greatest industrial powers in the world—Germany and Japan—and now we are supposed to shake in our boots at the prospect of fighting broken-down China. The very thought that you can scare people about all this is a good indication of the type of cockeyed thinking that is going on in this country. Let me give you a few A B C facts regarding China:

1. Believe it or not, there is not a single modern steel mill in all of China, and she is supposed to be able to fight a war.

2. In modern war, ground troops are a liability if they cannot be supplied with mechanized tanks and protected by air power consuming high-test airplane gas. For all practical purposes, there is not a gallon of high-test gas produced in China and her total production of crude oil is only 47,000 barrels a month. Can you imagine that? A little over 1,000 barrels a day which any single third-class industrial plant in the United States alone would consume.

3. As far as transportation in all of northern China is concerned, it is entirely done by horse and cart.

4. Believe it or not, as regards the making of modern weapons, China has no munition factories except for those making hand-made primitive weapons. Here is a country that is largely relying on American weapons

which our State Department practically presented them with at different times; or is relying on gifts of second-hand weapons from the Russian Reds, and which must be hauled overland thousands of miles. As contrasted with these primitive weapons, the United States has such powerful machines that on one single day this week they were able to wipe out 90 percent of a city of 85,000 people.

Frankly, I can only consider the attempts to measure the strength of China against that of the United States as a colossal joke. At the start of the Korean war, the Russian Reds were supposed to have hundreds of wonderful modern submarines ready to smash our Navy upon its arrival. When the showdown actually came with whatever submarines were there, they gracefully chose to say, "Excuse, please." Then, too, the Reds were supposed to have all types of planes that could run rings around the planes of the most modern and industrial power in the world. Again, after a few encounters they, too, followed the same course as the submarines in gracefully backing out. I am convinced that as stupid as the Russian leaders have proven themselves to be that they are not dumb enough to fight a war with us and lose face completely in Asia after seeing what happens to any primitive military and industrial country when it comes up against a first-class twentieth century power.

For that matter, let us look at a few simple A B C's as regards the difference between the horse-drawn civilization of the Russian Communists as against the mechanical power machine of the United States. The one figure that measures the power of a nation is the amount of mechanical horsepower produced in each country, whereas last year the United States controlled two-thirds of the world's horsepower and Russia controlled only 10 percent of the same horsepower. Here are the two figures in productive horsepower which show the power of the United States over that of Russia. In addition we show also the remaining horsepower in the rest of the world.

Comparative productive horsepower for the year 1950

		Percent
United States.....	6,452,000,000	65.0
U. S. S. R.....	984,000,000	10.0
Rest of world.....	2,495,000,000	25.0
World total---	9,932,000,000	100.0

ARE WE GOING TO FIGHT MIDGETS OR GIANTS?

If we were threatened with war by powerful industrial countries like Germany and Japan during the height of their power, we might have something to worry about. But I see absolutely nothing to be concerned about when we are being threatened by nations like Russia and China that are still using methods of the eighteenth and nineteenth centuries in order to conduct a war.

Now you can always built up a case to claim that the United States is completely unprepared as compared to previous wars which we decisively won. But actually, despite all the gloom, we are better prepared before the big battle with Russia starts than we have ever been in entering a war. In the first place, our Navy and merchant marine are just about 100-percent built already. Whereas at the beginning of World War II we had but a few Army camps ready, today we have all the Army camps of World War II available on a very short notice. At the beginning of World War II—when we fought the two greatest mass-production powers in the world at the same time in the case of Germany and Japan—we had but a modest aircraft production capacity. Today, this productive capacity is tremendous. China, on the other hand, does not have a single factory that can produce an airplane, and anyone who tries to win a war today

with manpower and not airplanes is just insane. Whereas Russia always has had a small airplane capacity compared to ours, and many of them producing wooden planes, our aircraft capacity as a result of World War II and the ensuing years is today by far the greatest of any country in the world. The plants do not have to be built, the men do not have to be trained, and the machine tools and metals are readily available. As contrasted with this, a substantial part of not only Russian aircraft plants, but every other type of plant was seriously damaged in World War II, whereas not a single American plant was damaged. One can safely say so soon after World War II that no country in all history ever had such a powerful armament machine ready to go into action on short notice.

Let's drop the old slogan, "See America First," and use instead "Know America First." Our organization, in its daily work, is familiar with a substantial part of this country's research of both a war and peacetime nature, and when you compare it with anything else in the world you just have to enjoy a good belly laugh. It would be one thing if the American scientific and industrial machine was just a theory which had never been tried and proven in actual practice. It was only a few years ago that it dumb-founded the entire world in its actual operation. How soon it is forgotten that, even before the postwar expansion of our industrial machine, during the last war it was turning out every single day of the year 4½ merchant vessels. Remember, this is not a month or a year, but 4½ merchant vessels every day. It was turning out over 1,800 airplanes a week and has still greater capacity for production today. It was also turning out Navy combatant vessels of different types at the rate of 1½ for every single day of the year.

We are firmly convinced that any reasonable analysis of comparative war strength between Russia and the United States is about as sensible as comparing the strength of an infant with a full-grown man. War is a mechanized thing today, and science, mass-production know-how, and oil have replaced men as its sinews. Don't be misled by the propaganda of fear which is the natural result of misinformation, and, above all, don't sell American industrial know-how short. We are the No. 1 power of the world and will continue to be for a long time.

WILLIAM J. BAXTER.

Consolidation of Veterans' Administration Offices

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

AMERICAN LEGION SERVICE COMMITTEE,
Jamaica, Long Island, August 10, 1951.

HON. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSWOMAN: You no doubt have received several letters concerning the transfer of the Veterans' Administration District Office which handled insurance and death claims to Philadelphia within the next 6 months, transfer to be completed within 18 months.

As rehabilitation chairman of the Tenth District (Nassau, Queens, and Suffolk) and service director of the Queens American Legion, I attended a special meeting held August 9, 1951, by the Queens County delegates, and it is our opinion that the following facts, if considered will be sufficient to warrant the cancellation of the present move which is certainly not a move toward economy. The American Legion believes in economy in Government expenses to keep down the tremendous income taxes.

However, this move by the Veterans' Administrator Gen. Carl A. Gray, Jr., is not an act of economy. This consolidation is an additional expense and burden upon our Government.

The following facts are as stated to the best of our knowledge and belief:

Whereas New York is a thickly populated veterans' area, and any move to another State would effect a great hardship on those doing business with the district office regarding loans, insurance and death cases, and for the widows and children who are beneficiaries of deceased veterans. Between the years 1928 and 1934 the New York regional office handled all claims of living and deceased veterans.

It has not been stated heretofore that on policies which have a loan value a veteran who needs money can go to this insurance company and get it immediately. It is false economy to say that these claims can be adjudicated through the mail box.

1. In urgent cases when a veteran appeared before 11 a. m. requesting an insurance loan he would have a check the same afternoon.

2. When a veteran died his claims folder being in the New York regional office was picked up, transferred to another section, adjudicated immediately upon proper credentials and for filing forms P 22, 530, and 534.

The two foregoing paragraphs are economy. The reason—no mail box, no transfer of case files from one State to another.

The consolidation of insurance and death claims at the regional office, 252 Seventh Avenue, New York, would effect economy. There would be no delay. A man could pay his premiums, borrow on his policy and upon his death the claims could be immediately adjudicated.

Therefore, we of Queens County American Legion ask our Congressmen to show General Gray that this is false economy, that the only way to effect economy in the Veterans' Administration is to consolidate the district office with the regional office.

The details involved in the moving, expediting of office equipment, required space to be made available in Philadelphia, and the great number of employees with families, owning their homes, which would have to be disposed of and which would entail a great loss, real-estate market being what it is today, all tend to show that the anticipated move is anything but economy.

Therefore, be it resolved to immediately abandon the moving of the district office to Philadelphia, Pa.

Respectfully,

MICHAEL J. OFFELT,
Rehabilitation Chairman, Tenth District,
New York, Service Director, Queens
County American Legion.

AUGUST 9, 1951.

HON. EDITH N. ROGERS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSWOMAN ROGERS: We, veterans of World War II, have just learned that you have introduced a resolution to rescind the so-called economy consolidation of the New York, Boston, Richmond, and Philadelphia offices of the Veterans' Administration.

It is with a sincere and appreciative feeling of gratitude that we take this opportunity to thank you for your spontaneous indignant reaction to a move which so completely disregards the principles of true economy and the welfare of loyal American war veterans. We wish to assure you that the stand you have taken is shared by all the able and sympathetic members of the New York delegation and by many of the delegations of other States.

It is gratifying to know that in our hour of need, we were fortunate to find men and women of your caliber in Congress who saw fit to champion the cause of the veteran.

Sincere thanks,

Herman Asners, John C. Schmidlin, Caslinne M. Anohor, Allen Schiff, New York, N. Y.; Marcus Hartman, Joseph F. Petendree, Bronx, N. Y.; Irving H. Richmond, John R. Pilazzo, Brooklyn, N. Y.; William Spina, Franklin Square, N. Y.; Joseph E. Jeantel, Corona, N. Y.; Charles Augere, Bronx, N. Y.; Sheldon Beeman, Brooklyn, N. Y.; Charles E. Franzinck, Staten Island, N. Y.; Louis Childs, Jamaica, N. Y.; Charles L. West, Marino M. Lewnes, Brooklyn, N. Y.; Domiano T. Coppa, Henry Holmes, Bronx, N. Y.; Ephraim Ed. Kaufman, Stanley Strumber, Brooklyn, N. Y.; David Lerner, Herbert J. Schming, Agnes J. Galm, Rafaela Santos, Arnold Shining, New York, N. Y.; David Fink, Bronx, N. Y.

THE AMERICAN LEGION,
New York, N. Y.

DEAR CONGRESSWOMAN: Under date of July 26, 1951, Carl R. Gray, Jr., administrator of Veterans' Affairs, issued a release announcing plans for the consolidation of the VA district offices now located in Boston, New York, Philadelphia, and Richmond, Va., into one area office to be located in Philadelphia. These offices handle the insurance and death claim benefits. Mr. Gray stated that this move will result in an estimated savings of nearly \$2,000,000 yearly.

We earnestly request that the two United States Senators from New York together with the State congressional delegation follow the example of the Massachusetts delegation and investigate the claims made by Mr. Gray as they effect New York State.

We believe that the figures as given out by Mr. Gray in his release as they relate to New York are erroneous and misleading. We are convinced that his plan will not bring about a saving by reason of the closing of the New York district office.

In the release Mr. Gray states: "The savings resulting from the abolishment of the New York district office alone have been estimated at \$1,000,000 a year. The figures include about \$478,000 in salaries; \$488,000 in rent and maintenance, and the remainder in other items such as communications and tabulating activities."

Further in the release regarding personnel Mr. Gray makes this statement: "Those now employed in the three district offices (Boston, New York, Richmond) will be given the opportunity to move to Philadelphia to work in the new office. Any vacancies created by VA employees not desiring to transfer will be filled locally." Judging from these two statements it would appear as though he would save \$478,000 on salaries in New York but spend that much in Philadelphia to replace them.

Regarding the saving of \$488,000 in rental, that too appears to be greatly exaggerated. First of all the VA occupies only a part of the building at 346 Broadway, or 180,000 square feet at a cost of \$1.25 per square foot or \$230,000. This figure would be brought down further by deducting the cost of space to be used in Philadelphia. Whatever saving

that might be made by moving to Philadelphia could be made right here in New York City by moving the district office to the VA building now housing the New York regional office at 252 Seventh Avenue where ample space is now available. Mr. Gray knows that 150,000 square feet was available in that building when he planned to move the activities of the Brooklyn regional office to that office several months back. It is still available.

We believe in fairness to all concerned that Mr. Gray should make available the exact figures showing actual savings, if any, that will accrue if this consolidation is carried out. That figure should take into consideration the actual rental cost of the space now occupied at 346 Broadway; the cost of moving this enormous activity to Philadelphia; the cost of space in Philadelphia for this New York case load; the cost of moving employees who would transfer to Philadelphia, and the cost of training new employees to take the place of those who would not make the change. Then deduct from that, the saving that could be made by consolidating the activities of the New York district office at 346 Broadway with the activities of the New York regional office at 252 Seventh Avenue where space is now available. We believe that the savings in dollars and cents for Uncle Sam, if any, will be greatly offset by the loss of employment for many with years of service in the VA; plus the loss of many employment opportunities in New York City, together with the disadvantage that VA clients will have to endure in securing that which they are rightfully entitled to by reason of the fact that the office administering these benefits is to be located many miles away in another State and city. Mr. Gray pointed out in his release that the new district office will continue to be as near as the corner mailbox for those paying their insurance premiums. For reasons known only to him he makes no statement regarding the many problems confronting claimants and service officers which cannot be handled or adjudicated through the corner mailbox.

Since 1923 the American Legion, through national convention mandates has been calling upon the Veterans' Administration to decentralize the adjudication of death and insurance claims to regional offices. These resolutions have been consistently and repeatedly presented to the Administrator of Veterans' Affairs. In 1950 the American Legion insurance advisory board, made up of leaders in the insurance field, went on record with the opinion that better service could be rendered policyholders and their beneficiaries if disability and death claims of United States Government life insurance and national service life insurance were settled at the regional office level, with centralization of premium payments and insurance underwriting.

The Veterans' Administration objection to our recommendation is that it would create an immediate need for additional personnel at the regional office level. We believe that a further study would reverse that opinion in view of the manpower needed to handle these cases in either the present district offices or the area offices contemplated in the new plan. The most important consideration overlooked by the Veterans' Administration is the difference in time required to adjudicate an insurance or death claim in an office far removed which has to be done through the corner mailbox as compared to the personal action that can be taken by all concerned in the regional office. That is a most important point that should be weighed when considering this matter.

Hon. EDITH NOURSE ROGERS in an article published in the CONGRESSIONAL RECORD, July 30, 1951, under extension of remarks, stated: "Taking the district office from Boston (the

same applies to New York) will be a great economic loss to that area, and give poorer service to veterans and their families and cause many to lose their jobs. The Veterans Administration was created to serve the veterans. Moving the office to Philadelphia will hurt that service."

Mr. Gray in his release stated that this move would be started in 6 months and completed in 18. It has been brought to our attention that the move has already been started.

Your individual and collective efforts in behalf of the veterans and their dependents in New York State will be appreciated.

Yours for the Legion,

JOSEPH P. PICCIRILLO,
Chairman, Department of Rehabilitation Committee.

Approved by:

Dr. JOSEPH R. HAWN,
Department Commander.

P S.—The enclosed resolution regarding this move was adopted at the Nassau County convention. It will be confirmed and adopted at the department of New York convention scheduled to be held in New York City, August 9, 10, and 11, 1951.

Salute to Sweden

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. SIEMINSKI. Mr. Speaker, in our prayers for the release not only of Bill Oatis and of Frank Noel, Associated Press men, but of all people suffering at the hands of Communist captors, surely there is room in our hearts for an expression of gratitude to a gallant friend of freedom. I refer to Sweden.

Bold in its stand against Red demands for their return, chivalrous Sweden has offered sanctuary to the 12 seamen and the 4 flyers who recently fled the barbaric tyranny of the Soviet-controlled Warsaw regime.

Yesterday I requested the Department of State to transmit a letter of thanks for the above to His Majesty, the King of Sweden.

Mr. Speaker, with your kind permission, I should like to list below, my letter:

CONGRESS OF THE UNITED STATES,
House of Representatives,
Washington, D. C., August 13, 1951.

His Majesty GUSTAVUS VI ADOLF,
King of Sweden.

MY DEAR KING GUSTAVUS: Would you please accept these humble thanks from the Representative of the Thirteenth Congressional District of New Jersey for the gallant place your country is taking in the fight for freedom.

I refer especially to the courageous action taken by members of Your Majesty's Government relative the recent escapees from Communist-dominated, Communist-despised Poland.

True to the traditions of your great people and your glorious kings, I am sure that you will not fail at any grunts that might be snorted from the direction of the Soviet bear for the release of these unfortunates.

I beg of you, King Gustavus, please do not repeat the tragic error that we made at the

end of the World War II, when we considered the Soviet a true and honorable military ally, and turned back to them, unwilling and unfortunate prisoners of war—to be slaughtered. We have learned our lesson.

May the glory of God shine on you and your people for this kindness.

Sincerely,

ALFRED D. SIEMINSKI,
Member of Congress.

Patriotic American—Alfred Kohlberg

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, these days a person who seriously exercises his energies in behalf of what he believes is best for America never knows whether he will be praised or damned for his efforts.

Alfred Kohlberg, an American merchant, has done a great deal of business with the people of China for many years. As a result of these personal contacts with the Chinese people he foresaw long ago the tragic course of our foreign policy in the Far East. His strenuous efforts to awaken the people in America, both in and out of the Government, to the Communist danger in China has brought him considerable abuse by those who would defend our ill-fated policy in China.

The Passionist Fathers, a Catholic missionary society, who have engaged in missionary work in China for many years, recognize Kohlberg for the true American patriot that he is. I include herewith the following article about Mr. Kohlberg, which appeared in the June 1951 issue of the Sign, a magazine published by the Passionist Fathers:

ONE-MAN CRUSADE—ALFRED KOHLBERG, No. 1 HEADACHE OF THE COMRADES, PARTICULARLY THOSE WHO FOULED UP OUR CHINA POLICY
(By Irene Corbally Kuhn)

One day last January, Government truckmen, armed with a Senate subpoena, pulled up at a farm near Lee, Mass., and hauled away 70 metal files of correspondence and documents stored there by the Institute of Pacific Relations. Whatever the outcome of the congressional inquiry based on the haul, it marked the climax of a process begun 5 years earlier by a stubborn little patriot named Alfred Kohlberg—importer, philanthropist, and self-educated authority on communism and far-eastern affairs.

Having stumbled on what, in his view, looked remarkably like Red skulduggery in the Institute—of which he was an active member—Kohlberg had launched a one-man campaign for an honest investigation of the outfit. Stymied in this effort, smeared for his pains, he dug in still deeper. And once aroused by the odor of Communist infiltration, he followed its trail in a dozen different directions. By this time, it is safe to surmise, he must be regarded by the comrades and their camp followers as their No. 1 headache.

The State Department's Far East policy has been the chief object of his bulldoglike min-

istrations. During the Tydings committee whitewash hearings last fall, those growing out of Senator JOE MCCARTHY's charges, Kohlberg was billed by hostile commentators, quite erroneously, as the bete noire behind the Wisconsin marine. His influence has been suspected, quite correctly, behind such anti-Communist enterprises as the American China Policy Association, the newsletter, Counterattack (famous for its publication of Red channels), the now-defunct monthly, Plain Talk, its current fortnightly successor, the Freeman, and the American Jewish League Against Communism. Indeed, whenever a new drive against the Stalinist brethren is in the news, it has become routine to look for this calm, quiet-spoken, relentless businessman behind the scenes.

It was back in January 1946 that high officials of our State Department became aware of a persistent buzzing and ringing in their heads and ears. The more they shook their heads, the more insistent the noise. They did not realize it then, but Alfred Kohlberg had initiated his private war on their far-eastern policy. Now, 5 years later, the war is still raging. There have been no conclusive victories on either side. But in the swift, bloody rush of history in Asia, Kohlberg has chalked up a depressing number of pyrrhic victories as time and again his predictions of catastrophe for Uncle Sam in that part of the world have become tragic actualities.

When the first small rockslides of Kohlberg's avalanche of criticism and protest began falling on the heads of the State Department officers, they were dismissed or ignored. No one "important" in the Department had ever heard of him. He was not an "expert" in the diplomats' sense of the word and apparently represented only his obscure self. His views, therefore, were considered worthless by the code-and-courier crowd. They have changed their minds since then.

State Department officials were not alone in their ignorance of Alfred Kohlberg. Beyond his business circle, his neighbors in suburban Bronxville, a small group of old China hands, and an even smaller group of long-time militant anti-Communists, few other Americans knew his name. And even among his professional colleagues and personal associates, few knew him really well. He is a man adept at protective coloring.

Faintly rotund, prematurely bald, and with a curiously enigmatic smile as his constant expression, he might have sat as the original model for the Chinese god of happiness. Although well-to-do, he is indifferent to externals and to any kind of show, and has been called by his friends "the worst-dressed man in New York," an accolade that merely makes him chuckle. He has extraordinary poise and coolness and a dry, crackling, subtly sarcastic wit. He has the unusual ability of making his personality felt as a strong, vital force even when he is merely sitting quiet, listening. In an argument, he is a deadly sure shot, developing his point of view deftly and then waiting for the proper moment to demolish an opponent's stand with one piece of indubitable fact, presented with sweet reasonableness. Like a plastic toy loaded at the base, he cannot be toppled, no matter how far he is pushed.

Nor will he compromise on a principle; once he has determined the principle at issue, nothing will shake him from it. He does not, for example, weaken his position by admitting flaws on his own side. One long-time friend said of him: "Alfred doesn't make the mistake of being a liberal who dilutes his views. He has a kind of narrow militancy about them that strengthens them beyond measure. He's a man of firm convictions—not merely opinions—a natural-born fighter."

Kohlberg's militancy in political convictions came relatively early in life. He was among the Republican rebels who split from the party in 1912 to support Theodore Roosevelt and his liberal Bull Moose campaign. Since then he has returned to the Republican fold, but he still considers himself a liberal in the original definition, holding to government by law instead of by administrative fiat.

By far the greater part of his energies until about 10 years ago, however, was devoted to his business—the importing of Chinese textiles and embroidered linens. It was a business he had begun in San Francisco, his birthplace, after schooling in the University of California and a brief career in job printing.

Kohlberg is gifted with daring practicality, willingness to try anything, and sympathetic understanding of other minds, which he has been able to put to good use in commerce. Almost single-handedly, he built up a real cottage industry in southeastern China, supplying linens from Ireland, basic designs from the United States. Shortly before the outbreak of the Sino-Japanese war in 1937, he had 100,000 Chinese needlewomen, working under contractors, readying linens for export to him.

His enlightened business methods have made his firm an outstanding one and have paid off in unusual human dividends. Virtually all his employees own stock in the company; most have been with him anywhere from 10 to 25 years. In China he has built a reputation over the years for scrupulous honesty and fair dealing.

When he returned to China after the war, when his business had been suspended for the duration of the hostilities, he found that he had been repaid in kind. At the time of Pearl Harbor, Kohlberg's firm had 3,500,000 pieces in work in China. When the Japanese struck, he simply wrote off that shipment as a complete loss. Early in 1946, however, he discovered that his workers had managed to store away nearly 70 percent, secreting it from the Japanese behind false walls or in underground caches. Some of the Chinese had gone to great lengths, often at great personal expense, to hold up what they considered their end of the bargain. They had salvaged for him more than \$100,000 in goods.

As a matter of course, Kohlberg took over all living expenses for his employees in China for the 4 years of the war. "They risked their lives to fulfill their contract and save my goods, even when they could have made a fortune from selling them in the black markets," he says, matter of factly. "I just put them back in business."

That reputation for fair dealing which paid off so handsomely in China is as much a part of Kohlberg as his skin. When he returned with this unexpected bonanza, he was in a position to corner the embroidered linen market, had he been so minded. Instead, he advertised to his old customers that he could take care of them on the basis of prewar goods at prewar prices. "Anybody else," a business competitor said, "would have taken advantage of that kind of situation to exploit the market. It was typical of Alfred that he didn't."

In prewar days, Kohlberg had made some 35 trips to the Orient. When we went to war with Japan, Kohlberg, then 55 years old, volunteered his services. He was an old hand at cross-country and all-weather flying. The Army Air Force used him as a pilot in the antisubmarine patrol of the Gulf of Mexico, flying protection for the convoys.

Later, still during the war, as a director and chairman of the executive committee of the American Bureau for Medical Aid to China, he continued to fly on periodic inspection trips. Despite his long business

association with China, his many friendships among the Chinese, he neither speaks nor understands Chinese. But he never let this handicap his movements. Repeatedly, without an interpreter, he struck out deep into the interior of China, to tiny villages and settlements, isolated Chinese army camps and training schools, to see for himself how American medical supplies were being used.

On one of these trips, quite by accident, he stumbled on what was to become his major concern and preoccupation in the years that followed. The seemingly phlegmatic business man was converted into a focused one-man crusader against Communist influences in American life and especially American policy in Asia.

"It was in 1943," he recalls. "I was in Chungking and got to talking to some of our Embassy officials there. They told me that Chiang Kai-shek was stockpiling tanks and guns he'd got from us under lend lease, hoarding them for future use against the Chinese Communists. He wasn't using them against the Japanese, they said.

"I got kind of sore at that, and a few weeks later, in Kunming, I repeated these charges to Brigadier General Arms, who was in charge of the infantry training school there, under Stilwell, preparing Chinese forces for the Burma campaign. I asked the general why we had no control over Lend-Lease equipment for China. 'But we do' General Arms told me. I insisted that I knew differently and repeated what I'd been told at the Embassy in Chungking. The general just looked at me a moment and then proceeded to give me the low-down facts."

The gist of it was that everything by way of munitions that had come into China had been delivered to him. The Chinese had received nothing directly as yet, and were not going to get one gun or one round of ammunition until Stilwell's forces were fully supplied.

"This was in August, 1943," Kohlberg said. "Nothing came through from us on lend-lease for the Chinese armies until the autumn of 1944. The Embassy story was made up out of whole cloth. The Nationalists couldn't have hoarded anything because they hadn't received anything."

Kohlberg was extremely disturbed. Why should American diplomats go out of their way to discredit our Chinese ally? He found other lies being circulated, a pattern of hostile propaganda.

"At first," he explains, "I didn't attribute it to Communist influence. A man doesn't think right off of traitors in his own government. I thought of them as liars, not Communists. Then I began looking into the Institute of Pacific Relations, to which I'd contributed time and money—I was still giving money to it then. The IPR was full of men who prattled the same line as those officials in Chungking. And the State Department, I knew, was drawing a lot of its personnel and consultants from the IPR."

Kohlberg did a simple thing which clinched his suspicions. He went back over a year of the institute's publications, pronouncements, and activities. Nearly all of these, he discovered, ran fairly parallel to the Communist Party line on China. He wrote an 88-page pamphlet detailing his findings and conclusions and sent it, plus an open letter, to all trustees of the organization as well as others interested in the Far East.

A hot controversy was touched off. The IPR board retaliated by attacking Kohlberg. He tried, without success, to get the story before the American public. He began to realize that there was a pattern to it all and to understand that it was a pattern designed by Communist-minded strategists. While there were a great many well-meaning innocents at the top of the institute roster, he found, the mischief was down below on the

operational level. It was there that his demand for an objective investigation by neutral outside people was blocked.

Characteristically, Kohlberg began to read his way through Marx's Das Kapital, the Communist manifesto, the constitution of the USSR, proceedings of Communist International Congresses. When he felt he was adequately fortified by knowledge of communism and its methods, he carried the war to the enemy. In 1946, he founded the American China Policy Association, a group of American experts on China dedicated to exposing the Communist direction of the campaign against Chiang Kai-shek's Nationalist regime and to informing the American people of the nature of the menace to the United States of America in a communized China. A barrage of carefully documented pamphlets and hard-hitting open letters poured out from the association headquarters. These were usually addressed to the Secretary of State, the President, or influential Members of Congress, and frequently revealed unpublished or suppressed information.

Kohlberg's tactics soon began to make an impression. Owen Lattimore, State Department consultant, charged that Kohlberg was in the pay of the Nationalist Government and was, besides, the undercover head of a China lobby. Both charges were absurd myths and merely gave Kohlberg more opportunities to ask embarrassing questions about Lattimore and his friends in relation to American policies that were clearing the road to power for Stalin's Chinese puppets.

The charges, however, were eagerly picked up and elaborated by self-styled liberal publications and commentators. Kohlberg's repeated demands that he be heard by congressional committees where he was being smeared were simply ignored. Only the Department of Internal Revenue took official cognizance of the accusations—by seeking evidence of those fabled payments from the Chinese Treasury.

After 2 months' combing of both Kohlberg's and his wife's financial affairs, the agent reported that Kohlberg had overpaid taxes in the amounts of \$188 and \$108 in 1946 and 1947, respectfully. Kohlberg, an inveterate letter writer, sent a caustic letter to Secretary of the Treasury Snyder in which he commented acidly on the deplorable waste of time and money involved in the just-concluded investigation. Shortly thereafter, he received a bill for \$32,000 from the Internal Revenue office for items it had decided, on second thought, to disallow as deductible after having approved them. He was delighted—it was just the kind of fight he likes, and he is now cheerfully engaged in court action on the issue. In any event, no slightest trace of the mythical Chinese payments showed up.

Since his introduction to the workings of the Communist conspiracy in China, Kohlberg has steadily broadened his campaign against it. He has contributed thousands of dollars to the fight and keeps his check-book handy, though he is the shrewd businessman at all times in judging worth-while anti-Communist causes. He has arranged his business affairs so that he now devotes about two-thirds of his time to reading, lecturing, writing to defeat communism.

Kohlberg views the torrid controversy on our Far East policy, which he helped expose, with quiet detachment and even a certain amount of mordant humor. Like the still, fixed eye of the tornado, he rides calmly in the center, unruffled by the violence of the forces around him. He doesn't deny that he enjoys his role enormously. It provides a perfect outlet for his combative propensities, his brimming sense of satire and, above all, his old-fashioned American patriotism.

All Must Share Blame With West Pointers

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. ANGELL. Mr. Speaker, pursuant to leave granted, I am including as part of these remarks an editorial from the August 7 issue of the Oregon Journal entitled "All Must Share Blame With West Pointers" which is well worth a wide reading audience. The editorial follows:

ALL MUST SHARE BLAME WITH WEST POINTERS

The I-get-by policy of many Americans is bearing sorry fruit. The belief that the real crime consists in getting caught rather than in the cheating or the misconduct is held by all-too-many Americans. And the West Point scandal proves it.

West Point is not the only school where cheating goes on. It is doubtful whether many high schools and colleges are free from it. Even honor system schools run up against the principle ingrained in most persons against reporting on our mates. As children in kindergarten we learned not to be "tattletales" before we learned our A B C's. Squealers and informers are disliked. We are told to be good sports. The honor system must break down that prejudice before it can succeed. The West Point cadets admit they shielded their friends.

Football is taking a beating for its professionalism and its demands on the players—but note that of the 90 suspended at the academy only 44 were players. Thus the explanation for cheating is an excuse and not the reason, although it may have contributed.

Faculty members cannot be in the clear. The stupidest of professors must have detected cheating since the West Point trial admittedly goes back several years. Honor system or no honor system, they have their responsibilities. In some schools football-crazy enthusiasts on the faculty have conspired at making ineligible men eligible to play football. And fellow students often pass their completed papers to distressed fellow classmates who are close to the borderline. School pride and spirit, you know. Bill has got to be in the lineup Saturday—or we get licked by Mudtown U.

Congress now turns a sour eye on the Academy. Football must be deprofessionalized. Yes, but how about the special trains that carry Senators and Representatives to the Annapolis-West Point game each year?

And what is more important, how about Congressman BREHM, convicted of demanding kick-backs from old women employed in his office, still sitting in Congress and making laws for us taxpayers?

And what about us? Did you pad your expense account when you made your last income tax? Did you list every dollar of income or cheat some on your own account?

Where does this little white lie and cheating really originate? Did the West Point cadets come from homes where it was condoned?

If football takes too much time—and it does—then let's reduce the pressure by fewer games. Place less emphasis on profit for the college involved. West Point is spending \$300,000 football profits on a plushy golf course.

Cheating at West Point or any other school is inexcusable. Gentlemen and officers are not cheats—or should not be, but some

highly placed Army officers have got away with sickening lack of morality and been protected by their superiors.

The issues contain a lot of "if's" as indicated. There should be a way to salvage these men, not bad fellows at heart. The lesson is a tough one. It should have been prevented, and could have been, by better faculty supervision.

But, obviously, stealing Army commissions—that is what cheating at West Point means—must be ended.

The Nation, however, stands indicted with the disgraced cadets—the administration, Congress, the Academy faculty, and all of us who believe that discipline and morals and honesty are mere words.

Definite Action Needed

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD the following editorial from the New York World-Telegram of August 13, 1951.

Mr. Speaker, William N. Oatis is a young American, jailed on trumped-up charges by a cynical and sinister foreign power, and as such he is entitled to expect this country to intercede for him and to take the most vigorous and even drastic action necessary to effectuate his release.

But, as this editorial points out, the Oatis case is only the culmination of a long and intolerable series of actions against American nationals living and working behind the iron curtain. However, as a newspaperman, Bill Oatis happens to symbolize one of the great freedoms for which America stands—one of the freedoms without which liberty cannot exist—freedom of information and of the press. If we are going to temporize on the Oatis case, returning "a tap on the wrist for a kick in the pants," then we had better advise freemen everywhere to abandon the ramparts and take to the storm cellars.

FUTILITY OF TIT FOR TAT

Every time the Communists say a bad word to us, we reply in kind, although usually after our officials have taken 2 or 3 weeks to make up their minds. And every time they kick one of our guys in the pants, we tap one of theirs on the wrist.

This might be amusing, or no worse than irksome, if it were a couple of boys in a shin-skinning contest.

This is not a diplomatic tea-table brawl. It is a war, a fighting war on some fronts, a war of nerves and propaganda on others, much of it a war of economic maneuver and political manipulation.

The point is, they always are on the initiative. If they are slowed or stopped on one front, they break out elsewhere. Whether it is a big or little incident, it always is their incident. Our action is purely defensive.

ALWAYS ON THE DEFENSIVE

This time it is the Communists in Poland, ordering us to shut down our information service in Warsaw, although under the usual

Communist restrictions it could not have been of much use.

So we counterpunch by telling the Red Poles to close down their propaganda office in New York.

It was the same with the other Russian satellites.

The Rumanians expelled our information service in Bucharest. In return, we closed their commercial office in New York. When they restricted the travel of American officials in Rumania, we did the same to their officials in Washington. When they said two of our diplomats had to leave, we sent two of theirs home.

After Hungary had jailed and abused American citizens in that country, and otherwise insulted and humiliated the United States, we closed up their consulates here.

We broke off diplomatic relations with Bulgaria, but only after they had beaten us to it by declaring our minister there "persona non grata."

DEFINITE ACTION NEEDED

In Czechoslovakia, William N. Oatis, an American newspaperman, has been in a Communist jail since April. After a rigged trial, he was sentenced to 10 years.

Our State Department has cried out in anguish, deplored, condemned, and railed at this outrage.

But we have just received a new Czech Ambassador in this country. We have not jailed, ejected, or restricted any Czech Communists—nor any of their Russian mentors. We have not cut off trade or diplomatic relations.

Congressional proposals for strong retaliation against the Czech Communists have been opposed by State Department lobbying.

Speaking out of his long experience in trying to deal with Communists, Gen. Mark Clark said recently that whenever the Russians have been met by definite action, not appeasement, "that's when they stopped and listened."

The actions of the satellites are all part of the same Russian pattern—the same Russian purpose. The Communists will not be deterred or stopped by minor reprisals.

If the Reds and their stooges will not do business on a dignified, decent basis, then there is no gain in trying to do business with them at all. It is neither becoming nor useful for a great nation like the United States to engage in purely defensive tit-for-tat with such people.

Veto of H. R. 3193 and 3549

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams:

WASHINGTON, D. C., August 10, 1951.

HON. EDITH NOURSE ROGERS,

House Office Building:

Principles involved in veto messages on H. R. 3193 and 3549 demand passage over objections. Cost involved is negligible when measured against need for relief. We join with other veterans in asking that you use your influence to have House override.

E. B. MATTHIAS,

Chairman for Legislation,
United Spanish War Veterans.

CAPE MAY COURT HOUSE, N. J.,

August 13, 1951.

HON. EDITH N. ROGERS,

House of Representatives,

Washington, D. C.:

My congratulations to you for asking Congress to override the President's veto of H. R. 3193 and H. R. 3549. I shall endeavor to send you my 20 veterans' organizations support. Keep up the good work.

Sincerely,

ANTHONY J. VOLTE,

Cape May County Service Officer.

A Few Kind Words for Harry Truman

EXTENSION OF REMARKS

OF

HON. ERNEST W. MCFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. MCFARLAND. Mr. President, I ask unanimous consent to have printed in the RECORD an article by one of the leading American historians, Henry Steele Commager, on the record of President Truman. The article, entitled "A Few Kind Words for Harry Truman," appears in the current issue of Look magazine.

Mr. Commager points out that President Truman has done more to fight the forces of aggressive communism than any other world leader, with the possible exception of Winston Churchill. He expresses the belief that the verdict of history will find that the Truman administration made many great advances for America and the free world.

I am fully convinced that many of the political attacks now being launched against the President will prove to be the manufactured products of cynical critics. I think Harry Truman is a great American, and I am glad to see a historian of Mr. Commager's stature giving recognition to Mr. Truman's courage and vision. I do not agree with some of Mr. Commager's criticisms of Congress, but I do believe that his article comes close to being a correct picture of the major achievements of a fine Democratic President.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A FEW KIND WORDS FOR HARRY TRUMAN—WHEN HISTORY BRINGS IN ITS VERDICT WE MAY FIND OUT THAT HE HAS BEEN DOING AN OUTSTANDING JOB AS PRESIDENT

(By Henry Steele Commager)

Some months ago President Truman, smarting perhaps under criticism which had reached new heights, or depths, of billingsgate, observed that the final verdict on a President cannot be made in less than a generation; and that when it comes it will emphasize not the day-by-day squabbles of party politics but the great positive achievements. He believed, he added, that there were a number of these to the credit of his own administration.

He was right on both counts. He was right in saying that the verdicts of contemporary critics and of the historian rarely agree. Every one of those Presidents whom we now call great was denounced by his contemporaries as a weakling or a tyrant, a tool

of the privileged interests or a demagogue, a marplot or a traitor.

Washington himself was not immune from this kind of abuse. The last years of his Presidency were embittered by a campaign of vilification. Jefferson was denounced as an atheist, a tool of the Jacobins (the Communists of that day), a demagogue, a tyrant, a coward, a liar, and almost everything else that those past masters of invective, the New England Federalists, could think of.

Jackson was portrayed as ignorant, illiterate, and uncouth, denounced as "King Andrew," charged with immorality and even with murder. Lincoln was reviled for his lowly birth, compared in appearance to an ape or a baboon, accused of telling ribald stories on battlefields and funny stories at Cabinet meetings, charged with subverting the laws and the Constitution, with reckless interference with the military conduct of the war, with blundering in the domestic and incompetence in the foreign fields.

The vilification heaped on Wilson passed the bounds of decency. He was a dictator and a tyrant; he had abandoned the Monroe Doctrine; he had pusillanimously surrendered to Mexico; he had lowered the Stars and Stripes over the Panama Canal; he was immoral in private life as in public.

The attacks on Franklin D. Roosevelt are so fresh in our minds that we can still blush for them; nothing, apparently, was too indecent or too profane for his opponents to say. He was a traitor to his class and eventually to his country; he had sold out to the British and then to the Communists; he fomented class war, he undermined private enterprise, he tried to destroy the American system; he joined hands with the spoliemen and bosses to corrupt the Government. And, as Roosevelt said in his teamsters' union speech, not content with attacking him, his critics attacked his little dog, Fala.

So in a sense Truman shouldn't complain. He is in good company. And he doubtless knows enough about American politics to know that this is what a President has to expect. It was Horace Greely, Presidential candidate in 1872, who said he didn't know whether he was running for the Presidency or for the penitentiary. Yet, in another sense, Truman has a right to feel aggrieved. He might well ask what it is that he has done.

By all normal standards, his administration has been one of almost uninterrupted and unparalleled success.

At no previous time have Americans enjoyed such widespread prosperity. Unemployment has all but disappeared; farm income and labor income are higher than ever before in peacetime, and even corporation income and dividends are at an all-time high. There have been no great crises in domestic affairs—unless inflation is such a crisis, and Truman has fought inflation consistently.

In world affairs, American power and prestige remain high. So President Truman is probably right in asserting that the verdict of history will not be the same as the verdict of contemporary critics.

It is a pretty safe prophecy, too, that Truman is right on his second point—that history will credit his administration with important achievements. For 6 years now, while critics have belabored Truman for venial sins, for tolerating a General Vaughan, for permitting the taint of corruption to reach high places, for replacing faithful New Dealers with cronies who have no real interest in progressivism, for loyalty to friends instead of to principles—Truman has gone ahead and chalked up one achievement after another in both foreign and domestic affairs.

The most important accomplishments are clearly in the foreign field. If we are to generalize here, we can say that no other President except Wilson and Franklin D. Roosevelt

has appreciated as fully the extent to which American power involves American responsibility.

In foreign relations, President Truman has revealed a firm grasp on the necessity of combining vigor with moderation, generosity with tolerance, a zeal for peace along with readiness for war. Here he has displayed an understanding of the nature of the problems confronting the democratic world.

Perhaps the first indication of this came with the President's advocacy of a substantial loan to Britain—a proposal which had the isolationists fighting George III all over again. The loan bill was passed and that money primed the pump of British economy, enabling it to start on the road to recovery. Soon there was a more serious challenge to American resourcefulness and readiness. When, early in 1947, the British announced that they were no longer able to carry the burden of the defense of Greece, Truman moved quickly to take over the responsibilities they had theretofore fulfilled. He seized the opportunity not only to save Greece from Communist domination but to promulgate what is known as the Truman doctrine.

One of the primary objectives of the foreign policy of the United States (he said in a message to Congress) is the "creation of conditions in which we and other nations will be able to work out a way of life free from coercion. . . . It must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures."

ACHESON SPEAKS OUT

After the Truman policy declaration, and after military aid to Greece, came the Marshall plan. It was in May 1947, that Under Secretary of State Dean Acheson announced that Europe must be made self-supporting and that the United States was prepared to help out to that end. The next month, Secretary of State George C. Marshall, in an address at Harvard, elaborated on this theme. Britain, France, and other western European nations responded with enthusiasm; and out of all this came the European Recovery Program—a program that pledged the United States to finance European economic recovery over a period of 4 or 5 years.

In boldness, in hard-headed realism, in imagination and vision, it was a program comparable to lend-lease. Republicans fought the proposal as they had fought lend-lease, as for that matter they had fought every major item in the program of internationalism. But after a full-dress debate, and after the Russians moved into Czechoslovakia, ERP went through, and an initial appropriation of \$4,000,000,000 guaranteed a fair trial. That it has been successful beyond even the hopes of its sponsors is a matter of record.

Economic aid was crucial, and with that aid Western Europe started on the long road to recovery. But ERP was designed for Europe only. Already President Truman was contemplating American aid on an even larger scale. Even American resources would not stretch to Marshall plans for every continent, but American resources in skills, techniques, organization, and brains might be still more valuable than American money.

That was the principle behind the famous point 4 proposed in Truman's inaugural address. Point 4 caught the imagination of the world. But a reluctant Congress made only grudging appropriations, and for 2 years the program has limped along without accomplishing what was expected of it.

Economic recovery of Europe was a long-range affair. Before it was even partially complete Russia might strike or might persuade Communist elements in Western European countries to revolt. To strengthen immediate barriers against communism, Tru-

man next proposed a military pact. "The determination of the free countries to protect themselves," he said, "will be matched by an equal determination on our part to help them to do so."

The idea of a powerful Anglo-American alliance had been broached by Winston Churchill in his Fulton, Mo., address, and Churchill, too, had worked for the creation of Western European union. Now Truman proposed that the United States move in with large-scale military aid to supplement the large-scale economic aid already transforming European economies.

Out of this came the Atlantic Pact—the first peacetime military alliance in our history. It provided that "an armed attack against one or more of the members should be considered an attack against them all." And when Truman persuaded Gen. Dwight D. Eisenhower to take the post of supreme commander and weld together the disparate defense systems of Western Europe the military balance of power in Europe began to right itself.

THE REPUBLICAN CHALLENGE

The Atlantic Pact was passed with bipartisan support, but when, in 1951, there came the problem of implementing it with American troops, the Republicans went into the opposition. That opposition took the form not only of challenging the possibility and the value of saving Western Europe but of challenging the Presidential power over the Nation's Armed Forces. This was the kind of challenge that Truman could not avoid and would not have avoided if he could have done so. Clearly, he had the Constitution on his side, and history and common sense as well. President Truman won a practical victory, though not a complete one, in that historic debate.

In other fields too, Truman's foreign policy will appeal hopefully for a favorable verdict from history. When, in 1948, the Soviet took advantage of a failure in the Potsdam agreement to provide for American access to Berlin and instituted a blockade, Truman met the challenge with the spectacularly successful airlift. Later, his administration formulated a German policy that went far to bring Germany back into the family of Western nations and to heal some of the deep wounds of war. When there appeared some danger of Italy's going Communist, the Truman administration moved to meet the crisis—and met it.

Thus, even before the Korean crisis, President Truman had displayed in the field of foreign relations firmness, vigor, courage, and vision. The invasion of South Korea presented a challenge to the United States and the United Nations firmness, vigor, courage and again Truman acted with boldness.

HE DID NOT DRIFT

We have only to contrast this action with the shilly-shallying of American policy toward the Manchuria invasion of 20 years ago or toward Mussolini's attack on Ethiopia, to appreciate the extent to which Truman had learned the lessons of history.

The invasion of Korea had another consequence of far-reaching importance. Ever since his accession to office, Truman had been calling for the rebuilding of our Armed Forces and the development of our military productive capacity.

To most of this program, Congress was deaf. The Korean War speedily changed the situation. Under the compelling pressure of military realities, Congress accepted the Truman program, voted immense sums for the military, stepped up taxes, organized production and created an army big enough to meet aggression wherever aggression should strike.

That Truman's record is less impressive in the domestic than in the foreign field

will not be denied. He has not been able to carry Congress with him. Nevertheless, the Truman administration will be credited with the following body of domestic legislation: The reorganization of Congress; a National Security Act unifying the armed services; an Atomic Energy Act that guarantees civilian control of the whole atomic-energy program and greatly enlarges that program; an act increasing the number of displaced persons who might come to the United States; increasing Federal aid to education; the extension and liberalizing of social security; steady advances in the field of civil rights; progress in slum clearance and housing, and the maintenance of rent control.

Two negative acts may be counted in the long run, as important as any positive acts. These are the veto of a bill that would have handed over the immeasurably valuable tidelands oil, property of the whole American Nation, to a few States and the veto of another bill that would have exempted natural gas from Federal regulation.

The list of proposals that President Truman has urged upon Congress and the Congress has rejected makes, it is fairly safe to say, a record that will not redound to his discredit. Congress has refused him an effective civil-rights bill; it has refused effective measures against inflation; it has ignored suggestions for further Federal aid to schools and public health; it has rejected a far-sighted conservation program; it has failed to act on findings of investigations of monopolies.

All in all, here is a record that is not only respectable but impressive. We cannot know what verdict history will pronounce upon it, but we can make a pretty good guess.

THE TRUMAN PARADOX

It will perhaps record the curious paradox that a man charged with being soft on communism has done more than any other leader in the Western World, with the exception of Churchill, to contain communism; that a man charged with mediocrity has launched a whole series of far-sighted plans for world reconstruction; that a man accused of being an enemy to private enterprise has been head of the Government during the period of greatest prosperity for private enterprise; that a man accused of betraying the New Deal has fought one Congress after another for progressive legislation.

A good part of the hostility to President Truman is like the hostility to Secretary Acheson; it means merely that the opposition wants an issue and a victim. That there are many things amiss with the Truman administration no one in his senses will deny. But it seems clear that the verdict is so far favorable, and that much of the criticism that fills the air is directed not to Truman's failings but to his successes.

A New Look at Public Housing

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. PHILLIPS. Mr. Speaker, under leave to extend my remarks, I call attention to the figures in an editorial from the Los Angeles Times of August 9, 1951. I hope, Mr. Speaker, you will observe several details; for example, local industry will build for \$5,000 a unit the housing which costs the Federal Gov-

ernment \$11,000 a unit. Observe also that Los Angeles has 2,000 empty units renting for \$40 or less. Most important, that of the future influence on units and taxes of a movement which controls approximately 5 percent of the city's rentals.

The editorial follows:

A NEW LOOK AT PUBLIC HOUSING

When the Federal Housing Act of 1949 was passed, the mayor of Los Angeles, armed with the prescribed resolution of cooperation from the city council, hurried to Washington to get a cut of the boodle. He came home with an authorization for 10,000 low-rental housing units—\$110,000,000 worth.

A STARTLING PICTURE

The attitude was, at the time, that if they were going to hand out Federal largesse Los Angeles should not lose its place in line. Now, 2 years later, there are some misgivings about this housing boon, guaranteed by the Federal Treasury. It now seems likely that the 11 housing projects will cost Los Angeles taxpayers something after all, and it is certain that one of the projects at least will ruin the value and desirability of a good many middle-class homes. The home owners are fighting tooth and nail to block the blighting bureaucrats and the battle hangs in the balance. Congress may come to their aid by reducing the unit building authorizations, but that battle in Washington is not yet decided either.

Meanwhile a look at the over-all housing picture in Los Angeles may startle some citizens who believe that a little low-rental housing for the poor is a worthy Christian benevolence easily afforded by the Federal Government which spreads its favors around the globe.

ONE PERSON OUT OF 20

If Congress does not cut the year's building authorizations and if the embattled home owners lose their fight to restrain the Los Angeles Housing Authority the 10,000 low-rental units probably will be completed by 1954. These units will house about 45,000 persons. There are already numerous low-rental public-housing units in Los Angeles in which 48,000 persons dwell. The total of public-housing tenants then will be about 93,000. Los Angeles has a population of 1,954,000, therefore almost one in 20 of the inhabitants of the city—about 4 3/4 percent—will be a public-housing tenant.

The bureaucrats of the Housing Authority will be far and away the greatest landlords in the city (the fourth largest in the United States, in fact). The power potential of landlordism on this scale hardly needs to be pointed out. The Housing Authority bureaucracy, gerrymandering low rents in the 10,000 projected rents, could almost sway the city. The power to control a man's home is coupled here with the authority to give him something for nothing and that adds up to a tremendous primal influence. One man said, "I know of no way by which I could control a country better than by the control of the housing situation."

This is socialism that no longer creeps. And it is not a socialism of necessity. When the Housing Act of 1949 was passed there was still a feeling of urgency in Congress. The wartime housing shortage was being overcome by private builders but a showing could be made that some public housing, particularly low-rental housing, was still going to be needed.

AT TWICE THE PRICE

Some of us did not wholly agree and we are borne out by developments. While the Housing Authority pushes ahead toward its 10,000 new low-rental units a private landlords' survey finds (in June 1951) that there are 2,000 vacant apartments in Los Angeles

which would rent for less than \$40 a month. The average rent in the Housing Authority's units will be \$32.50. The private survey, incidentally, covered only a third of the city's 425,000 rental units.

The cost of those public-housing units is another shocker. The 10,000 would be built for a total price of \$110,000,000. (This money, by the way, is to be raised by selling bonds guaranteed by the Federal Government. The Housing Authority here is empowered to issue such bonds. However, the Federal Treasury may be tapped for deficits.) Ten thousand units for \$110,000,000 means an average price of \$11,000 a unit. One outraged Los Angeles mass builder said: "We just completed some two-bedroom apartments at a cost of \$5,000 each, less than half the cost of these projected public-housing units being built, reputedly, for only the poorest of the poor."

It used to be said half-jokingly that the very poor and the very rich receive the best medical service. This may become partly true of housing, although the poor in this instance will not enjoy the charity of the doctors but the money of the taxpayers.

The threat to Los Angeles taxpayers deserves a separate chapter. On another day we shall show that Mayor Bowron's assurance that Los Angeles was getting something for nothing from the Federal Government is a painful delusion. Because this projected low-rental housing will, if completed, almost certainly raise the local tax rate.

Official Recognition of Federal Employee Organizations

EXTENSION OF REMARKS

OF

HON. GARDNER R. WITHROW

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. WITHROW. Mr. Speaker, on the very first day of the present session of the current Congress, I introduced a bill, H. R. 571, designed to give official recognition to Federal employee organizations. As matters now stand these employee groups have no official entree to Government departments for the presentation of grievances in behalf of their members. The purpose of my bill is to give Federal employee organizations the same standing as other unions have with respect to labor-management relationships.

On Tuesday, August 14, a subcommittee of the House Post Office and Civil Service Committee, of which the present speaker is privileged to be a member, held public hearings on my bill. One of the witnesses heard by our subcommittee was Mr. William C. Doherty, able president of the largest group of organized Federal employees, the National Association of Letter Carriers.

The testimony given by Mr. Doherty was outstanding. In his statement he pointed out that Government has failed to adopt management and personnel policies long ago adopted by progressive private management. This failure has proved to be costly to the taxpayers of this nation, and has also resulted in inefficient Government service.

As Mr. Doherty so ably underscored in his testimony, the present poor mail

service can be directly traced to the failure of the Postmaster General to consult with Congress, the mail users, or the employees. The unilateral action of the postal management in curtailing mail services has been one of the most costly blunders in the history of this Nation. It has all but wrecked the morale and efficiency of the service, a mistake that would not have happened had there been a law compelling the Postmaster General to take counsel with the employees before he issued his directive.

Mr. Speaker, under leave to extend my remarks, I desire to include Mr. Doherty's statement for the information of all Members of Congress:

STATEMENT BY WILLIAM C. DOHERTY, PRESIDENT, NATIONAL ASSOCIATION OF LETTER CARRIERS, ON H. R. 554 AND H. R. 571, BEFORE SUBCOMMITTEE, HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE, AUGUST 14, 1951

For the record my name is William C. Doherty. I am president of the National Association of Letter Carriers, which represents more than 100,000 city, rural, and village delivery letter carriers throughout the United States, Puerto Rico, and the Hawaiian Islands.

I am accompanied here this morning by our vice president, Daniel R. Sullivan, who has been a letter carrier working out of the San Francisco, Calif., post office for the past 45 years; our national secretary, Jerome J. Keating, who has been a letter carrier in the Minneapolis, Minn., office for the past 27 years; and our assistant secretary, Reuben B. Kremers, who is from Seattle, Wash., where he has been a letter carrier for the past 37 years. I, myself, have been on the rolls of the Cincinnati, Ohio, post office as a letter carrier for the past 28 years. Thus, between us, we represent approximately 131 years of service as letter carriers. I feel that we have considerable background in the postal service and that our combined experience gives us some degree of authority to talk about postal matters. We feel particularly qualified to speak about the bills before this distinguished subcommittee, which are measures to recognize employee organizations.

We are very happy to place the endorsement of our organization on Congressman RHODES' bill, H. R. 554, as well as the measure introduced by Congressman WITHROW, of Wisconsin, H. R. 571.

In the light of events that have transpired during the past several years, particularly in the postal service, I can think of no greater need in our particular field, outside of a pay increase, than legislation that would recognize employee organizations. We earnestly hope that Congress will give employees a voice in policy changes that affect their working conditions, their health, their wages, and all the other aspects that go into the day-to-day job of Government employment.

We are gratified to note that the bills before you would grant this recognition with an accompanying obligation for management to do so without restraint, coercion, interference, intimidation, or reprisal. For the past year and longer there has been a vicious wave of coercion and intimidation going on in the Post Office Department directed toward the employees. Employees who have the temerity, if you please, to speak out against poor working conditions, poor postal service, and reprehensible management policies are summarily charged with bad faith, disloyalty to the person of the Postmaster General, and a whole host of other equally asinine, trumped-up charges. This is neither the time nor the place to go into that subject. It is, however, a condi-

tion that points up the urgent need for legislation that will give the employee a better break than he is now getting under a system whereby the Postmaster General, through his Inspection Service, is at one and the same time the accuser, prosecutor, judge, and jury. The legislation before you would prevent the system of "thought control" that is being pursued by the present postal administration. There is no place in America for that sort of thing. And thank God for that.

Basically these bills would do more than officially establish and recognize Government employee organizations in government. They would also affect a long-felt need of the employees by establishing a labor-management relationship between Government and employee groups.

Government has given a helping hand to labor-management committees in private industry but for the most part has not applied the lessons thus derived to its own household. As a result of this failure to follow its own leadership, management and labor, as well as the public interest, has suffered. Government cost today is the highest in our Nation's history; personnel turn-over has reached catastrophic proportions.

The same things accomplished for private industry through labor-management councils can be done for Government. Progressive management in the commercial world long ago realized that complex relationships among the various levels of management and labor were quickly and economically settled across a conference table. Government at times seems unaware or reluctant to admit that teamwork pays dividends. Yet paradoxically it encourages and even insists on arbitration between labor and management outside government.

Employees in the Federal structure have obligations and duties, as well as interests and claims in no less a degree than workers in private industry. It has been demonstrated in private industry that policies from the top level are more readily assimilated and followed by employees when they understand them, and after they have had an opportunity to eliminate potential grievances. The same should hold true for Government. Under the system now in vogue in most Federal agencies, adjustment of grievances—real or fancied—are attempted only after the fact. A real labor-management program would insure a positive approach by eliminating potential friction.

There is nothing radical or even new in the thought behind H. R. 554. Except that it would obligate department and agency heads to follow methods and procedures already adopted with outstanding success by private industry. Admittedly that would be quite an effort in some Federal agencies. The Post Office Department, for example, probably would rather cave in at its foundations than admit that cooperation, not antagonism, is the key to good service, low operating costs, and high employee morale.

As a matter of fact, the Post Office Department would be the ideal agency to use as a test tube for the program contemplated in H. R. 554. With considerable justification the postal service under the present administration has been accused of being "the least efficiently operated department in the entire Government." More than 900 pages of detailed instructions go to make up a maze of outmoded laws, regulations, and traditions. Prior to the April 17, 1950, curtailment of mail, the Hoover Commission summed up the philosophy of postal management as "sluggish, irresolute, and wasteful, rather than imaginative, decisive, and cost-conscious." That damaging indictment has been compounded in all its implications since the curtailment of mail and elimination of certain postal functions.

The chaos, confusion, waste, and hardship following the curtailment of mail, directed by the Postmaster General in April, 1950,

is an outstanding example of what could have been prevented by a real, honest-to-goodness labor-management relationship between the agency and the employees. In this instance not only did the service itself suffer, as did the employees, but the invisible partner in every labor-management relationship—the public—likewise suffered tremendous inconvenience, as well as unaccountable financial losses. The Postmaster General consulted neither Congress, the mail users, or the employees before issuing his hasty, ill-advised curtailment order. As a result there has been resentment from all elements concerned, and rightfully so, in our estimation.

Years ago the late Mr. Justice Brandeis stated that employee efficiency depended upon consent. You cannot legislate efficiency any more than you can legislate goodness or morality. No intelligent private management would inflict radical changes in working conditions, hours of employment, and other conditions of employee welfare on his workers without advising his employees in advance. It is not our thought that a labor-management program should dictate policy, but it has been proved time after time in private enterprise that employees respond more willingly and more intelligently to a radical change in their employment when they understand what management is attempting to do and they are told precisely how it will affect their employment, their economic status, and their health.

The Post Office took unilateral action in the matter of the curtailment of mail. That it has been a colossal failure and a costly venture to the taxpayers, as well as a terrific hardship on the employee, is easily understood.

Today as never before there is a real need to pump life and instill progressive thinking in the postal service. Right now it stands at low ebb in efficiency, employee morale, and public opinion. A genuine attitude of trusteeship would automatically meet this challenge. The present postal administration, however, is content to busy itself attempting to shift the blame to Congress, mail users, and the employees.

There is another logical reason to support the need for a labor-management program in the postal service. The fact that key positions in the Department, as well as postmasters at all first-, second-, and third-class offices, are regularly filled from time to time by appointment creates a hardship on employees. This lack of continuity in management leaves employees defenseless and at the mercy of the incoming regime with respect to management and personnel policies. Proved procedures and mutually satisfactory personnel relationships are too often swept aside with each change of top level or local command. A labor-management set-up would guarantee a continuity of time-tested personnel policies, regardless of the turn-over at the administrative or postmaster level.

There have been half-way and piecemeal attempts in the past to accomplish some of the things that flow freely from labor-management councils. For example, Public Law 600, approved August 2, 1946, authorized awards to employees for ideas and suggestions to improve Government operation. The establishment of the system itself dates back to 1943. In the postal service this program does not admit rank and file representation on the panel designated to judge suggestions. For this and possibly other reasons the system has proved to be a dud in the Post Office Department. Without representation there is less incentive for rank and file employees to participate. Congress has sharply criticized the present postal administration for the relatively poor record of the service in this suggestion program. It is not likely there will be any noticeable improvement until employees are made to feel

they are a part of the team, not merely a minor cog in the wheel.

On the other hand, it is significant that the agencies with the best record along these lines are those with employee representation on committees functioning on an advisory basis, variously known by an assortment of titles. Basically this representation constitutes a phase of labor-management relationship.

Within the last month the Post Office Department has announced an experiment in collecting and delivering mail. It is proposed to equip letter carriers with scooters or motor bikes of various designs to be used in the collection and delivery of mail. This represents a very radical change in letter-carrier employment. It also carries with it a very significant possibility that the safety and health of the letter carrier will be affected. To my best knowledge, there has been very little consultation by the Department with respect to this innovation, except perhaps with the people selling this equipment to the Government. Certainly the organization that represents the men who will be forced to use these contraptions has not been consulted. The men themselves have not been consulted. While I cannot speak for the Congress, I doubt very seriously if it has been consulted.

Earlier in my statement I mentioned in passing that the speaker and his colleagues sitting at this table represent more than 131 years of postal service, which is to say 131 years' experience in delivering mail. Simple honesty compels us to state that we could give helpful suggestions to this new program. As matters now stand, we are receiving complaints from the men who have been assigned to this scooter experiment. They are not questioning the merit or the wisdom of inaugurating a change in the postal service; rather, they are telling us of the defects in the equipment. They are suggesting improvements in the manner in which the routes are being assigned and so forth. They are concerned with their own safety in operating these light scooters in heavy traffic. There are complaints about employees being obliged to pay for a license to operate the equipment. In other words, the Department simply dropped the entire experiment in the laps of the employees. Later on, after letter carriers are maimed, and even killed, their widows and children will have the cold consolation of getting a "so sorry" note from the Department. We are all for taking the weight off the backs and legs of our letter carriers, but we do not propose to have the legs of our people taken off in the process. The experience of the employees thus far might well be applied to the program with an accompanying savings to the taxpayers of this Nation. Certainly the morale of the employees could be much greater if they were given an opportunity to understand what is behind the program and what they could do to make it a success.

From a safety standpoint, it does not appear as if this association will be able to accept the type of equipment proposed by the Post Office Department in this scooter experiment. However, because we have no entree for our suggestions or thoughts to the Department, they will have to be made after the grievance has arisen, whereas a labor-management program would have ironed out these potential grievances before the fact.

There are dozens of other examples we could point out wherein the employees have been bypassed in matters which affect their health and welfare. It is little wonder that the Post Office Department has made little headway during the past few years in improving the service. Indeed, it has degenerated month by month, and year by year. A good portion of this degeneration can be attributed to the fact that the present postal administration prefers to conduct the operations of the Department from an ivory tower without reference to Congress, the

mail users, or the employees. This has proved a very costly venture and it will not improve until Congress passes legislation that will give people who have honest opinions and constructive criticism to make an opportunity to give voice to their position.

I might say in closing that the Hoover Commission suggested the establishment of an advisory committee to assist in the management of the postal service. That board was proposed in February 1950 and confirmed by the Senate just about a year ago. In March of this year the Postmaster General lately announced that up to that time this Citizens' Advisory Board had held but one meeting. Significantly enough, there is no employee representation on this advisory board, although the original recommendation specifically stipulated that different elements of the public would be represented.

This committee can do a real service not only to the employees, but to the people who use the postal service by reporting H. R. 554 or H. R. 571.

We appreciate the courtesy extended us to appear here this morning and we sincerely hope you will favorably report out a bill that will direct the recognition of bona fide employee organizations.

The Marine Corps Bill

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. ARENDS. Mr. Speaker, under consent to revise and extend my remarks, I include therein a copy of a letter addressed to the chairman of the House Armed Services Committee under date of August 10, by Vice Adm. G. F. Bogan, retired, in which he endorses the Marine Corps bill reported by the committee.

I am presenting this for the RECORD as it presents the point of view of a high-ranking naval officer of distinction. I wish the House to know that the position taken by the Navy Department on the bill does not necessarily represent the opinion of leading naval officers who, by virtue of being retired, would feel no compulsion—legal, moral, or otherwise—to have to support policy determined by superiors.

The letter follows:

AUGUST 10, 1951.

HON. CARL VINSON,
Chairman, Armed Services Committee,
House of Representatives, Wash-
ington, D. C.

MY DEAR MR. VINSON: Being familiar with your efforts as a Member of Congress and as a patriotic citizen to foster legislation enhancing our national security through improvements in the Defense Department, I have been deeply interested and sometimes shocked in reading testimony in the hearing on the Marine Corps bill, S. 677. My own efforts to suggest improvement in the somewhat unilateral functioning of that Department under the National Security Act of 1947 led to my retirement in February of 1950.

My association with the Marine Corps began in 1917 when I was a junior officer in one of the escort ships taking the first troops, both Army and Marines, to France. That association continued through the years. In many of the marine landings in the Pacific during the last war I commanded the naval

air support which provided tactical air assistance during the beachhead phase and later moves inland. Among those operations were Saipan, Guam, Pelelieu, and Okinawa. Each one demonstrated the efficiency, courage, and proficiency of the Marines in a highly specialized, thoroughly skilled aspect of war.

It is my considered opinion, reached after many years, that the United States Marine Corps has no equal as a fighting organization in any nation in the world, including our own. The amphibious doctrines followed by our own and other armies in similar attacks were developed solely by the Marines with somewhat grudging assistance and skepticism by our Navy.

That, however, is only one facet of the Marines' combat readiness. To the limit of their manpower and weapons, the Marines fight superlatively in any element and under all conditions. I believe those views are shared even by the very people who would oppose public recognition of the organization by denying it full participation in the meetings which determine its function, its stature, and its destiny. Only the Commandant and his staff, through knowledge and recognition of the problems of the corps and their unique experience in combined operations, can adequately represent the Marine Corps and speak its views.

I believe that the Joint Chiefs of Staff, as presently constituted, have a preponderantly land-locked viewpoint, not commensurate with the military requirements of our Nation. I am also convinced that the addition of the Commandant of the Marine Corps to the Joint Chiefs of Staff would greatly improve the balance, judgment, and decisions of that body.

The other feature of the bill, i. e., the size of the Marine Corps and its supporting air wings, is an unavoidable responsibility of the Congress. It is not the prerogative of the Secretaries of Defense and the Navy to specify the strength of the Marines in relation to the Navy, nor is it a question of duplication. There exists no duplicate of the Marines.

It is my earnest hope that you and the distinguished members of your committee will not waver in your support of this measure, as amended by you, to the end that our Nation's defenses may be radically and permanently improved.

Respectfully,

G. F. BOGAN,
Vice Admiral, United States Navy
(retired).

Jewish Sanitarium and Hospital, Brooklyn, N. Y.

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mrs. KELLY of New York. Mr. Speaker, the Honorable Vincent R. Impellitteri, mayor of the city of New York, has proclaimed the week of September 23 to 30 as Jewish Sanitarium and Hospital for Chronic Diseases Week.

I am proud of the fact that this hospital is located in the Tenth Congressional District of New York. This non-profit institution was founded in 1926 by Max Blumberg, a leading businessman of Brooklyn, who contributed very generously of his time, his energies, and his funds to various philanthropic causes.

The Jewish Sanitarium and Hospital for Chronic Diseases was established to care for the victims of cancer, arthritis, diabetes, multiple sclerosis, muscular dystrophy, Parkinson's disease, cerebral palsy, polio, and heart diseases among others. It has grown through the years until it now has a bed capacity in excess of 800. Under the leadership of Isaac Albert, who has been president for the past 8 years, it has become one of the largest of its kind in the country. Patients are accepted without regard to race, creed, color, age, place of residence, or ability to pay. In 1950, with the opening of its fourth building, a new concept of medicine was inaugurated, not only to give custodial care to those who required it, but also to help those who could be helped and send them back to their friends and families. New medical laboratories were opened for research into the cause and cure for various chronic ailments. A rehabilitation center, one of the largest of its kind in the country, was opened to bring back to partial or normal use, fingers, hands, arms, and legs, which have been crippled by various chronic diseases.

In his proclamation, Mayor Impellitteri has urged the men and women of our city to support this institution in carrying out its highly important work on behalf of hundreds of our citizens who are afflicted with chronic diseases. The people of Brooklyn are fortunate indeed to have known the good and kindly Max Blumberg and his concern for the sick. Like Abou Ben Adhem, he loved his fellow men and borrowing the words of the poet, we say "may his tribe increase."

Freedom Balloons Require Skill

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Drew Pearson from today's Washington Post:

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

FREEDOM BALLOONS REQUIRE SKILL

(This column was written by Mr. Pearson in Europe which he is now touring.)

SOMEWHERE NEAR THE CZECHOSLOVAK BORDER.—Anyone who thinks it's easy to launch freedom-friendship balloons across the iron curtain has another guess coming. Once the balloons are in the air, nature and the fact that winds of freedom blow from west to east takes care of the rest. But the real job is getting them into the air.

And that boils down to assembling hydrogen, tanks to put it in, trucks to haul it in, German workers to fill the balloons with hydrogen and, on top of all this, keeping the operation secret from the curious German population which loves intrigue. The man who deserves the chief credit for overcoming these headaches is Harry Andrews and the Dewey & Almy Rubber Co. who, without knowing a word of German cajoled, coaxed,

and wheedled nearly 1,000 hydrogen tanks from firms all over Germany, collected them all in one place and got them filled with hydrogen. It takes so much hydrogen to carry 15,000,000 pieces of literature across the iron curtain into Czechoslovakia that Andrews collected just about every tank in West Germany.

You can imagine the curiosity of the local tank distributors wondering why one man was going around picking up this colossal number of hydrogen containers. They popped the question to Andrews every time he brought in a new load, and he deserves a diploma in career diplomacy for expertly ducking these questions.

CURIOSITY AROUSED

It was a little harder for him to duck the questions from the 40 men recruited to fill the balloons.

They were to be taken near the Czech border every night, a 5-hour drive from Munich, begin launching balloons at about midnight, finish work at 4 a. m., then get home at 9. Naturally they wanted to know where they were going and what they were going to do.

However, after getting them a nice new bus in which to ride to the Czech border every day, they finally signed up for this mysterious assignment.

Another problem involved in sending balloons into Czechoslovakia is that it is such a narrow country you can easily overshoot the mark. In other words, if the balloons drift too far, they land in Poland where Poles can't read the Czech leaflets. Therefore it has been necessary to balance a payload of pamphlets against the wind currents in order to get the balloons to travel the right distance. It has been necessary to shift the launching site every night, depending on the winds. For this reason, we never know until our meteorologist gives the word around noon each day which way to head our truck caravan. The caravan totals nine trucks, two of them 20-tonners carrying hydrogen cylinders, balloons, 2,000,000 leaflets, and one motor generator which lights up the countryside sufficiently to arouse every farmer in the neighborhood but not sufficiently to give as much light as needed for the delicate operation of tying the nozzles of 2,000 balloons and doing it in record time.

The reason for night launchings is that the balloons are scheduled for arrival at 6 to 8 a. m., just as the Czech people are going to work. Two types of balloons are being used. One regular rubber balloon, manufactured by Dewey & Almy, carrying a load of about 3½ pounds, or 2,200 leaflets

SPECIAL BALLOONS USED

The other is a pillow-type balloon made by General Mills, which also contributed generously of its experts and time to help this operation. The pillow balloon, while carrying a lighter load, comes down to earth and bounces along the ground in an eerie fashion, bound to excite curiosity. Across its side, in large red letters is written "Svoboda", which means, freedom. Incidentally, Svoboda is the name of Harold Stassen's grandfather and it is especially appropriate, as an American of part Czech descent, that he is attending this launching.

Nobody should get the idea that this friendship balloon barrage to the people of Czechoslovakia is going to free that country overnight. It isn't, though it is especially timely coming as it does when the Czechs have imprisoned American newsmen William Oatis on trumped-up charges. It also comes at a time when unrest in Czechoslovakia has reached greater intensity than ever before.

However, this balloon barrage is merely a test—a test of what individual Americans working separately from their Government can do to promote people-to-people friendship and to make the iron curtain a lace curtain.

PROPAGANDA RAISES DOUBT

Its aim also is to raise doubts in satellite minds as to the why of the iron curtain. Why does their Government refuse them contact with the free peoples of the west? What has Stalin got to fear from contact between them and the free peoples of the world? What is he ashamed of? In brief, why the iron curtain?

Moscow, of course, will probably scream that this is a violation of international law or that we are dropping poisonous candy to the children of Czechoslovakia or disseminating anthrax, wheat rust, potato bugs, or other germs in bacteriological warfare. However, there's no international law forbidding one country to launch balloons in another country; if the winds carry them into certain other countries, that's a law of nature—not international law.

Addresses at the Minnesota-Dakotas District Kiwanis Convention by Hon. Alexander Wiley, Rev. Terence J. Finlay, and Ronald Reagan

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. WILEY. Mr. President, on Monday, August 13, it was my pleasure to address the district convention of Kiwanis International in Bismarck, N. Dak., on the subject of Kiwanis answers the challenges of 1951. I ask unanimous consent that the text of this address be printed in the Appendix of the RECORD.

I have in my hands also at this time a copy of Kiwanis magazine, of August 1951. This is the convention issue describing the principal addresses and resolutions adopted at the thirty-sixth convention of Kiwanis International in June 1951, at St. Louis. Some 10,000 registrants were on hand for the convention, and they had not only the time of their lives, but they contributed to the sound thinking of this Nation and to the focusing of attention on important national issues.

There were a great many important addresses delivered before the convention, and it would be difficult indeed to choose from among those which were the most significant. One of the most interesting, however, in my opinion, was delivered by Rev. Terence J. Finlay, of St. John the Evangelist Church of Ottawa, Canada. This address pointed out the responsibility which each of us has to maintain the freedoms of which we are heir. Whereas most addresses speak of our rights, this address rightly spoke of our obligations.

Another address of interest, taking a tack somewhat different from the usual discussion of the subject, was that delivered by Mr. Ronald Reagan, president of the Screen Actors' Guild. This address was entitled "Motion Pictures and Your Community." It answered certain false notions which are being spread intentionally or unintentionally about the motion-picture industry and about those

who are members of it. It pointed out that the American cinema is composed, by and large, of honest, hard-working, patriotic Americans who yield to no group in their devotion to this country and in their Americanism.

I ask unanimous consent, therefore, that the text of the Reverend Finlay's address and Mr. Ronald Reagan's address be printed in the Appendix of the RECORD following my own address.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN, ACTING RANKING REPUBLICAN, SENATE FOREIGN RELATIONS COMMITTEE, BEFORE THE MINNESOTA-DAKOTAS DISTRICT, KIWANIS CONVENTION, BISMARCK, N. DAK., AUGUST 13, 1951

KIWANIS ANSWERS THE CHALLENGES OF 1951

Speaking to you is indeed a privilege and a pleasure. To speak to a Kiwanis district convention is like coming home. It only seems like yesterday that I was privileged to be governor of the Wisconsin-Upper Michigan Kiwanis District, and yet, as we reckon time, I would have to roll back the pages 18 years. Yes; it is a real homecoming for me.

The spirit of Kiwanis objectives

Back in our yesteryears, our talks before Kiwanis revolved around the so-called objects of this great institution. I think those objects of Kiwanis are great stuff. They have been related in other terms, time and time again, throughout humanity's history, but they can never be said too much, or too often, especially if the spirit instead of the mere letter is vitalized in their saying.

An understanding of, a utilization of, a demonstration of, the truths contained in these objects would make any individual more adequate to meet the challenges of life. And if every Kiwanian became a living exponent in word and deed of the spirit of the objects of Kiwanis, he would contribute to the adequacy of the Nation in no little amount.

Let me read these objects to you:

1. To give supremacy to the human and spiritual, rather than to the material values of life (There you differentiate our way of life from communism.)

2. To encourage the daily living of the Golden Rule in our human relationships. (There you find the "open sesame" to real living.)

3. To promote the adoption and the application of higher social, business, and professional standards. (There you apply the morality so badly needed to daily living.)

4. To develop by precept and example the more intelligent, aggressive, and serviceable citizenship. (There you forget self in the interest of the Republic.)

5. To provide through Kiwanis clubs a practical means to form enduring friendships, to render altruistic service, and to build better communities. (There you forget self again in the interest of your local community, in getting rid, for example, of chiselers, crimesters, and racketeers.)

6. To cooperate in creating and maintaining that sound public opinion and high idealism which make possible the increase of righteousness, justice, patriotism, and good will. (There you join hands with folks of kindred mind, to bring the fruits of the spirit into the open.)

The challenge for a rebirth of morality

Now, my friends, I should like to speak to you about what I feel to be a Kiwanis-type answer to the challenges facing America and the peoples of the world. Perhaps the most important of these is for a rebirth of public and private morality. That, in a word, is what our "objects" call for.

In both the national and international spheres, there is considerable indication of a relapse in such morality. I am not one of those, however, who feels that the situation is all grim and discouraging; on the contrary, the very forces that have been disintegrating society have set in motion counterforces that are seeking to rebuild.

It is the aim of Kiwanis International to serve as one of the great building forces on the world scene by making the "objects" of Kiwanis vital in the lives of its members. If you and I would be adequate in serving as individual builders, we must learn about the world in which we live, its problems, and particularly we must learn about the disintegrating forces, how to combat them, and then go to work and do the job before us.

The awakening as to communism since 1945

Now, what about the challenge in the world scene? When hostilities came to an end in 1945 you will recall there was no peace or security. Yet our leaders had thought that they could live with little problem from the Communists. Realization came only slowly that the Soviet leaders were out to dominate and communize the world. Wherever the Red Army went it stayed, and wherever it stayed the Reds created a brutal police state and liquidated the opposition. Where the Red Army did not go the Communists used other methods, seeking to penetrate and take over. They infiltrated labor unions, organized strikes, published newspapers, operated radio stations, spread rumors and hatred, and poured their propaganda into the minds of the people. France and Greece, Italy and Turkey were slated to be taken over, the same as the Baltic states had been.

The conflict of freedom versus slavery

This presented a problem for your Government in Washington. We had been sucked into two world wars. The American people would have preferred to have followed the policy of no foreign entanglements laid down by President Washington. However, through the inventive genius of man, the world had been contracted so that every nation was in every other nation's back yard.

We knew that the Kremlin was on the march. In 6 years she has absorbed 7,500,000 square miles of new territory and over 500,000,000 people, and she has been seeking also to absorb Asia. Already she has taken into her orbit Poland, the Baltics, Hungary, Rumania, Bulgaria, Albania, Czechoslovakia. In these states not only national freedom but individual liberty have gone out the window. Even in 1946 we saw that the Soviet and its satellites had been interfering with the work of the United Nations. A conflict soon became apparent—a conflict not only of ideas but a conflict which involved the liberties of the free peoples of earth. A conflict that was old—that went back through the centuries of mankind's march upward—a conflict of freedom versus slavery.

President Roosevelt thought that he could deal with the Kremlin. But before he died, it is said that he became aware of his mistake. The Kremlin blocked our land access to Berlin so we were put to the additional cost of the airlift, with numerous aviators' lives lost and some \$600,000,000 spent.

Recognizing the interdependence of nations

The statesmen in Washington became aware of the fact that something had to be done. The Charter of the United Nations had generated the hope that it would provide a deterrent to aggression and a bulwark for peace. With it had developed the hope that the nations would take appropriate action resulting in economic and political stability among the signers thereof. Thinking people had come to realize that events in other nations would inevitably have an effect in our own Nation; war anywhere was dangerous; famines, depression, or epidemics

in one part of the globe were dangerous to another part thereof. All this had brought about the United Nations organization as well as subsequent acts on our part, including the Marshall plan, point 4 to and for underdeveloped areas, and various relief programs. MacArthur in Japan made the 80,000,000 Japanese people friends and allies. Our occupation of Western Germany made it possible that the people in our zone would enjoy liberty and economic health, which was a tremendous contrast to what the German people were experiencing in the Russian zone.

No real escape from war except by collective action

The American people wanted to live in peace, but they knew that they could not live in peace unless America was secure. The real problem that confronted America was how to go about bringing about security and peace. In pre-1940, the French people had falsely thought the Maginot Line would give them security. We ourselves had thought that two oceans would automatically save us from war. We now know that there is no real escape from war unless it could be found through nations joining together, dedicating themselves to peace and creating sufficient might to deter any aggressor.

We had hoped, as I said, that the United Nations would do the job, but it has no law-making power and no enforcement power. Russia's veto has stymied the UN Security Council. We had seen how the Soviet Union had moreover violated the spirit of the Charter time and time again. Each nation (and the Soviet was one of them) had solemnly promised to refrain from the threat or use of force against the territorial integrity or political independence of any state. Yet we had seen how by the threat or use of force the Kremlin took over Poland, Hungary, Bulgaria, Rumania, Albania, the Baltics, Eastern Germany, and, finally, Czechoslovakia.

Importance of Greece and Turkey

We had been developing both peaceful and military use of the atom bomb since Hiroshima; we had taken vigorous action in 1947 when we went to the assistance of Greece and Turkey. That was a very important step. It stopped the Russians in their tracks, particularly in Communist-invaded Greece. These two nations are on the flank of Russia, and if the Russians should attempt to take Europe, we could penetrate the underbelly of that continent through those nations. Airfields in Greece and Turkey could put out of business Russia's gasoline supply in Grozny, Baku, and in Rumania.

We knew that postwar Europe's economic and industrial system had been pretty well shot to pieces by the havoc of war. Millions of homes had been destroyed. As a consequence, the Marshall plan came into existence. I was in Europe in 1947. I have just returned from Europe a few weeks ago. I was during this last trip in Greece and Turkey also, and I am here to report we have saved Europe and Greece and Turkey from being taken over by the Russians. We have resuscitated their economies. We have brought back a spirit or will to resist. Yes, it has cost money, but I look upon the investment much as I do the paying of insurance premiums on my house and property. We shall probably spend something like \$8,000,000,000 to aid and rearm these countries this next year. This is approximately 3 percent of our national income, which is something like \$234,000,000,000.

In my opinion, we cannot afford to do otherwise. I know that there are those who disagree with me. But when you think what another war would mean, when you think what has happened to those countries that Russia has taken over, I feel sincerely that for the present at least that there is no other course than to get ready and get those who will fight with us ready also. That is what

we are doing under the North Atlantic Treaty and the aid programs. You know that our policy is to seek to build healthy economies in our allied nations without injuring our own; to build a collective defense through the United Nations, the North Atlantic Treaty, and the Rio Pact; to help other nations arm themselves for defense. We believe that the Kremlin knows no other language except force and the presence of force.

The nature of the Communist foe

Let us analyze a bit more closely precisely the force against which we have taken these costly steps. It constitutes the foremost disintegrating force on the world scene. It is a force which expresses itself in many ways; militarily, it expresses itself in the powerful Red army, the largest standing army in the world, consisting of 175 divisions, easily increased by mobilization to 5,000,000 men, plus the forces of the satellite states.

Politically, it expressed itself in the Communist International, whose headquarters in Moscow, send out instruction for the international conspiracy aimed at violent revolution against other orders and nations.

Psychologically it expresses itself in a war of ideas against all of the values of the west—against Christianity, against the concept that man is more than a brute material force, against the concept that there is more to life than class warfare and the lust for power.

Economically, communism expresses itself in cutthroat competition by mass cheap goods, produced by slave labor, flooding the markets of the world.

Steps the west has taken against this force

As I have pointed out, the peoples of the west have only slowly awakened to this threat to their way of life. Gradually they have set up their bulwark to defend their institutions. It took the North Korean invasion of June 1950, and the Red Chinese invasion later on, to fully alert many naive people to the danger of world communism.

Here in this country, it was only after a long series of shocking domestic revelations that many people in high places woke up to the fact that this constitutional Republic of ours was in danger.

What were those revelations? Well, take the story of Alger Hiss, who was Secretary-General of the United Nations Conference in San Francisco which set up the international charter, Alger Hiss who later turned out to be a perjurer.

Consider the story of Elizabeth Bentley, who had two college degrees but who was willing to sell her country out and who has since seen the "light."

The story of Judith Coplon, who worked in a high position in the United States Department of Justice and proceeded to turn over our secrets to a Red agent.

The story of Klaus Fuchs, the notorious British atomic spy.

The story of assorted American atomic espionage agents—two of whom are now awaiting death in the electric chair.

The story of William Remington, who was actually cleared of disloyalty charges and was later proven to be guilty of those very charges.

These and other exposés have shown the American people the absolute importance of vigorous enforcement of the internal security law if we would keep this Nation free.

Don't get the idea that all the leading Reds have been taken care of. On the contrary, the most dangerous part of the Red conspiracy, like the most dangerous part of an iceberg, is the part you cannot see. It is underground, functioning secretly and swiftly for the Kremlin's will.

Limitations on America's resources

Now, my friends, I need hardly tell you that your American budget is today heavily strained by domestic and foreign costs of combating communism. The American taxpayer today is bending under the heaviest burden in our peacetime history. He knows and his Government should know that he

cannot carry the rest of the world on his shoulders, financially, politically, or militarily. He knows that each nation must do its part, must contribute its proportionate share, unlike in Korea, where Uncle Sam has carried an unduly heavy share. The taxpayer, too, knows that in many instances, considerable amounts of the money which he has paid for by his hard-earned taxes have been dissipated—squandered down ratholes.

Meanwhile, sound projects in our own country have often been rejected; projects like the Great Lakes-St. Lawrence seaway, which would mean so much to our own future development here in North Dakota and in neighboring States.

In approaching the foreign-aid problem, we must ever bear in mind the words of St. Paul: "If any provide not for his own and especially for those of his own house, he hath denied the faith and is worse than the infidel."

If we are adequate to our own needs, we will be fulfilling that basic spiritual concept. Meanwhile, however, there are other fronts on which we can answer the challenge to public and private morality which I mentioned to you earlier in the address.

Combating disintegrating immoral forces

You and I know from the headlines in recent months that the revelations about communism in our midst have been matched by the shocking stories of moral disintegration. A few of these readily come to mind:

1 The story of shady influence in the Reconstruction Finance Corporation—the selling of Government favors for mink coats, deep freezers, etc.

2 The story of crime and corruption in America's cities, which we of the crime committee have brought before the public view.

3 The story of the mass breaking of the traditional code of honor at West Point, our Nation's military academy.

4 And a great number of other instances of moral breakdown

Now what is the cause of these developments? It is not enough to say that after every war, there is a certain moral let-down. It is not enough to say that modern society has become so complex that individuals often lose their foothold, so to speak.

Excuses and alibis to justify our inaction—yours and mine—will hardly suffice to change the present picture.

The home, the church, the school

What you and I have to do as Kiwanians and as leaders in our communities is to recognize our personal responsibilities. You know, my friends, that there are three great forces in the life of every community. They are. (a) the home, (b) the church, (c) the school.

If those three forces break down; if they fail to inculcate particularly in the Nation's youth the need for high moral action, then the sort of situation revealed in recent headlines is almost inevitable. What I urge you, therefore, to do, my friends, and what I feel is my responsibility to do as an individual citizen is to help make the home, the church, and the school more adequate to meet their duties. Each of these places must become a vital constructive force in the life of the individual citizen.

The lessons we learn at mother's knee; the lessons we learn from our minister; the lessons we learn from our school teachers, should be the type that previous generations would learn from those celebrated McGuffey Readers, wherein youngsters were taught the need for righteous conduct, for the highest standards of thinking and living. That is not an "old-fashioned approach"; that is plain horse sense for 1951 and any year.

The Constitution, America's greatest contribution

The home, the church, and the schools must cooperate moreover in raising the sights of our people so that we will all see that we

have been blessed with a pearl of great price; namely, the Constitution of the United States. This great document, with the Bill of Rights, is by far America's greatest contribution to the world's civilization.

Why? Because it set up for the first time in world history a tripartite system of checks and balances whereby power, instead of being centralized in the hands of one man or group who could abuse it, was divided among three separate and coequal branches of government—legislative, executive, and judicial.

On first glance, one might not think that this system is so unique or important, and yet if you will reflect for a moment, my friends, you will see why it is so valuable. In other countries power became autocratic and centralized. In prewar Japan, it was lodged exclusively in the militarist clique; in Russia it is in the crafty hands of Josef Stalin and the Politburo gang; in other lands, it is in one class or a king or a dictator.

But in this country, no single individual or group controls. Each group is checked and balanced by other groups, so as to prevent abuses.

If there is crime or corruption in a community, there will be a courageous newspaper which will fight it. A minister will rise in the pulpit against it. A chamber of commerce, Kiwanis Club, an American Legion post, a VFW post, a woman's club will individually and collectively serve as a force to fight the menace to their community. This is what is meant by the check-and-balance process on the community level.

This is what we must have more of if we want to keep America free.

So long as there is free competition of ideas; free competition of economic, political, yes, even religious thought, we of this Nation will continue to enjoy the great blessings which have been ours since the founding of the Republic.

Conclusion

My friends, I want to thank you for the opportunity of being with you today. As I have previously stated, it is always a joy to return to Kiwanis. One of the great experiences of my life was to serve in 1933 as district governor for Wisconsin-Upper Michigan. Those were the dark days of the depression.

It is our hope and prayer that those days will never return. We can make sure that they will not return by preserving the great values of which I have spoken today, by striving for a rebirth of public and private morality. In that way, America, on the home scene and in the international scene, may continue to play her great role of leadership.

Thank you.

[From the Kiwanis magazine of August 1951]

FREEDOM, OUR INHERITANCE

(By Rev. Terence J. Finlay)

During the years of my membership in Kiwanis I have always been impressed by the appropriate and suggestive themes which have been given us year by year through the executive officers. Never has there been any finer than the one given us this year and being used for this international convention—Freedom Is Not Free. It has been well said that those living beside church bells grow so accustomed to their ringing that they fall, after a while, to notice them. This is also true of some of the great bell notes contained in the words "democracy" and "freedom." These words, with their tremendous implications, have through frequent use become so familiar to the people on this North American continent that we are in grave danger of taking our democracy and freedom for granted. Therefore, it is of the utmost importance that we be jolted out of our indifference by our theme, Freedom Is Not Free.

What is freedom? Here is one definition. It is the ability of a man to live his life completely and unrestrictedly. Let me hasten to add, this freedom must never degenerate into license. We have a very striking illustration of the misuse of freedom given to us in the Bible. Here is a young man who sought his freedom from all home ties and responsibilities. He took his share of his inheritance from his father and went away into a far country. There he went out with the kind of friends he wanted to go with. He lived just as he wanted to live. He indulged himself in every passion. He did what he wanted to. He was free and the poor fool ended by being a slave, without any money and without his fair weather friends. He found himself with the beasts of the field and sought to satisfy his hunger with the crusts thrown to the swine. It was there, we are told, "He came to himself." He realized how foolish he had been and said, "I will arise and go to my father's house." That was the beginning of a new life for him—a life of real and lasting freedom.

You see what I am driving at. Freedom is not free. It means discipline. Discipline is a word we are not particularly fond of in our countries—yet even though we hate all dictatorships, with their conception of disciplined duty to the state as the highest goal, we must admit that they have disciplined their people to an idea and that is why they are strong, enthusiastic, and aggressive.

It is my belief that we of the democracies and the free people of the world should learn this hard lesson of discipline. There are far too many people in both our countries who keep prattling about their rights as individuals, who should be more concerned with living up to their duties and responsibilities to their country, their church, and their families. I confess that they do not seem glamorous or exciting, but they are absolutely necessary if we are to survive.

It was a workingman of France who sent a message to one of his close friends in America after France fell. He said, "Tell all your friends in America why France fell. France fell because her people looked on life as an easy thing. She became complacent and looked on the state as an everlasting milch cow, from which she could get everything and give nothing. She thought more of her rights than her duties—every citizen of France did—and then France fell."

Just 2 weeks ago a brigadier general of the United States Marine Corps arrived back in this country after 9 months in Korea. He was interviewed and asked for his opinions regarding the progress of the campaign. He replied buntly, "I will venture no opinion, but I will tell you this, we are up against a tough and ruthless enemy. I come back to this country and I find that what the American people want to do is fight a war without getting hurt. Here everyone is trying to get the other fellow to carry the burden." Those are not my words, but they are just as applicable to my country as to yours. We all need to be reminded forcibly and bluntly that freedom is not free.

People who return to our countries after visits abroad nearly always remind us that we are privileged to live in the freest part of the world. Never let us forget that this freedom has been purchased by the sacrifices of our forefathers. I believe that with all its faults our democratic system of government is the finest in the world. We in Canada are proud of the fact that we can trace our freedom of government back to the time of Magna Carta, and it should be a source of gratification for us to remember that we are bound together in our countries by this common ideal. Our peoples have always fought against tyranny and bondage. We believe with you in the immortal words of your great President, Abraham Lincoln, in "government of the people, by the people, and for the people." We in Kiwanis are like-

wise pledged to support that kind of government. Let us see that we do it. There are always those who are critical of the Government, but it has been said that a people only receive the kind of government that they deserve.

Are we showing in our actions the integrity and the wider vision that we expect from our elected Representatives?

Our freedom is bound up in our spiritual inheritance, for faith fosters freedom, and without faith there can be no freedom. The religious freedom we enjoy in America was purchased by the sacrifices of those early settlers who came from Europe determined to establish their homes and bring up their children in a new atmosphere. The early churches were built because the people realized the necessity of worship. They knew that it wasn't enough to have food, clothing, and shelter. They needed something more—the opportunity of worshipping God according to their own particular custom. One of the tragedies of our day is that so many of our people have forgotten that we owe our freedom of worship to those early pioneers.

What we need is not a watered-down, weak, or divided Christianity, but a strong, militant, united Christianity to preserve our freedom and point the way to the paths of true peace. A Canadian told me only a little while ago of an experience that he had during the midst of the blitz on Britain. He entered a large home in London which had been hit during the raid and badly damaged. He saw this inscription over the fireplace: "Peace is for those strong enough to defend it." We should be tragically aware of this truth by now.

Let's keep it that way.

[From the Kiwanis magazine of August 1951]

MOTION PICTURES AND YOUR COMMUNITY (By Ronald Reagan)

I would like to talk to you as a travel narrator would talk about a very strange and foreign land. But it is a foreign land which has more actual press coverage than any other locality in the world except the Capitol in Washington, D. C. Some 450 correspondents cover the daily activities of the motion-picture industry in Hollywood, Calif. Yet this remains the least discovered place on earth.

Probably more misconceptions and misinformation exist about the people I work with, the people in my industry and my town, than any other spot on earth. Part of this is due to the fact that among these 450 newspaper people that are there doing an honest job of gathering and reporting news we have attracted many camp followers. These are people who do not have the journalistic integrity to go through the task of gathering and reporting news honestly. With only a few hundred newsworthy names to deal with every day and a column to fill, they have chosen the easy path of gossip. They have the mistaken idea that the American people want to hear the worst instead of the best. And when they are hardpressed to fill their columns, they invent what does not happen.

The result is that among you and your communities and out through America there exists an idea that the people of motion pictures are crazy, extravagant, immoral, fickle, and are flitting from one husband or wife to the other, with no regard for each other. There exists also the idea that if we are interested in politics at all, it is because we are Communists.

The statements I have just made are not out of my own mind but are the result of a survey to find out what you people do think about those of us in Hollywood. Consequently, you will be a little surprised to learn that the people of motion pictures are not the troubadours, the strolling players who used to come into your town and live out of a trunk for a week and then pass on. Being

a part of the community now, and because the mechanical nature of motion pictures is so difficult, they have to go to work in the morning like everyone else, and they come home in the evening like everyone else. They have lawns to mow and they own their own homes. Seventy percent of them are high-school graduates or better, as against the national average of 28 percent. Seventy-nine percent of the people in my industry are married; 70 percent to their first husband or wife; 70 percent of them have children; 85 percent of them are regular members and attendants at the churches of Hollywood.

They constitute 1 percent of the population of Los Angeles. They contribute annually 12 percent of all the money in Los Angeles that is contributed to charity. Twenty-five percent of the personnel in the motion-picture business were in the Armed Forces in the last war.

Well, these are just a few of the things about our community that make us rather proud. Some of the things we feel a little badly about. We feel badly that the divorce rate in Hollywood is 29¹/₁₀ percent. We feel worse that the national average is 40 percent. We wish that the rest of the country could catch up with us.

Because the public has a misconception about us and because there is so much apathy about us, certain enemies of ours—enemies of democracy and our way of life—think they have found a leak in the dike. They have found a way to attack some of our American institutions and our American principles by way of the motion-picture industry. What we must all learn is that you can't lose a freedom any place without losing freedom every place.

If you are going to let one segment of society or one area of the country become maligned without insisting that the truth be known, all other segments and areas are subject to similar fates.

You know that the Communists have tried to invade our industry and that we have fought them to the point where we now have them licked. But there are other more insidious and less obvious inroads being made at our democratic institutions by way of the motion-picture industry. For example, no industry has been picked for such discriminatory taxes as have the individuals in the industry of motion pictures, and you don't realize that because the average citizen is too prone to say, "They are all overpaid in Hollywood, so let it go at that," but if they can get away with it there, it is aimed at your pocketbook and you are next.

Another one of the insidious infiltrations and the worst on our American freedom is by way of censorship. There isn't an American who wouldn't stand up and strike back at the imposition of controls on our freedom of press and freedom of speech, and yet here, for the last 15 years, we have been permitting it in spite of a self-imposed production code by the motion-picture industry. We have political censorship in 8 States and over 200 cities in the United States.

Do you realize that we are raising an entire generation of Americans in this way to assume that it is all right for someone to tell them what they can see and hear from a motion-picture screen? Isn't it a rather short step from there when they have grown up to tell those same people, "Well, we might go just a little further. It is all right for us to tell you what you can read." And from there you don't have very far to go to telling them what they can say and then what they can think.

I wanted to correct the misconceptions about Hollywood so you could take a word or two of it back to your communities because this is your struggle, not alone ours. The reason I want to say all of this to you and ask you to take it back to your communities is because we feel that we are operating in the best manner of free enterprise, be-

cause never once has our industry asked for Government aid nor any subsidy of any kind. We still stand today as one of the greatest fields of opportunity. We are in the American way. You can come into our field and the heights are unlimited, based only upon your ability and your talent.

We feel that you people should join us now in the struggle to preserve some of these freedoms, some of these American principles that are being nibbled away through our industry. In short, we would like to invite you to be on our side because we feel that we have been on your side for a very long time.

Application of Villisca Farmers Telephone Co. for an REA Loan

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. GILLETTE. Mr. President, for many years I have been greatly interested in the REA program and what it could do for the farmers in my State of Iowa and elsewhere throughout the Nation. During this long period in which I have supported the program in the Congress and as a private citizen, I have seen it accomplish much in promoting the welfare of many rural communities by helping the farmers provide themselves with low-cost, dependable electric power. This accomplishment in rural electrification is one reason why I became one of the sponsors of the rural telephone loan program which was enacted 2 years ago.

Experience through the years has demonstrated the fundamental interdependence which exists between farmers and the rest of the Nation. For that reason all of us have had to be concerned with efforts to achieve higher agricultural production, greater rural economic security, and better farm living. We have made outstanding progress toward these objectives, and I take pride in the fact that the progress has been made through the farmers' own initiative in applying modern farming techniques. Electricity has been a powerful aid to farm families in their progress.

One case in point is the revolution which modern electric equipment has made in dairying by saving labor, increasing production, and improving the quality of the product. This is, of course, just one example.

In my State, the years since 1935, when REA was established, have seen the number of farms having central station electricity increase from less than 15 percent, in 1935, to more than 90 percent now. We have 55 local farm groups who have obtained REA loans to do a big part of this job. These local co-ops have over 50,000 miles of power line in service and several generating plants in operation to serve more than 125,000 rural families.

Iowa's record of repayment on REA electrification loans is equally gratifying. Iowa borrowers have paid \$16,500,000 in

principal and interest on their Government loans. This includes \$2,500,000 paid on principal ahead of schedule. Not a single borrower was behind on its REA loan payments.

In view of this record in electrification, we are looking forward to the same kind of progress in the rural telephone field. Farmers have as much need for a telephone as a businessman in town. No one would think of running a business without telephone communication.

The REA telephone loan program is still very new. However, it has been moving along. At the present time, loan allocations have been approved for five borrowers in Iowa. This means that 555 families will get telephone service for the first time and 5,394 will have improved service.

The new program is encountering problems also. I was greatly disturbed to read recently newspaper accounts about the handling of a telephone loan at Villisca, Iowa. Because of my interest in the REA program, particularly the new telephone program, I felt it highly important to get all the facts on both sides of this case.

I have before me copies of correspondence which I received from REA. In view of the fact that the critical side of the story was printed in the CONGRESSIONAL RECORD, I feel that in fairness the correspondence should also be inserted to make the record complete, and I make that request.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

UNITED STATES

DEPARTMENT OF AGRICULTURE,
RURAL ELECTRIFICATION ADMINISTRATION,
Washington, D. C., August 10, 1951.

HON. GUY M. GILLETTE,

United States Senate.

DEAR SENATOR GILLETTE: We appreciate your interest in the Villisca telephone loan allocation and are glad to give you all the information we can regarding our handling of this case. At the time the Red Oak Express newspaper issued its critical story about us, we wrote to the editor giving all the facts and pointing out particularly the information which he had omitted altogether or had misstated in his story. A copy of this letter, which we believe makes a complete statement of the case, is enclosed. If there is anything further we can give you, we will be glad to do so.

Sincerely,

CLAUDE R. WICKARD,
Administrator.

UNITED STATES DEPARTMENT OF AGRICULTURE,

RURAL ELECTRIFICATION ADMINISTRATION,
Washington, D. C., June 23, 1951.

THE EDITOR, RED OAK EXPRESS,
Red Oak, Iowa.

DEAR SIR: Our attention has been called to an article in the June 11, 1951, issue of the Red Oak Express concerning the rejection by the Villisca Farmers Telephone Co. of a REA loan.

The article, as reprinted in the CONGRESSIONAL RECORD, contains a number of statements and conclusions which are at variance with the facts or fail to take into consideration facts not mentioned. As a result, the reader not familiar with the facts cannot help but pass unfair judgment on the Rural Electrification Administration and its administering of the rural telephone loan program.

We believe that you would not intentionally misinform your readers and that, therefore, you will welcome and give sincere consideration to the following comments prompted by the article.

As you probably know, the United States Congress has assigned to REA the responsibility for two loan programs, the rural electrification loan program which has been in effect for 16 years, and the rural telephone loan program which was authorized less than 2 years ago. We believe that the more than 100,000 farm and other rural families in Iowa which are now enjoying dependable electric service at reasonable cost as a direct result of REA loans to 55 new Iowa business enterprises—the rural electric cooperatives—would readily testify to the fact that their experience with REA does not bear out any accusation of wanton waste, high-handed extravagance, and misadministration on the part of REA. Let me assure you that it is our sincere and earnest endeavor to apply to the administration of the rural telephone loan program the same high standards of ethics, efficiency, and spirit of service to rural people which are responsible for the Nation-wide high regard of the rural electrification loan program.

The delays in approving a loan for the Villisca Farmers Telephone Co. were neither intentional nor the result of any complacency on our part. We recognize our obligation to expedite loan applications as rapidly as possible. We deeply regret that, due to the time required for the recruitment and training of qualified personnel, the development of basic policy and procedures, and the research and special studies needed to provide sound guide lines for the launching of a long-range program in a new field of service to the people, we could not act on the flood of early applications as quickly as the applicants expected or as we would have liked to be able to.

The account in your newspaper leaves the impression that REA, without prior knowledge of the applicant, attempted to force a loan on the applicant in an amount far in excess of need. For the record, let me say that the matter was taken up with the applicant and that a change in the amount of the application to about \$300,000 was agreed to in writing by the applicant before we started to process the final allocation papers.

Let me note also that the reference in your article to a fee for engineering expenses to an REA engineer to supervise the project is obviously based on a misunderstanding. Neither the salary nor the expenses of any REA employee are paid out of loan funds or charged in any way to a REA borrower.

The engineering fee item included was for the estimated cost of the services of a private engineering firm to be selected and employed by the applicant for the purpose of preparing plans and specifications and supervising construction of the facilities to be built with the loan. This is in accordance with a policy and practice which has proved very satisfactory in the rural electrification loan program, both from the standpoint of the REA borrower as the owner and operator of the facilities and from that of REA as a protection of the Government's loan investment. Many rural people would have enjoyed better telephone service if rural telephone companies in the past had more generally made use of the services of qualified engineers for design and construction supervision of their systems.

Permit me to call your attention to two major requirements of the Rural Telephone Loan Act. One is that the Administrator, in making a loan, shall make sure that the loan will provide adequate service to the widest practical number of rural users. The other is that the Administrator must certify that in his judgment the loan will be repaid with interest within the specified period, usually 35 years.

Satisfactory service to the largest practicable number of rural people during the life of an REA loan obviously offers the greatest assurance that a rural telephone company will operate successfully enough to repay the REA loan. But satisfactory service over a period of 35 years can be expected only if the telephone system is properly designed, constructed, and equipped.

It was the considered judgment of our telephone engineers and specialists who reviewed the application that, on the basis of extensive recent experience in the telephone industry, a loan of \$175,000 would be far from adequate to complete the rehabilitation, expansion, and improvements necessary to assure good area-wide telephone service. They estimated the cost of what would be required and recommended a loan in that amount. They felt that, from the standpoint of loan security, the larger loan would be safer than a loan in the amount originally asked for, which would not be enough, at today's prices, to accomplish the desired objective fully. They recognized, of course, that a "patchwork" job could be done for considerably less money although it would not last as long, give as good service, and would cost more in the long run to maintain.

The implication in the article, that REA loans are a waste of taxpayers' money, has no basis in fact. REA is prevented by law from making grants or giving subsidies. We make only loans, at 2 percent interest, which must be repaid over a maximum period of 35 years. Therefore, REA loans do not constitute a tax burden. And that they are not wasted nor a loss to the Government is clearly shown by the excellent repayment record of a thousand REA borrowers of rural electrification loan funds. With loans totaling well over \$2,000,000,000, less than one-half of 1 percent of the amounts due cumulatively in interest and on principal of the loans is overdue more than 30 days. You will agree that this is an outstanding record for any lending institution to point to. And not least among the reasons for such a repayment record is REA's insistence on high construction standards where REA loan funds are involved.

Persons familiar with the REA program in the rural electrification field know that REA has been and is still making every reasonable effort to keep construction costs down. We are doing the same in the rural telephone field. But we do not believe that savings in construction costs which are made at the expense of quality and adequacy of a utility system are real savings, nor that they will in the long run mean lower rates or good service.

There is still another point which should be clarified. An REA loan made in a given amount does not mean that the borrower is obligated to borrow the entire amount whether he needs it or not. A loan contract for a given amount merely obligates REA to earmark that much of its loan appropriation for the particular borrower. Funds are advanced to the borrower as needed, with interest charged only on the funds actually advanced. If the projected construction can be accomplished at a cost below the estimate for which the loan was made, the borrower, of course, will not need to borrow the full amount of the earmarked funds. Since all contracts are let by the borrower, not by REA, the borrower is assured of the full benefits of any savings below estimated costs.

For REA to approve a loan for an amount smaller than experience indicates adequate to do the job might create all sorts of difficulties later on. It might prove a disservice to the borrower and to the rural people expecting to get good telephone service, because of ensuing delays in completion of construction which would be necessitated by the company's inability to finish the job

without supplementary loans. And it would most certainly subject REA to deserved criticism from the rural people as well as from the Congress.

You will be glad to know that the attitude shown by this applicant toward REA is by no means typical. In general, loan applicants are more charitable, patient, and understanding of the steps and measures which a Federal lending agency is required to observe. We have received many expressions from borrowers of their satisfaction concerning their relations with REA. And we sincerely believe that the management of the Villisca Farmers Telephone Co. would have found little cause for further criticism if it had decided to accept our loan and advisory services.

While we regret the circumstances leading to the company's decision not to make use of an REA loan, we recognize that the Villisca Farmers Telephone Co. was under no obligation at any time to accept a loan from REA. For the sake of the rural people who depend upon it for service, we sincerely hope REA. For the sake of the rural people who way, will be able to accomplish the desired system improvements and expansion.

Sincerely,

GEORGE W. HAGGARD,
Acting Administrator.

Government Spending and Taxation

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by myself, and published in the Harrisburg (Pa.) Patriot-News on Sunday, August 12, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

As your guest columnist I want to direct attention to a problem which has given me a great deal of anxiety.

It has a direct bearing upon the future of our Nation as a land of freedom and opportunity.

I am particularly concerned because it affects the lives of our young men and young women and the generations that will inherit America in the years ahead.

One of the greatest responsibilities we have today is to preserve for the youth of tomorrow the freedom, advantages, and opportunities which America has offered in the past.

We are living in a time of superlatives. We have big Government, big business, and big labor. We have more wealth than any Nation in the world.

At the same time we have the biggest debt, the biggest budget, the biggest and most expensive government bureaucracy, and the highest taxes in all our peacetime history.

In the last 20 years, the Federal Government has grown so big and complex that we are spending almost 30 percent of our national income to keep it going.

That is today's picture of Federal spending. Nevertheless there are those in Government who predict an annual budget that will reach \$100,000,000,000 in the next few years.

This situation is alarming. To me it is terribly frightening, but many accept it with complacency, without seeming to realize the

dangerous implications and the inevitable result.

As a member of the Finance Committee of the United States Senate, I have a share of the responsibility for writing a tax bill that the American people must pay.

That is a grave responsibility because it has a direct bearing upon the problem which, as I have stated, is giving me so much concern—the preservation of the freedom, advantages, and opportunities upon which the greatness of our Republic was built.

History teaches that more nations have been destroyed by excessive taxation to support extravagant and wasteful government than by invading armies.

When government drains off the earnings of the people to the point of confiscation and oppression, the individual is robbed of incentive, initiative, and self-reliance.

Freedom of the individual is destroyed, all progress is blocked and government steps in to assume dictatorial powers over the lives of its citizens.

From my study of the new tax proposals I am convinced that we have reached the saturation point beyond which we cannot go without peril to the safety and security of the worker, the farmer, the small-business man, and the Nation as a whole.

To impose heavier taxation upon the people, or to increase the national debt by deficit financing will only postpone the day of reckoning which must come sooner or later.

When that day comes, American opportunity will be a thing of the past.

Our Government has grown so big, so costly, and so wasteful, and we have assumed obligations of such global proportions that tax revenues from big business are only a drop in the bucket compared with our tax needs.

With this expansion has come the increasing need to dip deeper into the pockets of the individual taxpayer, and each year take a larger share of his earnings.

When the average citizen is required to work 1 day of every 3 to pay the cost of government, it is time to call a halt.

Otherwise no boy or girl in America will be able to look forward to a savings account, to a chance to get ahead, to go into business, to invest in productive enterprise, or to create new jobs for others.

Those avenues of progress were open to the young man of the past. They gave the young man in overalls a chance to become his own boss, and opened the way for the development of our industries.

They offered rewards for hard work, thrift, initiative, energy, and resourcefulness.

When I think of opportunities of the past, I think of Thomas Edison, Henry Ford, Walter Chrysler, George Westinghouse, and a long list of other American workmen who rose from the shops and factories to leadership in giant industries.

I want to see America strengthened as the kind of country that will hold out the same golden hope of opportunity and achievement.

I want to preserve the kind of freedom that places in the hands of American youth the direction of his own destiny without dependence upon Government. How can this be accomplished?

First, the people of the United States must demand that the Members of Congress reverse the whole extravagant spending trend of recent years.

The brakes must be jammed on before we rush headlong into financial collapse.

Government spending must be reduced to the lowest possible minimum consistent with a sound national defense.

There is nothing complicated about this policy. It requires a strong and determined citizenry, and representatives in both Houses of Congress with the will, the spirit, and the

courage to say "no" when the bureaucrats, the socialistic planners, and the selfish pressure groups demand new and bigger appropriations.

Taxes can then be reduced and new advances in our national economy will again open the doors of opportunity to the youth of America.

Useless Extravagance in Reports of the Library of Congress

EXTENSION OF REMARKS OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. BYRD. Mr. President, I ask unanimous consent to have inserted in the Appendix of the Record as part of my remarks a letter I have received from a constituent who resides in Alexandria, Va. I shall not identify the correspondent, because he is a responsible official in the executive branch of the Government, and I assume he would not wish to be placed in a position of criticizing a legislative branch agency.

However, this letter is pertinent to the so-called publicity amendment which I have been offering to the appropriation bills as they have been considered by the Senate. The letter relates to annual reports by the Library of Congress and their useless extravagance of words and phrases which, even if they are grammatically proper, are so stilted and over-written that they are unintelligent short of academic analysis. These reports constitute a horrible example of some of the useless expenditure of manpower, time, effort, payroll money, paper and printing costs which my so-called publicity amendment is designed to reach.

I appreciate this letter, and I hope the Senate Appropriations Committee, and the subcommittee considering the legislative appropriation bill, will note it carefully. I hope the Library of Congress will regard it as constructive criticism and concern itself with simpler and less verbose reports about the great work it does. It would cost much less and be much more effective.

There being no objection, the letter was ordered to be printed in the Record, as follows:

DEAR SENATOR BYRD: I have just been fascinated by two volumes released by the Government. In the process, I have also developed a slow burn.

I have reference to the 1949 and 1950 annual reports of the Librarian of Congress. These reports contain between 200 and 300 pages, printed on best quality paper and handsomely bound in buckram. I quote below a few selections from the introduction contained in each of the annual reports. The first quotation appears on page 11 of the 1949 report:

"But if the Library is, as it is designed to be and as, in the past, it most assuredly has been, a popular institution, popularly supported, administered and sustained; if it is, invisibly perhaps, but nevertheless indivis-

bly and integrally a part of the intellectual endowment of every citizen; if solely to diffuse, it has scrupulously amassed the recorded knowledge it contains, if it belongs to the experience of its days; if it is sensitive to the expectations of it and applies whatever strength it has to their fulfillment; if learned spuriousness cannot taint, nor curtain, nor embarrass, nor divert, nor betray, nor in any way diminish its steadfast demonstration of the freedoms of inquiry and access and discovery and choice; if its ambitions do not exceed its opportunities for useful service; if it has acquired and exploited for perfected special skills; if it is an active agent as well as an obedient servant of the nobler energies of a people; if it is aware of, and disturbed by, and in rebellion against, its own shortcomings; if performance of duty is its single purpose and its duty, the enrichment of society; if its traditions are not marcescent, but alive, adaptable and approved; if hollow precedent does not exact conformity nor impose requirement; if there is confidence in its maturity; if through age, it has attained character, an identity, a realization, 'non faciat ea, quae iuvenet; at vero multo maiora et meliora facit' (Cicero: De Senectute, vi: 22-23), then the passage of its first 150 years may merit some attention."

As my old uncle would say, "A man who can understand that is fit to be President." I think you will agree with him. Page 32 of the 1949 report contains another interesting paragraph, which is quoted below:

"Some write in the clumsy characters of children, some in finely shaded Spencerian, some in the legibility produced by keys struck upon inked ribbon against a piece of paper, some in formality, some in familiarity, some in the bewildering idioms of countries left behind, some in hard-wrought felicities. Their questionings are conveyed on penny post cards, on lined leaves ripped from notebooks, on flower-decorated paper, or on bond with letterheads handsomely embellished and engraved."

What these gentlemen are trying to say, I believe, is that they do receive letters, some handwritten and some written on a typewriter—almost everybody does. The 1950 report also contains many gems.

I bring these to your attention because you have a reputation for showing a proper respect for the taxpayer's dollar, as well as a current interest in the money being devoted by agencies to publicity. It would be interesting to know how much money has been expended by the Librarian of Congress and, at his order, by the Government Printing Office for the preparation of these annual reports. I would expect the price per copy would be rather astounding.

I do not expect a reply to this letter. It is merely conveying information to you which I believe will be interesting to you.

Tidelands Oil

EXTENSION OF REMARKS OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excerpt from an editorial entitled "Hint of Danger," published in the Houston Chronicle and Herald of August 8, 1951, dealing with the question of the tidelands oil.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

HINT OF DANGER

The only argument for Federal seizure of the tidelands which has any appearance of validity is the claim that the oil underlying those lands should be conserved for use in war. Actually, the argument is wholly invalid because the Federal Government could assume control of all the Nation's oil resources in the event of an emergency.

There has been no indication that the Interior Department, which aspires to administer the tidelands, intends to withhold them from mineral exploitation. The Department merely wants to have charge of leasing the mineral rights and distributing the income.

Increases in Rail Rates

EXTENSION OF REMARKS OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Rail Boost Fires," written by Alfred D. Stedman, and published in the St. Paul Sunday Pioneer Press of August 12, 1951.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

RAIL BOOST FIRES

(By Alfred D. Stedman)

Fanned by the new rail rate boost just granted, forces are converging to stir up an old regional transportation question again. One force is generated by the railroads' part in defeat of the St. Lawrence seaway that would help the Midwest. Another is generated by the shortage of boxcars that is blocking elevators and snarling grain traffic again this year. The absence of many of the Northern Lines' cars on those very eastern railways that have led in defeating the Great Lakes seaway hits the Grain Belt recurrently and hard. The Midwest can have neither the seaway nor the boxcars that the seaway would help make available here.

Further, the rail rate boost is to be the sixth successive increase granted by the Interstate Commerce Commission since mid-1946. Rates on wheat and potatoes, for instance, are up more than 50 percent since then, not counting the new boost now authorized. With freight rates up and wheat prices down, the amount of rail transportation that a bushel of wheat can buy has fallen to the lowest point in a long time. Farmers and consumers are being asked to pay freight rates to cover, not just the costs of moving freight, but deficits on passenger services besides.

Of course, it would be silly to imagine that the railroads can be compelled to go on increasing wage, fuel, steel, building, tax, and other costs without either increasing freight rates or else injuring their service. They must have had a very good case for the latest 6-percent rise (they had asked 15 percent) or it would never have been granted in the face of stiff opposition from Government price and farm agencies.

So it is not the rate increase of itself alone, but this boost in relation to continued blocking of the seaway and recurrent

boxcar shortages that generate the heat. All this is tough on this region's railroads. Why? Because these railroads are natural allies of middle America's agriculture and industry; next to people and soil they have applied an absolutely basic element in this region's development; they fervently want a faster return of their cars to the Grain Belt from eastern lines; they are on the short end of even the freight rate increase, getting only 6 percent as against the eastern lines' 9 percent; and they surely stand to share in any rise of this region's prosperity resulting from opening the seaway.

Thus the fires set by rail opposition to the great national defense and Midwest improvement project that is the seaway may turn out to be hot. And one trouble is that they threaten to burn the wrong finger.

RFC: An Outdated Agency

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "RFC: An Outdated Agency," which appeared in today's edition of the New York Times.

Mr. President, I commend to the attention of all the Members of Congress, who may still be in doubt regarding the ultimate disposition which should be made of this agency, this editorial, which I feel is very forceful and forthright in its expression.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RFC: AN OUTDATED AGENCY

President Truman, after conducting his own personal investigation of the alleged improprieties against William M. Boyle, Jr., in connection with the Reconstruction Finance Corporation, has announced that he is "exonerating" the chairman of the Democratic National Committee of the charge against him. "I have the utmost confidence in Mr. Boyle," said the President, "and I believe the statements that he made to me, and I believe also that the investigations which I made in the RFC cover the matter fully."

The charge against Mr. Boyle was made by the St. Louis Post-Dispatch. According to this newspaper, Mr. Boyle was employed as counsel for a St. Louis concern, the American Lithofold Corp., at \$500 a month at a time when he was a member of the Democratic National Committee. Shortly after the company retained his services, it is alleged, it was granted an RFC loan, although three earlier applications for loans had been rejected. It was implied that as one of the highest of the higher-ups in the Democratic Party and a strong supporter of the President, Mr. Boyle had lent his influence to Lithofold, thus enabling the company to obtain the loan previously denied it. Mr. Truman, in dismissing the case against the National Committee chairman, does so on the ground that latter was not selling influence, but merely his legal services.

There will be many persons, we think, who will feel that the President's exoneration of this high-ranking member of the Democratic Party would have been more convincing if

it had included some measure of documentation. Such persons may consider the charges to be so serious and the case so important that it should be explored more fully. But are we to go on forever trying to run down charges against every individual who takes advantage of the morally insidious dual character of the RFC to use the institution as an instrument for financial or political aggrandizement, as the case might be? Or are we to do the intelligent thing and rid ourselves once and for all of the corrupting influence of this agency, which was erected 20 years ago to deal with a temporary emergency and has perpetuated itself as a potential paradise for political shysters and chiseling businessmen?

Owen J. Lattimore

EXTENSION OF REMARKS

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Lattimore to the Stand Again," published in the Herald-News, of Passaic, N. J., on August 10, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LATTIMORE TO THE STAND AGAIN

When Judge Stanley H. Fuld ruled that it's libelous per se to call anyone a Communist unless the man admits it, he had in mind the harm an unjust accusation could do, now that the whole country knows who its real enemies are. Unwittingly, however, the Fuld dictum helped the Reds. Many timid writers and lawyers are now afraid to identify Communists who don't deny their party affiliation.

You can give Manny Cantor his proper designation without risking a libel suit. The former Passaic Communist is the party chairman in Mercer County—or was, before his unexplained disappearance and the abandonment of his Trenton office. You can put the Red label on Martha Stone, the Paterson woman who became State chairman of the party in Newark. Emil Asher is a Communist, too. He's Miss Stone's husband. He was union business agent for electrical workers in the Passaic area until he showed his hand. The union workers got Asher's measure when he arranged a Passaic rally for Gerhard Eisler, the Soviet agent who eluded the FBI and escaped to East Germany aboard the *Batory*. Asher is now party chairman for Passaic County.

You'd be sued for libel if you put a Red tag on Prof. Owen Lattimore, director of the Walter Hines Page School at Johns Hopkins and former adviser to the State Department on far eastern policy. But Senator Joe McCarthy could and did. Speaking on the Senate floor, with congressional immunity, McCarthy described Lattimore as the top Soviet espionage agent in America.

Last night Peter Edson, Scripps-Howard columnist, wrote that "McCarthy has never repeated his charges off the floor of the Senate . . . where such remarks are privileged." Edson seems to forget that McCarthy wanted to give his State Department suspect list to a senatorial committee. It was Scott Lucas, then Democratic majority leader, who repeatedly insisted that McCarthy make the names public on the Senate floor.

Edson and other writers keep saying that McCarthy wouldn't take Lattimore's dare to say on a public platform what he said in the Senate. They seem to forget that soon after Lattimore's lawyers threatened suit, McCarthy addressed the Marine Corps League in Passaic at a public meeting, with reporters and cameramen present. There McCarthy cited the records of Lattimore, John S. Service, and Dr. Philip Jessup, our ambassador at large. Again he invited Lattimore to sue. No mention was made of espionage and party membership, but he laid everything else on the line.

On April 20, 1950, the Senator addressed the American Society of Newspaper Editors in Washington, citing a deadly parallel between Russia's and Lattimore's programs for Asia. Of that perennial joiner, Dr. Jessup he asked, "Why does he always join Communist fronts? Why not anti-Communist organizations? Again he exposed the records of the men he criticized.

Professor Lattimore had his day before the Millard Tydings committee, which whitewashed the Truman administration. He defended himself in a book and on the lecture platform. He will soon have his opportunity to be heard again publicly before Senator McCarran's judiciary subcommittee which is investigating the Institute of Pacific Relations, whose magazine, *Pacific Affairs*, was edited by Lattimore from 1933 to 1941. Pat McCarran is a Democrat but he's not conducting a whitewash.

McCarran isn't Lattimore's only accuser. Pro Louis Budenz, of Fordham, was managing editor of the *Daily Worker* before he gave up communism. When Budenz was executing Moscow's orders, he said he was told by Jack Stachel, one of the 11 party leaders convicted of conspiracy, to "consider Owen Lattimore as a Communist." Gen. Alexander Barmine, former Red army intelligence officer, now in charge of the Voice of America's Russian broadcasts, said the Soviet military intelligence chief, Gen. Jan Birzin, told him in 1933 that Lattimore and Joseph Barnes, American newspaperman, were two of "our men." That was the year when Lattimore took over *Pacific Affairs*. It was also the year when he brought out his book *Manchuria: Cradle of Conflict*, in which he had some nice things to say about Russia and the Communists.

Lattimore, who is clever as well as belligerent, knows how to present a case for himself. If McCarthy is unable to show that he is a card-carrier or spy, the Senator has shown the company the professor and some of Secretary Acheson's men keep, and the Senator's not through yet.

Principle Versus Dollars

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the National Tribune of August 16, 1951:

PRINCIPLE VERSUS DOLLARS

Mr. Congressman, on August 6 President Truman saw fit to veto two measures that relate to veterans and their dependents. We would discuss briefly with you the issues involved because they concern national policy.

H. R. 3549 relates admittedly to only a small handful of elderly widows—perhaps

100 of them—who married their soldier husbands in late years. The bill would remove the necessity of their proving "dependency" in order to receive modest monthly pensions of \$48, but the Chief Executive believes the treatment suggested would constitute a "dangerous precedent" and that it would be a "departure from social policy."

It is your job, Mr. Congressman, to determine both precedent and social policy in this country. The few women concerned here must be 60 years of age, and most are much older. Theirs were not fly-by-night marriages for pension purposes, and they must have lived continuously with their soldiers for 10 or more years next preceding their deaths. They need help now, and we cannot believe fair treatment to them will endanger our social structure. We feel we can afford to be a little generous with these Civil War, Indian wars, and Spanish-American War widows, and we think you will agree with us that it is a shame to make them subscribe to a pauper oath. Considering also the fact that the Veterans' Administration testified an administrative saving can be made by enacting this bill, we expect you will support it by your vote when the measure again comes to you for final action.

The other bill is H. R. 3193. The policy involved here is as old as the country itself, not new as Mr. Truman's advisers suggest. What is new is the idea advanced in the veto message that a man who serves his people in uniform in time of war should be accorded no different treatment than any other person whose security was defended by such as these. The bill would permit payment of a pension of \$120 monthly to part III beneficiaries who are so badly disabled that they require the constant aid and attendance of another person. Although pending legislation suggests an increase of 10 cents a day to help them to meet present high living costs, and all payments are subject to income provisions, these veterans are conigned to their homes or hospitals—many of them blind or bedridden—and they must have constant care. They are already pensioned, but they cannot eke out an existence and afford a nurse on their present small payments. Could you, Mr. Congressman, meet these obligations on \$60 or \$72 a month?

It is all very well to make scare headlines by saying that this bill might cost four hundred million a year a half century hence, but we can imagine nothing more cruel than to insult such badly disabled war veterans by doing so. That is inexcusable. It seems quite proper these days to spend billions on the countries whose soldiers fought these veterans, but we consider it dastardly to do so at the expense of former heroes who are now flat on their backs. The veterans of this Nation cannot subscribe to such a policy. This measure creates no hand-out, no giveaway program, no racket—it simply compensates fair treatment to those who need it.

Mr. Congressman, so long as we must fight wars they must be paid for and those who suffer must have proper care. If President Truman and his advisers believe what they say in these messages, and if they feel that all veterans who become disabled in after years should be treated solely under social-welfare laws, we challenge them to support legislation to draft all resources in time of stress, and subject all persons to the low pay, discipline, and punishment that is accorded to men in uniform. That would be more logical than the new and unproved ideas now being advanced by the White House. Of what purpose is it to fight communism abroad when such thoughts as are contained in these veto messages encourage discord at home?

If you, as a Member of Congress, believe that veterans of America's wars are to be treated only as human derelicts, to be included in welfare payments as are all others of the luckless poor, we shall expect you to

vote to sustain the President's observations. If, on the other hand, you feel that war veterans and their loved ones have given more to the security of this Nation than those who were privileged to remain securely at home, we shall expect you to cast your vote to override the vetoes of these two bills. Somehow we feel confident you will recognize the difference between principle and dollar decisions. This is not a case of political courage; it is one of morals and common decency.

Reply to Extension of Remarks by Congressman Wood, of Idaho, Congressional Record, July 19, 1951

EXTENSION OF REMARKS

OF

HON. HARRY L. TOWE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. TOWE. Mr. Speaker, on July 18, 1951, there appeared in the CONGRESSIONAL RECORD, under the extension of remarks of Hon. JOHN T. WOOD, of Idaho, a statement by one John McBride, which I think should be brought to the attention of the House. These remarks have to do with the silver situation. I have the greatest respect for my colleague from Idaho, and I am sure that he will be as concerned as I am with one of the statements made by Mr. McBride. The particular statement I have reference to is as follows, and I quote:

It may startle most Americans to know that of the more than \$26,000,000,000 of United States paper currency in circulation, only silver certificates (less than 10 percent) have anything behind them but debts.

I do not condone the present monetary situation in this country which I think is unsound and inflationary. Nevertheless, for a Member of the House to sponsor a statement that there is nothing but debts behind 90 percent of our paper currency in circulation is a very serious matter, and if true it should startle the American people. The truth is that the law requires that our paper currency, other than silver certificates, be backed 25 percent with gold. Actually today this paper currency is backed with nearly double that amount of gold. It is true that you cannot get this gold, but nevertheless it is there. Mr. Speaker, irresponsible and incorrect statements such as this only further confuse and disturb the American people, and in my opinion Members of Congress should be particularly alert to prevent such occurrences.

If Mr. McBride wants to startle the American people he should tell them the truth about the silver situation. He points out that the law requires 77 percent of an ounce of silver to be set aside to back each paper dollar issued by the Treasury. He also points out that this silver is today worth about 70 cents. What he fails to tell the American people is that silver is a commodity which varies in value whereas gold, which is our standard money, has a constant value of \$35 per ounce. This value is guaranteed by law. The value of silver,

on the other hand, is determined by what it will bring in the market. This value is at present controlled by producers of silver and Mexico. In other words the silver backing paper money fluctuates. Obviously then, silver should not be used to back our currency. It has a very proper use in our currency system for subsidiary coins such as the half-dollar, quarter, and the dime. Otherwise it is not needed in our monetary system. The Government has accumulated nearly 2,000,000,000 ounces of silver whose true worth is what it will bring in the open market. The first step in a return to a sound-money basis which Mr. McBride advocates should be the repeal of the silver-purchase laws which require the Treasury to keep purchasing silver regardless of need.

The Benton Resolution for the Expulsion of Senator McCarthy

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Get McCARTHY Still the Order," published in the *Huntington (W. Va.) Herald-Dispatch* of August 9, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"GET McCARTHY" STILL THE ORDER

Senator JOSEPH R. McCARTHY, Republican, of Wisconsin, has so upset the administration's political playhouse by his relentless ment-ax attacks on Communists and fellow travelers in Government that he has for some time been the Fair Dealers' No. 1 enemy and a target for every contrivable smear.

The latest attempt to "get McCARTHY" is the resolution to expel him from his seat.

Stooging for the resolution in the Senate is Senator WILLIAM BENTON, Democrat, of Connecticut, whose philosophy and activities have brought him within the range of McCARTHY's guns and who would seem to be better qualified to perform as a Truman kitchen-cabinet errand boy than a hatchet man assigned to trim the Wisconsin battler down to size.

Senator McCARTHY attacked the sinister Red web that had been insidiously woven into the fabric of official policy-making Washington since before the outbreak of World War II with a double-barrel shotgun loaded with scatter shot because by no other method could even the edge of the target be hit behind the determined, desperate New Deal-Fair Deal-Truman administration cover-up.

When circumstances compel the use of scatter shot, some who are innocent may get hit.

But any objective appraisal of what has transpired since the McCARTHY anti-Red attacks began points up the one important fact, namely, the Commies and their fellow travelers, the Hesses and all the rest who had infiltrated our Government, wouldn't be on the run or in prison today, if it were not for McCARTHY's relentless, uninhibited,

meat-ax assaults on not only the known but the suspected enemies of America.

Hardly an area of inquiry initiated by Senator McCARTHY has failed to turn up evidence of the Red taint, and most of them have been the objects of belated investigation and prosecution by Government agencies which should have performed their duty months or years before, without the prodding of a public aroused by McCARTHY'S charges.

A Senate whose membership continues to stomach the rottenness of the Missouri gang that has captured the White House, whose majority party will permit itself to be led and spoken for by a William Boyle, that will blink at all the thievery and influence peddling, the St. Louis election scandals, and the sordid pages without number in the Truman administration's record of political chicanery is a dubious instrument to entrust with such a loaded resolution as Senator BENTON has introduced.

It is a stacked partisan deck to begin with, and the vote by the Rules Committee yesterday demonstrated anew the willingness of some Republican Members of the Senate to play a sell-out game with the Fair Dealers for personal reasons of pique or preferment.

Senator BENTON'S asserted complaint is based, of course, on the Maryland election which unseated Senator Tydings, whom Senator McCARTHY charged influenced the celebrated committee "whitewash" of the inquiry into Red influences in the State Department. The real complaint of the Fair Dealers, however, is Senator McCARTHY'S success in blasting away the administration's cover-up.

Tribute to the President

EXTENSION OF REMARKS OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "History Will See Truman," which was published in the August 13 issue of the Fairmont Times, of Fairmont, W. Va.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

HISTORY WILL SEE TRUMAN

President Truman is characterized as a man of "firmness, vigor, courage, and vision" by Henry Commager noted author and professor of history at Columbia University. Writing in the issue of Look magazine, just released, Dr. Commager declares that by all moral standards President Truman's administration "has been one of almost uninterrupted and unparalleled success," and he predicts that history will recognize it as such.

Recalling that every President we now call great was denounced by his contemporaries, Dr. Commager asserts that President Truman was correct in saying that the verdicts of contemporary critics and of the historian rarely agree.

Citing President Truman's record, Dr. Commager states in Look that at no previous time have Americans enjoyed such widespread prosperity, nor ever before in peacetime have farm, labor, and corporation incomes been at a comparable peak. However, Dr. Commager says, the President's most important accomplishments "are clearly in foreign fields. If we are to generalize here," he writes, "we can say that no other

President except Wilson and Franklin D. Roosevelt has appreciated as fully the extent to which American power involves American responsibility."

In foreign relations, Dr. Commager contends, President Truman "has revealed a firm grasp on the necessity of combining vigor with moderation, generosity with tolerance, a zeal for peace along with readiness for war."

Dr. Commager admits that the President's record is less impressive in the domestic than in the foreign field, but he points out that in spite of Congress' opposition Mr. Truman's administration must be credited with a large body of significant domestic legislation including the reorganization of Congress; a National Security Act; increasing Federal aid to education; the extension and liberalizing of social security; and steady advances in the field of civil rights.

That there are many things amiss with the Truman administration no one in his senses will deny, Dr. Commager concludes in Look. "But it seems clear," he says, "that the verdict is so far favorable, and that much of the criticism that fills the air is directed not to Truman's failings but to his successes."

Senator McCarthy Debate With Marquis Childs and Marshall McNeil

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "McCARTHY and His Critics," published in the Passaic Herald-News of August 8, 1951, discussing my appearance on the Meet the Press program on August 7 last.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

McCARTHY AND HIS CRITICS

Newspapermen often squirm in their seats when Hollywood's movie-makers present the news room as it is not. They feel embarrassment when smart aleck writers from the Rountree-Spivak "stable" fire impertinences and loaded questions at public officials whom these columnists do not like, during televised Meet the Press interviews.

Many men of the "working press" had a half hour's enjoyment at home last night when Senator Joe McCARTHY turned the tables on two hecklers. Marquis Childs, a New Deal columnist who pontificates from a Washington ivory tower, probably wishes he had not gotten fresh with the Senator, who pinned his shoulders to the mat more than once. Marshall McNeil, whose gauche-erie about crap shooting slapped back at him, knows now he ought to read his own Texas papers.

Left wingers and phony liberals have be-deviled McCARTHY and twisted his words ever since the Wisconsin Senator invited attack by every administration spokesman with his charges that Communists and fellow travelers had wormed their way into the State Department. When his detractors snipe at him from ambush he cannot get at them. But when they meet him face to face, he is their match—"standing off or rough-and-tumble." Moreover, the old marine enjoys it, and he comes prepared.

Missouri Basin Problem

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the Record, I include herewith two articles, the Missouri Basin Problem, and, Definitions: MVA, Pick-Sloan Plan, Missouri Basin Interagency Committee, taken from the St. Louis Post-Dispatch of Sunday, August 5, 1951:

THE MISSOURI BASIN PROBLEM—NINE DISASTROUS FLOODS IN 9 YEARS RAISE VIGOROUS NEW DEMANDS FOR UNIFIED CONTROL PLAN IN VALLEY—IMMEDIATE NEED IS TO GET MONEY FROM CONGRESS AND AROUSE PUBLIC SUPPORT; NEXT IS DECISION ON PRESENT VOLUNTARY COOPERATION OR BASIN-WIDE CONTROL

(By Richard G. Baumhoff)

After the ninth flood in the Missouri River Basin in 9 years, demands are being renewed vigorously "to do something about it." This time the huge damages, coupled with loss of life and severe disruption of the heart of the Nation, put fresh urgency in the demands.

Last month's inundation, which reached levels exceeded only slightly by the record flood of 1844, occurred principally along the Kansas River and its tributaries in Kansas and along the Missouri River from Kansas City to St. Louis. The overflow then followed the lower Mississippi. With the flood waters receding, review of the situation by the Post-Dispatch shows that two elements are outstanding.

The immediate question: Obtaining big appropriations from Congress for carrying out extensive existing plans for flood control. In many important instances this involves obtaining local public support, which now may be more readily forthcoming than heretofore.

The long-range question: Whether a single, unified, specifically chartered administrative agency shall supplant the present divided authority and voluntary coordination. Such a unified agency would be regional, charged only with duties in the Missouri basin, unlike the existing set-up operated by branches of Federal departments with headquarters in Washington and responsibilities throughout the Nation. The long-proposed Missouri Valley Authority, or conceivably some variant, would constitute such a regional administration.

The existing so-called comprehensive plan for development of the Missouri Valley, being coordinated by the Missouri Basin Interagency Committee, contemplates expenditures aggregating \$13,930,538,702, according to the latest available compilation. That figure is about 2 years old. It includes more than a billion dollars earmarked for flood control.

A revision is under way now, which, it is expected, will show an increase of about 10 percent in the over-all program—about half of the increase being attributed to inflation, the remainder to addition of new projects to the plan.

This means that the existing official plan calls for eventual total expenditure of about 15½ billion dollars. This would be mainly Federal money, but nearly one-third would represent private investments on the land of the basin, and the balance would be expended by the States and local governmental units.

The program includes flood control; irrigation; hydroelectric power; navigation; ex-

tensive soil conservation and many other related measures dealing with the land; extensive stabilization of small watercourses; recreation facilities; fish and wildlife promotion, and many lesser related subjects.

Expenditures on the program so far are estimated to have exceeded \$1,358,285,000. This is largely for work since 1945, but includes some old projects such as Fort Peck Dam, also all past navigation work.

Principal divisions of the latest, or 1949, compilation of the program, are:

Corps of Engineers.....	\$2, 102, 400, 751
Bureau of Reclamation.....	3, 290, 579, 217
Other Interior Department bureaus.....	23, 777, 159
Agriculture Department, for the extensive basin pro- gram awaiting approval by Congress.....	3, 092, 328, 000
Private expenditures in con- nection with above agri- culture program.....	5, 030, 550, 000
State and local governmen- tal expenditures on above agriculture program.....	380, 638, 575
Miscellaneous State expend- itures.....	10, 265, 000
Total.....	13, 930, 538, 702

The Agriculture Department's program contemplates total expenditures, Federal, private, State and local, as above, of \$8,503,516,575. A considerable part of this huge undertaking would have important incidental effects contributing to flood abatement, this refers to soil conservation, small watercourse stabilization and forest and range land improvement measures.

The Interagency plan contemplates comprehensive development, dealing with all major resource needs of the basin. That is the ideal also for an MVA or any other form of administration. An essential difference at this point of development, as between interagency and MVA, for example, is the form of management, rather than the general characteristics of the plan. Any plan that would meet with general public approval now undoubtedly would have to take all aspects of development into consideration.

There has been no definitive breakdown or allocation of eventual costs as between the various functions of the interagency plan, but a start in this direction was contained in the report early this year of the President's Water Resources Policy Commission. This division was as follows:

Flood control.....	\$1, 005, 000, 000
Irrigation	2, 585, 000, 000
Agriculture program (other than irrigation) (Federal only)	2, 860, 000, 000
Hydroelectric power.....	849, 000, 000
Navigation	350, 000, 000
Municipal water supplies.....	43, 500, 000
Total	7, 692, 500, 000

Such allocations as the foregoing are essentially arbitrary, being related to the so-called benefits of the various functions. Much flood-control effect is obtained from multiple-purpose dams, and it would be virtually impossible to segregate exact physical costs by functions.

The plan of flood control—by just what means and at just what locations floods could be curbed—might be changed under some change in management. It could be changed under the existing form. Indeed, it has been altered markedly in the Osage subbasin of Missouri and Kansas and is under process of radical change in the Grand River subbasin of northern Missouri. A proposal for extensive enlargement of the plan in Kansas is pending in Congress.

The Army engineers, who have the legal responsibility for flood control now, have said that design of projects presently proposed

might be changed as a result of findings in the recent flood.

Background of the failure to build numerous flood-control projects in the rich, populous lower end of the Missouri Basin, especially in Missouri and Kansas, was told recently in considerable detail in two articles in the Post-Dispatch, last July 3 and July 20.

SOIL CONSERVATION NOT ENOUGH

Repeatedly through recent years the argument has been made by some persons that thorough-going soil conservation would abate floods, as it would appreciably reduce the runoff of storm water and melting snow as well as preserve needed land. However, even the Federal Department of Agriculture—which has had a tremendous program for soil control and related measures throughout the Missouri Basin pending in Congress without action for almost 2 years—does not claim that soil conservation alone could prevent floods. It is generally agreed by engineers and other well-informed specialists that dams and levees are vital elements in flood control.

There also is general acceptance throughout the Missouri Valley of the idea that flood control is only one of numerous undertakings to be dovetailed in conserving and developing all natural resources of this area. The basin covers a sixth of the Nation, but has only about a twentieth of the country's population.

DEMANDS FOR VALLEY AUTHORITY

The Missouri Valley Authority has long been the outstanding specific proposal for unified regional administration. Severe floods in the Missouri River in 1943 and again in 1944, during World War II, started the demands for doing something about the great, unruly stream.

Early in 1944 the Pick plan was issued by the Army's Corps of Engineers. It dealt essentially with flood control in the humid eastern end of the valley. This was followed speedily by the Sloan plan of the Interior Department's Bureau of Reclamation, dealing chiefly with irrigation in the dry western portion. The authors were Lewis A. Pick, then Missouri River division engineer for the Army engineers, now a lieutenant general and Chief of Engineers, and W. G. Sloan, then an assistant regional director of the Reclamation Bureau, now retired.

It was at once apparent that there were conflicts of ideas and jurisdiction. It was then that the Post-Dispatch devoted its entire editorial space, Sunday, May 14, 1944, to a now famous editorial. This was titled "One River—One Problem" and addressed to one editors of the Missouri Valley. It proposed creation of a Missouri Valley Authority, a Government corporation, to carry out the development of this basin in the pattern of the successful Tennessee Valley Authority, established in 1933.

"The time has come," said the opening statement of the editorial, "to recognize that the Missouri River is one big river presenting one big problem."

ESSENTIALS OF MVA IDEA

It cited the following "essentials of the TVA idea" as the design for an MVA:

"A Federal autonomous agency, with full authority to make decisions within the region.

"Responsibility to deal with resources as a unified whole, clearly fixed in the regional agency, not divided among several centralized agencies.

"A policy, fixed by law, that the Federal, regional agency work cooperatively with and through local and State agencies."

"This newspaper," the editorial added, "confesses an error of the past—a preoccupation with the interests of its own section, to the exclusion of those of Montana, Kansas, Nebraska, and the Dakotas."

Widespread attention was attracted by the editorial and by the consistent policy

of the Post-Dispatch ever since in reporting comprehensively and objectively news developments in the MVA movement and subsequent activities and in maintaining editorial demands for unified regional administration. The appeal to editors in the original editorial, however, attracted more support from newspapers and magazines in other parts of the country than in the Missouri Basin.

PICK-SLOAN PLAN COMPROMISE

Meanwhile, the governors of the 10 States of the valley, through their Missouri River States Committee, realized the need for reconciling the Pick plan and the Sloan plan. By the autumn of 1944 they had brought this about and Congress received the famous Pick-Sloan plan. This was quietly enacted into law in the 1944 Flood Control Act, passed late that December.

In the summer of 1945 the Missouri Basin Interagency Committee was formed as the extra-legal, voluntary coordinating body. It consists of one representative each from six major Federal departments concerned with the basin and five governors delegated by their States' committee. Pick-Sloan has been expanded by addition of some projects, including notably some big ones authorized earlier, and also including some activities of the States. Thus the undertaking has become in reality the interagency plan.

The great bulk of expenditures have been by the Corps of Engineers and Bureau of Reclamation. Most of the work has been and is being done, so far, in the middle and upper portions of the basin. The Army engineers have declared—and there is evidence in verification—that either serious public opposition or changes in plans demanded locally have prevented them from proceeding with many projects in the lower or eastern end of the valley.

MURRAY'S SERIES OF MVA BILLS

The first MVA bill was introduced in Congress August 18, 1944, by Senator JAMES E. MURRAY, Montana Democrat and liberal. Like its successors to date, it failed to progress. The second bill, in 1945, was referred by President Truman, then Vice President, to unfriendly Senate committees, an action for which he was roundly criticized by MVA backers. The measure did not reach the Senate floor. Truman in the electoral campaign of 1944 and since he became President, has made statements seeming to give some support to the MVA idea, not backed by action.

A third bill followed, then, in 1949, the fourth and, finally, the fifth, presented last July 23.

President Roosevelt approved the 1944 Flood Control Act with the "distinct understanding that it is not to be interpreted as jeopardizing in any way the creation of a Missouri Valley Authority." Roosevelt died in the spring of 1945, while the second MVA bill was pending. He had been the vigorous backer of the long efforts of the late Senator George W. Norris to create the Tennessee Valley Authority.

VARIOUS OBJECTIONS MET

In the course of the series of MVA bills various changes have been made in an effort to meet criticisms and overcome objections. Opponents still maintain that powers of the MVA, as they have been proposed, would be too broad and far-reaching. One of the favorite attacks on MVA has been that it would be a socialistic superstate, based at Washington, out of reach of the people, whereas the interagency method is represented as the essence of democracy.

As a matter of fact, the MVA scheme would require a direct regional administration, subject only to the normal powers of Congress, whereas the interagency constituents are part of the federalized system of Government wholly dependent on Washington. The last MVA bill specifically provided that MVA, a management agency, could arrange with

existing agencies, such as the Army engineers and Reclamation Bureau, to handle construction of projects for which they are especially qualified.

Questions frequently asked are: What is the MVA plan? How would its projects differ from the Interagency plan?

There is no MVA physical plan. It would not be feasible to set one up by the congressional bill. Establishment of a plan would be the first duty of an MVA if and when established.

The MVA bill specified, however, that basin development projects for which Congress already has made appropriations should be retained in MVA's plan "insofar as practicable." This makes the likelihood slim for any radical change from existing physical plans, as Interagency's work has gone so far already.

AROUSED PUBLIC SUPPORT NEEDED

For a time there was a vigorous organization backing MVA, the regional committee for a Missouri Valley Authority. Its main support came from labor and liberal elements. A principal financial backer was the CIO, while much of its push came from the National Farmers Union. This organization has become dormant. Senator MURRAY, leading congressional backer of MVA, has become preoccupied with various other interests, especially since he became chairman of the Senate's Labor and Public Welfare Committee in the current session.

Members of the St. Louis Chamber of Commerce voted 776 to 700 in favor of an MVA in a secret vote taken among the 3,270 members in April 1945.

The question now is whether the impetus of the disastrous flood will be sufficient to arouse support for funds for flood control and support for a unified regional management of the basin's development.

DEFINITIONS: MVA, PICK-SLOAN PLAN, MISSOURI BASIN INTERAGENCY COMMITTEE

Three terms recur frequently in discussions of the flood-control problem and other matters concerning the great watershed of the Missouri River. These are Missouri Valley Authority, Pick-Sloan plan, and Missouri Basin Interagency Committee.

They concern an area covering one-sixth of the Nation, including about half of the State of Missouri. It stretches from the Missouri River's mouth just north of St. Louis to the Continental Divide in the Rocky Mountains, from central Colorado to the Canadian border of Montana.

Definitions of these terms follow:

Missouri Valley Authority: This would be a planning and administrative agency to handle unified development and management of the natural resources of the whole watershed. It would be a strictly regional organization, in the nature of a Federal Government corporation, operating only in this valley, and with its officials and staff situated within the valley. It would follow the pattern of the successful Tennessee Valley Authority. An MVA has been proposed in a bill now before Congress.

Pick-Sloan plan: This term is loosely applied to the existing plans of existing agencies for development of the basin. It represents a 1944 merger of the Pick plan of the Army's Corps of Engineers, which was based on flood control and kindred subjects, and of the Sloan plan of the Interior Department's Bureau of Reclamation, which was pitched on irrigation and related fields. Gradually since 1945 the plan has in actuality been expanded into an interagency plan of the interagency committee. The latter plan is an effort to achieve a more comprehensive development, covering a greater field of activity. It has absorbed some projects dating from both before and after the more limited Pick-Sloan plan.

Missouri Basin Interagency Committee: This is a voluntary or extralegal coordinating agency for the valley work, established in 1945 by a similar national committee at Washington representing six major Federal departments. It holds public meetings nearly every month in various parts of the basin and through technical staffs of the respective departments, carries out its coordinating endeavors. Federal departments represented on the basin committee are: Corps of Engineers, Interior (including Bureau of Reclamation and other agencies), Agriculture, Commerce, Federal Power Commission, and Federal Security Agency (representative chiefly of the Public Health Service). The 10 States in the basin are represented with a strong voice in Interagency by a delegation of five Governors chosen by the Governors' Missouri River States Committee.

Proposed State Television Network in Pennsylvania

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. McCARTHY. Mr. President, on Sunday evening, July 29, 1951, Mr. George E. Sokolsky broadcast a statement over the facilities of the American Broadcasting Co. under the headline "Shoot the works" regarding a proposal to establish a State television network in Pennsylvania. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SHOOT THE WORKS

The General Assembly of Pennsylvania has before it a bill, No. 784, which interests me because it is indicative of a general unwholesome trend in this country for the Federal Government, the States, and municipalities to compete increasingly with private enterprise.

It used to be said that when private enterprise failed, it was the duty and obligation of government to step in.

But that is not true of radio or television. They are, on the whole, well-managed organizations, performing a useful service, doing it better than anywhere else on earth, although still not good enough, and making a profit at it.

This Pennsylvania bill is only important because it shows that the politicians cannot keep their hands off things. Because there has been an important discussion concerning the use of television for educational purposes, particularly as regards children, these Pennsylvania politicians jumped the gun and want to set up a costly system, competitive with private enterprise. If they get away with this proposal, it will be followed in other States and will place upon the taxpayer another unjustified and heavy burden.

This is the preamble of the Pennsylvania bill No. 784:

"To provide for the establishment of a State television network to be licensed by the Federal Communications Commission for noncommercial educational service authorizing the survey and purchase of necessary sites and equipment providing for the

construction of a master station and subsidiary stations as may be needed for State-wide coverage creating within the department of public instruction a division of audio-visual education and defining its powers and duties conferring powers and imposing duties upon the superintendent and department of public instruction and making an appropriation."

I note that they start with a \$100,000 appropriation. That looks small enough, but it is only a starter. It strikes me, after reading all that the politicians put into the bill, that a first expenditure of \$25,000,000 would be low. And that is a first cost. This television network is to be operated without any revenue, which means that every year there would have to be appropriations to keep it going. Those appropriations could become enormous.

For instance, how many cities are to have booster and subsidiary stations? I note that the bill calls for schools of the air, whatever that may mean. There will be a widespread distribution of scripts and transcripts. And, of course, land and buildings will be bought all over the place, probably marble front buildings with the politicians' names on the cornerstones.

This Pennsylvania bill for a State television system is an example of what Senator BYRD of Virginia has been quarreling about so valiantly, the habit of politicians of spending this country into bankruptcy. It is like the discovery by the Washington Times Herald of millions of dollars of office desks and furniture in forgotten warehouses in Washington. It is why the Hoover Commission reports have not been implemented. Had they been, this Government of ours would have saved some money.

"Shoot the Works!" is apparently the motto of our era.

And we are shooting the works. I suggest that citizens watch in their own States for such fandangles as this Pennsylvania bill. This is a good time for retrenchment not for expansion. Our citizens got a pretty good education without television and I do not see that we are producing such a wonderfully educated race of men with all the new and so-called progressive ideas that have come into our educational system in recent years. The intelligence tests during World War II, after a generation of fussing over the schools, did not prove the worth of so-called progressive education.

Apart from that, I do not like to see the politicians get their hands on the means of expression of this country. There is too much propaganda. The State Department, for instance, maintains a vast propaganda force designed to influence the minds of our people. Actually, we should make up our own minds and the politicians should be subordinated to the will of the people.

It is scandalous that General MacArthur should have felt that he had to say this in Boston:

"I have been warned by many that an outspoken course, even if it be solely of truth, will bring down upon my head ruthless retaliation—that efforts will be made to destroy public faith in the integrity of my views—not by force of just argument but by the application of the false methods of propaganda. I am told in effect I must follow blindly the leader—keep silent—or take the bitter consequences.

"I had thought Abraham Lincoln had pinned down for all time this ugly code when he declared: 'To sin by silence when they should protest makes cowards of men.'"

Surely, something has gone wrong with the American conception of liberty if anyone would dare say to any citizen that he may not speak his mind on a public question.

There is danger for all of us when the

Government—when any agency of government—Federal, State, or municipal—takes over the control and management of the means of expression. Look what Hitler did to the magnificent German people by use of the radio. He hammered their minds on the anvil of government propaganda until he virtually drove them into a madness that made them morally and spiritually comatose.

There is too much Government propaganda and too little truth. For instance, the other day, Dean Acheson announced to the world that by 1954, European military aid will cost the United States \$25,000,000,000. If that is what we have to pay to get allies, I suppose we have to do it.

But I could not help wondering what the British and the French are putting up. How much? How much in money or wealth is anybody else putting up?

I should like to see some figures on what General Eisenhower is accomplishing in Europe. I see a lot of photographs. I see a lot of handshaking in those photographs. But I see no statistics.

If you have a Government-owned television network, competing with private, free stations, you will have lots of speeches on how excellent the Government is. Obviously, there is already too much Government in all countries which puts a ceiling on individual initiative and ingenuity.

The McCarran committee has opened its hearings of its investigation of the Institute of Pacific Relations. The first witnesses were Edward C. Carter who for many years managed the Institute, and Frederick Vanderbilt Field, who used to be its financial angel.

Field is now in jail in connection with the bail cases involving Communists in New York with whom he has had many public and long associations.

The first evidence produced a curious letter from Owen Lattimore to E. C. Carter in which Lattimore congratulates Carter for his support of the position of the Communists in China.

The disclosure of that letter, written in 1938, is possible because of the seizure of the files of the institute from Carter's barn in Lee, Mass. There were thousands of documents, some of which I have seen. This Lattimore letter is of such a nature that it raises anew the charges of Senator JOE McCARTHY.

Many regard Senator McCARTHY as a wild man who makes charges without investigation. He had made severe charges against Lattimore which the Tydings committee last year investigated. Senator Tydings whitewashed Lattimore and was defeated in the subsequent election.

But now we have this letter in which Lattimore not only congratulates Carter but instructs him. I shall read the pertinent words:

"For China, my hunch is that it will pay to keep behind the official Chinese Communist position—far enough not to be covered by the same label * * * for the British, scare the hell out of them in a polite way * * * for the U. S. S. R.—back their international policy in general, but without using their slogans and above all without giving them or anybody else an impression of 'subservience.'"

You will find that this letter comes up again and again in this McCarran investigation. It is the key to much that happened to make the State Department so tolerant of Communists up to the Korean War. And Senator PAT McCARRAN can't be called off. He will fight this thing through. His committee will fight this thing through until we know the truth.

General MacArthur said:

"I shall raise my voice as loud and as often as I believe it to be in the interest of the

American people. I shall dedicate all of my energies to restoring to American life those immutable principles and ideals which your forebears and mine handed down to us in sacred trust. I shall assist in the regaining of that moral base for both public and private life which will restore the people's faith in the integrity of public institutions and the private faith of every man in the integrity of his neighbor.

"I shall set my course to the end that no man need fear to speak the truth."

Green Tomato Auctions Start

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article taken from the Wilkes-Barre Record on August 10, 1951, entitled "Green Tomato Auctions Start":

GREEN TOMATO AUCTIONS START—FIRST OF SERIES SLATED TODAY AT SYBERTSVILLE

Green tomato auctions, an industry that has grown locally to \$750,000 annually, will get underway in Luzerne County today with the opening sale at Sybertsville, Conyngham Valley, starting at 3 p. m. Auctions will be held at the same hour Monday, Wednesday, and Friday of each week.

Luzerne County Farm Agent James Hutchison said last night the Carverton auction will start Saturday at 3 and will be held Tuesday, Thursday, and Saturday of each week.

Bloomingsdale auction will start August 18 at 11 a. m. and will continue each Tuesday and Saturday until frost.

For the past 15 years farmers of the second largest vegetable-producing county in the State have been growing tomatoes for the "Green Wraps" markets.

"Green Wraps" is a name given to tomatoes picked green and sold to buyers who, in turn, sell them in the South as "pink" tomatoes, or to New York packers who "pink" them by sprinkling water and providing extra heat, causing tomatoes to pink more readily.

Tomatoes grown in the upland soils of the county and particularly the volusia clay loams, are especially fine for green wrapping. Mostly of the Rutgers variety, they are solid and pack well, retaining a fine flavor even though not actually ripened on the vine.

These tomatoes must be picked at precisely the right time, approximately 5 to 7 days before they ripen on the vine, or they will not ripen properly in the markets. They are graded for size and shape and until recent years were wrapped in thin glazed paper and packaged in 30-pound bags or 12-quart climax boxes.

In 1946, farmers organized the Carverton Upland Tomato Growers Association, Inc., under the supervision of the Luzerne County Agricultural Extension Association, and started a tomato auction. It is held 3 days a week and attended by most of the buyers who are interested in shipping tomatoes to New York and Philadelphia, or even as far away as Miami, Fla., and New Orleans, La.

The participating farmers drive their truck loads past the auction block, giving each buyer an opportunity to get an over-all view of each load. One basket, picked at random by a disinterested party, is dumped for the buyers to further see the quality of tomatoes

offered for sale. The tomatoes are sold to the highest bidder with the guaranty that each basket on that load will be as good as the sample.

Before the auction was started, farmers were getting 35 or 40 cents for a half-bushel basket of tomatoes. The average price the first year of the auction was \$1.24. Prices varied according to the quality of tomatoes and the amounts required by the buyers. In addition to the additional profit realized per basket of tomatoes, the growers had further advantages in that they were practically assured of a market for their crop, and they were fairly certain that they would be paid according to the quality of their own goods, and not just receive the price of the day.

Buyers were also pleased with this method of purchasing large quantities of tomatoes, because it was no longer necessary for them to go from one farm to another to bargain for the quantity and quality of tomatoes they wished to pack.

Here they were able to view all the loads and compare them before the auction began, and then get a closer view of a sample basket as each load was auctioned off. Since the farmers had meetings in which correct methods of selecting and grading tomatoes for market were demonstrated, the tomatoes as a whole were superior to those purchased in the valley before the auction, and because all tomatoes were guaranteed to be good as the sample basket, buyers were able to be fairly sure of what they were getting, and the price varied largely according to quality.

Many buyers no longer wrap the tomatoes and put them in lugs. Instead, they are washed, sized, placed in Flafield crates and loaded immediately into trailer trucks which carry up to 400 crates or 800 half-bushel baskets. Thus the tomatoes could be put on the road for their final destination within a very short time after being purchased.

There are now three tomato auctions in this vicinity. Some of these offer as high as 10,000 baskets for sale on a good day. The region is known as the great tomato valley. It is conceded by all tomato buyers that the best tomatoes in the world are grown in the Wyoming Valley.

Western Europe Feels "No World War III"

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copyrighted article containing an interview with Archbishop Cushing, who has just returned from Europe, dealing with conditions in Western Europe, and particularly in Spain. The article has already been read by more than 1,000,000 citizens of New England, and I think it would be well to share it with other citizens of the country. It was published in the Boston Advertiser of August 17, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WESTERN EUROPE FEELS "NO WORLD WAR III"
(By the Most Reverend Richard J. Cushing,
D. D., archbishop of Boston)

The feeling in Western Europe today is that there will be no world war III.

This is the message I bring to the people of Boston and New England following our pilgrimage to Portugal, Spain and France, which was dedicated to world peace.

After talking with religious and political leaders in Western Europe I have found the consensus to be that the United States has averted an all-out war—at least for the time being—by showing the world its determination to halt Communist aggression.

The United States has told Russia in no uncertain terms it will fight if necessary to destroy the evils of communism and to preserve democracy. And western Europeans believe that this show of unflinching strength by America has made the Russians retreat from their policy of world military conquest.

However, this European optimism must not be allowed to deaden America's awareness of the Communist menace. The United States must not forget or ignore the fact that Russia still is bent upon the conquest of religion and the conquest of democracy.

What Russia does not dare do militarily at the moment, it will redouble its efforts to accomplish by its undermining sabotage tactics.

As long as the Communist spectre hovers over the world, the United States must continue to increase its military and political defenses.

Moreover, the people of the world who earnestly desire peace, must pray to Almighty God for peace.

The purpose of our pilgrimage was to pray for peace. The real solution to world peace can be obtained only by prayer and true religious living.

When we pilgrims debarked at Lisbon, Portugal, we were tired and worn from our arduous trip. Our minds were heavy because when we left Boston, on July 15, the world crisis was bleak.

But after visitations to the Shrine of Our Lady of Fatima, and the numerous other sacred shrines of Spain and France, our entire outlook was changed.

I talked with religious and political leaders of Western Europe, in addition to any number of people in all walks of life.

It was then I began to gather that war to the Western European is not nearly so apparent and inevitable as it is to Americans.

The people with whom I spoke can't conceive how Russia would dare war upon America. But, if the Russians prove to be that foolhardy, it was reassuring to know that Western Europe is prepared to jump to democracy's defense should a third world war break out ultimately.

Despite the common belief in Western Europe that another war will not occur at least for many years, the people of Spain and France are fully aware of the Communist menace. They are bitterly opposed to any appeasement of communism. They are ready and willing to fight any threat of Communist aggression toward their nations.

I had a conference lasting an hour and a half with Gen. Francisco Franco of Spain.

There are those who dislike General Franco. They argue against any aid to his government and to the people of Spain.

But after talking with General Franco I have come to the conclusion that his government is vitally necessary to the preservation of democracy in Western Europe.

General Franco assured me that the Spanish people have the will to fight any threat of Communist aggression in Western Europe. The Franco government has a standing army of 2,000,000 men—all remarkably trained soldiers.

If we do not accept Franco's military aid, we face chaos in Western Europe. After my talk with General Franco, I am convinced of his sincerity to aid the democracies. Franco, regardless of what some people think of his political views, is a man of great faith.

America must afford economic and political aid to General Franco's government so that Spain can help do our military job in Europe if a war with Russia should break out sometime in the future.

In this message, I also want to tell the people of the Boston Archdiocese that my prayers were offered daily during the pilgrimage for their spiritual and temporal well-being.

To the wives, parents, and other relatives of our men in the Armed Forces from the Boston Archdiocese, may I say that special prayers were offered up every day at all of the shrines we visited for your loved ones in battle.

The pilgrimage was very arduous, but the blessings and fruits of our visitations to the Shrine of Our Lady of Fatima, and all of the other shrines cannot be measured.

After recovering from a very bad cold which I acquired during the pilgrimage, I now feel quite well and am overjoyed with the prospect of arriving back in Boston late tonight.

As you know, we dock in New York today, and then entrain for Boston.

It was wonderful to have made the pilgrimage. We feel our prayers have been answered.

It will be wonderful, also, to be home again among the people of the Boston Archdiocese.

Give Me the American Sinner

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article commenting on world affairs by Mark A. Graubard, guest editor of *Skol*, the University of Minnesota student publication, which appeared in the March 1951 issue.

There being no objection, the article was ordered to be printed in the Record, as follows:

My love for the underdog had lain chained and muzzled for years in punishment for his meddling habits, but at last broke out of his bondage. How long, he thundered, will this slander of America go on? Abuse, if you like, America's institutions, here uncouthness, ambitions, and brutality but spare something, for charity's sake; her youth perhaps, her womanhood (women and children, you know); spare perhaps a few kind words for her generosity, or—here I cut him short with one goodly blow of repression and a guilt complex. Enough of that, I said. You want to get me in trouble with my friends, my respectable neighbors, bosses, students, and the public?

And I am not kidding either. Can you imagine what would happen to anyone hereabouts who dared assert that America is not the vulgar country our intellectuals declare her to be; that Congress does represent the people; that Wall Street or big business does not run the country; but Congress and the President, the people's choice for good or evil; that a Senator who gets half a million votes is not quite the stupidest man in the State, but by and large represents the voters more faithfully than any highbrow would; that Americans are far more generous, less concerned with the dollar than Europeans, whose hunger for money is pathological, though understandable; that the American novel is not quite

rubbish; that even Hollywood has produced some daring and valuable pictures; that the easy-going American college student may be juvenile but is decent, willing, and unpolluted by as much provincialism, social and intellectual snobbishness as beset his European cousins; that—etc., etc. Don't assert it brother. The abuse that greeted a Senator who said there were more men like Hiss in the State Department will hit you in the face, and if you are not a marine you may even be flooded by it. (Had the loon said there were 200 Fascists and militarists there he would have been hailed a hero.) So relax, find another underdog, and be on good behavior. Please.

And life will go on for *Homo Americanus* as before. If he is a small town storekeeper who minds his own business and mows his lawn, he will be a Babbitt. If he loves culture and yearns to go abroad he will be a Dodsborough. If he belongs to Rotary or Kiwanis to be a good fellow, listens to shady jokes once in a while, and creates in his clubs the biggest lecture market in the world, he is a gregarious boob. If he buys a painting and feels grand and artistic because the Mrs. yearns for a little culture, he is a money-eyed vulgarian. If he distributes \$42,000,000,000 in foreign relief and rehabilitation, he is merely filthy rich, and if he expects some favor or friendship in return he is a Shylock and selfish. If backward nations beg him to invest money in their neglected lands, he is an imperialist, and if he frees the Philippines he is an oppressor. If he distributes nickels to barefoot boys in Spain who follow him doggedly with outstretched hands, he scatters lightly men's sweat and blood. If he is a GI away from home giving kids gum and candy, he is uncouth; if he seeks a girl and gives her money because she is so poor and he can't give her a sonnet or a rose, he is cheap. Brother, there simply is no hiding place down here.

I took a European visitor to lunch last summer. On the lawn in front of Coffman Memorial Union sat a sweet thing gazing romantically toward the west, her eyes fixed on the Foshay Tower. Her boy friend lay on the grass with his head in her lap. The visitor frowned—such manners on a campus of a *universitatus*—no culture—these Americans. Oh, in Europe students are students. They wear university caps, carry Latin books, have mistresses, discuss Nietzsche and Leibnitz, and then marry decent girls in church.

Madame Pandit came to Minneapolis. Schools closed. Women ran to hear her platitudes. Editorials honored her. A noble foreign visitor. A few weeks later she appeared on a TV interview show, told Americans they were vulgar and cared only for money, were hysterical, distributed aid to dump their excess goods (while her brother is furious because we dump none on him) have no competent spokesmen, and if we only let her, she would do an excellent public relations job for us.

I was at two British universities and at Zurich. (I had a visitor's card with a police stamp, and knew I was abroad.) For an American student to criticize local politics or customs there, in letters or speeches, was unthinkable. But here our campus daily prints constant abuse from Dutch and German and Austrian and Norwegian students, and everybody exults in Amens. I have still to read an editorial in the same, praising some American Senator, or newly passed law, or some meager lesson we are reluctantly learning in our struggle to be left alone to enjoy our prosperity and our goal of the Fair Deal, or our amateurish attempts at strengthening our security, threatened from within and without. But I am forgetting the madmen in Washington, the hysteria, the witch hunt in present day America where life is such that, as Professor Wirth of Chicago puts it, "everyone suspects his neighbor." Alas, the only hysteria I have

found so far is the passion and frenzy generated when those worthy critics get together to shout "Hysteria!" "Witch hunt!" and then proceed to accuse, abuse, and vilify our culture, leaders, institutions, intentions, and our weak and inexperienced efforts at survival. But then I am only a smug middle class mentality, pooh. But since I have thus been caught redhanded, here is my confession:

Give me the simple-minded American student with all his faults, but free from nineteenth century medievalisms, petty European hates, snobbishness and provincialism. Give me the GI sentry in Germany who looked blank as he chewed his gum and listened to Margarette Buber (Under Two Dictators) seeking refuge behind American lines, and finally said, "O. K. sister. Go through." Said she, "I never heard such a beautiful arrangement of words before in my life." Give me the American sinner of the South and the North, and I still think that with some educational skill and understanding my future is more secure than with embittered, conceltd, and harassed Germans, Russians, or Rumanians. As to American culture, I wish I had more time for its science, literature, exhibits, concerts, and plays.

General Eisenhower's Views

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of August 14, 1951:

GENERAL EISENHOWER'S VIEWS

The dangers of any major cut in the \$8,500,000,000 foreign-aid program, which is facing crucial legislative tests this week, have now been laid before Congress by General Eisenhower, and Congress can ignore his views only at the risk of imperiling the task for which he was sent abroad, which is to organize the first-line defense of both Europe and the United States. As reported by a Senate subcommittee, General Eisenhower holds that the Western World is exposed to the constant threat of a Soviet army of 4,000,000 men backed by 20,000 war planes, not to speak of another million men in the satellite armies, that this threat compels the earliest possible conversion of Western Europe into a military bastion, which can be done only with American military and financial aid; and that the loss of this bastion, which would leave us standing alone in a hostile sea of communism, would make any attempted savings on our aid program payayune.

What is more, he holds that what must be done had best be done quickly, for "if we drag this job out, we fail." At best we would get half the result at twice the cost. He goes so far as to suggest—for the benefit of Congress, but also of Europe itself—that if we can't do the job in a reasonable length of time it can't be done at all and we had better get out. But he is confident that, given proper support, the job can be done. The material, intellectual, spiritual, technical, and professional resources of the free world are, in his view, so superior to those of the iron-curtain countries that fright or hysteria becomes ridiculous. But these resources must be mobilized to be effective,

and that requires the joint effort of both the United States and Europe.

In this joint effort the United States must provide some initial military forces which may have to exceed the six divisions already scheduled. But in the main the United States is called upon to provide the guns while Europe provides the bulk of the men. The subcommittee is frank in stating that Europe's progress in mobilization is far from satisfactory, but at least one of the factors in its delays is the lack of equipment from the United States, whose production program is just getting under way. Given adequate equipment, the European members of the North Atlantic Treaty Organization can provide at least 3,000,000 men, and countries now being associated with the Atlantic defense system, such as Greece, Turkey, and Yugoslavia, can provide at least a million more, and every dollar saved on the foreign-aid program means so many fewer Europeans available to fight for themselves and for us.

Formosa as Bastion of Free World

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Formosa as Bastion of Free World," written by May Craig, the well-known Washington correspondent of the Gannett papers in the State of Maine, written as a result of her recent tour through the Orient and particularly her visit in Formosa and conference with our American Minister, Hon. Karl L. Rankin, of Maine, incidentally, one of the most experienced of our career diplomats, and one who has been in key spots in troubled areas all over the world following his internment by the Japanese in the Philippines and his later service in Greece and the Orient.

This report seems most pertinent as we contemplate the consideration of the proposed Japanese peace treaty and its relation to the Chinese Nationalist Government in Formosa.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORMOSA AS BASTION OF FREE WORLD

(By May Craig)

TAIPEI, FORMOSA.—Two principal questions arise out of the complex situation in this key spot in the Pacific which yet so closely affects all the world. The most immediate is why the Chinese Nationalists are so upset about the proposed Japanese peace treaty, which they have not been invited to sign as one of the allies, in San Francisco, in September, and what can be done about this difficult situation created by their exclusion.

The other question is the future of Formosa, the home of the anti-Communist Chinese, the seat of the Nationalist Government in exile from the Communist-held mainland of China.

I asked these two questions of our American minister here, Karl L. Rankin. He is a calm, quiet, career diplomat, experienced in trouble spots. He was in Belgrade, interned for 2 years by the Japanese in Manila after Pearl Harbor. He was sent to

Greece when we were saving that key Mediterranean spot from the Communist guerrilla and propaganda war, sent to Shanghai but never got there because the Communists got there first, thrown out of Canton, then a term in Hong Kong. Now here.

As to the Japanese treaty, Mr. Rankin said that the Chinese Nationalist Government on Formosa, and many elements friendly to this Government, both Chinese and other nationalities, are deeply hurt by the omission of Nationalist China from the list of countries invited to sign the multilateral treaty. Their chagrin parallels that of the Philippines and Korea, though for reasons which differ in detail.

It is not hard to understand these bitter feelings in the countries so intimately involved in the war with Japan, Mr. Rankin says, and he has been in the Far East long enough to have an understanding of Oriental psychology. The bitter feeling is particularly true in free China, which lost all but a small fraction of its huge territory and population as an indirect result of the war, he says.

"Moreover, the Chinese Nationalists say and believe, that the influences which exclude them from the treaty are the same which favor extinguishing what remains of China's independence by turning over Formosa to the tender mercies of the Communists," Mr. Rankin says, and this is important in the great conflict between free world and Communist world which is shaping up on a global scale, with the fate of freedom in the balance.

"No less important in Nationalist Chinese minds is the necessity of continuing their mission on Formosa, which is to provide a rallying point which some day will play a vital part in liberating their homeland from the Communist yoke.

On the other hand, we may expect a growing realization among Chinese outside the iron curtain that the draft Japanese Peace Treaty, as published July 12, 1951, protects Chinese interests as well as any such document could be expected to do with or without the signature of the Nationalist Government.

"Careful study of the draft also will reveal to them few if any political features to which China could object, other than its omission from the list of signatories. It may also be expected that Free China, in general, will come to accept, as many of its leading citizens already do, the paramount importance to the Free World of a magnanimous peace treaty with Japan, including as many important countries as possible, and to be signed at the earliest possible date.

"There will remain the delicate but essential task of restoring normal relations between Japan and free China as soon as possible, along lines similar to those of the draft treaty. Despite all that has happened in the past, the good will and common sense existing on both sides make success both possible and probable. Any necessary support from friends abroad should not be withheld."

My own conversations with Japanese in Japan, with Chinese here, with Americans all over the Far East, confirm Mr. Rankin's sober words, and go further—that it is a mistake not to include Nationalist China in the Japanese treaty, to demonstrate that we mean what Assistant Secretary of State Dean Rusk said in May, that not only do we repudiate claim of the Red Chinese Communists that they represent the people of China, but that we reaffirm our position that the Nationalist Government, now seated in Formosa, is the true representative of the Chinese people.

If we are not to include Nationalist China in signature, as an ally in the multilateral treaty to be signed in San Francisco, then we should at least use our influence, which there is no use denying we have, to promote

an early treaty between Japan and Nationalist China. This influence should be used while we still have it, to shut out the Reds and to weld Japan and Free China in the anti-Communist crusade.

Coming to the second question, the future of Formosa, Mr. Rankin said: "Formosa can be the bastion; it can also be the show window and a rallying point for all Chinese who love freedom."

"Formosa," he said, "is so inextricably connected with most of the major international problems of the Far East that before considering its future, several prior assumptions are necessary. Suppose, for example, that substantially the present status quo is preserved on Formosa, until a satisfactory degree of peace and security can be established in the western Pacific."

This would allow for whatever military and economic strengthening of Formosa as is required to deter or defeat the attack which the Communists have repeatedly vowed to make. "Perhaps," Mr. Rankin says, "they will make the attack anyway, or maybe some new aggression elsewhere in the Far East would involve Formosa indirectly. There are so many possible combinations of factors, such complex speculations do not get us anywhere, do not permit us to see ahead with any clarity."

"So we come back to the only single assumption which involves a good measure of probability as well as enough known facts to give us a glimpse ahead—that Formosa will, with American help, remain outside the Iron curtain. From this point we can consider the prospects of our cooperative effort, with the Chinese, in strengthening the island's defenses and its economy. Fortunately, there is a great deal to start with. The armed forces include more than a half million men, a majority of whom have received considerable training and whose present equipment, while inadequate in amount, is by no means negligible. Formosa's industry is small but capable of considerable expansion at no great cost, while its agriculture produces more than enough food for the island's population of 8,000,000. Of this number, more than a million are children in school."

"The death rate on the island compares favorably with America and Europe, while law and order are on as satisfactory a basis as anywhere in the Far East."

"On such foundations a United States military and economic aid program is developing which promises to produce on Formosa a genuine situation of strength. This strength will be both a deterrent to further Communist aggression and an example of what international cooperation in the free world can accomplish in promoting the general welfare of a people." And then he re-emphasized that Formosa can be a bastion of this free world, a demonstration of democracy, a show window and a rallying point.

The Fulbright Exchange of Students Law

EXTENSION OF REMARKS OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article which appeared in the Washington Evening Star today. It is an excellent discussion of the exchange-of-persons program made possible by the law en-

acted on August 1, 1946, which I believe is making a real contribution to better relations among the peoples of the world. I believe this article will be of interest to the readers of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FAMED FULBRIGHT ACT HAS SENT 1,907 ABROAD

In a world where Paris and Patagonia seem little farther than New York, more and more young Americans are packing their bags and setting off for study and travel in foreign lands.

The famed Fulbright Act has made a major contribution to this temporary exodus. It became law on August 1, 1946, when, amending the Surplus Property Act of 1944, it enabled a portion of the currencies and credits of other countries accrued by the United States through the sale of surplus property to be used for educational purposes.

Since then, the Fulbright program has sent 1,907 Americans from 48 States and the District of Columbia to study, teach, lecture or conduct research abroad, while 1,731 nationals of other countries received awards for similar projects here. Also, 646 foreign students have received scholarships for study in American schools in their home country. The competition for next year's awards closes October 15, 1951.

Although only graduate students are sent, college students may apply in their senior year for a grant to pursue graduate study overseas. According to Dr. A. J. Prohl, Fulbright adviser at the University of Maryland, students' interest does not seem to become sparked until they are seniors, although earlier interest can obviously be a boon to successful candidacy.

Candidates for study abroad must also be United States citizens, have a satisfactory knowledge of the country in which they plan to study, good health and a suitable plan of study or research.

The program of study planned, together with the qualifications the student has to carry it out, is the prime consideration, of course. But another important qualification is how well the students selected will represent America abroad, and how successfully they are apt to adjust to foreign ways of living. In remote regions, students must be virtually encyclopedias, full of knowledge on all manner of things American. And they must also be capable of understanding the people of the country which is their host.

It is quite important for students to have counsel, according to Dr. Prohl. When a student expresses interest in the program, his adviser discusses his background and plan with him, and suggests the university he might attend most profitably.

The volume of applications for Fulbright grants is tremendous, and that of student applications is particularly impressive. Walter Johnson, chairman of the Board of Foreign Scholarships, has stated. In all, approximately 600 American students went overseas last fall as Fulbright scholars—and some 7,000 applications were received for those 600 spots. To date, the following 21 countries have signed agreements to participate in student exchange, and several more may be included this year. Those now participating are Australia, Austria, Belgium, and Luxembourg, Burma, China (suspended), Egypt, France, Greece, India, Iran, Italy, Korea (suspended), the Netherlands, New Zealand, Norway, Pakistan, the Philippines, Thailand, and the United Kingdom.

England is students' first choice, according to information we obtained from the Division of Exchange of Persons of the Department of State, with the preponderance of applications for Cambridge and Oxford. The reputation of these schools, together with the absence of a language barrier in England, places them at the top of the list.

Second in popularity is France, with Italy third. The ratio varies, we were told, but in general about five or six times as many applications are received for these countries as there are scholarships available.

Grants, always awarded in foreign currencies, include cost of schooling, living expenses, and transportation to and from the foreign country. No additional provisions are made for married students.

Under the act, programs are put into effect only after an executive agreement has been signed between the United States and each participating country. The amount available in each country depends upon the sales of surplus property to that country and on the terms of the sales agreement. So, in England, France, and Italy the expenditure of the equivalent of \$1,000,000 annually is authorized while in Burma, New Zealand, and the Netherlands the equivalent of from \$100,000 to \$300,000 is available each year. It is anticipated that most, if not all, of the programs will be carried on for a period of approximately 20 years, and may involve as much as the equivalent of one hundred and fifty million American dollars.

When the competition closes in the fall, all applications are sent to the Institute of International Education and reviewed by committees especially organized for this purpose, made up of prominent educators and specialists in various subject-matter fields. These committees recommend panels of candidates for each country, normally in excess of the actual number of opportunities. These names, as well as the applications of all rejected candidates, are forwarded to the Department of State for final consideration by the 10-member Board of Foreign Scholarships, appointed by the President. Applications of recommended candidates are then sent to the appropriate binational foundation or commission overseas which determines whether the project of each applicant can feasibly be undertaken in that country, and also arranges affiliation with an institution of higher learning there. When the applications are returned to the Department of State, the Board then selects the recipients.

More than 800 American colleges have appointed Fulbright advisers to receive applications on their campuses, and to give information to interested students. Here is a list of advisers at schools in this vicinity:

Donald Derby, assistant to the president, Fulbright program adviser, the American University, Washington, D. C.

Dean J. M. Campbell, college of arts and sciences, Catholic University of America, Washington, D. C.

Sister Mary Justine, registrar, Dumbarton College, 2935 Upton Street NW., Washington, D. C.

Dr. Paul Locher, assistant professor of history, Georgetown University, Washington, D. C.

Alan T. Delbert, George Washington University, Washington, D. C.

Dean William Stuart Nelson, Howard University, Washington, D. C.

Dr. Sadie St. Clair, Miner Teachers' College, Georgia Avenue and Euclid Street NW., Washington, D. C.

Dr. C. Grove Haines, School of Advanced International Studies, 1906 Florida Avenue NW., Washington, D. C.

Mr. R. Bruin, Jr., business manager, South-eastern University, 1736 G Street NW., Washington, D. C.

Sister Ann Francis, dean of students (FSA), Trinity College, Washington, D. C.

Assistant Prof. Ethel Summy, education and psychology, Wilson Teachers College, Washington, D. C.

A. J. Frahl, acting head, foreign language department, University of Maryland, College Park, Md.

President Truman's Third-Term Campaign

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by George Rothwell Brown relating to President Truman's campaign for a third term, which appeared in the Washington Times-Herald of August 13, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE POLITICAL PARADE

(By George Rothwell Brown)

President Truman's third-term campaign under the personal direction of Democratic National Chairman Boyle, is developing on the pattern first revealed at the meeting of the party leaders at Denver, in June.

The Washington administration was feeling the terrific impact of the scandals which had been dragged into the light by Democratic Senate committees, and the disclosures by KEFAUVER's television brigade of the tie-in between crooked politics and the underworld in big Democratic cities.

The decision was reached to meet these shattering assaults on the New Deal Party's integrity by the methods of counterattack.

The Republican opposition was branded the party of the smear, and an effort to fasten the war label on it was begun.

Republicans in Congress were falsely charged with having cut or refused appropriations for the development of the resources of Western States.

President Truman, in his letter to Philip Murray, adheres to the Denver pattern by charging the Republicans in Congress and in Kansas with responsibility for the vast flood damage in the recent disaster.

He ignored the fact that on August 2, 1945, he had by Executive order curtailed congressionally authorized expenditures for flood-control and river and harbor work by more than \$300,000,000, and that his own Budget Bureau had reduced funds for these purposes for the fiscal year ended June 30, 1951, by \$344,777,200.

Earlier, on June 28, President Truman went overboard and declared that the aim of his administration was world peace and that he was dedicated to that goal. By inference the war party label was pinned on the GOP.

"They," he added, referring to those who have been opposing his socialistic money-squandering schemes, "are using the smear and the big lie for personal publicity and partisan advantage, heedless of the damage they do to the country."

"Never, not even in the bitterest campaigns, and I have been through many a one, have I seen such a flood of lies and slanders as is now pouring forth over the country."

Truman thus faithfully followed the new Democratic Party line, which is to meet legitimate criticism with the most vicious forms of attack.

The President's letter to Murray is a clear indication that he is after the electoral votes of the Midwest States, most of which he carried in 1948, and has confirmed the opinion that he will seek to succeed himself next year.

On the same day that Truman spoke at Detroit, Boyle, in a speech in New York, had

the superlative audacity to say that the President had been "a pioneer in acting to make sure that our Government was kept free of disloyal persons or anyone who might be a risk to our security."

Truman's disastrous "Red herring" remark in the Alger Hiss case, and the refusal of his Secretary of State, Mr. Acheson, to "turn his back" on this jailbird perjurer, must be met in the approaching presidential campaign.

The technique is the smear. Thus, Senator BENTON steps up, and adds his contribution to the new party line.

His resolution that Senator JOE McCARTHY, of Wisconsin, resign or be expelled from the Senate follows the Denver pattern.

McCARTHY, who has won Nation-wide acclaim by his State Department exposure, is a menace to the third term in 1952. He must be destroyed or discredited.

It will be recalled that in every State where McCARTHY spoke last year in behalf of Republican candidates they were elected.

It will also be recalled that Connecticut Republicans gave McCARTHY the cold shoulder, with the result that Republican candidates were defeated, and two New Deal Democrats survived the Republican landslide.

BENTON must stand for reelection in 1952, and it is probable that Connecticut Republicans will not make the mistake they made in 1950, but put up a strong candidate against him, with support from McCARTHY.

McCARTHY, who comes up himself next year, will be under a mud barrage from now on. The dirtiest campaign in history is under way.

The Railroad Retirement Act

EXTENSION OF REMARKS

OF

HON. JOHN A. McGUIRE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. McGUIRE. Mr. Speaker, under leave to revise and extend my remarks, I desire to include in the RECORD a heart-rending letter that has been received by Mr. T. C. Carroll, president of the Brotherhood of Maintenance of Way Employees, from an aged widow of a deceased railroad employee who lives in Tennessee and who badly needs immediate assistance in the form of increased benefits under the Railroad Retirement Act. There are many similar cases coming to light daily. As the Members of the House know, the Committee on Interstate and Foreign Commerce is now considering H. R. 3669. Should this bill be enacted into law, the woman who writes Mr. Carroll and who is now receiving \$28.60 a month, would receive an increased annuity amounting to \$52.90 a month. This increase, as provided in H. R. 3669, would almost double this widow's monthly allowance. It is distressing to me after reading this letter to contemplate the proposals that the Congress has heard regarding railroad retirement. Some railroad labor organizations representing a small minority of the total are asking us to enact legislation which would increase this woman's benefit by \$3 a month. This is totally inadequate and completely indefensible. I urge that the Congress immediately adopt H. R. 3669 in order that conditions

described in the letter below can be alleviated. The letter follows:

COOKEVILLE, TENN.

Mr. T. C. CARROLL,

President, Brotherhood of Maintenance-of-Way Employees:

I am writing you to see if there is a way you can help me to get my railroad pension raised. I am only getting \$28.60 a month and I can hardly get by on such a little, while I am very thankful for that much.

My husband had 36 years on the railroad and he passed away February 7, 1945, and his birth date is June 2, 1882, and my birth date is September 13, 1884. After my husband, James P. Jackson, passed away, I did not get anything from the railroad retirement until I was 65 years old and then I have got \$28.60 since then. But I haven't got any other income, only this \$28.60, and I know you surely can understand how hard it would be to try to pay room rent and get by, and things are so high to live on. Surely there is some way you can help me to get my pension raised so I could get by. I am not able to work and sure have no other income, only this. Will you please help me to get this pension raised? I pay \$12 a month for room rent so you can see how much I have left to live on. I know you can understand how it would be to try to get by on so little.

I do hope and pray to the Lord you can and will get my pension raised so I can live on what I get. Please do what you can for me on this. I will be so thankful for all that can be done for me.

Thanks to you,

Mrs. MARY LEE JACKSON.

Anti-McCarthy and Anti-American

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Anti-McCARTHY and Anti-American," published in the Chicago Daily Tribune of July 23, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANTI-McCARTHY AND ANTI-AMERICAN

Republican Governor Kohler, of Wisconsin, has put in their place the Democratic smear artists of the State who are conducting a campaign against Senator McCARTHY, which they quaintly call Operation Truth. For some strange reason, the smear bund thought the Governor would go along with them and solicited a meeting. He undeceived them.

Noting that they are primarily concerned with getting newspaper publicity, he suggested that they could get more of it "if you will denounce the condonation of Alger Hiss by Dean Acheson, if you will exorcise the Missouri ballot frauds, the mink coat, home freezer and RFC scandals, the Kansas City killings of Democratic leaders in Democratic headquarters, and the general incompetence of the Democratic Party in the Nation."

On the specific issue of McCarthyism, as the smear artists like to call the Senator's attacks on communism within the administration, Governor Kohler referred to the Tydings committee whitewash, remarking

that McCARTHY's charges have not had a full or a fair hearing. He added that the Senator's activities pleased "neither the Communists nor certain Democratic leaders."

Like every other thoughtful citizen, Governor Kohler has no difficulty in seeing through Operation Truth. Senator McCARTHY's enemies have no wish to discuss his charges against Communists in the State Department. He has too much ammunition. The street corner gossip they are circulating against him is all in the nature of personal attacks, unrelated to the issue he has posed to the Nation. In short, they are dragging red herrings.

Typical of their charges is that the Senator violated the law when he ran for the Senate while a member of the bench in Wisconsin. That so-called crime certainly did not impress the voters of Wisconsin. They knew all about it, and they elected McCARTHY. The Senate refused to consider the matter.

The Madison Capital-Times and the Milwaukee Journal, which have been spearheading the drive to smear McCARTHY, cannot be called anti-Communist. The Senator has charged, in fact, that the Capital-Times had a party liner as one of its editors. The two newspapers may be against exposing communism in the administration from an excess of New Deal zeal, but whatever their motives, they are serving the Communist cause. As for those people who are mildly anti-McCARTHY, they may also consider themselves mildly anti-American.

Activities of the Reconstruction Finance Corporation

EXTENSION OF REMARKS OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thorough statement made before the Banking and Currency Committee this morning by Mr. W. Stuart Symington, Administrator of the Reconstruction Finance Corporation. The statement covers the activities of the Corporation since Mr. Symington assumed office as Administrator, and I believe it should be included in the RECORD in order that Senators and others may understand what the RFC is doing under his administration.

I have been informed by the Public Printer that the manuscript will make 3 3/4 pages of the RECORD, at a cost of \$307.50.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

It is a pleasure to appear before this committee.

The hearings before the RFC subcommittee raised important questions concerning the administration of the RFC. Steps have been taken to eliminate the causes for such questioning, and I would like to comment briefly on our present policies.

I am convinced that 99.9 percent of the RFC organization are honest, conscientious, and capable Americans. These people are determined that the RFC will again be known throughout the land as an example of honesty and integrity in Government.

The present activities of the RFC fall into two major groups. One has to do with the

lending of money, the other with the purchase and production of certain strategic materials. I will discuss the latter first.

RFC has jurisdiction over the production of synthetic rubber; also the refining and smelting of tin, and the production of abaca.

During the last year the requirements for these materials have greatly expanded; this as a result of the current mobilization program now being superimposed on an already full economy.

Under the authority of the Rubber Act of 1948, as extended by Public Law 575, RFC has expanded its operations in the synthetic rubber-producing facilities owned by the Government.

The above law specifies that synthetic-rubber-production facilities shall be maintained at an annual rated capacity of not less than 600,000 tons of general-purpose rubber, and not less than 65,000 tons of special-purpose rubber.

As a result of two outstanding reports on rubber by the Preparedness Subcommittee of the Senate Armed Forces Committee, the production of synthetic rubber was rapidly increased.

This recommendation proved wise, because already the above statutory capacity has proved insufficient. Already synthetic rubber at the rate of 950,000 tons is being programmed for the fiscal year 1952. To accomplish this goal, 11 additional facilities have been placed in production; 28 are now operating.

Without subsidy, the RFC is now selling synthetic rubber, at no loss, for less than half the world price of natural rubber.

It is estimated that 65 percent of the rubber now being used in American production is synthetic rubber.

Farmer, worker, and businessman all travel to work on rubber; and use it daily in countless other ways. The importance, therefore, of this RFC synthetic rubber program cannot be overemphasized.

May I insert in the record at this point this chart? [Chart not printed.] It illustrates graphically: (1) The increasing production of synthetic rubber, and (2) the favorable price relationship of synthetic against natural rubber.

Synthetic rubber would not have reached this advanced state of usefulness without research. The RFC synthetic-rubber research program, carried on in conjunction with many rubber manufacturers, has resulted in outstanding developments.

Included in this technical progress is the program of oil-extended rubber, a development that will increase the total supply of rubber with much less use of those components formerly necessary to produce the synthetic material.

Another development is cold synthetic rubber, a product that has proven superior to natural rubber in many applications.

Already it has been demonstrated that cold synthetic rubber for tread stock on tires has 20 percent to 30 percent better wearing qualities than natural rubber.

Improvements in the manufacture of synthetic rubber latex using the cold rubber process have resulted in a product now generally recognized to be as good or better than natural latex for the majority of uses.

Further research in this field is continuing, in order to secure superior products.

The significance of this program, to an America literally transported on millions of tons of rubber annually, is very great; because until the RFC synthetic-rubber program became a reality, nearly all rubber was controlled by either foreign governments, or foreign corporations set up by private interests with the approval of their governments.

To advise the RFC in its administration of the rubber program, we have established a Rubber Advisory Committee consisting of the following representatives of both large and small rubber companies who operate the

Government's rubber plants: John L. Collyer, president, B. F. Goodrich Co.; H. S. Firestone, Jr., chairman, Firestone Tire & Rubber Co.; A. L. Freedlander, president, Dayton Rubber Co.; Frank D. Hendrickson, president, American Hard Rubber Co.; H. E. Humphreys, president, United States Rubber Co.; P. W. Litchfield, chairman, Goodyear Tire & Rubber Co.; Everett Moras, president, Simplex Wire & Cable Co.; Thomas Robins, Jr., president, Hewitt-Robins, Inc.; J. Penfield Seiberling, president, Seiberling Rubber Co.

We have had many highly constructive meetings with the members of this advisory committee.

Another strategic material in the RFC program is tin.

Unlike natural rubber, tin has no substitute except those our research laboratories are working hard to create. This country relies entirely on foreign sources for that tin necessary to produce tin plate, bearing babbits, solder, and the many other industrial uses.

During the last war, when the major sources of tin, Malaya and Indonesia, were cut off, the RFC built a smelter at Texas City, Tex., to process low- and high-grade tin ores from South America.

This smelter has been in continuous operation since 1941. It is now producing many thousands of tons of tin metal a year, about 50 percent of our current industrial consumption.

Several months ago, another classic Government report from the Senate Preparedness Subcommittee was released on tin. This report showed in convincing fashion how disastrous to the American taxpayer was the operation of this foreign cartel in the current rising demand tin market caused by mobilizing an already full economy.

The purchase of tin by the United States Government has now ceased, until such time as reasonably fair prices can be obtained from those foreign suppliers.

Immediately after the outbreak of the Korean war last June, the New York price of tin rose steadily, from 78 3/4 cents a pound to \$1.83 last January. At that time domestic prices were frozen. Foreign markets continued to rise, however, the Singapore price reaching \$1.93 on February 14.

The above Senate report, coupled with changed Government buying policies, resulted in a sharp decline in tin prices to \$1.34; but supported by the cartels, the price worked back up to over \$1.50.

This time, however, America was determined to cease buying at these exorbitant prices. As a result, the world tin price began to really fall. As of Monday, it was \$1.004.

The current RFC sales price is \$1.03.

May I insert in the record at this point these charts which illustrate the story of tin prices. [Charts not printed.]

The availability of RFC stocks, plus the production of the Texas City smelter, have proven a valuable asset in the struggle for a fair tin price to the American producer and consumer. Reductions already obtained under the above program will result in the saving of many millions to the American taxpayer. If this recommended policy is continued, within the next 2 years the savings will run into hundreds of millions of dollars.

What the foreign tin interests of the world should realize is that, unless they approach this whole problem realistically—to wit, a fair profit only—they are ultimately ruining their greatest market because, in addition to further curtailment of nonessential uses, American laboratories, faced with these exorbitant prices, are working hard for adequate substitutes.

Based on the present price and amount of production of synthetic rubber, the natural-rubber people could tell the tin cartel a lot about what may happen to their largest market if the United States is forced to continue to face exorbitant prices.

The total amount involved in this RFC tin-rubber program is expected to run around \$700,000,000 in the fiscal year 1952.

Aside, therefore, from its more generally understood lending function, RFC has a significant role in the field of critical materials—a field in which both during and after World War II it has had a record of outstanding success.

In addition to rubber and tin production, RFC operates five abacá-fiber plantations in Central America, with a total of 25,000 acres now under cultivation. Those plantations produce 30,000,000 pounds of fiber a year.

Abacá, better known as manila hemp, is another material for which this country must depend upon imports. It is used principally in the production of marine cordage—an item vital in the defense program.

During the last war RFC was authorized to produce abacá in Central America, in order to alleviate the loss of hemp from the Philippine Islands. Because of defense requirements, authorization for the operation of those plantations was continued by the Congress after the war.

During the current fiscal year RFC, under congressional directive, is increasing the area under cultivation to 50,000 acres. This expansion will be completed in 1952.

In summary, the problem of those materials is primarily one of obtaining those raw materials essential for that American production necessary to protect both ourselves and our allies. If our economy is to survive the unprecedented cost of this vast mobilization effort, however, these necessary materials must be obtained at a fair price.

So much for the materials division of the RFC

Now as to its lending functions.

Since 1934, when direct lending authority to business enterprises was granted, the RFC has authorized 62,154 business loans in the amount of \$4,900,000,000. Bank participation in 25,925 of these loans aggregated an additional \$538,000,000.

Presently there are 11,493 loans and commitments outstanding in the amount of \$696,000,000, with bank participation in 4,037 of these aggregating \$48,000,000.

Shortly after I took office, we had the managers of the 32 field offices come to Washington for a general discussion of our policies. This meeting convinced us that there ought to be a new statement of lending policies so that there could be a uniform basis for the exercise of business judgment on the part of the agency managers.

Immediately thereafter we issued a directive on lending policies which furnished the criteria for the types of loans RFC should make as well as those for the types which should not be made. Recently RFC lending policies were more fully and formally defined in a policy statement approved by the Loan Policy Board which was set up under the present reorganization of this agency. The members of the Loan Policy Board include Secretary Snyder, Secretary Sawyer, and the Administrator and Deputy Administrator of the RFC.

A copy of this policy statement is attached. Some of its high lights are as follows:

Under the new policy every loan must serve the public interest as well as the private interest of the borrower. It can serve the purpose by helping a borrower to contribute to the defense program or to provide essential civilian goods or services.

RFC loans must conform to the anti-inflationary policies of the Government. To protect against an inflationary effect, a loan must be used to produce an equivalent amount of essential goods or services.

No loan may be made unless the applicant can show in writing that financing is not available from banks or other sources on reasonable terms. We are requiring that a borrower show evidence that he has tried to get the financing from at least three financial institutions when available.

We want to be very sure that the RFC is not in any way competing with private banking. We also want to encourage bank participation to the greatest possible extent.

No loans may be made to bail out other creditors.

No loans may be made to luxury hotels or to places deriving their principal income from the sale of intoxicating liquors.

No loans may be made to gambling establishments.

We have instituted a policy of full disclosure on RFC loans. In accordance with the views expressed by many of the members of this committee, we announce that we would do our best to conduct the RFC's affairs in a "goldfish bowl." We stated it as our conviction that where the taxpayers' money was being loaned the taxpayers had a right to know all the facts.

Other policy and organizational changes which have been put into effect may be summarized as follows. Since May 7, 1951, the RFC has—

(a) Established the policy of having all loan authorizations, except disaster loans, made in the Washington Office to assure uniformity of actions through decisions emanating from one central authority.

(b) Modified the Corporation's regulations requiring registration of attorneys or representatives of applicants, borrowers, or others so as to provide that officers of corporate applicants or borrowers come within the category of those required to register.

(c) Established a policy whereby all sales of securities or property held by the Corporation shall be made on competitive bidding, which may be by sealed bids or at auctions, depending upon the type of collateral.

(d) Established an Office of Loan Agency Management, responsible for the general supervision of the operations of all loan agencies.

(e) Issued broad general authorities to the Director, Office of Personnel, thereby streamlining this operation and eliminating the presentation of all personnel matters to the Administrator.

(f) Increased the personnel of the Office of Investigation.

(g) Reorganized and strengthened the Corporation's fiscal department, and reestablished fiscal divisions and changes in loan-agency operations to provide for the orderly and efficient transaction of fiscal functions.

(h) Reduced the number of statistical and other reports required of the Corporation's loan agencies.

In addition to the business-loan program, the RFC also makes loans to persons or enterprises which have suffered from a major disaster. To date we have made over 26,000 loans totaling \$63,000,000 in this program, of which 997 loans totaling \$4,000,000 are outstanding. By law these loans can be made without collateral. They are, in effect, character loans, and it is interesting to note that virtually all of them are repaid in full. The percentage of loss is very low—about 10 to 12 percent.

The RFC is playing an important role in the present flood disaster in the Midwest.

To facilitate and speed up processing of applications for disaster loans for flood sufferers, the following steps have been taken:

1. The Kansas and Missouri flood areas and Ottawa County, Okla., have been declared disaster areas as required by the RFC Act. These three areas are under the jurisdiction of the RFC Loan Agencies in Kansas City, St. Louis, and Oklahoma City, respectively.

2. The Kansas City Loan Agency has established seven emergency branch offices in the Kansas area; the St. Louis Loan Agency has set up three emergency branch offices in the Missouri area; and the Oklahoma City Agency has installed an emergency branch office at Miami, Oklahoma. This makes a

total of 14 RFC offices which are handling disaster loans in the flood areas.

3. The 11 emergency branch offices are empowered to make loans on their own authority up to and including \$5,000.

4. The managers of the RFC loan agencies in Kansas City, St. Louis and Oklahoma City continue to have the right to make disaster loans on their own authority up to and including \$20,000. This authority has now been broadened to include loans from \$20,000 to \$50,000, providing they have the approval of the RFC Advisory Committee in the area.

5. In the interest of speeding up aid to flood sufferers, the RFC has obtained the cooperation of local banks to receive and process applications for disaster loans up to and including \$5,000. While the RFC must approve and make these loans, this system of bank cooperation is making it possible for flood sufferers to receive loan commitments as early as possible so they in turn can proceed immediately with rehabilitation efforts.

At the present time the RFC has a revolving fund of \$40,000,000 for disaster loan purposes and about \$4,000,000 of this was previously committed, leaving about \$35,000,000 for the present flood emergency.

Up to today we have received about 500 applications for disaster loans in the flood areas. These have ranged from a \$75 loan to replace a kitchen stove to a \$500,000 loan to restore a grain elevator. The total of these disaster loans so far has been about \$10,000,000 and they are coming in at an increasing rate.

To date in Kansas we have made 61 disaster loans totaling \$564,000; in Oklahoma 86 loans totaling \$116,500; and in Missouri 3 loans totaling \$3,750.

Also in the disaster area the RFC helps in another way. We were informed by the Department of Agriculture that there were between three and four billion bushels of water-soaked grain in flood-damaged elevators and in railroad cars. This amount of grain will make between seven and one-half and ten million gallons of alcohol. The RFC uses alcohol in the manufacture of synthetic rubber. We indicated to alcohol distillers that we would consider the purchase of alcohol made from this flood-damaged grain at prices not over 70 cents per gallon delivered.

At a 70-cent price for alcohol, the distillers should be able to pay in the neighborhood of \$1 per bushel for the water-soaked grain. This compares with distress sales which were being made to feeders at prices as low as 15 cents per bushel.

In this way the RFC is obtaining alcohol at about 15 cents a gallon under the market; at the same time giving the Kansas and Missouri grain people a fair price for water-soaked grain.

The RFC also serve as fiscal agent for the Defense Production Administration. It handles loans granted by DPA from funds authorized by the Defense Production Act. It does not review these loans from a credit standpoint, merely handling same as fiscal agent.

The authority and therefore the responsibility for such a loan should be concentrated in one agency, and the President now has under study a plan for effecting such a consolidation within the RFC.

In the RFC is a final Board of Review, consisting of the Corporation's five probably most experienced loan examiners. It is a significant fact that not one loan approved by this Board of Review has been the subject of criticism in the recent congressional investigation of this agency. Every loan criticized was approved by the RFC Board of Directors against the recommendation of its own Review Board.

Under the reorganized set-up, the Administrator does not undertake to reverse the recommendations of the RFC's Board of Review without giving his reasons in writing.

During the current period of defense production, RFC will have its role in supplementing credit available from other sources. Experience in the last war and the current expansion proves that guaranteed loans will meet only part of the credit needs of defense mobilization.

This country is now in a period of expanding production, expanding economy controls, and rising costs. Such conditions will require many businesses to secure credit assistance, especially as the smaller businesses attempt to shift from peacetime products to defense items.

Based on past experience, it is anticipated that RFC loans to industry in the fiscal year 1952 will increase about one-third over the current fiscal year. Many of these loans will be to relatively small subcontractors, typical small-business men, whose attempts to add their productive facilities to the defense job might otherwise be either hampered or eliminated through lack of credit. In this connection RFC is specifically charged with carrying out the loan program for small business provided in the amendments to the Defense Production Act of 1950.

May I insert in the Record at this point this chart which presents the history of RFC loan activities. Note the sharp rise and fall of loans during periods of recession and expansion. [Chart not printed.]

The present position would seem comparable to that in 1941 prior to the major war expansion.

The above summary of what the RFC is doing as presented to you today would seem to end any discussion as to its value, but there are certain additional factors I present for your consideration.

In an effort to both preserve its freedom and at the same time maintain its high standard of living, America has now accumulated a staggering debt. Its Government must nevertheless face up to all the implications of this debt, at the same time the rise of Soviet communism forces us, for security reasons, to embark on another vast program of mobilization and expenditure.

Nowhere in the economy is the resulting impact of these hundreds of billions of dollars of debt felt more heavily than in our private banking system, and in the credit facilities that system is normally expected to extend.

In the past banks paid money on your and my deposits; and therefore it was necessary for them to lend money in order to make money for their stockholders.

Today, however, with their walls bulging with those Government securities necessary to handle the problem of this gigantic public debt, they pay little or no interest on your and my deposits; but they obtain a large portion of their earnings from the Government funds they purchase with the money their depositors have placed in their care.

Under these circumstances it is obvious that the lending policy of a bank can be handled on a far more fastidious basis than before. A bank can just about eliminate any element of risk in its loan policies and still make money.

Some element of risk in lending, however, has heretofore been considered an important aspect of our private enterprise system.

May we point out that RFC pays interest to the Treasury on a substantial part of the money it loans to small business.

Another aspect is that banks are willing to still incur risks on private loans; but at interest rates far above the normal value of money. RFC is a great deterrent against excessive interest charges because it can lend the little-business man if he cannot obtain a loan, with proper collateral, on reasonable terms.

This I believe—that under the steady march in this country toward the big—big government, big business, big taxes, America is steadily moving toward a con-

centration of wealth—and a concentration of the power behind that wealth—which in a relatively short time may put us perilously close to socialism.

As a wise man said to me years ago, the walk from trusts, cartels, and monopolies to socialism is just a step across the street.

Almost certain progress toward that undesirable form of government is the elimination of the smaller-business man through the restriction, or withdrawal, of his credit, at the same time there is a continuous increase in the size of his large competitors.

That is what has happened in certain countries which formerly were considered the master prophets of the private enterprise system.

For such reasons as restrictions on total lending authority, restrictions on the amount that can be lent to any individual, banking policy not to lend on fixed assets, and banking policy not to make term loans, it is becoming more and more difficult for smaller businesses to obtain credit, on reasonable terms, despite such businesses nevertheless possessing what was formerly considered adequate collateral.

As the current world situation develops, with its grave impact on the American economy, this credit vacuum is becoming more apparent; and we believe it will get worse instead of better. There is no more difficult time for small business than in a mobilization conversion period.

It would seem that one real and practical finger in the dike against this trend toward socialism through the abolition of small business is the RFC.

As the large corporations in our great industries continue to grow, any credit problem becomes less. But as the national debt mounts under the spur of this new mobilization, the credit problem of the little-business man becomes steadily more acute.

I have had as much experience as most in direct contact with working men and women in plants. Most of these citizens, regardless of their wages, have a desire—a hope. They want to break away from the wage, and have, and have their children have, their own business, which they hope will grow.

Even though today ever mounting taxes make it more difficult for them to save their "stake" to get started, they still have that hope, which in the past has been an inherent part of the American way of life.

The RFC cannot give them the venture capital to start a business.

No matter how hard it is to begin, they must save or borrow elsewhere the original capital required.

Surely, however, they should not be rubbed out of the business they have started with their savings because of credit conditions which have risen as a result of other conditions far beyond their control.

I believe that any organized effort to abolish the RFC is just another blow at small business, in favor of the trust, the cartel and the monopoly. I believe that the perpetuation of small business in this country is vital to preserve our system of free enterprise. I believe this agency is essential in order to prevent the entrance over here of one of the many "isms" now plaguing both the governments and the plain people in the lands of all our enemies, and many of our allies.

Speaking of foreign countries, an apparent development in the United States is becoming more and more perplexing.

Since VJ-day, to help the people of other lands, the American taxpayer has contributed over \$30,000,000,000.

Today the Detroit mechanic, the Kansas farmer, the Texas cattleman is heavily taxed to help preserve his counterpart in many countries; and under proposed programs he is going to be taxed a lot more.

In the present world crisis, it is our responsibility and our national policy to make

grants and loans to foreign countries to aid them in withstanding the spread of Soviet aggression.

This is a responsibility which we must all face up to.

Things have come to a pretty pass, however, if at the same time we are giving tens of billions of dollars to the little people—and the big people—of foreign countries, we nevertheless won't allow our neighbor down the street, who has served us well over a period of years, the loan of a few dollars necessary to maintain his established business when he is caught in economic conditions beyond his control.

Why should American citizenship be a deterrent to obtaining aid from our Government, especially when in this case the aid must be backed by collateral?

If we are interested in giving tens of billions of dollars to preserve the free enterprise system in other countries, why should we not be interested in lending a few million dollars to preserve free enterprise in this country?

Another group would abolish the RFC because of corruption. There were conditions in this agency which merit criticism. They have been changed; but a continuing analysis of the operating efficiency and integrity of the agency, just as in private business, will continue.

What an absurdity, however, to imply that, because of possible corruption resulting from inefficient management, a Government agency should be abolished, regardless of its contribution to the American people and their economy.

It would be just as logical to say that the Departments of State or Defense should be abolished because several officials were found dishonest.

The important point to consider is, does the RFC contribute a necessary function during these critical days?

Aside from its position in defense loans, or in the handling of critical materials, I believe RFC is a true bulwark against all "isms," through the preservation of independent business.

I believe, therefore, that its continuation is essential to the preservation of the American system of free enterprise.

RECONSTRUCTION FINANCE CORPORATION,

Washington, D. C., August 7, 1951.

LOAN AGENCY BULLETIN No. 2127

Subject: Loan policy statement No. 1

In accordance with section 6 of Reorganization Plan No. 1 of 1951, the Loan Policy Board of the Reconstruction Finance Corporation, composed of the following members, all ex officio: Stuart Symington, administrator, Reconstruction Finance Corporation, as chairman; Peter Bukowski, deputy administrator, Reconstruction Finance Corporation; as vice chairman, John W. Snyder, Secretary of the Treasury; and Charles Sawyer, Secretary of Commerce, have approved the attached policy statement No. 1 establishing general policies which shall govern the granting and denial of applications for financial assistance by the Reconstruction Finance Corporation.

Agency managers are hereby instructed to follow the policies set forth in such statement.

LEO NIELSON,
Secretary.

RECONSTRUCTION FINANCE CORPORATION, LOAN POLICY BOARD.

POLICY STATEMENT No. 1

The purpose of this document is to establish the principles and policies to be followed by the RFC in the conduct of its lending operations, including participations in loans.

The general policies are contained in part I. These general policies incorporate the statutory requirements of the RFC Act and expressions of congressional intent as to the manner in which the loan operations of the Corporation should be conducted. In addition, there are included various standards, implementing the statutory provisions and the expressions of congressional intent.

In the pursuit of the objectives of the RFC Act, the general policies of the RFC shall, to the maximum extent possible, be correlated with the general programs and policies of the Federal Government such as the present anti-inflation and defense-mobilization program. Accordingly part II of this statement of loan policies prescribes additional loan standards to be followed during the present period of mobilization and rearmament. The standards in part II are not in substitution for, but are supplemental to, the general standards embodied in part I.

These standards for loan policies are not intended to and cannot be automatically operative in each individual case. Accordingly, appropriate instructions and interpretations will be issued from time to time to the several managers of RFC loan agencies.

PART I. GENERAL LOAN POLICIES

A General objectives: All loans by the RFC must be of such character as to accomplish one or more of the stated objectives of the RFC Act, namely, to aid in financing agriculture, commerce, and industry, to encourage small business, to help in maintaining the economic stability of the country, and to assist in promoting maximum employment and production.

B Specific statutory restrictions: All loans by the RFC must at all times meet the following requirements of the RFC Act:

1. That no financial assistance be extended unless the credit requested is not otherwise available on reasonable terms. No loan shall be made in competition with private sources of credit. Loans shall not be made to an applicant where credit is available from private sources unless the terms, including the interest rate at which the credit is so available, are clearly unreasonable. In most cases, it should be insufficient to find only one commercial bank unwilling to grant the loan. The applicant should show why he should not dispose of a marketable asset in order to obtain all or any portion of the funds needed.

2. That all securities and obligations purchased and all loans made be of such sound value or so secured as reasonably to assure retirement or repayment.

3. That all loans made and all obligations and securities purchased, except those of public governmental agencies, mature in 10 years or less.

4. That in agreements with banks to participate in loans wherein the Corporation's disbursements are deferred, the amount of the Corporation's participation be limited to 70 percent of the balance outstanding at the time of disbursement in those cases where the total amount borrowed is \$100,000 or less, and be limited to 60 percent of such amount in those cases where the total amount is over \$100,000.

5. That no loan shall be made to any State, or political subdivision thereof, for the payment of ordinary governmental expenses as distinguished from specific public projects.

6. That loans to common carriers, such as railroads and airlines, must meet the standards set by the regulatory agencies, specifically the Interstate Commerce Commission and the Civil Aeronautics Board, in addition to the usual standards for all RFC loans.

7. That loans to financial institutions must meet standards set by the Treasury and are subject to Treasury approval.

8. The objective in emergency disaster lending should be to relieve the hardships

attendant upon such disasters. Such loans are not required to meet all the credit standards governing loans for normal purposes.

9. That no director, officer, attorney, agent, or employee of the Corporation participate directly or indirectly in the deliberation upon or determination of any question affecting his personal interests.

C. Implementation of basic statutory provisions: In addition to meeting the general objectives and requirements of the RFC act, all loans shall be made in accordance with the following principles:

1. The primary consideration in determining whether to grant a loan shall be the interest of the general public rather than the interest of the individual borrower.

2. Loans shall not be granted which in effect would promote monopoly.

3. In carrying out the objectives of the RFC act, particular consideration shall be given to the credit needs of small-business enterprises.

D. Particular types of loans which do not qualify: 1. No loan shall be made to "bail out" creditors, i. e., to pay off creditors who are inadequately secured or likely to sustain a loss.

2. No loan shall be made primarily to re-finance an existing debt.

3. No loan shall be made for effecting a change in the ownership of a going business or for purchasing an interest in such business.

4. No loan shall be made for acquiring, constructing, or improving real property which is to be held for investment.

5. No loan shall be made for speculative investments or purchases.

6. No loan shall be made to an eleemosynary institution.

7. No loan shall be made to any newspaper, magazine, radio broadcasting companies, or other similar organizations.

8. No loan shall be made for providing capital to an enterprise engaged in the business of lending.

9. No loan shall be made for operating an establishment whose income is derived in whole or in part from gambling or from rental of the premises for gambling or from rental of the premises for gambling purposes.

10. No loan shall be made for operating an establishment whose income is derived predominantly from the sale of alcoholic beverages.

PART II LOAN POLICY IN PRESENT EMERGENCY

In addition to the loan policies prescribed in part I hereof, the following principles shall be effective during the present period of defense mobilization and rearmament:

1. All loans by the RFC must assist, expedite, increase, or maintain the production of goods or services necessary to meet either military requirements or essential civilian requirements.

(a) The receipt of a "certificate of necessity" for accelerated tax amortization or the receipt of a defense contract (either a prime contract or subcontract) or a purchase order by the borrower or the existence of a national shortage of a commodity or service or proof of a regional (normal market area) shortage so great that minimum needs cannot be met at reasonable prices may be considered as evidence that the loan is for a defense purpose or an essential civilian requirement.

(b) Loans for the maintenance of existing production, processing, and orderly distribution of goods and services which are customarily recognized as necessities as distinguished from luxuries, may be considered loans for essential civilian requirements.

(c) Loans for conversion to essential production may be considered in the interest of national defense.

2. In each instance it should be determined as far as possible whether granting a loan will or will not be inflationary. For a loan to be considered noninflationary, the

finding should indicate that the loan will produce either an increased supply of essential goods or services or the prevention of a decrease.

LEO NIELSON,
Secretary.

The St. Lawrence Story—VI

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the sixth in a series of articles entitled "The St. Lawrence Story" which appeared in the August 13 edition of the Minneapolis Star. This article discusses the St. Lawrence seaway and power project as a vital link in America's national-defense system.

ST. LAWRENCE STORY—ALL AGREE SEAWAY WOULD AID DEFENSE

(By Leo Sonderegger)

Opponents in the controversy over the St. Lawrence project are agreed on one thing. Both sides acknowledge that the seaway's importance to national security, as a safe route for vital iron ore, is the central question just now.

The lead-off witness for the opposition went so far as to say before the Public Works Committee of the House of Representatives:

"I want to state at the outset that the railroads would not for one minute oppose this project, regardless of its economic unsoundness, if they thought its construction was required in the best interest of national defense."

It is scarcely necessary to add that the railroads have managed to resist the national security argument. They and other opponents of the project say the argument is faulty for several reasons.

In the first place, they assert, there is no pressing need for Labrador iron ore, because Lake Superior reserves are still adequate. They contend that the long, narrow channel would be highly vulnerable to sabotage or air attack.

CITE DRAIN OF MONEY, MATERIALS

In any case, they claim, existing means of transportation are adequate to handle any prospective tonnage of ore from Labrador.

Besides, it is argued, even if the project were really of importance to our defense, this would be a poor time to start it. Construction would be a drain on money, strategic materials, and manpower required in our current mobilization effort.

Opponents also claim that, once the project was finished, it would become a burden on the Nation's protective machinery. There would have to be elaborate precautions, they say, against a raid that could put one of the locks out of operation for months.

This point also is used to oppose the government view that development of Great Lakes shipbuilding facilities would be helpful to defense.

Another major argument against the project is that it would cost too much, especially at a time when our economy is being strained to embrace the defense and mobilization program. Here is a summary of this argument:

The present cost estimate is approximately \$818,000,000, of which this country's share is \$566,794,000. Even this is a very material underestimate of the ultimate cost.

Besides, the totals presented to the House committee include nothing for deepening of the many Great Lakes harbors that would expect to share in the seaway business.

The Army engineers estimate about \$14,000,000 for providing entrance channels and turning basins to outer docks at 10 United States harbors. The actual cost of fitting these harbors to handle ocean vessels would be many times that amount.

On top of all this, there is the fact that actual costs of some government projects have been much greater than the original estimates.

Seaway opponents also find fault with the assertion that the United States and Canada will share about equally in the financial burden.

TOLL PLAN CALLED IMPRACTICAL

The self-liquidation theory has few takers on the opposition side. This is pretty much a smoke screen, in their view, intended to hide the fact that the seaway will be a subsidized transportation system operating in competition with the railroads.

They believe the toll plan is impractical because it creates a dilemma: high tolls will drive away prospective shippers; low tolls won't bring in enough money. At any rate, they say, there just will not be enough traffic to justify the project.

This matter of prospective use is one of the biggest bones the debaters gnaw on. Enemies of the seaway say the department of commerce estimates are way off on two points, capacity and traffic potential.

Theoretical capacity is something quite different, they point out, from actual capacity under operating conditions. It is easy to arrive at a figure of, say, 60,000,000 tons a year by assuming that a steady stream of large, fully-loaded vessels will steam through the Welland canal as fast as its locks can work.

But under actual conditions the ships won't be pushing up the canal, bow to stern. Nor will they all be either large or fully loaded; some will be small canalers that take up lock space without adding much to the tonnage figure.

FIGURES ON OIL, ORE CALLED UNREALISTIC

As for the administration's potential-capacity estimate of fifty-seven to eighty-four million tons, the opponents say these figures are in the realm of dreamland.

Individual commodity figures in the department's 1951 estimate are regarded as quite unrealistic. Much is made of the fact, for example, that the total includes six to twenty million tons of petroleum, despite the department's admission that "no accurate predictions of the petroleum traffic over the seaway can be made."

They also scorn the department estimate of thirty to thirty-seven and one-half million tons of iron ore and claim there is no likelihood of its hitting even the minimum figure. They don't think anything like 4,000,000 tons of coal is going to move via the seaway, either.

Whatever capacity and traffic potential are discussed, channel depth is not far behind. Seaway opponents say the projected 27-foot channel would exclude all but 9.5 percent of oceangoing vessels that fly the American flag.

On the other hand, it is noted that 41 percent of all foreign ships could navigate the 27-foot channel. The conclusion is that a swarm of vessels from other countries, operating cheaply because of much lower wages, would dominate seaway traffic and cut into the legitimate business of American shipping.

Opponents of the project are suspicious, too, that the 27-foot channel is only an opening wedge. Once that has been approved, they foresee, Congress soon will be asked for money to deepen the channel to 30 feet. That would boost the cost to well over a billion dollars, maybe more than a billion and a half.

ONE-HUNDRED-MILLION-DOLLAR LOSS SEEN BY RAILS

There is one final major question, the most essential one of all so far as the railroads and port cities are concerned. That is the matter of how they are going to be affected financially by the seaway.

The opponents find it difficult to discuss this without seeming to argue against themselves. That is, they contend on the one hand that the seaway traffic will be much less than is estimated, and on the other hand they say that it will seriously hurt their business.

Generally, they resolve the apparent discrepancy by saying that whatever traffic the seaway carries will be just that much taken away from the ports and railroads.

The Association of American Railroads claims that the loss to its members might range from \$100,000,000 to \$25,000,000 a year.

The ports generally steer clear of estimates, although a spokesman for the Port of New Orleans figured it might lose out to the tune of more than \$90,000,000. The Port of New York claims that it would be robbed of half its foreign commerce.

This business-loss argument is tied in with another—that the seaway would be an "iceaway" about 5 months of the year. In order to carry the freight when ships can't operate in the channel, the railroads say, they would have to maintain a large amount of stand-by equipment.

RAILROADS PROVIDE CHIEF OPPOSITION

There are numerous other arguments against the seaway, mostly of minor significance. One item of more than minor importance, however, is the specific opposition to the power phase of the project.

The private utilities are natural opponents of this big Federal hydroelectrical development. They contend that there is no power shortage in New England and New York. They claim they can handle all the expansion that is necessary.

The fact remains that although power is an important part of the picture, the strongest opposition is still coming from the railroads.

Gregory S. Price, assistant general counsel of the Association of American Railroads and "whip" for opposition witnesses, testified before the Public Works Committee last April. He promised that others would discuss economic aspects of the seaway question "such as the effect on the national transportation system of providing a subsidized competitor."

Whereupon Representative JONES of Alabama inquired, "Is that not really your chief opposition to this whole thing?"

Prince replied, "That is the basic complaint."

GI Housing Conditions

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. BROOKS. Mr. Speaker, I have just received an excellent letter showing housing conditions among the GI's. This letter, from a young man with a family, is bright and cheerful. At the same time it is pathetic in a larger sense.

It seems tragic to me that Americans trying to rear families are having to live under conditions which we would not want or permit in the rearing of our

families. To try to rear a family in a one-room trailer, regardless of how fine it may be, is far below our standard of life. We in Congress do not approve of this, nor do we condone it. Those of our people who are in uniform should be given as soon as possible reasonably good places in which to live as American citizens.

The letter is as follows:

AUGUST 9, 1951.

DEAR OVERTON: I see where the LDO promotions are out. I think I was a little too late getting squared away on mine as I didn't even get an honorable mention. Anyway, I'm still able to apply one more year. However they are still making temporary officers, and I'd even like that.

I was promoted master sergeant last month, so the only thing left is a commission or warrant officer, and I understand that there will be no more warrants.

A large number of us are greatly interested in this housing subcommittee, and for a good reason. Don't laugh, but I broke loose and bought a house trailer. Have you been inside one of these 1951 jobs? I have a 35-foot lighthouse with two bedrooms, one with a large regular bed and the other with bunk beds for the two little Indians. It has a regular home type bath with shower, commode, and other fixtures. The wife loves the kitchen, which has an electric refrigerator, butane gas stove. We have been using one bottle of gas now for 8 weeks; a refill costs \$2.50—cheap cooking. At present we, with about 150 others, have our trailer on the base, however we found that we are paying \$17.75 per month for space and having to dig separate septic tanks for each trailer. The trailer owner has to do this himself. On the Great Lakes Training Center base at Chicago we found that the trailerite is paying \$12.50 per month with sewage and other services that we can't get. So most of us are moving away from the Government park to public parks where we get the sewage connections and services for \$15 per month.

You know, I believe that after looking into the matter, Congress can find a real savings in self-supporting trailer parks at every installation. More married NCO's and company grade officers are finding every day that they can save money and time by buying a trailer. I will wager that you would find over 20,000 trailer owners in service and there would be more if they had a place to park them at the assigned duty station. One example is me, of course. I used to have to move my furniture and personal effects at Government expense. I am entitled, as a master sergeant, to 4,500 pounds and I had that much. You know what van and freight rates are and you also multiply that by a goodly number of married men and you will find a large round figure. You can go into any trailer salesroom near a military installation and I'll also bet that 99.99 percent of the persons there are married NCO's and officers trying to buy a trailer.

With a few parks and an ease-off in credit on the purchase of a trailer I think this housing shortage in regards to the military would be about 40 percent over with. A trailer park has no repair bill or maintenance problems. At around \$12.50 per month a 100-unit park would show a profit to the Government over utilities. Hope you look on my ideas with favor and interest. I have quite a bit on the problems on such installations.

Hope you remember that deer season opens here in October and I am counting on you hunting with our party. We hunt every other Saturday during season. We had a wonderful time last year. In fact I got my season's limit of two. The turkey are increasing and are wilder than ever. So we

should have a good season. Oh, before you think of it, my trailer sleeps seven, so don't worry on that account. Be sure and let me know and we'll show you how the upper half lives and operates.

When you have time drop a line and don't forget where I live. You have my office phone, and I live on the post in Trailer Park.

Yours,

DAVID.

Independence Day, 1951

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 15, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Independence Day, 1951," published in the Pratt (Kans.) Daily Tribune of July 4, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INDEPENDENCE DAY, 1951

"And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

With these closing words, a small band of pioneer statesmen declared 175 years ago today their independence from British rule and domination, taxation, and other abuses charged in the Declaration of Independence, the anniversary of which Pratt is observing today in true holiday fashion.

They so cherished independence from foreign dictation and influences that they pledged their lives, their fortunes, and their honor to the defense of that independence.

During the era that followed, many lives were lost, many fortunes were spent in the fighting that ensued to keep the pledge our founding fathers had made. There were days when it appeared that we may have lost our cause, days like those at Valley Forge, where the Divine Providence, upon whom the Declaration signers placed their faith, stepped in.

No nation in the world's history has such an honest, such a determined, nor such a glorious background.

The war over, we began to build and grow under a form of government the world had never known. Britain kicked up more trouble in 1812, and again we won. More years passed until we found ourselves divided between the North and the South. We settled this and three more wars.

Through these years we were being served by Chief Executives, Senators and Congressmen, and Supreme Court Justices who held sacred the Declaration of Independence and the Constitution.

We guarded zealously our independence from foreign entanglements. We handed down from one generation to another Washington's famous words: "Avoid foreign entanglements."

During these many years we grew and grew and grew. We produced the world's best inventors, the world's best industrial system, the world's best transportation and communication systems, the world's best educational system—the world's best everything.

We continually set a pattern for others to follow, but they did not. The British, from whom we declared ourselves independent,

continued to cling—and still are—to rule by the Crown. No country was wise enough to observe what we were accomplishing under our private enterprise and capitalistic system. Instead, they professed hatred for us from time to time, but when, one by one, they got into trouble they showed no qualms about reaching out for our capitalistic dollars.

More years passed and Franklin Roosevelt became President. One of his earliest acts was to take over the air mail. A dozen fliers died. Here was the first attack upon the private enterprise system that made America. On July 5, 1935, Mr. Roosevelt wrote a letter to Representative Samuel B. Hill in which, commenting upon the McGuffey coal bill, he said this: "I hope your committee will not permit doubts as to the constitutionality, however reasonable, to block the suggested legislation." Here was the first attack upon the Constitution.

Mr. Roosevelt became friendly with Winston Churchill—he's the fellow who said he had hoped and prayed for the day when America would get into the Second World War. Mr. Roosevelt met Mr. Churchill in the North Atlantic. Mr. Roosevelt then went to Yalta and Tehran. Here he tossed to the winds the complete independence we declared 175 years ago today.

More years passed and now we have Harry Truman. He attacked the Constitution by going into a war in Korea without the consent of Congress, which the Constitution clearly says is the only power that can declare a war. Oh, yes, Mr. Truman says it is not a war, but when there are more than 70,000 casualties among our young people, it is war and nothing else.

Within recent weeks there has been talk of an armistice. Commenting the other day, our Secretary of State, Alger Hiss' friend, Dean Acheson, said openly that there cannot be an armistice until the rest of the so-called United Nations agree.

There's the story. Independence day, 1951, finds us devoid of our independence from foreign influences. The boys of the last 20 years have cast our lot with the quarreling countries across the world.

During all of the years we unitedly remained aloof from foreign influences we never knew traitors within our Government. Today, high and low national public officials are going to jail for attacks upon our country. Even Congressmen are getting jailed. We have sunk to the lowest level of governing we have ever known.

Today, too, we are a controlled people. We are becoming as controlled as our forefathers were controlled by Britain. We are losing our independence at home as we have lost it internationally.

We need a new declaration, a declaration of removal from office of the whole crowd; the crowd that shouts speeches on Independence Day and forgets the historic background of the day the rest of the year.

Public Housing

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. HELLER. Mr. Speaker, public housing is an urgent necessity for millions of people residing in our large urban centers. Although considerable progress has been made in the city of New York, our city housing authority reports that it has 460,000 applications on file

from that many families who are desperately in need of adequate housing.

The low-income wage earners are anxiously looking to Congress to help provide decent housing for them and their families, and in this way aid in reducing delinquency and improving health conditions in the congested slum areas. Two years ago Congress initiated a forward-looking program of public housing which, it was hoped, would gradually eliminate the deplorable slum conditions. That program has already been drastically cut. Instead of 135,000 low-rent housing units to be constructed per year, at best we can now hope for 50,000 units.

In the bill coming up before this House today, we shall have the opportunity to vote for decent housing and the construction of 50,000 housing units this year, or we shall turn the clock back and condemn thousands of low-income families and small children to the miseries of the filth and disease-ridden slum dwellings which are a disgrace to our cities. I urge most earnestly all Members of this House to cast their vote for decent housing.

In this connection, I commend to the attention of my colleagues a very fine article which was published recently in the Christian Science Monitor on public housing in New York. This very interesting and informative article is as follows:

PUBLIC HOUSING SCRUBS UP PART OF NEW YORK SLUMS—NEW DWELLINGS DOT EAST RIVER FRONT

(By Mary Hornaday)

Thomas Jefferson warned in a letter to James Madison in 1787 that urbanization would destroy democracy, but he hadn't foreseen what has happened on New York's lower East Side in the last decade or so.

Practically the entire East River waterfront from Fourteenth Street down to the famous Brooklyn Bridge today is taken up with public housing recently constructed or soon to be built for the lower-income-earning groups of this metropolis.

Take a look from the top of the Empire State Building or the round-Manhattan sightseeing boat and you cannot help being impressed that here is the answer to Socialists and Communists who claim that living conditions of the masses cannot be improved under the private enterprise system.

ELEVEN PROJECTS

Today there are 11 publicly subsidized or partially tax-exempt projects on the lower East Side. The line-up runs from Fourteenth Street down—Jacob Riis houses, Lillian Wald houses, Vladeck houses, and Governor Smith houses with spaces in-between for other projects awaiting State and Federal funds.

Today 60,000 families of many nationalities are living in public housing in New York City—on a completely interracial basis. Apartments for 44,000 more are in the construction or approved-plan stage; yet there is nowhere near enough room for thousands still clamoring to be lifted out of vermin-infested old-law tenements. The New York City Housing Authority still has 460,000 applications on file.

Though it began in the depression when Franklin D. Roosevelt and his cohorts were looking for economic pump primers, the job of East Side rehabilitation has been greatly expedited by the economic prosperity of the last few years.

TAX EXEMPTION

Postwar prosperity has enabled New York City to expand its low-cost housing program

with a type never before attempted in the United States. Public housing has been built without a cash subsidy with rents high enough to cover all operating costs and debt services. The city grants tax exemption in the value of the improvements.

This is the first time that a public housing program has been designed to operate wholly on rental income and to meet the great need of families, especially of veterans, who could afford slightly higher rents than those of fully subsidized housing.

Prosperity has helped the East Side in other ways. The Bowery will probably be the Bowery for a long time, yet the homeless men who congregate in its saloons and missions have felt the backwash of economic improvement.

OLD LANDMARK CHANGES

Just in the last 6 months the number of men served in municipal lodging houses has dropped 30 percent. The Hart Island rehabilitation program, begun about a year ago for the homeless men who drift in from all over the United States, has also begun to make a dent on this degraded section of the metropolis.

Another old landmark is also undergoing a change. Brooklyn Bridge, made famous in photographs and jokes from 1883 to 1903, when it was the world's longest suspension bridge, is getting a \$6,900,000 modernization. Two roadways of 30 feet each are being built on the Manhattan and Brooklyn approaches, with room for six lanes of traffic.

CHILD CARE CENTERS

New York's Chinatown, colorful to tourists but distressing to sociologists, was also slated to undergo slum clearance, but after a hot debate these plans have been shelved. "If you tear down buildings to put up new ones it will put the merchants out of business," complained Shavey Lee, Chinatown's perennial mayor.

It is still too early to tell statistically just what the fruits of a better East Side will mean in improved public health and reduction of delinquency.

More than half the new housing sites are devoted to open spaces, including playgrounds. There are social and craft clubs, gymnasiums, child care centers, citizenship and adult education classes, and related community activities.

The accomplishments to date have their critics among their friends as well as among their enemies of public housing.

Lewis Mumford, author and city-planning expert, has kept up a running criticism in the New Yorker magazine. His May 6 criticism was typical: "At the end of a dozen years of zealous construction the New York City Housing Authority is further away from a good civic standard for the rebuilding of the great city than it was when, in 1937, it completed Harlem River Houses. . . .

"As I have said before, these new housing estates are, in such essentials as air, light, open space, and quiet better than the quarters provided for the upper-income groups on Park Avenue. . . . The most disturbing thing is that . . . the land is as densely populated as it was when it was covered with over-crowded slums."

RECORD RELIED ON

State Housing Commissioner Herman T. Stichtman also has been critical. He says the city has allowed too much concentration of lower-income groups without sufficient provision for their employment nearby. By eliminating streets, he says, they have created a traffic maelstrom.

Mr. Stichtman is in favor of redevelopment on a neighborhood basis.

But the city-housing planners are content to rely on their record. They think they have done the best that could be done in a

crowded place like Manhattan. The inhuman conditions of New York slums and sweatshops became infamous as the influx of Italians, Russians, Greeks, Slovaks, and Poles succeeded earlier waves of north Europeans, driven to the shores of the New World by potato rot and political oppression.

MARKED GAINS

The color of Italian fiestas with the garlands of overhead lights and the Orchard Street pushcarts are still there, but the filth and common-use toilets have begun to disappear.

The hacking that Congress has recently done on public housing will hit New York City hard. New York alone would like to have Federal money for more new apartments than Congress is allowing for the whole country. The city money is all committed. The State has some money that it hands out in what appears to the city to be dribbles.

And still there are thousands of families in New York who qualify for public housing who would like to move in.

Water Development in the Missouri Basin

EXTENSION OF REMARKS

OF

HON. FRED G. AANDAHL

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. AANDAH. Mr. Speaker, on Monday, August 13, the gentleman from Nebraska [Mr. CURTIS] spent an hour on the floor of the House presenting a very fine analysis of the water development program in the Missouri Basin. Much time was devoted to the need for the various Federal agencies supplementing each other in the work that was being done.

On December 1, 1950, at the last meeting of the Missouri Basin Inter-Agency Committee that I attended as Governor of North Dakota, and as a member of the committee, I made a statement reflecting on the past work of the committee and outlining the future objectives.

I trust that this statement carries information that will be of value to the Members of Congress, and I am therefore here inserting it in the CONGRESSIONAL RECORD:

THE MISSOURI BASIN INTER-AGENCY COMMITTEE: WHAT IT HAS DONE, WHAT IT CAN DO

(By Gov. FRED G. AANDAH.)

My fellow citizens, in order to understand the past work and future opportunities of the Missouri Basin Inter-Agency Committee it is advisable to review the conditions that stimulated its establishment. Since the time that white people as a part of the westward expansion of our national population first settled in the basin, the local inhabitants have been talking about, working with, battling the deluges of, and suffering the limitations of the water resources of the area. Without the rain and snow that makes the river the area would be a desert waste. Man has always tried to use the water resource for his best economic advantage. In its natural state it would water the fields, forests, and meadows, furnish

transportation, water for human consumption and dispose of sewage for limited population. But we are an expanding Nation both in population and in economic capacity. We have reached the point where it is necessary to harness the water resources of the area and use them to the maximum.

Community leaders from throughout the basin have been urging water resources development for many, many years. Some work has been done by private groups and political subdivisions. Full comprehensive development of this enormous river system, however, is so expansive, the multiple benefits of many single projects so widely dispersed, the repayment for reimbursable portions of the initial construction cost extended so far into the future and the intangible and unassessable benefits for the basin and the entire Nation so large, that the basic development immediately gets beyond the scope of private groups and political subdivisions including the States, and properly and wisely becoming a Federal function. All through the years community leaders have therefore gone to the Federal Government and its departments urging and requesting that studies be made and the work be started and offering the cooperation of the local groups and political subdivisions.

The most impelling water project requirements of the basin are flood control and reclamation through irrigation. For 40 years and more the Department of Interior through the Bureau of Reclamation has been effectively wrestling and solving problems of irrigation in the Western States. For even a longer period the Corps of Army Engineers for national defense throughout the Nation have successfully been allocated the work of harbor improvement and development of river navigation which has logically expanded into flood control clear up to the source of each stream. It was perfectly natural that these departments should on their own initiatives explore the water-development potentials of the Missouri Basin and it is equally natural that the local people went to them for aid in this great problem.

Two men of outstanding ability and great depth of vision, Gen. Lewis A. Pick, of the Corps of Engineers, and W. G. Sloan, of the Bureau of Reclamation, in response to nationally assigned duties in the area and the continuing requests of the local people each formulated a basin-wide plan for comprehensive development and each, of course, placing the greatest emphasis on that particular phase of the work in which his department was engaged.

At about this time local interest prompted the voluntary organization of the Missouri River States Committee made up of the 10 governors and two other members from each State in the basin appointed by the governor. This committee organized and crystallized local thinking and discovered the great theme of unity of basin-wide purpose. Water stored in upstream reservoirs to give downstream flood control could there be used for multiple beneficial purposes before it was again turned loose to flow downstream to give adequate water supply for municipal use in dry season.

With a new burst of enthusiasm and justified confidence the States committee, the Corps of Engineers, and the Bureau of Reclamation went to Congress with a growing vision of beneficial basin-wide development. Congress, somewhat sympathetic to a sizable project to help fill the anticipated postwar economic slack and eager to stimulate an expanding future economy, after requiring the initial coordination of the Pick and Sloan plans authorized in the Flood Control Act of December 22, 1944, this vast program of comprehensive basin-wide development to start shortly after the close of the war.

With this background, the logic of Congress in giving the primary construction and

operation responsibilities to the Corps of Engineers and the Bureau of Reclamation becomes apparent. Although not specified in the Flood Control Act of 1944, it was soon evident that the Federal Power Commission, the Department of Agriculture, and the Department of Commerce also had definite responsibilities in the basin development and should adjust and expand their programs accordingly. Long-established Federal law directing the activities of each of these Departments fortunately make it mandatory that they work in cooperation and in harmony with the States and their political subdivisions.

Thus, as World War II ended, there unfolded in the Missouri Basin a plan for the development and wise use of the water resources, closely associated with the soil resources, in which several Federal departments and the States would have closely interwoven duties and responsibilities. Out of this combination of circumstances has grown an outstanding example of successful, true American voluntary coordination without the establishment of centralized authoritarian procedure.

The Missouri Basin Inter-Agency Committee, organized at the start in 1945 and now made up of representatives of five Federal agencies and five governors from the basin, is the unit that has cleared thinking, crystallized opinions, broadened understanding, and charted the way for coordinated purpose and achievement. This is the forty-fifth meeting of the committee. It has met once a year in each of nine States where major planning and construction is under way. Generally each department at each meeting summarizes the progress of its plans and work in the State, and associates it with the entire basin. The governor and his associates in the State present their opinions and desires. The cooperative response and the resultant effective coordination has far exceeded the highest hopes of the sponsors. It satisfactorily has done a job that many theorists said would be impossible. It has successfully brought together the best information and ability that the several departments have acquired through years of Nation-wide experience and unified them to meet the specific problems of the Missouri Basin. Our meetings have been filled with a full, free, and open expression of opinions, many of which have been conflicting, but out of those opinions and answers has come a mutual adjustment of thinking as justified by the additional basic information. We cannot always be in full agreement on every detail, but our association in this committee has developed a firm unity in the broad purposes and objectives of comprehensive basin-wide development. It is also pleasant to note how early suspicions and jealousies have disappeared as association has developed mutual confidence and appreciation. We have all discovered that the job is so big that it will require every resource that each of us can make available for many, many years. Our big task is to find ways and means of getting the entire job done. Each in his own field has more than he can do without trying to absorb the duties of someone else.

Much thought has been given to the question of where the final authority to make decisions should be vested. As previously stated in this paper the program is of necessity a Federal function. Each Federal department under the prerogatives and limitations given it by Congress should make the final decision on what it can advisedly do. If it is a question of the installations needed to give adequate flood control we should look to the Corps of Engineers with their years of Nation-wide experience in such work for the final answer. If it is a question of

the advisabilities of irrigating a certain tract of land we should look to the Bureau of Reclamation with its many years of rich experience in the arid and semiarid regions of our country. If it is a question of soil conservation or adaptability of crops we should look to the Department of Agriculture. If there is conflict among departments or among governors representing areas let us try to iron them out on a voluntary basis in the Interagency Committee and as a last resort they can be settled in Congress where the specific directives, authorization, and appropriations are and must be made. The value of the long experience of the well-established Federal departments is of such paramount importance in this broad and comprehensive work that is being done that it would be little short of an invitation to mistakes and delay to not leave the duty of decision with the qualified department as we now have it. This statement of course is made with an awareness of the fine cooperation among all the groups involved as required by law and stimulated by the functioning of the Missouri Basin Interagency Committee.

My high esteem for the coordinated plan of basin development as now approved by Congress and the effectiveness of the Missouri Basin Inter-Agency Committee as a means of attaining the full measure of desired coordination on a voluntary basis is by now apparent. The personnel in the membership of the committee is constantly changing. On August 16, 1945, at its second meeting I appeared before the Inter-Agency Committee not as a member but as a witness. The committee was then composed of General Crawford for the Corps of Engineers, Mr. Comstock for the Department of Interior, Mr. Green for the Federal Power Commission, Mr. McClymonds for the Department of Agriculture and Governors Grisswold, Ford, Hunt and Donnelly for the States. At this meeting, Mr. Green is the only original member still on the committee. In the meantime there have also been General Pick, Mr. Meehan and Mr. Davlin as former members of the committee. This is the last meeting for Governor Michelson, myself and, I believe, Mr. Sloan. But with the changing membership of the committee the spirit, the purpose and the high objectives still go on. I have often marveled at how quickly new members become familiar with the program and sense its opportunities for basinwide unity and high achievement.

Much has been accomplished during the past five years. The biggest and most comprehensive river development program ever envisioned by man has moved far along into the construction stage. Additional water is being brought into the basin by tunnels under the Continental Divide. The largest rolled earth filled dams in the world are being built. Expansive new acreage of irrigation will be added. Flood damage will be reduced to a minimum. Hydroelectric power will be developed to the maximum capacity of the streams. Wildlife and recreation will be given new avenues of development. The Missouri Basin Inter-Agency Committee is a pivotal point around which the planning and coordination of this tremendous undertaking is being done. Is it any wonder that the representatives of the Federal agencies have given all meetings about a 98-percent attendance and the Governors a 62-percent personal attendance with representation at practically all other meetings.

The work of the committee as measured by the accomplishments of the past 5 years both in unity of thinking and actual construction work in the field is a challenge to ensuing memberships. The new membership, I am sure, will pick up where the old

has left off and move on to still higher achievement.

There is one parting thought that is tremendously important to our area, to our Nation and to our American way of life. The objective of the Missouri Basin development is not to give Government ownership to anything that can be done effectively by private enterprise. Its big purpose is to conserve and make more abundantly available a neglected inexhaustible natural resource for the use of the people through the avenues of private enterprise. Private enterprise is the spark plug that has made American production click. It has given us a greater wealth of consumer goods available to the rank and file of our people than has ever been or ever will be possible under any other economic system. It is the tax base that supports our cherished form of government for a free people. In the Missouri Basin program we are working to make a new resource available and provide for an expanding economy but should not absorb the established or potential functions of private enterprise.

We are in the midst and a part of a great program. We must plan carefully and keep our feet on the ground. The people of our local communities are our firmest foundation. We must work with them avoiding all unnecessary centralized authority and stimulating their initiative and their prosperity.

Civil Defense Program

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, on Friday I had inserted in the RECORD a letter from Robert E. Lackey, civilian defense director of Levittown, Long Island, in which Mr. Lackey reminded me that Members of Congress have a special responsibility toward civil defense on the local level. He urged Members of Congress to lend the weight and prestige of their office to civil-defense units in their own communities and to encourage people in their communities to join this effort.

Here is a blind man who is leading the way in American civil defense. Mr. Lackey and the civil defense unit he has organized in Levittown are worthy of the greatest praise. Lackey is a blinded war veteran—he lost his sight during the landing at Saipan—who devotes practically all his spare time to the Levittown civil defense program. During the day he is employed by the Veterans' Administration.

Levittown, which is a 90-percent veterans' community, has about 1,500 participants in the civil defense program. Veterans know what war is like at first hand. Under Mr. Lackey's supervision, Levittown has its own shortwave radio station built and operated by some 50 Levittown "hams." It has central headquarters set up and operating, and district offices at seven interior shopping centers where defense workers are to report in an emergency. Levittown has its own ambulance and squad car with

public address system, a 200-man auxiliary fire unit and 300-man auxiliary police unit. Trucks and taxis with two-way radio are ready to swing into action. Levittown has had several practice alerts—all very successful.

Levittown is ready for an atomic attack, and it is also ready to serve as a refuge for New Yorkers in event of an attack on our largest city.

The Nation's civil defense program is of the greatest importance. Right now, it needs the proverbial "shot in the arm". I suggest that Congress can give its greatest encouragement to the program now by lending support to civil defense programs in our own States and communities. And other communities would do well to follow the example of the Long Island town of Levittown.

Interview on Pro and Con Radio Program

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks in the Record, I include the following interview of Frank Bourgholtzer with Representative CLARENCE J. BROWN, Republican of Ohio, on Pro and Con program, National Broadcasting System, Friday, August 10, 1951:

Mr. BOURGHOLTZER. Congressman BROWN, it's good of you to appear on this program at the end of a hard legislative week. The House of Representatives has just passed the largest appropriation bill in the peace-time history of the country, which carries funds of more than \$56,000,000,000 for the Defense Department. As a Congressman, what is your opinion of this huge appropriation for national defense?

Congressman BROWN. Well frankly, Mr. Bourgholtzer I doubt if any appropriation bill has ever gone through the national House of Representatives on which the average Member had less information than on this huge peace-time defense bill. Fifty-six billion dollars is a lot of money. It is difficult to comprehend how much \$56,000,000,000 really is. It is not only fifty-six thousand million dollars, but it is also approximately twice as much as the entire cost of the United States Government from the beginning of our Republic, back in 1789, until World War I began in 1917—or two times as much as we spent on all Federal Government in the first 128 years of this Nation's history—all appropriated in one single bill to run the Defense Department for a single year, or until June 30, 1952.

But that is not all. As soon as the House approved this \$56,000,000,000 defense measure it took up the Military Construction Bill to authorize spending an additional \$5,700,000,000 for building new military and naval bases and installations; to be followed this next week by the Administration-sponsored \$8,500,000,000 foreign aid bill, of which approximately \$6,500,000,000 is for sending military supplies to other nations.

The big \$56,000,000,000 defense bill was brought to the House floor after the Appropriations Subcommittee had spent 11 weeks

in hearings and took 3,500 printed pages of testimony. Members of the House not on this subcommittee had only a few hours in which to read these 3,500 pages of hearings, the 158-page committee report, and the 60-odd pages of the bill itself. So it was impossible for most of us to learn whether the many huge items contained in this bill were really justified or even necessary. We had to accept the bill on faith, even though there was a strong feeling the military might be running a bit wild in its demands.

Frankly, I am rather certain the Defense Department, the administration, and the generals, at least, asked for as much as they expected to get, and probably far more than actually necessary to give America the kind of a defense it must have in these troublesome days.

But the Congress is charged with providing an adequate defense for this country and we had to accept the judgment of military officials on the largest defense appropriation bill in the peace-time history of the Nation.

There is one thing I do want to emphasize, Mr. Bourgholtzer, and that is, the Congress of the United States, as representatives of the people, has the responsibility of seeing to it that the money we have appropriated for defense purposes is not wasted. We need, and should have, some sort of a "watch-dog" committee in the House to see to it that the \$56,000,000,000 we have furnished for national defense is spent wisely and well. It won't hurt a bit if the boys in the Pentagon know the Congress is checking on every expenditure they make. We owe that to the taxpayers of America.

Mr. BOURGHOLTZER. Well that is quite a statement, Congressman BROWN. It reminds me that a little less than 3 years ago your party—the Republican—was in control of the House and Senate. You say the Eighty-second Congress was practically legislating in the dark when it passed this huge \$56,000,000,000 appropriation bill. Was the Eightieth Congress legislating in the dark when you Republicans were voting appropriations for the military?

Congressman BROWN. The answer, Mr. Bourgholtzer, is an emphatic "No." We did not legislate in the dark. We knew exactly what we were doing. And I might add, if President Truman had followed the direction and properly administered the defense legislation sent him by the Republican Eightieth Congress we would not have been passing a \$56,000,000,000 defense appropriation bill in the House this week. I might go even further and say that in all probability we would not now be engaged in a war in Korea.

During the Republican Eightieth Congress the House Appropriations Committee had a large staff of nonpartisan investigators and experts who gave us the benefit of their knowledge and experience, not only in connection with military questions, but on all the ramifications of this huge Government of ours.

But speaking of the military: I am sure you will remember the Eightieth Congress fixed the size of our Armed Forces at a little over 2,000,000 men—2,040,000, I believe—and provided the funds therefor; but that President Truman and his then Secretary of National Defense decided only a little over 1,400,000 men were needed in the armed services at that time.

You may also remember that the Republican Eightieth Congress authorized an Air Force of 70 groups, and furnished the funds therefor, only to have the President say a 48-group Air Force was enough, and refuse to enlarge the Air Force or to use the money we had furnished for that purpose.

The Eightieth Congress authorized an expanded naval air program, including a super-aircraft carrier upon which work was begun

and then ordered stopped by the President and Secretary of Defense Johnson, at a dead loss of about \$20,000,000. You may also recall how we blocked the attempt to put the Marine Corps completely out of business.

All of this was going on while President Truman was running up and down the country denouncing the Eightieth Congress. But now the story is different. We have three and one-half million men in our Armed Forces; we have an 89-group Air Force—with more groups to be added later—and, believe it or not, we are now building that new superaircraft carrier, just a little smaller and much more expensive, of course, than the one we authorized, after more than 2 years of precious time has been lost.

Why, Mr. Bourgholtzer, we were so far ahead of the President and his administration in preparing our national defense for these troublesome days that early this week the Democratic chairman of the House Armed Services Committee, CARL VINSON, in appearing before the Rules Committee, frankly admitted that the Republican Eightieth Congress had actually done more to build a strong national defense than any peacetime Congress in our history, and far more than the Democratic Eighty-first Congress which succeeded it.

Mr. BOURGHOLTZER. Well, I can see you are proud of the record of the Republican Eightieth Congress on defense matters, Mr. BROWN. I think you will concede, however, that it would have cost a lot of money to have done all the things the Republican Congress proposed for national defense, isn't that right?

Congressman BROWN. Of course, that is right, but only about half as much as it is costing now, and it would probably have prevented most of the recent Communist aggression, and many of the tragic deaths of American boys on the battlefields of Korea.

I do hope the American people, and you, Mr. Bourgholtzer, will never forget that the Republican Eightieth Congress not only provided the funds for a strong national defense, but we also balanced our national budget, and created such a large surplus that, for the first time in nearly 20 years, heavy payments were made on the national debt. In addition to all this, Federal taxes were reduced for the first time in more than a generation—reduced by more than five and one-half billion dollars a year—and more than 7,000,000 low-income Americans were taken entirely off the tax rolls.

Compare this record, if you will, with the huge tax increase voted last October, or the new \$7,200,000,000 tax bite voted by the House a little over a month ago, and now pending in the Senate.

Mr. BOURGHOLTZER. But, Mr. BROWN, it is claimed that the world situation has worsened since the Republican Eightieth Congress sat on Capitol Hill. What do you think about that?

Congressman BROWN. Well, I'll agree, Mr. Bourgholtzer, the world situation has not improved under the administration's weak foreign policies. You will remember, of course, that the Republican Eightieth Congress did do everything within its power to get Mr. Truman to change his policies concerning China. Also that the President and the Ambassador to China, General Marshall, along with Dean Acheson and others in the administration, were so determined the Chinese Reds must be taken in and made a part of some sort of a coalition government in China, that the money and military supplies the Eightieth Congress had voted to help the Nationalist Government hold the Chinese Reds in check were held up and not used for that purpose for 11 months or more. Had the Republican-sponsored aid program for China not been sabotaged the chances are

the Nationalist Government, which was friendly to us, would still be in control of China today, and our American boys would not now be fighting the Chinese Reds in Korea.

You may remember, too, Mr. Bourgholtzer, as I am sure many Americans will, that the Republican Eightieth Congress, seeing the need for a balanced and sensible foreign policy for both Asia and Europe, enacted the Greek-Turkey aid program, the interim-aid program, and the ECA. And it was the late Senator Arthur Vandenberg, a Republican, who steered through the Eightieth Congress the resolution which made possible the North Atlantic defense pact.

Mr. BOURGHOLTZER. And what about this present Eighty-second Congress, Mr. Brown? What kind of a Congress is it?

Congressman BROWN. Well, Mr. Bourgholtzer, this Democratic controlled Eighty-second Congress has broken all records for doing nothing.

By August 1 of this year not a single major appropriation bill had cleared the Congress or reached the White House. Up to August 1, the Eighty-second Congress had passed only 108 public laws and 186 private bills. Only four major measures went through the legislative mill in the first 7 months of this present Congress—the Trade Agreements Extension Act; the emergency food relief bill for India; the bill continuing selective service, and the measure extending the Defense Production Act.

In the first 7 months of the Eightieth Republican Congress we had enacted 388 public laws and 131 private bills, including every single appropriation bill for running the Federal Government; measures to strengthen the drive for world peace and to provide foreign relief and aid. We also approved the Inter-American treaty for the defense of the Americas, and four peace treaties with defeated European nations, as well as established our trusteeship over the Pacific islands formerly under the rule of Japan. We also helped thousands of displaced persons find havens of safety, and extended the Reciprocal Trade Agreements Act.

We passed the Taft-Hartley Act over the President's veto, adopted housing legislation which promoted the greatest home-building boom of all time; passed numerous bills to meet the needs of our war veterans; provided for a long-range agricultural program for the benefit of the farmers; appropriated more money for reclamation and the development of the West than any previous Congress; voted large sums for research on cancer, heart, and mental diseases, and the construction of new hospitals; and also created the Hoover Commission—through my bill, by the way—from which has already resulted savings in governmental costs of more than \$2,000,000,000 a year. All of this mind you in addition to balancing the budget and reducing taxes, as I mentioned a moment ago.

The Republican Eightieth Congress, Mr. Bourgholtzer, had a record of which all America can be proud.

What we need in Washington today more than anything else is a leadership with the mental capacity, the intellectual grasp and the moral fortitude to cope with world communism abroad and the trend toward state socialism here at home. Until America is given leadership of principle, courage, conviction, and integrity the Nation will continue to flounder in the sea of indecision, confusion, colossal waste, and corruption which threatens to engulf us. As never before we need honesty, decency, and moral integrity in Government, and courage and faith in high places, if we are to prevent world war III and maintain individual liberty and sound government here on this continent.

"Let George (Uncle Sam) Do It" Still Attitude of Europeans

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Indianapolis Star of August 12, 1951:

"LET GEORGE (UNCLE SAM) DO IT" STILL ATTITUDE OF EUROPEANS

(The writer has just returned from a trip through Italy, Spain, and France. The report on conditions in Europe today is based on first-hand observations.)

(By Steffan Andrews)

NEW YORK.—"Let George do it" is still the predominant attitude in Europe today.

France, Spain, Italy, and to some extent even England are still relying on outsiders to solve the myriad of lingering postwar internal problems facing them six long years after the war.

And the only outsider in the picture is "George." In this case it is merely another name for Uncle Sam and his open-handed generosity with American taxpayers' hard-earned billions.

The impression of a reporter after a quick, first-hand investigation and an on-the-spot observation in such capitals as Rome, Paris, Madrid, Lisbon, and London is that Europeans seem to have lost the knack of solving their problems.

They are still so apathetic and "neutralist" on the continent that they not only expect Americans to fight communism for them but also to keep pouring money indefinitely into their countries in the hope this eventually will solve their internal difficulties.

That, in a nutshell, is the answer to the No. 1 question that inquiring friends have been shooting at this reporter since his return from Europe. Here are answers to some other questions:

Question Do we have any real friends in Europe?

Answer. Yes. England is a real friend, despite the occasional brickbats the Socialists toss in our direction. You cannot help admiring the British. They have "guts" and they are really trying to do something about their problems, too.

Question. Will the French fight now that we have given them \$2,000,000,000?

Answer. I seriously doubt it. Anyone who relies on the French to do anything these days ought to have his head examined. That goes for all our Marshall plan officials who have been pumping us full of these rosy propaganda stories.

Question. How about Spain? Would Franco fight on our side?

Answer. I think so.

Question. Do you think we would be bolstering totalitarians by making a military deal with him?

Answer. Perhaps. But the thing to remember is that Franco's Spain would be insurance for us. After all our postwar aid, we cannot be sure of anyone but England. If the French again fold, Spain would be our second line of defense.

Question. Just what is wrong with the French?

Answer. Just about everything. They are old and tired. They have no vitality for anything. They want the easy ways out

of any problem. And the easy way is to keep accepting United States dollars and do nothing.

Question. Is communism still growing in Europe?

Answer. No; it seems to have been stopped. But the thing to remember is that the biggest danger perhaps is not the number of Communists but the growing feeling among Frenchmen and a lot of Europeans that they somehow can sit out the fight between communism and democracy.

Question. How can Europeans have that attitude?

Answer. They simply seem to have the feeling that it is a fight between the United States and Soviet Russia.

Question. How about Italy? Is it making progress?

Answer. Yes. Premier de Gasperi played it smart. He never fell for the line that you can cooperate with the Communists, hence he never took them into the Government. They are still on the outside looking in and probably will remain that way until they splinter away from the Cominform.

Question. How are the people? How do they look?

Answer. Well fed everywhere, particularly in Italy. There is plenty of food, but prices are exceedingly high—especially in Paris.

Veto of H. R. 3193

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

VIRGINIA CHAPTER,
PARALYZED VETERANS OF AMERICA,
MC GUIRE VETERANS' HOSPITAL,
Richmond, Va., August 11, 1951.

VIRGINIUS DABNEY,
Editor, Richmond Times-Dispatch,
Richmond, Va.

DEAR MR. DABNEY: In accordance with our recent phone conversation, I am writing this letter to express further our viewpoints regarding H. R. 3193, the bill (vetoed last Monday, August 6, by Mr. Truman) which would have increased the non-service-connected pension for those permanently and totally disabled veterans who are in need of the constant aid and attendance of another person. However, after giving the matter further thought, I am asking that you do not print this letter, since our primary interest is that you have a complete picture relating to this bill and will, therefore, be in a better position to judge its merits. We are hopefully expecting Congress to override the President's veto, and in that event, with these additional facts, I feel sure that your newspaper will take a more favorable stand on this legislation.

You have always made a very commendable effort to see things clearly and we feel that you followed that policy in expressing your views in last Thursday's editorial, "Thank you, Mr. Truman." You were put to extreme disadvantage in this case, however, by Mr. Truman's press release and also by his veto message to Congress. His press statement did not even mention that this pension affected only that small group of permanent and total disabilities who are in

constant need of aid and attendance. This alone alters the picture considerably.

Perhaps Mr. Truman is not entirely responsible in this case—it is very possible that he has not been given all the facts which would enable him to see exactly what the bill entails. Unfortunately, in the many years of the existence of our comparatively small national veterans' organization, the Paralyzed Veterans of America, we have never been granted an opportunity to express our views directly to the President on any legislation affecting us. Had the President been shown the true meaning of his bill, we like to believe that he would have taken an entirely different stand.

We are enclosing a copy of the analysis of H. R. 3193 by the House of Representatives Veterans' Affairs Committee which was presented when reporting the bill to the House floor. It was approved unanimously by this committee, and we are told, also passed the House without a dissenting vote. The Senate Finance Committee, headed by Senator GEORGE, of Georgia, and further bolstered by such economists as Senator TART and Senator BYRD, of Virginia, approved this legislation unanimously and, with virtually the same analysis as the Veterans' Affairs Committee, reported the bill to the Senate floor 5 days after it passed the House. It was passed on a Consent Calendar, where it took but one objection to shelve it. This objection was not to be had. Let us tell you further why there was no objection.

The attached analysis sheet points out that the \$120 rate of pension sought in this bill already applies to veterans of the Spanish-American War at this time. H. R. 3193 was presented in an effort to equalize this disparity between the veterans' groups of the different wars.

We have at this time disabled men in our hospitals who have been there for years awaiting an opportunity to leave. The present pension of \$60 or \$72 per month will scarcely buy more than their necessary medical supplies. Many have tried and still try to work for their living outside of the hospital, but even those successful in finding employment have been unable to continue for any length of time because of a very limited work tolerance. It must be pointed out that the permanently and totally disabled man who can work a consistent 8-hour day, is very much the exception. Our men, who are subject to many ever-present medical problems, disorders, and extreme fatigue, would find themselves within reach of making their own living outside the confines of a hospital, if this bill raising their pension to \$120 would become law.

At this time our Government pays \$25 per day or approximately \$9,000 per year for each of these veterans who has been waiting for many years, hoping to find some way of returning to a more normal way of life. Which is better, to pay these men \$720 more per year or to continue at the present rate of \$9,000. True, we cannot close down the hospitals, and therefore we cannot expect to save our Government the full \$9,000 by vacating a bed; but if our present patients do not get this opportunity to leave, we will be forced to expand our existing facilities to accommodate the ever-increasing numbers of casualties resulting from the Korean conflict.

Mr. Truman puts great emphasis upon the disparity between nonservice and nonmilitary disabilities, yet he accepts very matter-of-factly the existing disparity between service-connected and non-service-connected disabilities. Many of our nonservice cases received their disabilities a matter of days after being discharged from service, but the fact remain they were not in service at the time they became disabled. By the same token, although in most cases, through no fault of their own, the

same fact remains that these nonmilitary disabilities did not serve in the Armed Forces of their country.

In view of these and other facts contained in the Veterans' Affairs Committee analysis sheet, can you view this as bad legislation? Are these men, who willingly served their country in time of war, deserving of an opportunity to live more normally again? Can the true cost be as high as is estimated? Can it possibly, in these cases of men untouchable by insurance companies because of short life expectancy, ever multiply to our President's very high stab at the century-end cost? We think not, and repeat again that we like to believe Mr. Truman was not aware of its true significance and value when he chose to send his veto message on this bill.

Very truly yours,

RICHARD T. WHALEN,
Legislative Representative.

Tensions in the Middle East

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert the following summary of views expressed by Prof. Taraknath Das, as one of the participants in a panel discussion entitled "Tensions in the Middle East" on July 9, 1951, in one of the sessions of the Institute of Public Affairs, at the University of Virginia. I regard Professor Das highly, and I am favorably impressed with the contribution made by him to the conference mentioned above. However, there are a number of remarks made in the article with which I am not in accord. I have, therefore, appended to the end of this extension a number of footnotes in explanation of the areas of disagreement between us.

Professor Das' summary follows:

TENSIONS IN THE MIDDLE EAST

(By Prof. Taraknath Das)

In the area between Egypt and India—as we may define the Middle East—the causes of tension are many. Besides the over-all problem of Soviet efforts to penetrate into the area and the present intense conflict over Iranian oil, we must list Anglo-Egyptian disputes over the Sudan and the Suez Canal, the problem of Arab-Israeli relations, including the vexed Arab refugee problem, the Egyptian blockade of Israel-bound vessels passing through Suez, Syrian opposition to Israel's drainage project in the Huleh swamps, the permanent status of Arab Palestine. In addition, India's foreign policies affect the whole of Asia, while additional sources of conflict are Pakistan's relations with her two neighbors, Afghanistan and India, and subversive Communist agitation in Pakistan.

Let us examine these issues briefly. The British desire to create an independent Sudanese state is bitterly opposed by the Egyptians who wish to give the Sudanese full local autonomy while federating the Sudan with Egypt. To one who has studied British procedure and arguments in partitioning other countries, British concern for minority rights and self-determination in the Sudan becomes suspect. One reaches the

conclusion that a Sudanese program which will intensify existing anti-British feeling in Egypt must be avoided. For rapprochement between Britain and Egypt is of utmost importance to the entire free world.

Ever since, through the farsighted statesmanship of Disraeli, Britain managed to get control of the Suez Canal, domination of the lands around the Canal has been the crux of British policy. There is nothing in international law to prevent Egypt from nationalizing the Canal when the 99-year lease of the Suez Canal Company expires. But an Egypt in control of Suez and allied with Soviet Russia would be highly prejudicial to the Atlantic Pact powers and the forces friendly to them in the Middle East. Hence, it is of the utmost importance that American, British, French and Egyptian statesmen devise a formula which will be satisfactory to Egyptian national interests as well as to the needs of the free peoples.

It would clearly be to the advantage of Egypt, in this tense situation, to come to terms with Israel, so that those two advanced Middle East states might cooperate toward greater security and progress. I sometimes hear vague talk of the possibility of such a settlement, but at the same time Egyptian and Israeli spokesmen continue to exacerbate matters by making public statements to the effect that the breach between the two countries cannot be healed. Certainly, as long as Egypt blockades Israel there is no possibility of a peace settlement. The blockade has been strongly protested by the United States, Great Britain, Australia, Norway, for since it involves oil which might otherwise be refined at Haifa, it touches Western interests to the quick.

It is of immeasurable importance to the future of the Middle East that the Arab League powers recognize that Israel is a fact which cannot be wished out of existence or destroyed by a new Arab invasion. Once Israel's existence is recognized, Arab hostility would, with inevitable logic, have to give way gradually to collaboration with Israel. This is not so impossible as it may sound. It was the program of the late Emir Faisal who welcomed Zionism to the Middle East as a future aid to the Arabs in the development of their territories.

In the framework of over-all collaboration, Israeli swamp reclamation would come to be seen as being what it really is—beneficial to the Arabs as well. Such projects would then cease to be sources of conflict and become factors towards cementing friendlier relations.

Essentially neither the Jews nor the Arabs can or should pursue a pro-Russian policy. Their friendship to the West will be strengthened if the Anglo-American powers and their friends in the United Nations encouraged Arab-Israeli cooperation. This will be possible if powerful forces in Great Britain and the United States foreswear their present sympathy for anti-Semitic thinking, on the one hand, or political Pan-Islamism, on the other.

Racial or religious exclusiveness of the Pan-Islamic or anti-Semitic types lead to intolerance of minorities and ultimately to refugee problems, as we see in the sad cases of the Arab refugees from Palestine or the vastly more numerous Hindu refugees from Pakistan. In the special case of the Arab refugees, it is beginning to appear that they might be best readjusted by making their homes in underpopulated Arab countries, with the aid of internationally administered funds to which Israel would contribute for compensation. The approach of combined resettlement and development work suggested by the Clapp Commission remains

See footnotes at end of article.

valid and should be the foundation stone of aid to the Arab refugees.

Certainly no area of the world needs large scale development more urgently than the Middle East.

Students of world affairs cannot ignore the fact that international tensions are caused not merely by international rivalry, but are often the direct result of internal conditions affecting the well-being of the masses. Poverty and depressed conditions lead to national disunity, civil wars, and revolutions, resulting in serious national weakness which invites aggressive action from expanding imperialist powers.

The Near and Middle East today are characterized fundamentally by abject poverty of the masses and workers, due primarily to the feudal land system. Whenever there are expressions of unrest among the masses of the Middle East, we are at once told that this is due to Soviet Russian plots and intrigues. To be sure, Soviet Russian governmental agents—Russian and native—are always alert to opportunities for spreading disaffection among the masses, but their propaganda alone cannot bring men to riot and revolt. Ordinary human beings are extremely conservative and do not wish to risk their lives to bring about a change in the social order unless they have reached the point of desperation. Full recognition must be given to the fact that the masses of the Middle East are reaching that stage.

The newspapers daily print items about unrest in the Middle East—attempts by peasants to take over the properties of landlords in Egypt, Iraq, Iran, Pakistan, and India. We read of the growing strength of left wing political groups in country after country.

It is often said that Islam immunizes the Moslem peoples against Communist propaganda. The Moslem countries are regarded as the bulwark against Soviet Russian imperialism trying to penetrate into the Middle East. Pakistan, in particular, is considered a dependable ally of the Anglo-American powers against communism. But the fact is that it was a Communist plot, headed by the chiefs of the general staffs of Pakistan and others, that recently almost overthrew the present government of Pakistan. The rise of the Tudeh Party in Iran, too, disproves the assertion that Islam is the best antidote to communism.

Social revolution in the Middle East cannot be checked by wishful thinking. The standard of living of hundreds of millions in the region must be raised by internal reforms, sponsored by the local governments and aided by the Government and people of the United States. It is here that point 4 program can play a great and crucial role, welding together diverse parts of the world toward freedom.

The case of Iranian oil is an aggravated example of the social tensions affecting the Middle East. Persia has been a pawn ever since Tsarist Russia and Britain tried to partition it between them as part of the attempt by the Triple Entente to check Germany and her Berlin-Bagdad Railway and German-Turkish collaboration in world politics. Persia is still a pawn and Persian nationalists and every self-respecting Persian resents this.

One of the most revealing items regarding Persian oil came out of the recent hearings regarding the ouster of General MacArthur. It was the information given by General Hurley to the late President Roosevelt that continued exploitation of Persian oil by the Anglo-Iranian Oil Co. (which is controlled by the British Government which owns more than 60 percent of its stocks) will result in serious discontent in Persia which will be used by Soviet Russia. He suggested that Anglo-Iranian Oil Co. and other Middle Eastern oil concerns should take the initiative to make more equitable

arrangements regarding royalties, etc. Heeding this suggestion, American oil concerns have made greater concessions to the Arab States regarding royalties. Had the British Government followed this precedent, there might not have arisen the present crisis.

To look at the present crisis realistically, one will have to acknowledge that Iran, like Mexico and other countries, can, by exercising the sovereign authority of the state, cancel a concession and nationalize an industry. This is not contrary to the practices of international law. The Labor Government in Britain which has nationalized its coal industries cannot very well take exception to Iran's right to nationalize the oil industry. But it must be understood that Iran must not expropriate private property without just compensation. Adjustment of compensation should be arrived at between Britain and Iran, and the Government of the United States should use its influence to bring about a peaceful solution of the issues involved.² The Government of the United States should, however, be careful not to take any action which may give the impression that the Anglo-American powers are in concert against Iran. Landing British forces in Iran might well have serious repercussions in the whole of the Middle East and even lead to world war III.

The possibility of Iranian nationalists who are not pro-Soviet, seeking Soviet support, must not be ruled out. This can be clearly understood if we take into consideration certain developments in the situation in China after World War I. To my personal knowledge, the late Dr. Sun Yat Sen, after World War I, tried to enlist the cooperation and support of America, Britain, and also Japan toward abolition of extraterritorial jurisdiction in China, but the statesmen of those nations, largely through British influence, ignored Dr. Sun's legitimate pleas, while the Government of Soviet Russia formally gave up all extraterritorial rights and concessions in China. This situation forced Dr. Sun, who was pro-American and pro-Japanese and had always been suspicious of British and Russian imperialism in Asia, to seek Soviet Russian aid. Then came the importation of Soviet experts into the Republic of China under the Kuomintang regime. And we know what has happened in China, step by step, leading to complete Communist control.

In the present Anglo-Iranian crisis, American statesmanship should be directed toward the preservation of American interests, not following the British anti-Iranian program blindly. It cannot be overemphasized that if the conduct of the American Government in relation to the present Anglo-Iranian dispute is anti-Iranian, there will be very serious effects all over Asia, even in Egypt and Turkey.³ Today all Asian statesmen of any consequence must think and act in terms of Asian independence and sovereignty, and all of the Middle and Far East countries are in full sympathy with the present Iranian efforts to divest the country of British control. Any false step on the part of American statesmen will rouse Asian antagonism and raise louder cries of American imperialism siding with the British. Let us hope that American statesmanship, seeking to cooperate with the British, will be successful in solving the present crisis in Iran and solidifying the common interests of the Anglo-American and Asian peoples to uphold world freedom, rather than playing into the hands of Soviet Russia.

If we move further east to Pakistan, India, and Afghanistan, we find that tension between India and Pakistan and Afghanistan may have most far-reaching and disastrous consequences to the whole world. This is

not understood by the majority of Americans, even American experts on the subject, who have tended to make the British point of view their own.

The very creation of Pakistan by partition of India is an indictment of British rule. In pursuance of the policy of "divide and rule," the British authorities deliberately led up to partition.

Let there be any misunderstanding, let me acknowledge the fact that there was a very small group of Pan-Islamists in India during the latter part of the nineteenth century and the early days of the twentieth century, but not until 1940 did the demand for partition of India come from the Moslem League. It came then under the leadership of Jinnah, who in his early days had prided himself on being "an Indian first and a Moslem afterwards." The seed of this idea that Moslems and Hindus are different nations was sown by British officials who in 1905 introduced communal representation into Indian political life in the Morley Minto reform scheme. The Moslem League and the British authorities nurtured the seed of disaffection for 35 years, and in 1940 the demand for partition of India came to the fore in Indian politics.

In 1947 when the British found that they could not remain in India as rulers, they decided to leave India in partitioned, not united form. Mr. Churchill agreed to support Indian independence, provided that the Moslems of India were given a separate State—Pakistan, which would have territories in the northwestern part of India adjoining the Persian Gulf and Afghanistan and western India (Punjab) and in northeastern India (eastern Bengal) adjoining Tibet, Burma. This was a monstrous scheme from the political and economic points of view, and unfortunately the leaders of India, such as Mr. Nehru, did not have the vision or courage to oppose partition effectively because they held that after the British got out, Pakistan and India would become a United India.

In supporting the Moslems of India, the British hoped to use the Moslem blocs of western Asia as an obstacle on the path of the Soviet march towards the Persian Gulf and the Middle East, while in the East they anticipated using eastern Pakistan, Burma and Malaya to check the Russians and Chinese.

The Indian people cannot help feeling that any nation that supports the cause of partition of India cannot be a friend of India. This is one of the facts in the Indian attitude of nonhostility to Soviet Russia and China. They feel that the Anglo-American Powers are for Pakistan and against India, as has been demonstrated in their attitude on the issue of Kashmir. The Anglo-American powers seem anxious to appease the Moslem world even to the extent of hurting the vital interests of 340,000,000 Indians.⁴

The reflex of this is the growth in India of a trend towards Russo-Chinese-Indian collaboration in world politics which is dangerous for America and the people of India and the world at large. The only way for the free powers to counteract this is to adopt a positive policy which will lead to Indo-Pakistani cooperation, not at India's expense, but in terms of the development of federalism in India and Pakistan so that Pakistan would be analogous to the province of Quebec in Canada. Today more than 35 to 40,000,000 of Moslems live in India and enjoy equal rights. Just as Catholic and French-speaking Canadians in Quebec are Canadian citizens and Quebec is an integral part of the dominion, so Pakistan must in the course of time be reunited with India in a new United India which will pursue a policy of collaboration with America.

See footnotes at end of article.

See footnotes at end of article.

Playing Pakistan against India, to check the possibility of the development of a strong united India, is as dangerous as it was to play Japan against China to avert what was called the "Yellow Peril." That policy, originated by the British, Germans, and Russians, did not serve to maintain western or white supremacy in Asia. If a similar policy is adopted by America now, it will also fail and ultimately help the cause of Soviet Russia.

American scholars tend to think exclusively in terms of Europe, and of Asia incidentally; but I venture to predict that Asia is the key to the future destiny of mankind and that cooperation between Asia and America is the most important factor in the field of world politics and one of the best hopes for the future peace of the world.

FOOTNOTES BY CONGRESSMAN CELLER

¹ I have yet to note that Israel has stated that the breach between her and Egypt cannot be solved by peaceful settlement. Frankly, Egypt deserves the condemnation of the world for her refusal to allow cargoes destined for Israel to go through the Suez Canal. It is, indeed, hoped that the resolution sponsored by the United States, Great Britain, and France now pending before the Security Council of the United Nations will pass. If Egypt continues to act in violation of international law and ignores the action of the Security Council, economic sanctions should be invoked against her.

² Since this address was delivered by Professor Das, President Truman has most effectively and graciously interceded, with a view toward resolving the difficulties between Iran and Britain. Presently, the President's special adviser, Mr. W. Averell Harriman, is in Tehran and has partially succeeded already in leveling off the sharp edges of the dispute.

³ The attitude of the United States has never been, and is not now, anti-Iranian.

⁴ I emphatically disagree with Professor Das in his implication that the United States seeks to appease the Moslem world as against India. We have just completed arrangements for the shipment of 2,000,000 tons of grain to India. That was no mere gesture of friendship. It was an act of the uttermost friendliness to India. I, personally, espouse the cause of India on the issue of Kashmir. Reasonable men may differ with me and with Professor Das on this subject. That need not necessarily make them anti-Indian and appeasers of Pakistan and the Moslem world.

Point 4 Expanded

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial which appeared in the Sioux City Journal, Sioux City, Iowa, on August 12, 1951:

POINT 4 EXPANDED

As hearings continue in Washington on the administration's point 4 plan to aid foreign nations, charges are being made that the program has been enlarged from its original concept.

Disclosure of dissatisfaction among members of the Senate Foreign Relations and

Armed Services Committees was made public by Senator TOM CONNALLY, an administration Democrat. He said some members had "expressed concern at the expansion of the technical and economic assistance programs beyond the original concept of point 4."

Enlarging upon the Connally statement, Senator H. ALEXANDER SMITH of New Jersey criticized point 4 experts for promoting wholesale farming in the world's backward areas. Too much stress is being laid on furnishing such materials as farm machinery, he said, in the program for which the administration has asked \$67,000,000.

The so-called point 4 plan is included in an \$8,500,000,000 foreign aid authorization bill now under consideration by the committees. What it actually amounts to is a continuation and expansion of the old Marshall plan under another title.

Testimony reveals that agreements already have been reached to furnish 32 countries with technical assistance. This represents no small job. It puts the United States in the position of playing Santa Claus to most of the world, despite the unalterable fact that we cannot afford it in view of our national debt of over \$250,000,000,000 heavily increased taxes, unbalanced budgets, and the forthcoming heavy expenditures in our defense-war effort.

If we must buy the good will of the so-called backward countries to save them from communism, as we are planning on doing through the point 4 scheme, one wonders what will happen when we cut this flow of money and materials from Uncle Sam's horn of plenty.

Even the most philanthropic fair dealer cannot believe we will be able to continue doling out billions to the backward areas of the world forever. Someday it will have to stop. What then? The administration hopes, and indeed it is only a hope, that communism will have been stopped by then and the recipient countries will be back on their economic feet.

This same hope was held out for the Marshall plan countries back in 1948. Yet today, about 3 years and quite a few billion dollars later, we still are furnishing tremendous sums to the very countries which we were told would be in shape to do the job themselves by this time.

Aid to other countries promises to be a continuing drain on our resources. Two world wars already have taken their toll of our manpower and our wealth. Another may be on the way, one which promises to make the other two appear small by comparison.

The prudent course would be to conserve our strength, to make absolutely certain we will have what it takes to win a long and bloody war if we are forced into it. We cannot achieve that goal by dissipating our wealth.

Does Our Foreign Policy Play Into Russia's Hands?

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following article by Dorothy Thompson which appeared in the Ladies' Home Journal and which has been sent to me by Mr. Crawford Wheeler, of Nyack, N. Y.

Miss Thompson questions this administration's foreign policy, in Europe and

Asia, suggesting that in Asia we have played into Stalin's hands by backing internationalism when the whole continent is seething with nationalism and revolution. A war in Europe, she believes, would "break down the last remnants of a political, social, and economic order," and while it might result in the overthrow of the Stalinist regime, "it is hardly conceivable that it would result in the kind of social order we should like to see."

This country—

Miss Thompson writes—

during the whole Truman administration has been too much under the domination of military and strategical thinking, and terribly lacking in both historical sense and political imagination.

The full text of Miss Thompson's article follows:

WAR AND REVOLUTION

(By Dorothy Thompson)

I doubt whether the political leaders of the west, and especially of the United States, are giving sufficient thought to the historic interrelationship between war and revolution.

We wish to halt the spread of communism, and picture it as extending itself by the armed forces of the Soviet Union and its satellites. To counter this, we are building up force to frighten the Communist states into caution, and, if they attack, to defeat them.

But the question which ought to be more seriously explored is whether a revolution can ever be checked by armed force. Revolutions, to be sure, carry on wars; but wars create the revolutions. For war is itself a revolution, embodying the very spirit of violence in its most complete expression, infecting the human spirit, accustoming men to hideous cruelties, dislocating stable economies, and intensifying all the grievances and injustices which are present in every society, by adding to them the supreme injustice— injustice against the very order of nature. For in the order of nature, the sons of men bury their parents, but in the order of war, the parents bury their sons.

Both ancient and modern revolutions illustrate the truth of this interrelationship between war and revolution. The French Revolution, which for those who passed through it was anything but the expression of liberty, fraternity, and equality, and was instead anarchy, mob rule, terror, people's tribunals, tumbrels, and the guillotine, followed three centuries of almost perpetual war. The great revolution did not break out all at once. Revolutions never do. Revolution was a gradually mounting thing, imperceptible at first to those who were destined to be its victims, finally exploding in the great torrent of 1793.

The financing of the American war (for the embarrassment of England, with whom France was at war) played a definite role in the French Revolution. It bankrupted France. External struggles greatly increased the power of seceding generals, led to violent monarchist reactions further inflaming an oppressed population, and created hordes of émigrés who played a disastrous role abroad, in bringing into being an anti-French war coalition.

The war against this coalition could only be conducted by radical leaders able to resuscitate the people in the name of revolution itself. It was the revolution which created Napoleon Bonaparte. He was eventually defeated, though it took all Europe to do so. And although the allies restored a Bourbon to the French throne, the restoration was only temporary. For no restoration has ever long survived a revolution. France lost the war, but not the revolution.

The Russian revolution was even more patently the offspring of war—and a war which Czarist Russia invited, though she did not initiate it.

A handful of Bolshevik agitators could never have seized power in Russia but for the anarchy accompanying collapsing armies, and the cry of a war-weary people for peace. The Russian masses knew nothing of Marxist theory. The Bolsheviks succeeded because—apart from their promise of land to the peasants—they were the only peace party. The revolution started with a naval mutiny, followed by large-scale desertions from all forces. The first Red army was made up of these seceding officers and soldiers out to disarm others who, wanting to continue the war, were aided by the western allies who were still fighting Imperial Germany. The western interventionists kept on supporting the "Whites," even after the war with Germany was over, and the civil war then took on the nature of a national struggle against foreign interventionists.

Thus, though the Germans had been the original enemy, and though they had extracted, at Brest Litovsk, a brutally hard peace, the national struggle entirely changed its nature, and became directed against the antirevolutionists allied with the Western Powers. It was successful.

The Chinese revolution was also a direct result of over a decade of war. Poverty is endemic to China, landlordism, the depredations of war lords, overpopulation, Government weakness plus corruption had been part of the China story for centuries. But war intensified economic suffering. In China, as in Russia, an international war turned into a civil war. One can argue that the outcome was determined by Russia's arming the Communists from the Japanese arsenals in Manchuria, while the western Allies gave meager support to Chiang Kai-shek's forces. But no one can say with authority that if the West had supported Chiang more vigorously the outcome would have been different.

The historical record of successful armed foreign intervention against revolutionary forces is very poor indeed. For there is a characteristic of all revolutions of which history has a record. They succeed only when they have united the revolutionary creed and order with the national will.

This evolution occurred in Russia by grace and aid of the German attack. In anticipation and apprehension of it, following the rise of Hitler to power, Stalin purged the so-called Old Bolsheviks. Why did he do so? That the original revolutionary leaders so ruthlessly exterminated were guilty as charged no one who read even the Russian account of the trials can believe. But the original revolutionaries were men of European background and trained in internationalism. Stalin (like Robespierre) was a nationalist. He would not risk the counsels of men who for a generation and more had had ties abroad, even though those ties were with foreign Communist Parties. He knew that a successful war can be fought against a foreign invader only on the basis of patriotism.

There is another characteristic of revolutions. External interventions always accelerate their extremisms, as they pursue and persecute every person even suspected of foreign sympathies or connections.

It looks, therefore, as though it were best for more conservative societies to let revolutions run their course, and to hold aloof from them, not rush into them.

In Asia, in particular, the contemporary revolutions are a combination of social revolt—accelerated by sufferings of the past war—and national revolt from centuries of colonial imperialism and western interventionism.

If we do not understand the British attitude toward nonintervention in China, it

is because, I believe, we have not shared the British experience in Asia.

India and Pakistan have been kept, with however tenuous ties, within the British Commonwealth and out of the Soviet sphere of influence, only because Great Britain voluntarily left India without firing a shot. Suppose she had insisted on her "rights" in India? Is it possible to believe that men like Mr. Nehru would have been in power today? On the contrary, the power would have passed to revolutionary leaders who would immediately have been supported by the Soviet Union. It would be a supreme irony if the United States, by repelling aggression in Asia—actually by intervening in a civil and revolutionary war—should only succeed in driving India and Pakistan out of the British Commonwealth.

In Asia the Soviet Union has acted with great adeptness. Stalin is supporting Asian nationalisms, while the policy of the U. N. bloc, led by the United States, has been to support international intervention. I cannot see how this can have any other result than further to solidify the national spirit with the revolutionary order.

U. N. internationalism cannot, at this stage of history, exercise any pulling force upon countries animated by a furious revolutionary, nationalist and anti-Western spirit. The one thing that would certainly tighten and prolong the Russian domination of China would be a war in China between the West and the Red government. For this reason alone the war in Korea has been wholly in the Soviet interest.

As for Europe, the thought that it could be saved for any order of liberty and law by another war fought on its soil cannot be entertained by anyone with a political mind. Another war would break down the last remnants of political, social, and economic order, already undermined by the last war, and regardless of the machinations of the European Communist Parties.

Military minds can figure out how a war can be won—that is their training and business. But they have never been able to envision the social, economic, and political consequences of even a victorious war.

This country, during the whole Truman administration, has been far too much under the domination of military and strategical thinking, and terribly lacking in both historical sense and political imagination.

War never creates the conditions for a serene and reasonable social and political order. It is, for instance, possible that another war would result in the overthrow of the Stalinist regime. But it is hardly conceivable that it would result in the kind of social order we should like to see. The more probable result would be ungovernable anarchy.

This I write down in this year of decision in a plea for a more cautious and prudent foreign policy. Revolution is not stopped by war. War is the culture in which it flourishes.

Truman's "Airpork"

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. GROSS. Mr. Speaker, although unsuccessful in stopping the authorization of a \$19,019,000 Federal hand-out for the construction of a huge airport at Grandview, Mo., this fight is not yet over. An appropriation for this purpose

must still be approved, and if the House Appropriations Committee fails to remove this item from the bill I will certainly offer an amendment on the floor to do so.

This is but another example of the continued gouging of the taxpayers that is being approved by Congress under the guise of defense. It is a shoddy and unthinkable deal, as well described in the following editorial from the August 14 issue of the Chicago Tribune:

TRUMAN'S "AIRPORK"

Tucked away in an appropriation bill calling for \$5,750,000,000 in "military construction" is an item of \$19,000,000 to expand the airport at Grandview, in Jackson County, Mo. Grandview was the home of Mr. Truman's mother; Jackson County is his bailiwick; and the small field at the town is used principally to receive the Presidential airplane on flying visits to the old stamping ground.

Grandview has not the slightest strategic importance, but the continental air command, which has the Air National Guard under its direction, has announced plans to remove its headquarters from Mitchel Field, Long Island, to this community. If Grandview weren't associated with Truman, nobody would ever have heard of the place or considered it.

If a hayseed Congressman succeeded in dragging down \$19,000,000 for the old home town, he would feel justified in taking a few bows around the cracker barrel. But, somehow, dulled as the sensitivity of the American people may be to spoils politics, they don't quite expect this sort of thing from a President. They ought to know their man better. Truman's favorite dish is pork.

The Most Successful War on Record

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. HILL. Mr. Speaker, I wish to include in the Record Interpretation and Comments taken from Economic Trend Line Studies, and written by Chester D. Tripp.

This is a very interesting discussion, in which the idea is developed that war in the eighteenth century was more or less decisive, somebody won or somebody lost. But it seems in the twentieth century nobody wins a war, not even those who come out on top.

The war in Korea would be a typical example of what Mr. Tripp is concerned with in this essay. How can you win a war when you place on the backs of the winners, not only the cost of the war, but the cost of rehabilitation of the country losing the war.

The above-mentioned follows:

INTERPRETATION AND COMMENT

(By Chester D. Tripp)

THE MOST SUCCESSFUL WAR ON RECORD

I believe it was Dr. Johnson who observed that the major part of written history up to his time involved telling the story of struggles. We refer to these as wars. This is really a strange situation because the more civilized man becomes, the more he accomplishes that has nothing to do with warfare and these accomplishments should have

an ever increasing place in historical reference.

The conspicuous place that the story of warfare assumes in history may be due to its spectacular aspects. As a rule wars have been dynamic and decisive, and it is probably easier to write and read about them than some of the slow abstract developments that have evolved from the spiritual side of man, even though they seem fundamentally much more important than the use of the battle-ax or the machine gun.

Up to the eighteenth century or Johnson's time, war was more or less decisive—somebody won and somebody lost—and the stream of history was thereby diverted. However, if we can judge by the twentieth century experience, nobody wins a war, even the group on top loses. This has been true of late and will probably be more true from now on unless the type of tools of warfare can be radically changed, and it may be that such a change is taking place without our realizing it.

As one reviews the development of warfare, he is impressed with the fact that all the refinements are attained by increasing its violence and that when violence reaches a certain point, general devastation is the result. The man with the first stone mace had a big advantage over an unarmed opponent, but the bow and arrow and the spear made the mace rather obsolete. Every form of offense has evolved some method of defense that progressively increased the violence and the cost. The bow and arrow gave way to the crossed bow, the crossed bow to black powder, and black powder to TNT; the muzzle-loading rifle was simply an ancestor of the machine gun; and finally the use of atomic energy, for the moment at least, has clapped the climax.

It is literally true that from now on no nation can better itself by fighting a major war. The devastation that can be caused on both sides could cancel out the progress of the past hundreds of years. We have literally reached a point where warfare must be abandoned as a means of settling a controversy, or some new technique will have to be developed that could do something toward eliminating the frightful expense of modern conflict.

It is in the realm of such developments that perchance our enemy is working, perfecting something new that may be infinitely more potent than even atomic energy. I refer to the undeclared war and the subtle techniques that go with waging it.

It has finally dawned on the American people that we are in the midst of a serious struggle with the Russians. It is not a struggle that started last month or last year, but it has been growing more serious and more widespread since the close of World War II. The interesting thing about it is that the Russians rather realistically recognize the facts and have been pointing out in their periodicals and in their speeches that all they have to do is give the hated capitalists time enough and they will defeat themselves by their own efforts. It is their open claim that when our great capitalist economy becomes sufficiently congested and involved in maladjustment, that we will collapse of our own weight and then the world will be safe for a rapid spread of free democracy from the Russian point of view.

It seems to me that there is much to be said in support of the Russian thesis. Relatively speaking we are distorting our economy enormously, we are liquidating our strength on old-fashioned methods, while the Russians go on playing us like a fish on a line waiting for the day of exhaustion to come to pass.

It is certainly a fact today that we are expending fantastic effort and treasure on a side show of warfare, while to date the Rus-

sians have not lost a single man and very little equipment. In addition, they are clearly masters of the situation because they are in a position to needle us in half a dozen other directions, where again there would be no relation between our efforts and expense compared with their own.

Is this all just an accident; or, have they with realistic cunning developed a technique that may be altogether as important as the best efforts put out by our scientific brains and our enormous industrial establishments. It may be that they fully realize that the further we go in technical warfare the more expensive it gets and that the antidote from now on is going to be in the realm of mental activities which involve a good deal of training but very little expenditure of energy. It might be interesting to try to appraise what their new techniques are and to put some small part of the enormous energy and resources that we are pouring into the conflict into trying to combat it in kind.

In many ways they have an advantage no matter what we do. They are using every chance they can find to muster the ignorance, misery, and dissatisfaction in the world for the benefit of their cause. At first thought this seems to be a difficult thing to combat and our reaction to date has been to try to remove the misery and poverty of life by improving the standards of the whole world. This, however, on the face of it, is a program involving centuries, not years or months, and for 6 percent of the world's population to try to straighten out the other 94 percent to a point where they are satisfied with their condition, is a little too foolish to consider. However, it is simply perfect from the Russian point of view.

Their next most important tool as I see it, is their organization for the dissemination of information which is certainly world-wide and which effectively contacts the class of people that could rally to their cause. There is a fair smattering of communism everywhere in the world but there is a mighty small smattering of free enterprise in Russia where all the forms of freedom are legal enemies of the state. For the time being it is the greatest disadvantage to our cause that subversion can be practiced rather openly in all democratic areas but subversion of our type is not tolerated for a minute on the other side of the curtain. The mere fact such a situation exists points to one of the great weaknesses of democracy—our great belief in individual liberty is one of our great liabilities in combating what I am inclined to refer to as really modern warfare. Before we get through we may be forced to compromise with our democratic aspirations, and, in a controversy of this kind, insist on bilateral arrangements as far as free speech or individual freedom is concerned.

I think it is a fair statement that from now on no nation can indulge in the luxury of old fashioned warfare violence without ruin following in its wake. In addition to the damage that weapons can do to our economic and social organization which have taken centuries to build, a present-day war can absolutely bankrupt a nation within a short period of years. The great middle class, which the English and ourselves have up to now put such weight on, the class which is the backbone of any democratic practice will be eliminated, as its savings and its security go glimmering as a result of exhaustive taxation and deficit spending.

The whole structure of what we consider important may disappear for centuries to come. We have the best scientific brains in the country working on new inventions of destruction and mobilizing the means of producing them, but, outside of ECA and the Voice of America, we are doing almost less than nothing to show our less fortunate

brethren around about the world what our type of social organization might do for them. I know at the best the problem would be a difficult one but it is not an impossible one. I cannot feel that the idea would take more brains than to build an atomic bomb but it would take more patience, more wisdom, and more understanding of the other fellow's problems.

There are some serious reasons to believe that if democracy is eventually to be saved, some new types of weapons will have to be made effective, and, if we can judge by the Russians' success to date, these weapons will be more involved with the subtleties of the human mind than with inventions of destruction. It is pretty safe to say that today the Russians are waging the most successful war in history, successful because of its limited cost in men and material, successful because it does not of necessity carry in its train its own destruction.

William N. Oatis

EXTENSION OF REMARKS OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include the following resolution from the Madison County (Ind.) Industrial Union Council in behalf of William N. Oatis:

Whereas Indiana's native, William Oatis, is now imprisoned by the Communist Government of Czechoslovakia; and

Whereas the Government of the United States recognizes that his conviction is a fraud, and

Whereas we have confidence in the President and the Congress of the United States, we the Madison County Industrial Union Council (CIO) do hereby respectfully petition and resolve that we favor any action necessary to be taken by our Government to facilitate and expedite the immediate release of William Oatis: Be it

Resolved, That the fraudulent conviction of this courageous newspaperman is a threat to the freedom of all men and uncompromising and militant action must be taken by our leaders; be it further

Resolved, That a copy of this resolution be forwarded to the two Indiana Senators and the United States Representatives from the Fifth Indiana District, the President of the United States, Philip Murray, president of national CIO, and Neal W. Edwards, president of Indiana State Industrial Union Council, CIO.

DALLAS W. SELLS,
Recording Secretary.

Veterans' Home Loan Guaranty Entitlement

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. JAVITS. Mr. Speaker, in connection with the amendment on the

captioned subject that I proposed today to S. 349, the Defense Housing Act, two letters were mentioned in the debate. They refer to H. R. 1014, a bill I introduced January last to accomplish the objective of my amendment. The text of these letters is appended hereto:

VETERANS OF FOREIGN

WARS OF THE UNITED STATES,
Washington, D. C., February 26, 1951.

HON. JACOB K. JAVITS,
House Office Building,
Washington, D. C.

DEAR MR. JAVITS: This is to thank you for your letter of February 23, 1951, and enclosures, in reference to H. R. 1014, your bill to amend the Servicemen's Readjustment Act of 1944 with respect to the guaranteeing of home loans.

The objective appears to be highly meritorious and although we have no national encampment mandate on the subject, it is believed our national legislative committee will authorize this office to support your bill.

Your correspondence is being kept before me for further attention at the earliest practicable date and commending you for your efforts to liberalize the existing law and regulations governing home loans, I am

Sincerely yours,

OMAR B. KETCHUM,
Director.

DISABLED AMERICAN VETERANS,
Washington, D. C., March 27, 1951.

HON. JACOB K. JAVITS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN JAVITS: In reply to your letter relative to H. R. 1014, a bill to amend Public Law 346 of the Seventy-eighth Congress, I am pleased to be able to advise you that the Disabled American Veterans will support this legislation.

While we have not received any correspondence from veterans relative to this subject, we do feel that the Congress intended the veteran should have the maximum use of the \$7,500 entitlement, under section 500 of Public Law 346, even though he may have used a portion of such entitlement in a previous loan.

If and when hearings are held on this measure by the Veterans' Affairs Committee the DAV will appear in support of it.

Very sincerely yours,

FRANCIS M. SULLIVAN,
National Legislative Director.

The Peace Conference in Korea

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, August 16, 1951

Mr. CAIN. Mr. President, I ask unanimous consent that an editorial from the Washington News of today, which bears the title "Ridgway's Firm Stand," be printed in the Appendix of the RECORD.

This editorial calls to mind a statement I was privileged to offer on the subject The Puzzle of Korea, to the Washington State Association of the Loyal Order of Moose on July 19, 1951. There are some observations in this statement which, in the light of what is and is not now taking place in Korea, may be of

interest to my colleagues. I would suggest to those who are concerned that they consider the conditions which the Korean National Assembly on June 29 resolved should be met before any cease-fire was agreed to on or about the thirty-eighth parallel. What was a tragic situation when the Korean cease-fire talks began has become more tragic with the passing of each day.

I also ask unanimous consent that my statement to the Washington State Association of the Loyal Order of Moose be printed in the RECORD.

There being no objection, the statement and the editorial were ordered to be printed in the RECORD, as follows:

THE PUZZLE OF KOREA

(By U. S. Senator HARRY P. CAIN)

Mr. Director-General Giles, Mr. General Chairman Sartori, members of the Loyal Order of Moose and Americans all, you may take as being a happy fact that I was deeply pleased and complimented by the invitation to address your convention here in Spokane. Your favor has brought me home; it permits me to join with an order whose principles and membership are noted throughout the country for outstanding loyalty and patriotism, and this favor offers me an opportunity to discuss with you the puzzle of Korea.

There was in your written invitation a paragraph which was particularly appealing to me. It was pointed out that the Moose lodge is intensely anticommunistic. It was emphasized that your members belong to all parties except the Communist Party and that by a resolution adopted at a national convention several years ago, membership in the Communist Party automatically causes any individual to be immediately dropped from the rolls of the Moose. By this action, you have given full evidence of your conviction that Communist aggression seeks only to destroy and devour freedom and free institutions throughout the world. It is good to be in the company of those who recognize the enemy by his intentions and are determined to stop that aggressor whatever the cost and sacrifices may be.

It is not possible for me to accurately define tonight what the United States and the United Nations are endeavoring to accomplish in Korea. It is a sad fact that as a Member of the Senate, and as a member of the Senate's Armed Services Committee, I do not know. All that any of us presently know is that the allied supreme commander in Korea is conducting consultations with the enemy supreme commander in Kaesong, which may lead to a cease-fire, to be followed by an armistice that may result in a peace treaty. If or when a peace treaty has reached the stage where it ought to be ratified, no one yet knows to whom that treaty will be offered for study and ratification. I need not remind you that after 13 months of war, the United States has never, by constitutional means, acknowledged that a war exists. I do not understand why a major war should be undertaken without congressional sanction and then be concluded by having the Senate of the United States ratify a peace treaty.

If, by way of argument, we assume that the peace treaty in question is not to be submitted to the Senate for consideration and ratification, then we must assume that any war of the future in which America may be engaged will be started, managed, won or lost, and concluded without any participation by the legislative branch of our Government. To me, this is a preposterous and suicidal prospect but this prospect is a definite possibility. You have previously heard almost nothing about this

serious and complex question. Yet it stands out as one of the strange and bewildering factors in the puzzle called Korea.

On June 29 our supreme commander, General Ridgway, as gallant and able an officer as lives, offered to negotiate an armistice with the Communist commander aboard a Danish hospital ship in Wonsan Harbor. This offer was approved by all members of the United Nations fighting in Korea.

On July 2, the North Koreans and Chinese Communists accepted via Radio Peiping, the United Nations proposal for a meeting to discuss a truce. The Communists ignored the suggestion to meet at Wonsan, and instead proposed that the meeting be held in the area of Kaesong, south of the thirty-eighth parallel.

On July 3, without a single word of objection, the Allies agreed to Red proposals that cease-fire talks open July 10 at Kaesong. In my considered view, the Allies, by accepting the enemy's terms as to place and time, gave to that enemy an unlimited propaganda advantage to which he was not entitled, and as a result of which millions and millions of individuals in the Far East are convinced that the free forces were required to wave the white flag of surrender and forced to sue for an armistice. Only a limitation on time keeps me from adequately defining the evil results to flow from our unwillingness to demand that the enemy meet with us on a neutral, nonbelligerent vessel.

I must tell you this about Kaesong and why it was strategically advantageous to the enemy for discussions to be held in that enemy-controlled city. Late in the fourteenth century in Kaesong—then the flourishing capital of the ancient Koryu Kingdom—the ruling dynasty was brought to an abrupt end by a coup d'etat which was triggered by the assassination of the Prime Minister. While crossing the beautiful stone Sunjook Bridge late one night, the Prime Minister was treacherously waylaid and stabbed to death, his blood seeping over the stones of the bridge. To present times, the Sunjook Bridge mysteriously turns red occasionally, and Koreans will tell you that it always becomes crimson when traitors and evil-doers are loose in the land. If the Sunjook Bridge still stands in the rubble city of Kaesong, will it turn red again during the cease-fire negotiations?

Ironically, it was in the Kaesong area that the officials of the ill-fated United States-U. S. S. R. Joint Commission met to arrange the futile unification conferences held in Seoul and Pyongyang during 1946 and 1947. Soviet intransigence during those meetings prohibited any settlement and resulted only in the thickening of the iron curtain at the thirty-eighth parallel. It is a bitter coincidence that it was also near Kaesong that the United Nations Commission on Korea sought in vain to cross the thirty-eighth parallel into North Korea in 1948 for the purpose of holding and supervising nationwide, free elections.

You have often heard the Korean conflict defined as being a "police action." From the day this improper label was first used, informed Americans have bitterly opposed its application to a war which is today the fourth largest in our Nation's history. Total casualties on both sides exceeded 1,000,000 in the first year of the war. American battle and nonbattle casualties approximated 150,000 in the first year of the war. The total casualties in the first 12 months were greater than the combined totals of the War of the Revolution, the War of 1812, the Mexican War, and the Spanish American War.

On June 27, 1951, several days after Jacob Malik, a Russian spokesman, proposed discussions "between the belligerents for a cease-fire and an armistice providing for the mutual withdrawal of forces from the

thirty-eighth parallel," our American Secretary of State testified before your House of Representatives to urge approval of the administration's \$8,500,000,000 foreign military and economic-aid program for next year. He said it remains United Nations policy to unify Korea, if possible, but not by armed force. The Secretary stated that if the Chinese Communists had not intervened in the war, the campaign directed by General MacArthur probably would have resulted in the unification of North and South Korea. In this testimony the Secretary of State said more. He declared that ending the war along the thirty-eighth parallel would constitute a United Nations victory.

It is not possible for me to reconcile this attitude of the Secretary of State with the United Nations declaration of October 7, 1950, that the goal of the free members of the United Nations was a unified, independent, and democratic Korea. This resolution was approved by an overwhelming vote of 44 to 7 but not until the United Nations had created a unified command in Korea last July and directed it to carry out our political mission by military means. Military means were not authorized and employed until political discussions and diplomatic efforts directed at unifying Korea had broken down and failed utterly after years of effort.

I find it impossible to reconcile recent statements by the Secretary of State with what our President said to the Nation after he had returned from talking with General MacArthur on Wake Island last October. The President said, from San Francisco, on October 17:

"We talked about the plans for establishing a 'unified, independent, democratic' government in that country in accordance with the resolution of the General Assembly of the United Nations. It has been our policy ever since World War II to achieve these results for Korea. Our sole purpose in Korea is to establish peace and independence. Our troops will stay there only so long as they are needed by the United Nations for that purpose. The only victory we seek is the victory of peace. The United Nations in Korea are making spectacular progress. The North Korean Communists still refuse to acknowledge the authority of the United Nations. The United Nations forces are growing in strength and are now far superior to the forces which oppose them. The power of the Korean Communists to resist effectively will soon be at an end."

All of this tells us plainly that for some months after the Korean war began, it was the determination of the United Nations to provide whatever forces might be required to restore order and freedom to Korea. You never heard of a proposed or intended armistice at or about the thirty-eighth parallel until the nature and character of the Korean conflict had been changed following the entry of the Red Chinese aggressor into that war.

What puzzles me is why we free people should wage one kind of war against one aggressor in Korea and another kind of war against another aggressor in Korea. Like many another American, I thought in the beginning, and believe today, that our determination and mission was to restore freedom to all of Korea. I shall not forget that approximately one-third of our present 80,000 battle casualties were suffered north of the thirty-eighth parallel. Many a brave and duty motivated American, and allied soldier is buried and will remain forever above that parallel.

The thirty-eighth parallel in Korea is a new question to many an American. It is an old question as far as history is concerned. We ought to talk about this question and about Korea for just a little while.

I have a great respect, a greater sympathy, and some understanding of and for the

Koreans. Were I to do nothing other than compliment their patience, faith and courage, and define what the Koreans believe must be established before any possible peace treaty is ratified, this would constitute a constructive contribution I would gladly cross the country to make. History is full of forgotten men, forgotten purposes, and forgotten principles but Korea stands on the brink of becoming a forgotten nation. We are so likely to be over-impressed and deluged by the admonitions, declarations, and predictions of the high diplomats who serve the United Nations and our aggressor enemies that we are inclined to ignore the feelings and the rights belonging to these millions of human beings whose nation stands in danger of being totally devastated and ruined by the surging tides of battle between the belligerents.

Have you previously been told that Korea is the twelfth largest nation in the world with a population of 30,000,000? Are you aware that two-thirds of what remains in this population is south of the thirty-eighth parallel. Do you know that Korea has a recorded history of some 42 centuries? In all of these more than 4,000 years of existence, Korea has never committed an act of aggression north of the Yalu River.

In 1895, the Korean Empress was murdered by the Japanese and the Emperor was imprisoned. In 1896, the Emperor and the Crown Prince, who was held prisoner by Japan, escaped and took refuge in the Russian Legation. The Koreans attempted to set-up a new form of government under the influence of Russia. The Japanese about this time, offered to divide Korea with Russia and the thirty-eighth parallel was to be the dividing line. Both Russia and Japan had their eyes on Korea for many years prior to this date, each believing that eventually they would hold all of Korea.

On February 23, 1904, the Korean Emperor was forced to sign a treaty of alliance with Japan, which allowed Japan to make Korea a base of operation against Russia. In return, the Japanese definitely guaranteed the independence and territorial sovereignty of the Korean state.

In 1905 under the peace treaty between Russia and Japan, held at Portsmouth, N. H., Russia then insisted on the territory in Korea, north of the thirty-eighth parallel. Japan having won the war, notwithstanding they had offered to make this deal with Russia, decided that Russia was to have no part of Korea.

In 1919, President Woodrow Wilson in his 14 points, declared that all nations should have the right to self-determination. Dr. Syngman Rhee, who is a graduate from Princeton University, was a very close and personal friend of President Wilson. The Koreans believed that the President of the United States would break the shackles of the enslavement of the Korean people by Japan.

Though we remain in doubt tonight concerning the terms to be insisted upon by the United Nations before any cease-fire, armistice, or peace treaty is agreed to, we have no doubts concerning what the Koreans believe are fair terms to justify hope for a lasting peace. On June 29, the Korean National Assembly unanimously resolved that there ought to be no cease-fire on or about the thirty-eighth parallel unless five conditions were met. They are:

1. The Chinese Communists must withdraw beyond the Korean traditional boundary into Manchuria without causing any further harm to the lives and property of the civilian population of North Korea.

2. The North Korean Communists must be disarmed.

3. The United Nations must agree to prevent any third power from giving assistance to the North Korean Communists, militarily or financially.

4. The official representatives of the Republic of Korea shall participate in any international conference or meeting which discusses or considers any phase of the Korean problem.

5. No plan or program or course of action will be considered as having any legal effect which conflicts in any degree with the administrative sovereignty and territorial integrity of Korea.

In my view, these conditions must be accepted if there is ever to be any durable or lasting peace in the Far East. If we free people refuse to demand their acceptance now or if we fail to fight to impose these conditions on the aggressor, we shall merely pave the way for a far greater future disaster than the one which engages our attention now.

In 1943, at Cairo, the United States was one among other nations which solemnly pledged that Korea must be set free.

In 1948, the United Nations General Assembly created the government of the Republic of Korea as a sovereign nation.

In June of 1950, the United States and the free members of the United Nations set forth upon a crusade to protect the integrity and to restore the sovereignty of a new republic which those nations had created only several years before.

It was this manifestation of Christian faith and determination which caused General MacArthur to say to the Veterans of Foreign Wars last August:

"The decision of our President on June 27 lighted into flame a lamp of hope throughout Asia that was burning toward extinction. It marked for the Far East the focal and turning point in this area's struggle for freedom. It swept aside in one great monumental stroke all of the hypocrisy and the sophistry which has confused and deluded so many people distant from the actual scene."

In our 13 months of war, the free nations won a war against the North Koreans and have reached the stage of no contest with the Red Chinese. More than 10 percent of the total population of Korea has been killed or maimed or injured. Korea today is not a fit place in which to live. Its cities and towns and factories have been demolished and swept away. All that Korea can look forward to is an opportunity to rebuild and re-create her broken institutions and bodies. These achievements are humanly possible provided Korea is given a chance to reestablish herself as a sovereign nation. Without this hope, and expectation, we must not believe that any Korean has much to live for.

Some of you may recall that on March 24, 1951, General MacArthur stated that "Within the area as military commander, I stand ready at any time to confer in the field with the commander in chief of the enemy force in an earnest effort to find any military means whereby the realization of the political objectives of the United Nations in Korea might be accomplished without further bloodshed."

The State Department subsequently stated that "The political issues which General MacArthur has stated are beyond his responsibility as a field commander, and are being dealt with in the United Nations and by intergovernmental consultations."

General MacArthur offered to meet with the enemy because he was operating under orders and directives which would actually prevent him from seeking to accomplish our political objectives through military means, as he had been ordered to do in the early months of the war.

As long ago as late December of 1950, General MacArthur was advised that he could expect no substantial reinforcements from the United States and no additional units of troops from among our allies. General MacArthur was instructed to fight with what he

had and to expect no more. He was likewise prohibited from using the maximum striking power at his disposal because of restrictions on the naval and air arms under his command.

I can readily understand why the free forces in Korea are required to look to a cease fire or armistice to carry out our political objective in Korea. It has been understood for a long time that the free forces would not be provided with either the personnel or the equipment and matériel required to crush and repel the aggressors by military means. Under these limitations the accordian war in Korea could go on indefinitely with no positive decision being reached by either side. Under these circumstances Americans and our friends would be required to continue to offer their lives on the altar of futility. One must be puzzled by this fact that America has long been engaged in a vicious war in which American forces are prevented from utilizing their maximum strength, and are required to fight with inadequate numbers.

This being clear, I shall remain puzzled all of my life over the fact that our supreme commander was dismissed for having offered to discuss a possible truce or armistice with the enemy military commander, while those who dismissed him waited 3 months to jump at the first opportunity offered by a Russian spokesman to seek a cease fire and armistice in the field.

If there is a way to call off the killing in Korea while making certain that the mission which took the free nations to Korea is accomplished then we want to stop that killing at the earliest moment. General MacArthur sought to explore this opportunity 3 months ago. Such a possible opportunity is before us right now. Let us briefly examine it.

As I see the possibilities, one of three things can result from the consultations being held now in Kaesong:

The first: It is possible that political and diplomatic means will be employed following the cessation of military activities to consummate an independent and unified Korea. Our Secretary of State and other United Nations members have stated that when the actual fighting has stopped, "regulation channels and conferences" could then be used to achieve the "political" goals. Unfortunately, however, not a single word has yet been said by any responsible American official or allied representative concerning precisely how, when, where, or with whom such political discussions will occur. What are our political plans? How can they be carried out? What new diplomatic methods can be used to be successful this time where diplomatic methods have failed in years gone by? The free members of the United Nations attempted repeatedly before the war began to negotiate with the Communists on the political level for a unified and independent Korea. Every attempt, when reason and high principle were used as weapons, failed.

The Communist aggressors are not likely to give ground politically while they remain in a position of diplomatic strength. They must recognize as signs of major weakness the current statements that the only goal of the war was to force the aggressor back to the thirty-eighth parallel. If this was the intention of the free nations, which it obviously never was, then the war could have been ended last fall when the tide of aggression had been pushed back to that line. If this had ever been an intention, who is to explain the puzzle which is apparent when we remember that the free forces reached the shores of the Yalu River last November?

How can it be claimed that political discussions will accomplish in the future what both bilateral talks and unenforced United Nations resolutions have failed to produce in

the past? There is no real likelihood, in short, that the proposed military cease-fire will be followed by a successful diplomatic settlement of Korea's future.

The second: It is possible that the cease-fire deliberations can result in the springing of a gigantic trap on the United Nations armies. It would be relatively simple for the Communists to declare in any stage of the military negotiations that some minor infraction or some misinterpretation on our part invalidated our original pledges. The time-consuming truce talks could be used by the Reds as a breathing space, as a much needed pause during which communication lines could be repaired, war matériel stockpiled, and fresh armies organized. Should we agree to a cease-fire truce on or about the thirty-eighth parallel, the United Nations forces would abandon favorable defenses and return to a militarily untenable line. The Reds could be planning to re-launch an invasion during the winter months when weather conditions are favorable to their type of warfare and when that same weather would work the greatest hardships on the free forces, as was the case last winter.

The third: The most likely result of the Kaesong discussions, from an optimistic point of view, will be a real cease-fire to be followed by long months, and perhaps by long years, of endless political and diplomatic negotiations on the question of establishing an independent, unified Korea. It by no means follows that a satisfactory peace follows a cease-fire. There is reason to believe that a suspension of military action and the initiation of diplomatic maneuvering is to the advantage of our enemies and the Soviet Union at this time. Unless the previously mentioned conditions are accepted in any armistice terms, I should think that the Kremlin would reap these benefits: (1) It can pose as the initiator of peace; (2) it tightens its hold on China and avoids the dilemma of either sending more supplies to the Red Chinese or watching the rapid disintegration of a satellite army; (3) it stops the huge losses in Communist matériel and men, and at the same time ties down large American and much smaller Allied forces in Korea; (4) as a result, the Kremlin will be free to move in other directions as it pleases and (5) most importantly, the interminable political parleys will leave Korea smashed and still divided—to be used as an object lesson by the Kremlin to show any threatened Asian nation what will happen to it if it should decide to resist Red pressures.

The only conceivable consequence, from my American point of view, which we must permit to come out of the war is a unified and independent Korea. In part, this is a selfish view but it will always remain as a realistic view. A united Korea would be a valuable asset to the free world. A divided Korea would be a continuing and amazingly costly liability. If any decision permits Korea to remain divided by an artificial boundary line, the economic life of Korea will remain disrupted and she will become an economic burden on the United States. Politically, the Republic of Korea will be faced with conditions of terror and tension until an ultimate settlement is reached. Morally the spectre of the 3,000,000 Korean civilian casualties and the utter devastation of the Korean countryside will haunt the conscience of the free world and point an accusing finger at the diplomats who are willing to permit the dead to have died in vain and willing to place the living in further jeopardy.

What I have said to you tonight will be deeply disturbing to most of you. There is no help for this distress which I share with all of you. I have tried objectively to relate the facts in the puzzle of Korea as I understand them to be. I stand among those of you who pray and hope that our negotiators will demand justice for Korea. I am with

you who believe that the free nations must do for Korea what we would expect others to do for us under comparable circumstances.

We want to help unify Korea because we are Christian people. We want to give independence to Korea because we are Americans. We must make Korea free because for as long as any part of Korea remains in bondage, the aggressors will be inclined to ravage and despoil other nations who do not possess sufficient power to defend themselves against those who rule by tyranny and oppression.

If the free nations can provide Korea with freedom, unity, and independence through conferences at an armistice table, so much the better for everybody. If, however, these ends are not attainable through conferences, then we free people must, if we hope to live in a future free world, fight with every weapon at our disposal to accomplish these ends.

A marauder has been ravishing and seeks to devour a precious segment of freedom called Korea. Unless that marauder is stopped cold, crushed and repelled in Korea, or accepts the conditions laid down by the Koreans, he will seek to carry out his determination to devour freedom everywhere. The only possible way to avoid his intentions for the future is to stop him now, at the conference table or on the field of battle.

Freedom has designed its own standard by which it wishes and seeks to live. The time has come for the free peoples of our world to live up to and carry out their own bold declaration of faith and purpose. Our only weakness in Korea is that we have failed to obey our own instructions. It is never too late to right a wrong or to live up to one's responsibilities.

Our leaders have said repeatedly that free people hate war, but that they love their liberties more. We have said that we will not stand by and see these liberties destroyed. We have said that we want peace in Korea and throughout the world, but that it must be a peace founded upon justice. We maintain that this American policy is as old as our Republic, and that it is stronger today than ever before. We clinch the argument by stating that we intend to keep this policy inviolate.

If only we mean what we say, peace with unification can be restored to Korea and free men can walk erect throughout the world. If we betray our own words and fail to live up to what we say we mean, then freedom for you and me has gone forever.

Korea is but a symbol of the opportunity available to freedom throughout the universe. For us to fail to restore independence to Korea is for us to acknowledge the supremacy of tyranny and slavery. How foolish, cynical, and futile for us to even entertain the thought.

[From the Washington News of August 16, 1951]

RIDGWAY'S FIRM STAND

In his extraordinary session with news correspondents in Tokyo this week, General Ridgway cogently summed up in one sentence the reasons for the United Nations' adamant stand on a demarcation line in Korea. He said:

"We propose we shall have a line—if and when we are attacked again—we can defend."

The U. N. commander insisted he was not charging bad faith to the Reds, but in all truth he was taking a literal and most sensible view of the issue which has deadlocked the two delegations at Kaesong since July 27.

It is a crucial issue which could bring complete collapse to the truce talks overnight. And General Ridgway is well within his rights in breaking them off if the Reds persist in their demands. For him, it is a purely military question, involving the only guarantee with any degree of security for

our troops against a new and overwhelming surprise in Korea.

The question is essentially this: The Communists want a demilitarized buffer zone along the thirty-eighth parallel. The Allied forces are now firmly entrenched on a line that runs from just below the parallel on the west to a point roughly 35 miles above the parallel on the east. If General Ridgway should accede to Red demands, the Allies would have to withdraw, giving up ground won at the cost of many casualties.

More importantly, it would mean the Allies would have to take up a virtually indefensible line twice before overrun by the Reds with comparative ease.

There never has been any certainty that the Reds want to reach an agreement in good faith, even on the cease-fire proposals. It is known that since the Kaesong talks began, 6 weeks ago, the Chinese Communists and North Koreans have built up their forces for a potentially massive drive southward. In the light of our bitter experience with the Communists, who respect neither agreement nor the ordinary patterns of decency, how can anyone expect the U. N. commander to pull back to a precarious military position to satisfy Red demands as a price for continuing the truce talks?

The only agreement the Reds will respect, we know from experience, is one that can be enforced with arms. General Ridgway is playing his cards exactly right.

"I accept nothing on faith," he told his press conference. "My primary consideration is the security of my troops."

Hope may be dimming for the eventual success of the long, exhaustive negotiations at Kaesong, but it is reassuring to know our military commander has not deviated from his objective; that he is not interested in an armistice at any price.

Symposium on World Affairs

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 16, 1951

Mr. WILEY. Mr. President, the Sunday, August 12, issue of the *Wichita Beacon*, of Wichita, Kans., contained an interesting symposium on world affairs. It presented the views of nine of my colleagues and myself on the subject of our future international relations.

I think that Mr. Louis Levand, publisher of the *Beacon*, is to be congratulated for presenting these views to his readers. Although each of the comments represents an individual approach to the problem, there are a good many similarities in viewpoint.

I ask unanimous consent that the text of the symposium be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE 10 UNITED STATES SENATORS GIVE THE BEACON THEIR VIEWS ON WORLD AFFAIRS

Senator JOHN J. SPARKMAN, Democrat, of Alabama: I am against the go-it-alone policy. The free world can stop the onrush of communism, but working separately the democracies are doomed. Therefore, I favor: (1) Continuing support and strength to United Nations, as the best single hope for world peace. (2) Adequate military and

economic aid to other countries that will join us in opposing the would-be world dictators. (3) Building a strong defense here to discourage aggressors from attack on us, and organizing offensive forces that can defeat any aggressor nation. (4) Remaining willing at all times to settle differences with other nations by negotiation and peaceful means, but always on honorable conditions absolutely devoid of appeasement in any form.

Senator MARGARET CHASE SMITH, Republican of Maine: I think most every well-informed authority will agree that our foreign policy should be twofold: (1) To make aggression as unattractive as possible, and (2) to make cooperative peace as attractive as possible. Most of us support international economic schemes, such as the Marshall plan, to effect peace. But many of us oppose proposals for matching our military strength with our international economic goals. Before we can even approach a guess as to how large our armed services should be we must have some idea of what we want the size of our military force to do. We should make it crystal clear to the politburo that we will back our firm talk. Russia must be convinced that we mean what we say.

Senator PAT MCCARRAN, Democrat, of Nevada. Against our adversary (Moscow) who recognizes no rules, we cannot afford to play the game (war) according to Hoyle's rules or Emily Post's. Our hands have been tied behind our back, while Moscow acts with both hands free. Our propaganda must be in deeds as well as words. I urge five points: (1) Breaking relations with all Communist countries; (2) expel Russians and their puppets from all societies; (3) officially condemn the Kremlin for their crimes—slave labor, police terrors, mass murders (genocide), aggression against neighbors, denying civil rights, and so forth; (4) full support of underground insurgents against communism; (5) open cooperation with all fugitives from communism.

Senator ROBERT A. TAFT, Republican, of Ohio. We Republicans are constantly met with the statement: Nobody should question the recommendations of our military, nobody should question the foreign policies of our State Department. We who do question are immediately smeared by the administration press, by radio and television critics, and charged with torpedoing the "bipartisan policy," which hasn't existed since 1948. But it is true the great power of Russia today was built by the policies of Roosevelt at Tehran and Yalta and by Truman at Potsdam and by their acceptance of the theory that communism was a "form of democracy" and Russia was a peace-loving, liberty-loving democracy. Under such delusions we established the Russians in Berlin and Prague and Vienna.

Senator HARRY P. CAIN, Republican, of Washington: America's destiny has never before been so dependent on the outcome of a presidential election. This has become clear as crises and emergencies and startling events and wars follow one another over the Nation's news pages. I think it increasingly evident that whether or not we shall finally fall over the brink into a cesspool of socialism, corruption, and ultimate disaster, our fate will be determined at the 1952 polls. I was first to advocate rearming of Japan and China against the Reds, and also for incorporation of Spain, Greece, and Turkey in our European alliance. Spain is the only really tenable area in Europe today, protected from Red armies by the Pyrenees, as Britain is by the English channel.

Senator JAMES E. DUFF, Republican, of Pennsylvania: The United States faces a fight for its very existence. Never before has our Nation been in such mortal danger. We allowed our Military Establishment to fall apart for 5 years after the last war. Russia meanwhile was building its war power. To-

day it completely outmatches the might of all the free world nations combined. A year ago the Russian-inspired sneak attack in Korea almost won out. It caught us totally unprepared, unexpected. The Reds hoped to seize Korea, later Japan, still later the Philippines. But they missed the boat somehow. This week we have another fake peace proposal from Russia. Shall we shake hands in amity with a fellow that holds a dagger ready to stab us in the back?

Senator ALEXANDER WILEY, Republican, of Wisconsin: A 13,000-mile trip through Europe showed a group of us that the challenge of communism everywhere still remains. Only teamwork with our allies can do the big job that faces us. Here is what I found, in a nutshell: (a) The Marshall plan has worked. Western Europe has made great progress toward full economic recovery. Their production often exceeds prewar production. Their economic and military programs intertwine; (b) The general will to oppose communism has hardened, become firm. This will resist the enemy gains point from General Eisenhower's policies. (c) Europe's defenses can't be improved too fast. But they're pitifully weak compared to the 175 Red army divisions that may attack them.

Senator EDWARD MARTIN, Republican, of Pennsylvania: Years ago American citizenship was a protecting shield the world over. It was insurance against mistreatment, insult, and robbery. All nations respected Americans and our passports. That respect was earned by a firm, straightforward policy, backed by a courageous State Department. What now? You all know. Weakness makes Americans abroad the victims of injustice; American missionaries arrested and expelled, American businessmen tortured, forced to make false confessions for their lives; American reporters tortured, denied contact with our Government by arrogant satellites of Communist Russia. Teddy Roosevelt showed us how to speak softly, but carry a big stick. Now, we have a pink-tinted State Department making policies, selling out our reputation and prestige.

Senator BURNET MAYBANK, Democrat, of South Carolina: "There is nothing more urgent or important to our military program now than the work of the Atomic Energy Commission. The A-bomb alone has saved us thus far from a global war. Russia's respect for atomic power has preserved Europe's borders from Communist hordes. I am happy to be chairman of the Appropriations Subcommittee handling their funds. We face two paramount threats: Externally, the ever-spreading scourge of communism; internally, the ever-mounting hazard of inflation. The first monster threatens the entire world. The second has a devastating appetite, capable of paralyzing our entire economy. It is easier to discuss these twin threats at the same time. They are part and parcel of the same diabolical scheme to wreak havoc and chaos on our people.

Senator OLIN JOHNSTON, Democrat, of South Carolina: The Federal Government's multi-billion-dollar foreign-aid program is designed to send us into economic ruin or give us a black eye before our political allies abroad. We are undertaking a financial responsibility unparalleled in world history. The time has already arrived when this should be greatly decreased generally and terminated in many instances. But when steps are taken in this direction it will seem like "taking the bottle away from a hungry baby." That will mean ill-feeling abroad. If we continue this spending program, it will be with money we do not have. Our taxes will rise again and again and again. We have already expended far more abroad than will ever be spent on our needy people here at home. I see the result as an advance of Socialist thinking and planning.

The West Point Case**EXTENSION OF REMARKS**

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, August 16, 1951

Mr. BUTLER of Nebraska. Mr. President, in yesterday's Washington Post appeared an exceptionally fine letter from a West Point cadet entitled "Cadet Speaks," dealing with the honor system at West Point and the recent violations which have been so widely publicized. This cadet points out what a comparatively small number of boys at West Point are involved in this affair, and emphasizes the fact that we should not condemn the others because of the few who have gotten themselves into trouble. His letter certainly shows the deep feeling of the cadets for their motto, "Duty, honor, and country," and I feel it is a fine expression of the attitude of most of the boys there.

I might add that I am very proud to say that none of the boys I have appointed to West Point have been involved in this matter in any way.

I ask unanimous consent that the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CADET SPEAKS

I am one of the 2,400 cadets at West Point and, the motive for writing this is to be found in the multitude of newspapers that spread throughout this great country of ours and reach the eyes of all our people.

It seems to be somewhat misunderstood what has happened at West Point and some of the statements of our distinguished Senators have really caused me worry; especially those who suggest "the abolishment of West Point." It seems to me that these men wish to extinguish one of the greatest lights that burns for democracy and freedom, and has lighted the way for us in times of peril, by the production of some of our finest and greatest military leaders, for many decades.

We at West Point feel that the honor system is one of the bulwarks that has supported and developed the fine men that have graduated from the Academy. It has not produced merely good men, but the best men. We all know this system and have lived by it. We have had complete faith in our fellows and never once doubted them or their actions. It certainly was a blow to us all, but we do not feel prejudiced in any way. We know and like these men. They are fine fellows, but, and I emphasize, they violated what we all upheld and so they must pay as others have. (Here I wish to pose a question: Why don't people judge West Point by the 2,300 men remaining instead of the 90 who have erred?)

They should not be entitled to violate this code and receive some sort of punishment different than those who have been dismissed in the past. It seems that if these men had been firm in their respect for West Point and its ideals and had really wanted to be the kind of men that graduate, they would not have committed themselves to what they did.

I imagine that it is somewhat hard for you to understand why we feel the way we do, but I ask you to look at our shield and emblem where you see duty, honor, and country. These are not words only, but they really mean what they say, and what they

stand for is what we stand for. There is no glory mentioned there and men do not and should not come to West Point for glory in any one form or another.

I feel that the thousands of men that have graduated feel the same as I do. I, myself am only an average cadet, with average marks, and am from an average American family. There are hundreds like myself that go to school there and we work hard and we play hard.

It simply boils down to the fact that these cadets violated our honor code. Cadets, other than these, learned of these violations and investigated these men and found that they had done wrong. As I heard mentioned by another man, "Black is black and white in white and no light gray lines can be drawn in between." These men did wrong, and they must pay fully; if I did wrong I would pay the same penalty; and if any man does wrong he also is expected to pay the same penalty.

Again I say that West Point and her honor system is one of the greatest educational bulwarks in this world. If people wish us to produce as we have done in the past, then I feel that they should respect us and our honor system and I'm sure that West Point never has or never will fail the American people when called on for military leadership.

A CADET OF '53.

WEST POINT.

The Tidelands Issue**EXTENSION OF REMARKS**

OF

HON. ZALES N. ECTON

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, August 16, 1951

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Tidelands Issue," published in the Washington Star on Sunday, August 12, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TIDELANDS ISSUE

There is reason to doubt that the Senate will go along with the so-called tidelands bill that the House has enacted by a vote of 265 to 109. In any event, if it ever reaches the President in its present form, the bill—sponsored by Democratic Representative WALTER, of Pennsylvania—is almost certain to suffer the same fate as similar legislation in the past. That is to say, it will be vetoed, and the chances of overriding the veto will be slim at best.

All this is fairly predictable because the bill is wide open to challenge on the ground that it is far too sweeping in the way it would quit-claim Federal rights to oil and gas deposits within the seaward boundaries of the coastal States. Although its critics have resorted to grossly exaggerated attacks on it, it falls considerably short of offering a good compromise settlement of the highly complicated issues involved in this long-standing Federal-State dispute over ownership and control of the vast mineral wealth in the submerged lands off our shores, particularly off Louisiana, Texas, and California.

The Supreme Court, in its historic decisions of 1947 and 1950, has affirmed that the Federal Government has paramount rights to the resources of the coastal lands beyond the inland waters of the States. What still remains to be determined, however, is the precise dividing line between those rights and the States' interests. Accordingly, in an ef-

fort to settle the question, the Walter bill provides that everything within the seaward boundaries of the States should be regarded as belonging to the States. Generally speaking, the boundaries would be those claimed by the States at the time of their entry into the Union. In most cases, the line would be 3 miles from the State's coast line, though for Texas, in keeping with the treaty ratified when it joined the Nation, the distance would be 10.5 miles.

For the sake of settling the dispute, the Federal Government might well agree to this provision of the Walter bill if the provision itself were definite and final. Unfortunately however, the bill declares that any State, if it can get the approval of Congress, may in the future extend its seaward boundary beyond three geographical miles, or beyond 10.5 miles in the case of Texas. In other words, the legislation, far from putting an end to the issue, would encourage the States to expand their claims in the years ahead and engage in recurrent legal controversy with the Federal Government. Moreover, it would entitle them—especially Louisiana, Texas, and California—to 37½ percent of all the royalties and other proceeds earned from the development of oil and gas deposits in the submerged lands recognized as belonging to the whole Nation, not merely to a few States.

If Congress would enact legislation definitely fixing the seaward boundaries along the lines suggested by the Walter bill (but without that bill's loophole for expansionist claims in the future) and if the revenue from the Continental Shelf beyond those boundaries were earmarked in the law for the entire Nation (without big special hand-outs to a small minority of privileged States), there would be little reason for a Presidential veto. At any rate, such a measure—which would uphold States' rights, but still recognize Federal paramountcy over submerged lands containing perhaps 70 or 80 percent of our offshore wealth—would serve the interests of the country as a whole more effectively than the one approved by the House.

As matters stand today, the offshore wealth is not being developed or exploited. This is so because the oil companies—as a result of the Supreme Court's decisions—have been enjoined from doing anything about it until the Federal Government and the States agree upon a firm delimitation of their clashing claims. It is certainly to the interests of all parties concerned—not least the American people—that Congress should legislate a compromise settlement less vulnerable to a veto than the Walter bill.

The Army Reserve Program**EXTENSION OF REMARKS**

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, August 16, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Rooked at Rucker," which appeared in a recent issue of the Swift County News, published at Benson, Minn. The editorial deals with the inefficiency with which the Army operates its reserve program.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ROOKED AT RUCKER

A typical example of how inefficiently the Army operates its Reserve program is the

taking of men from the Forty-seventh Infantry Division at Camp Rucker, Ala., as replacements for the soldiers now returning to the States from Korea under the rotation program.

How badly the Army has botched the Reserve program at the very start is well known, but a year after the war has been going on it is still tactlessly stepping on the toes of many servicemen.

Many of the men joined the National Guard years prior to their recall to active duty January 16. Most of them are veterans of World War II and have several years of longevity. The rest of the men who joined the National Guard prior to its mobilization the first of this year joined because they felt as long as they had to go into the Army, they might as well take their training with men from their home.

That was one of the big selling points of the National Guard program. Learn and train with men from your own home town, the posters blared at the young eligible men. They fell for the bait, and are now starting to know how the Army keeps promises.

They will now be sent as infantry replacements to the Far East command or Korea. They will be thrown in among men they have never seen before. Ask any veteran of World War II and he'll tell you that the life of an infantry replacement was the toughest thing he had to face in the Army. The Army has a "plausible" excuse for the calling of men from the Forty-seventh. It says that the men are members of the Army and hence subject to go anywhere on the international checkerboard the service beckons. No one can dispute that. But to sell a man a bill of goods and then casually overlook the promises that lured him into the Army is rather callous and certainly not profitable.

With such tactics, it is small wonder that the Army has a hard time filling its Reserve ranks during times of peace. With such tactics it kills all incentive a civilian might have for joining a National Guard or Reserve unit.

The way it handles men once it gets them in the Army has created a deep feeling of mistrust that is not easily overcome.

Perhaps we're prejudiced because we saw the Benson National Guard leave here January 16 for Camp Rucker and know most of the fellows in the unit. We just wonder how the Army ever expects to build its Reserve program again with such flagrant abuses of the men once they are in the service. The seeds of discontent will bear fruit in the years to come when the Army again seeks to build its Reserve program.

Two men from Benson have already been taken from the division, and more are to go in the next call, which is expected to be out this week. The thought of going overseas wouldn't be so repugnant to most men of the Forty-seventh if they could go with the men with whom they have trained for the past 6 months.

In one swoop, the Army has gained perhaps 3,000 replacements at the cost of perhaps killing a future Reserve program.

Believe It or Not

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter

written by our colleague from Georgia [Mr. CAMP]:

BELIEVE IT OR NOT

My dear constituents, on Thursday, August 9, the House passed H. R. 5054, the largest peacetime appropriation ever made by any government in the history of the world. It is for the amount of \$56,000,000,000 to arm this country and prepare it to meet any threat to its security. This amounts to \$367 for each man, woman, and child in this country. It is hard to conceive of this vast amount of money. If it were coined into gold dollars, there would be 66,670 tons of these gold coins. If loaded into freight cars, each car carrying 40,000 pounds of gold or \$16,800,000, there would be 3,334 carloads of it. If these cars were made up into trains of 40 cars each, there would be more than 83 trainloads. If these trains were traveling over the same railroad at 15 minute intervals, it would take 48 hours, or 2 days and 2 nights, for them to pass through your town. As one Member said, "This is a lot of dough." It requires this sum to arm, equip, and maintain our Armed Forces of three and one-half million men. When this huge sum is expended, we hope that we will have an Army, Navy, and Air Force equal or better than that of any country in the world and sufficient to protect us.

Within a period of 60 days, this money will begin to be spent at the rate of \$1,000,000,000 each week. This money will go into the hands of our people and unless the strictest controls are exercised by the Government and by every man, woman, and child in the country, there may be rank inflation.

Everyone of us should guard against inflationary practices of every kind. We should not buy anything we do not need or can do without, and above all, we should not hoard food, clothing, or any other necessity.

I fear that many of our people do not realize the seriousness of this undertaking, and I hope that all of us cooperate toward the end that we will not be engulfed by the enemy of inflation at home while trying to protect ourselves against the threats of enemies abroad.

The weather is hot up here and we are working long hours in the hope that we may finish before September 1 in order to have a little rest.

Hoping to see you soon, I am

Sincerely,

SIDNEY CAMP,
Member of Congress.

A Conference on Flood Control

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. CURTIS of Nebraska. Mr. Speaker, following the recent disastrous floods the Lincoln Journal newspapers of Lincoln, Nebr., called a conference on the subject of flood control. It was held at Lincoln, Nebr., on August 11, 1951, and was attended by 280 weekly and daily newspaper representatives and farm and community leaders from Kansas and Nebraska. I would like to insert that resolution in the RECORD. It is as follows:

Whereas at this meeting assembled this 11th day of August 1951 at Lincoln, Nebr.,

there are assembled several hundred residents of eastern Nebraska and eastern Kansas, to discuss methods of flood control; and

Whereas the sentiment of the meeting is quite generally in agreement that the only sound approach to the flood-control program is an over-all, coordinated, cooperative approach consisting of a sound soil and water conservation program on the tributary watersheds, combined with both small and large retention structures on the minor and major tributary streams, together with such major, main channel structures as are indicated to control water that cannot be controlled in small watersheds; and

Whereas there have already been formed and are being now formed many organizations on a small watershed basis which are prepared or will be prepared to utilize Federal assistance in the full development of their soil- and water-control programs: Be it therefore

Resolved, That this body does therefore petition Congress to proceed immediately to make funds available to individual watershed groups who are prepared to utilize such funds to expedite progress and completion of conservation and flood control measures within their respective watersheds.

GI Education Bill

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks, I also wish to include in the RECORD the following article from the New York Times of July 23, 1951. This article deals with the benefits derived by the Veterans under the GI education bill. It gives a graphic illustration as to how millions of our veterans have gained an education which they otherwise would have not had an opportunity to obtain. Many of them are now lawyers, doctors and other professional men. As they helped America on the battlefield in the last war, so they will help America on the home front through their education. Our country has gained immeasurably through their hard work and study. A great deal of conversation is being made about the wasting of the taxpayers' money, but it is my belief the GI education bill was one of the best investments this country ever made and the educational program of the bill was a worth-while service both to the veterans and to higher education generally.

The Times article follows:

GI CALLED CREDIT TO UNITED STATES EDUCATION—MATURE, SERIOUS STUDENTS DID MUCH TO RAISE STANDARDS, COLLEGE OFFICIALS DECLARE

(By Benjamin Fine)

The GI education bill, which enabled 2,350,000 servicemen to attend colleges and universities, and another 3,430,000 to go to technical and vocational schools, has left a permanent imprint on American education. Because of their maturity and seriousness, the veterans changed the general attitude toward schools and colleges.

These conclusions were reached in a survey of 30 representative colleges and uni-

versities, conducted by the New York Times. The study indicated that the influence of the veterans on education had been significant and wholesome. The campus "rah-rah" spirit has been, to a large extent, replaced by a down-to-earth, scholarly attitude.

After Wednesday, no veteran will be eligible to begin training under the GI bill, which already has provided for 8,170,000 veterans an educational and training that cost \$14,000,000,000.

Virtually all the educators reached in the survey urged that Congress extend the provisions of the GI bill to include men now fighting in Korea or those who have been drafted.

FEW WENT "JUST FOR THE RIDE"

In the opinion of the educators, few ex-servicemen attend college "just for the ride" or to "get on the gravy train." Contrary to fears expressed when the bill was adopted in July 1944, the educators held that the men who studied under Government subsidy were serious minded, attended to their studies, and in all other respects were a credit to their institutions. Indeed, for the most part they got higher grades and did better work than their civilian classmates. In almost every respect, the average veteran was a superior student on the campus and in the classroom.

To a considerable extent, the veteran tended to be more vocational minded than the nonveteran. He was interested in courses that would prove worth while or assist him directly in his profession. For that reason, he was more impatient with cultural courses that did not contribute to his technical training.

But the veteran also changed the general attitude of the public toward education, the survey showed.

Several educators pointed out that a feeling had developed among parents that their sons must get at least a college education if they were to amount to anything or be able to compete in the professional labor market.

A significant influence of the veterans on colleges was the change in teaching methods. Because the veterans were more mature, instructors were able to go to the heart of a problem without too much preliminary introduction. In the opinion of Dr. William H. Coleman, dean of the college at Bucknell University, the GI's stimulated better teaching. A survey taken at Bucknell showed the importance of student attitude and maturity.

Those who made the lowest grades as pre-war students showed the most improvement in the postwar years. Dr. Coleman noted that the veterans had a steady influence on the campus, as their greater experience and maturity made their college work take on new meaning.

Similarly, officials at the University of Pennsylvania pointed out that the interest taken by the veterans in their studies had set a helpful example for the student body as a whole. There was a definite feeling on this campus that the educational program of the GI bill was a worth-while service both to the veterans and to higher education generally.

From the University of Illinois, Dr. Robert G. Bone, director of the division of special services for war veterans, said the faculty had been stimulated because the GI was not afraid to ask questions or to discuss any point with the teachers.

TEACHERS KEPT ON THEIR TOES

"More than one teacher has told me that he had to be on his toes in his classes after 1946 as never before," Dr. Bone commented.

"We have statistics each semester showing conclusively that the scholastic average of the veteran was higher than the nonveteran (the married veteran was higher than the unmarried veteran). The percentage of vet-

erans placed on probation and dropped has always been lower than the nonveterans."

James C. Dolley, vice president of the University of Texas, brought out that the GI's did consistently better academic work than nonveterans—about one-half a letter grade higher on the average. He added:

"The GI's toned up the general level of scholarship. When they took part in student activities—such as student government—they were more mature and practical in their approach to problem solutions."

The coordinator of veterans' education at Northwestern University, Dr. Chester Willard, said the veterans had entered wholeheartedly into the varied activities of life on the campus and had contributed a notably serious attitude and agreeable pleasant courtesy which remains from their military discipline."

That the higher academic standards brought about by the GI's will be lasting is apparent from the comment made by many educators. Stanford University officials pointed out that the intellectual curiosity and maturity of the veterans broadened the scope of many classes. This has been carried into the postveteran period, as professors have become accustomed to a higher level of student performance. Similarly, Dean Fred C. Cole, of Tulane University, observed that most of the veterans came specifically for an education, and their presence increased the intensity and seriousness of the educational process.

According to officials at Columbia University, the GI bill opened a new era in American higher education. It was characterized as one of the wisest educational expenditures the Federal Government has ever made in behalf of the people.

"The veterans brought to the Columbia campus an atmosphere of seriousness of purpose and a sense of responsibility," the officials stressed. "They became interested in the more serious phase of college life. They are vitally concerned with public affairs, with world problems, and are equipping themselves for sound citizenship."

Florida University reported that the GI brought about an atmosphere of more mature judgment and of serious study, generally raising the spirit and morale of the student body. He contributed to a general revision of the curriculum and helped bring about a more wholesome attitude toward the responsibility of higher education to the people.

EFFECT ON EDUCATION

Dr. George L. Cross, president of the University of Oklahoma, was of the opinion that the ultimate effect of the GI's on the campuses of the Nation would be improved teaching. He said the GI bill was one of the best investments this country ever had made.

Praising the GI's on the campus, Dean William C. DeVane, of Yale University, said the veterans had set a pace in academic excellence that had been revivifying for American higher education.

"Most of us here at Yale feel that the GI bill has been an extremely worth-while investment for the country and for higher education," Dr. DeVane declared. "Very few of the GI students abused the privilege of having their tuition and expenses paid. The contributions that they made beyond the classroom were equally useful. They brought maturity and seriousness to such extracurricular affairs as they were interested in, and it is not too much to say that they quickened and improved the life of the college."

Dean John C. Weldin, of the University of Rhode Island, pointed out that as a rule, the veteran was more responsive in discussion and more demanding of the instructor than the younger nonveteran students. He be-

lieved the veterans would leave a permanent effect on the educational program of the institution because "the quality of the work in the classroom, once raised, remains on a higher level than it had been previously."

The views expressed by Dr. George E. Vander Beke, registrar and director of admissions at Marquette University, typify those of other educators reached in the survey. Dr. Vander Beke listed these contributions made by the veterans to the campus: They supplied incentives for a revision of methods of teaching and courses of study; they generated a renaissance of healthy school spirit, and they actively participated in civic and community campaigns.

Dr. Nils Y. Wessell, vice president of Tufts College, pointed out that the GI brought to the American college campus a maturity and seriousness of purpose that has made its impact on the nonveterans. The overseas experiences of the ex-servicemen helped make college students more conscious of international affairs and problems.

"Although the veterans in many instances had difficulties in readjusting themselves to scholastic work," Dr. Wessell said, "their definiteness of purpose and determination enabled them to overcome many difficulties. Unquestionably, the educational investment the country has made in the GI has been worth while for the men themselves and for the Nation as a whole."

Price It in Blood

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Globe-Democrat of August 13, 1951:

PRICE IT IN BLOOD

The Census Bureau has announced Federal tax collections alone last year averaged out at \$248 for every man, woman, and child in the United States, or roughly double the bite of 8 years ago. That figures right at \$1,000 of hard-earned cash taken from every family of four.

Will anybody be shocked into action? No. Most will read, recall his Federal income tax was less than that, then dismiss the whole thing. That is why Federal spending soars year after year and few Congressmen make any real effort to economize. The taxpayer forgets that no person who buys anything escapes a Federal tax; that the direct income levy is often a minor part of what he pays annually. In 1950, less than half of that \$248 average came from individual income tax.

So maybe what we need is to start expressing these Federal extravagances, not in terms of now-meaningless dollar sums, but in terms of the number of American families whose entire tax burden would be spent for a given Government gimmick.

For example, those office divans a defense agency recently bought for a mere \$40,000. That's the whole painful tax take from you and 39 of your neighbors who haven't the time or the money for a luxurious divan in the office.

Or take the two Treasury officials who, with their wives, flew to Idaho at a Federal cost of \$2,000 to make a convention plea that individual citizens curtail their spending.

Aren't you happy to know that you and one other family earner sweat blood for an entire year to pay the equivalent of this merry junket's cost?

Or, to get down to "legitimate" spending, take the \$35,000,000 the President wants for the start of a \$4,000,000,000 point 4 program to de-backwardize alien natives who hadn't for a thousand years thought of themselves as backward until Mr. Truman popped off. That amounts to the tax take from 35,000 families, or the population of a nice-sized town whose business would boom if that sum were spent there.

Perhaps a more realistic wording in legislation would help wake up Congressmen and taxpayers. So we recommend the preamble to each money bill introduced, instead of reading "A bill appropriating \$10,000,000 for the expansion of whiffenpoofery," should read "A bill bleeding 10,000 families for the expansion, etc., etc."

St. Lawrence Waterway

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the August 13 edition of the Detroit News:

CONGRESS' RECORD IS SHAMEFUL

It is true, unfortunately, that the latest setback given the St. Lawrence seaway in the House Public Works' Committee was the work of "powerful lobbyists."

That explanation of how the national interest came to be thwarted was given by M. J. Coldwell, Canadian political leader, in a lecture comparing the Canadian with our form of government. Such an outcome on an issue of national importance would have been impossible or nearly so at Ottawa, he said, which, again, is correct.

Our form of government has become in modern times extraordinarily susceptible to minority-group pressures, a fact most glaringly instanced by the seaway's own dismal story. Indorsed and urged by every national administration for more than 30 years, the project nevertheless has yet to win approval by Congress. Neither major party, when in power, has been more successful than the other in accomplishing its enactment. Our form of government has not given us the strict party responsibility favored by the parliamentary system, which, at its best, must be conceded to excel ours in accurate expression of the majority will.

The part played by lobbyists in the seaway's committee defeat was clearly shown by analysis of the vote. Few votes against it were cast by members with an obvious motive based on sectional jealousies. The rest could have been influenced only by the spadework of private interests—mostly rail, coal and power—that, for their own reasons, long have fought the seaway.

It is not a pretty state of affairs when such interests can determine our action on a project called by highest military authority vital to national defense. The legislative history of the seaway reflects shame on the American Congress. The merited rebuke by the Canadian statesman, it is hoped, will inspire it to do better next time.

What's Right With the Democratic Party?

EXTENSION OF REMARKS

OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. YORTY. Mr. Speaker, during this era of the "big lie," the smear, and the sneer, it is refreshing and inspiring to hear authoritative voices raised in defense of what is good and right, not only with the United States but with those entrusted with the task of governing it. The very distinguished president of the Los Angeles Daily News, Mr. Robert L. Smith, on July 19 addressed the Democratic Luncheon Club of Los Angeles. His remarks have been the subject of widespread comment in California, and I am sure they will prove of interest to every Member of the House. Under unanimous consent, I insert Mr. Smith's address in the RECORD:

WHAT'S RIGHT WITH THE DEMOCRATIC PARTY?

(By Robert L. Smith)

Chairman Arnold, members of the Democratic Luncheon Club, and distinguished guests, just 2 years ago, from this same vantage point, and using this same microphone, I addressed your organization on the subject, What's Wrong With the Democratic Party? When your chairman, George Arnold, asked me to speak to you today I was struck with the idea that it might be provocative and perhaps constructive to examine the other side of the coin through discussing What's Right With the Democratic Party?

Perhaps it's because we enjoy, and sometimes abuse, freedom of speech and freedom of press, or perhaps it's because millions of our citizens have never had it so good—whatever the reason, important segments of our populace have developed into chronic "ferminsters." Whether it is the Sunday morning quarterbacking of Saturday's USC-Notre Dame football game, or the way the administration, any administration, is running the Government, they're "agin" it, in a vocal and often bellicose manner. When General Knudsen, who, you will recall, was head of the War Production Board in World War II, was asked what he thought of the human race, he reflected for a few moments, and said: "They're mostly good, God-fearing, well-meaning people, but 95 percent of them are adept at taking things apart, and only 5 percent adept at putting them back together again." Mind you, he wasn't referring exclusively to Republicans either; the percentage must be even higher there.

This ferminster psychology, which in some cases is nothing more than a byproduct which provides a safety valve in our democratic form of government, but in other cases, unfortunately, is fraught with more dire implications, has made it popular to criticize leadership in any form, from the football quarterback to "that man (any man) in the White House."

Most people who have had occasion to go to Washington, and, indeed many who have not, seem to consider it fashionable and smart in a sophisticated sort of way, to refer to Washington as a madhouse and generally to disparage all that goes on there. As a member of two governmental committees which meet frequently in Washington, I have had occasion virtually to commute be-

tween Los Angeles and our Capital and, in addition, to gain considerable insight into the workings of our various governmental departments, military, social, and economic, and I can say to you, based on this experience which extends over a considerable period of years, that most of the men, and most of the departments in Washington are doing an outstandingly efficient and effective job against formidable obstacles. Because the Democratic Party is the party of the people, it is therefore a very human party, and subject to human frailties. To say that the administration and the people in it have never made any mistakes would, of course, be fatuous, but when we consider the enormous size and scope of the present problems which confront our Government, and when we consider the social, economic, and military advancements which this country has achieved in recent years, in all objectivity it must be conceded that somebody in Washington is doing something besides collecting deep freezers and mink coats.

Now then, let us analyze some of these social, economic, and military achievements. In other words, as that happy warrior Al Smith would have said, let's look at the record:

The administration has broadened the base and extended the benefits of social security by the enactment of the new social-security law.

The administration has established a farmers' agricultural adjustment and price-support program which, in 16 years, has increased the farm income by 800 percent, while substantially reducing interest rates on farm credit, and reducing farm mortgage indebtedness 50 percent and farm mortgage foreclosures by 95 percent.

The administration has established a soil-conservation program, a rural electrification program, and has developed water resources which have directly benefited millions of our citizens and, indirectly, contributed to our expanded economy and increased standard of living.

While on the subject of an expanded economy and increased standard of living, let us point up the fact that, whereas the administration believes that our over-all economy can be expanded to support both our civilian and our defense requirements, the reactionaries contend that our economy cannot support such a program. What is the real answer based on our actual experience from the beginning of World War II to the present time? Immediately after Pearl Harbor these same disciples of doom said civilian living would have to be cut to \$66,000,000,000, the 1933 low, as compared with the 1940 level of \$72,000,000,000. But what actually happened? By war's peak, production for civilian use had been boosted to \$112,000,000,000, while we had superimposed on our civilian economy another \$100,000,000 for war materials. In other words, despite dire predictions to the contrary, the over-all standard of living actually rose substantially during World War II. For example, just prior to Korea, in terms of real dollars (corrected for inflation) our standard of living as measured by total consumption was 52 percent greater than in 1940; the amount put aside in personal savings was 111 percent greater, and liquid assets held by individuals 102 percent greater. This experience shows that in order to support the increased financial burden of necessary defense, it is not necessary to cut living standards or to compromise our American system. We can, if we put our minds, our hearts, and our know-how to the task, have an expanding economy which will support strong defense and, by 1955, raise our standard of living one-third above 1949 levels. This is not merely my opinion, this is the opinion of unbiased financial and economic authorities.

While disgruntled Republicans carp about deficit financing (at the same time reflecting their opposition to increased taxes by their votes in Congress) the administration has not resorted to deficit financing and, in fact, has operated in such a manner that the net balance of income over the past 5 years has been seven billion more than expenditures, and there is now a budget surplus of more than \$3,000,000,000. This "squand money" policy of the administration is in no small way due to John Snyder, our Secretary of the Treasury, who spoke to your group here just a few weeks ago.

With increased demands, principally military defense expenditures, Secretary Snyder warns that higher taxes, wage and price controls, and limits on credit are necessary if we are to continue on a pay-as-you-go basis without cutting into essential civilian requirements. Yet the very Republicans who claim to be sound money men are opposed to higher taxes, opposed to controls, and opposed to credit limitation. Moreover, these self-same Republicans would, on the one hand, have had us reduce military defense expenditures and, on the other, risk a third world war by pursuing MacArthur policies in Asia.

The administration has neutralized Red aggression in Europe by setting up first the Marshall plan, then the North Atlantic Treaty organization, and finally a Supreme Allied command under Eisenhower. We have taken the lead in establishing and co-operating fully in the operation of such international organizations as the United Nations, the Food and Agricultural Organization, and the World Bank. When communism threatened Greece and Turkey, we sent aid to those beleaguered countries, and today they stand firm in democratic ranks. Incidentally, 88 percent of the Democrats voted for this aid, while 80 percent of the votes against it were Republican.

We came to the aid of the peoples of France and Italy in their struggle against the political cold war onslaught of communism. In each of these countries communism has been defeated in two free elections since 1947. There is no longer danger that they will vote themselves into the hands of the Soviet Union. We came to the aid of the people of Berlin when the Kremlin tried to take them over. We and our allies kept Berlin alive by the historic miracle of the airlift, and, as a result, Berlin is free today.

The administration has given new hope to industrial and business enterprise all over the world through point 4, which offers under sound conditions capital and American know-how to countries whose resources and industrial potentials have not heretofore been adequately developed. In line with its policy of aid to impoverished nations the administration insisted upon sending grain to India over bitter Republican opposition.

The administration invited the Republicans to join in a bipartisan foreign policy and in both words and action lived up to such a policy. Typical are the important posts in government which have been given to Republicans such as General Marshall and John Foster Dulles. Conversely, at one of the most crucial periods in our international life the Republicans completely scuttled this bipartisan policy with the passing of their distinguished leader, Senator Vandenberg.

While the Republicans have employed witch hunts, smear campaigns and personal vilification of administration leaders, and resorted to red herring tactics, the administration has actually prosecuted and jailed Communists, while the McCarthys and Hickenloopers have merely given lip service to this problem in an effort aimed not to rid the country of Communists per se, but to embarrass and heckle the administration. The Republicans have done their best to use the Kefauver crime committee as a means

of proving that the administration is corrupt. Let's quote Senator Kefauver personally on this subject:

"The impression seems to have gotten around as a result of the investigations which the Senate Crime Committee conducted, that political parties and their leaders are dishonest, crooked, and bound up with crime and criminals. That impression certainly is most erroneous and wholly unjustified.

"There are crooked politicians, Republican and Democratic, and we exposed them wherever we found them. There also are crooked businessmen. Crooks have been discovered in the labor movement. Happily, they are a very small minority. In no case do I believe that they reflect the morals of the whole. Conversely, those who charge that they do should have another look at their own morals. . . .

"We must remember that this crime committee of which I was chairman was sponsored by the Democratic majority, that its membership was Democratic in the majority, and that it exposed corruption and crime wherever they were found, letting the chips fall where they may."

The administration stopped Red aggression in its tracks in Korea, and its faith in the United Nations as a world instrument for good was confirmed last June when the Security Council acted swiftly to condemn this Soviet-sponsored aggression of the North Koreans. As it has met other sharp issues, boldly and without fear, the administration met the Korean issue and by so doing checked and confounded the plans and timetable of the Soviet aggressors.

A year ago Korea appeared as an easy conquest to the Soviet rulers in Moscow and their agents in the Far East. But they were wrong. Today, after more than a million Communist casualties, after the destruction of one Communist army after another, the forces of aggression have been thrown back on their heels. They are back behind the line they started from sulking for peace.

Things have not turned out the way the Communists expected.

The United Nations has not been shattered. Instead, it is stronger today than it was a year ago.

The free nations are not demoralized. Instead, they are stronger and more confident today than they were a year ago.

The cause of world peace has not been defeated. On the contrary, the cause of world peace is stronger than it was a year ago.

We have been fighting this conflict in Korea to prevent a third world war. So far we have succeeded. We have blocked aggression, and we have kept the conflict from spreading. The attack on Korea has stimulated the free nations to build up their defenses in dead earnest. Korea convinced the free nations that they had to have armies and equipment ready to defend themselves. The United States is leading the way, with defense expenditures of \$40,000,000,000. Other nations are devoting a large share of their national effort to our mutual defense. Never before in history have we taken such measures to keep the peace. Never have the odds against an aggressor been made so clear before the attack was launched.

We have the United Nations which expresses the conscience and the collective will of the free world. We have the Organization of American States which is building the strength of this hemisphere. We have the North Atlantic Treaty which commits all the nations of the Atlantic community to fight together against aggression. We have unified land, sea, and air forces in Europe, under the command of General Eisenhower. We are strengthening the free nations of the Far East and setting up collective security arrangements in the Pacific. Most important of all, we have shown that we will fight

to resist aggression. The free nations have fought and won in Korea.

Never before has an aggressor been confronted with such a series of positive measures to keep the peace. Never before in history have there been such deterrents to the outbreak of world war.

Despite the pomp and circumstance and the histrionic folderol which accompanied the removal of General MacArthur, despite his admitted genius, glamor, and articulation, the three-ring circus which the Republicans made of this incident has finally boomeranged to the point where most thinking people consider the removal action justified and necessary as shown by current opinion polls.

This boomerang reaction was predicted in a poll conducted by Elmo Roper among 332 officially credited press correspondents. Seventy-two percent of these correspondents thought the majority of the American people would finally come to believe that the removal of MacArthur was justified and right, while only 16 percent thought to the contrary. Three percent said it would depend on the outcome in Korea. Incidentally, 85 percent of these correspondents thought from the beginning that the removal of MacArthur was justified and right, while only 13 percent disagreed, and 2 percent didn't know.

The administration has steadfastly believed in and fought for economic controls as a curb for inflation during periods of emergency, yet it is the Republicans who have screamed the loudest about inflation who are responsible for the impotent, watered-down controls bill now in effect.

Now, in conclusion, let's summarize. There are bound to be flaws in any party organization, particularly one as fluid, as dynamic, and as progressive as the Democratic Party. Moreover, in the nearly 20 years during which that party has been in office this country, and the world, have been confronted with the most colossal problems within the memory of man. From the greatest depression on record, through the most devastating global war in history, to the atomic and electronic age which has produced the grim, tense, cold war in which we are today engaged. Yet, when you add up the plus and minus columns, there's a big net profit. The record of the Democratic Party over these years is a record of achievement and progress, and a record of which to be proud, and the program of the Democratic Party, not only then, but now and for the future, is a program of which to be proud. Moreover, the unfortunate fact must be weighed that most of the objectives achieved during the Democratic administration were achieved against strong Republican opposition—an opposition which has degenerated to a point where the Republican Party has become a party of negation and sterility. As a strong believer in the two-party system, I, for one, would like to see the Republican Party come up with an affirmative, constructive perspective and program. It would be good for all America if they did, but up to now they just haven't.

Nevertheless, the cold, hard facts are that under the stewardship of the Democratic Party the United States of America is stronger today than ever before in its history. Our free enterprise economy is the most productive in the world. More people are gainfully employed at higher wages than ever before, and corporate earnings are at the highest level on record. No other form of government promotes the general welfare of its citizenry as vigorously or as effectively as does our American democracy, nor has any nation ever assumed world leadership on the same high level of unselfishness and humanitarianism as has America in our time. Thus the Democratic Party remains the party of peace, the party of prosperity, and the party of the people.

Military Appropriation Bills**EXTENSION OF REMARKS
OF****HON. WILLIAM G. BRAY**

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. BRAY. Mr. Speaker, we have just passed two gigantic military appropriations bills—appropriations that will shock our economy and will plunge our people much deeper in debt. The administration has given the armed services a blank check, drawn on the tax money of our Government. The chairman of the House Committee on Armed Services has told us that this is only the beginning of their requirements—that more and greater demands are to come. We are not "let in" on the plans of the administration, but we are told that unless this great amount is approved our armed defense effort will fail.

The Congress and the people of this country are placed in a most embarrassing position. Through its leaders, the administration states that any deviation or questioning of this armed services budget will be an aid to the Kremlin and will be a vote of no confidence in our boys fighting in Korea.

The second appropriations bill is for construction of new installations. It proposes to scatter tens of millions into the building of various Army camps, of airfields, and of other facilities. The armed services ignore the fact that less than six short years ago we had sufficient installations to train more than 15,000,000 men to win World War II. Yet, today we are asked to build scores of new installations while so many of the established ones are abandoned and allowed to grow over with weeds.

In my own State of Indiana there are two fine air bases that have been abandoned. I do not want at this time to ask for any favors for my own State, but across the river in Illinois is located one of the really fine airfields of the Nation—George Field. It was constructed at a cost of many millions of dollars. Adequate housing is available. If needed, the airplane runways can be extended to any desired length. Yet in the planning of the armed services groups this field is to be ignored and abandoned with scores of others.

Unnecessary, extravagant and wasteful spending of money, of material, or of manpower can never help our country; but it can lead to the ruin of our economy. Lenin once said that America will spend itself into ruin. Could this be a specific example of what Lenin had in mind? The reliance upon wealth as power is dangerous. It is a sign of decadence, such as Croesus eventually realized, in that great riches are not sufficient protection for man. In our country today it would seem we are using as the measuring stick of national defense how much we spend and not how much we accomplish. Every combat soldier knows that wars are won by the courage and bravery and intestinal fortitude of the men on the battle line and

not back in the palatial officers' clubs or fine polo fields of extravagant installations. We cannot make an impregnable America by merely voting more and more money, if it is wasted and used unwisely. Every bit of money and material that is used in unnecessary installations injures the potential defense effort of America just that much, and cripples the economy that has made America great.

There are many of us here in Congress who demand that before the wild extravagant appropriations of the armed services be listed as "must" legislation, the services utilize the great installations we already have, that they make a sincere and honest effort to eliminate waste of the taxpayers' money, such as is illustrated by the abandonment of George Field in Illinois and of other similar facilities all over the Nation.

**Consolidation of District VA Offices
Detrimental****EXTENSION OF REMARKS
OF****HON. THOMAS J. LANE**

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter from George W. Grader, department commander, the American Legion, Department of Massachusetts, Inc., Boston, Mass.:

THE AMERICAN LEGION,
DEPARTMENT OF MASSACHUSETTS, INC.,
Boston, Mass., August 14, 1951.
Hon. THOMAS J. LANE,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN. Thank you for your letter of August 8 with an attached copy from the Veterans' Administration at Washington signed by Mr. Clark, Deputy Administrator.

It seems to me that his letter is quite similar to the public release that went out in which they claim a great deal of savings in salaries and rents by moving the Boston office to Philadelphia. However, when one analyzes the matter it does not figure out. It seems to me that if it takes 100 people to handle a certain amount of cases in Boston, it will be just as expensive in personnel to handle the same amount in Philadelphia. I do not see where there would be any savings of money in salaries.

If the rent is \$1 25 a square yard in Boston, to handle the same amount of files, it will be approximately as expensive per square yard in Philadelphia; so I do not see where they are saving any money in rents. True, Mr. Clark states that the Government owns the Atwater Building in Philadelphia, but in lieu of rent there will be heat, cleaning, repairs, etc., which would offset rent if the building were owned.

Therefore, his statements of savings seem to be far afield. We here in the Legion feel, and readily so I believe, that any consolidation would be detrimental to the service of the veterans, widows, and orphans that a grateful Government, some years back, through its Congress issued them. It seems to me that it is up to this same body at Congress to see to it that these imposed injustices do not occur.

I appreciate your interest deeply as well as the other Congressmen and Senators who have also signified their intent to do everything to see that the veterans who have made this country safe for democracy are given a democratic regime.

My warm personal regards, and with kind wishes, I remain,

Sincerely yours,

GEORGE W. GRADER,
Department Commander.

**How Rent Control Boomerangs Against
the Public****EXTENSION OF REMARKS
OF****HON. LESLIE C. ARENDS**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the CONGRESSIONAL RECORD an article by Lee Thompson Smith dealing with the experiences of other countries with rent control.

It is a thought provoking article which I feel merits the consideration of all of us. At the very least we must recognize that there is no real substitute for individual freedom and initiative, and that once artificial government controls are imposed there are invariably demands for their broadening and continuation. Controls have been demonstrated to be the means by which an economy of abundance is converted into an economy of scarcity, where everyone is the loser.

The article follows:

HOW RENT CONTROL BOOMERANGS AGAINST THE PUBLIC—MANY NATIONS SHOW TRAGEDIES OF RENTAL HOUSING HAMSTRUNG BY THE ABUSES OF EMERGENCY REFORMS

(By Lee Thompson Smith, chairman, executive committee, Home Title Guaranty Co.)

In the world's reckless turn toward the left, which has been manifest now for many years, there have been innumerable instances of the people selling their birthright for a pottage of lentils. But I have never personally encountered a more striking international panorama of this folly than that which I was privileged to study at a recent conference in Paris.

Nation after nation revealed its sorry plight as delegates described wretched housing conditions and general construction dilemmas foisted on the public through the abuse of rent control. In each case, between the lines of statistical reports, ran tragic overtones of the people being deprived of decent and adequate places to live and to work simply because of bureaucratic dictatorship.

The conference was the organizational meeting of the International Confederation of Real Estate Agents, attended by 350 experts. Delegates from nine of the most civilized countries in the world participated in the panel discussions, including 26 delegates from the United States.

And the most amazing lesson of the 4-day deliberations was that you do not have to go behind the Iron curtain to find people so complacent that they allow their pockets to be picked by ideologists.

It is a lesson we should study and learn by heart.

Perhaps one of the frailties of human nature is the capacity to turn a reform into a vice, but when a necessary expedient in an emergency, such as rent control, once becomes rooted in bureaucracy, it inevitably becomes perpetuated to a degree that boomerangs against everyone.

This has been demonstrated in country after country. The consequences are extremely serious. When the people of war-torn nations are denied the possibilities of rehousing because of arbitrary and impracticable bureaucratic decrees, the situation is tragic indeed.

France, for example, admits that it has learned that a sure way to stop all residential rental building is to impose rent control. Holland finds its housing situation alarming. In Norway, where rents have been the same from 1939 to 1951, the country realizes that it will be plagued with a housing shortage until 1969. In Austria, where some rents have been held to the equivalent of 10 street car tickets, houses have fallen into disuse, building credits have disappeared, and the housing crisis is described as unimaginable.

Black markets in rooms have developed in Vienna with 1 room bringing more than 30 times the amount of legal rent fixed for the entire apartment.

"Wherever a policy of rent pegging has been enforced, the ultimate outcome has been catastrophe," declared M. Claudius Petit, French minister of reconstruction and town planning, in summarizing the work of the congress at the final session.

Yet rent control, per se, is only half the story. Once natural economic laws are surrendered to the arbitrary power of governmental office—no matter how competent and honorable the officeholder may be—confusion and far-reaching injustice are inevitable results.

Cuba, for example, finds itself with two classes of landlords and two schedules of rents. There, two buildings of equal value and appointments are rented in a ratio of 1 to 35 because one was built before 1937 and one after that year. The result is that the one class of landlords is economically prohibited from carrying out indispensable repairs, expected by tenants when they see such repairs made in an equal building on the other side of the bureaucratic fence.

Deep-seated evils develop. Good will between tenants and landlords is destroyed. Tenants are taught to disregard all of the responsibilities of the owner. Socially dangerous falsehoods are sown—the tenant is always right and the landlord always wrong. The virtues of thrift and the painstaking building up of private property are confused with greed and clouded with suspicion.

But worst of all, official thinking is twisted and the very purpose of rent control is distorted. This happens when the cart is placed before the horse by fixing rents to produce an arbitrary small profit rather than to regulate rents in harmony with economic trends. In other words, the private assets of an owner are examined as a factor, rather than the possibilities of encouraging rental construction.

For example, when Switzerland was faced with the necessity of easing rent control in order to stimulate some construction, it apparently did not weigh the needs for continuing the system, nor the capacity of the public to pay in accordance with greater incomes. It merely adjusted rents to allow landlords to obtain a return of 3.8 percent on invested income on buildings erected before 1943. And it allowed a return of 6.8 percent on buildings erected after that year.

Even this recognition of a minimum income was granted in the teeth of bitter opposition in Switzerland.

The plight of France has been notorious. Rent control which began in World War I has never been shaken off. Minister Petit reported that retail prices in France have soared to more than 135 times their 1914 level, and building costs have climbed to 120 times that level, while rents are still only 7 times what they were in 1914. The result has been paralysis in rental construction.

France had half a million homes entirely bombed out in World War II and more than a million and a half damaged. But another two million French homes have been allowed to fall into disrepair by the suffocation of rent control. The region of Caen through which our invasion of Europe was made, supplies a pitiful case. Caen sums up its report:

"For those who suffered a total loss, their house will be rebuilt in 5, 6 or 10 years perhaps. For those who lost only their source of rental income, it is wretchedness."

Belgium, on the other hand, has taken this bull in hand to the extent that the prospects for reconstruction were looking bright at the start of this year until new rises in the costs of materials and labor, coupled with the armaments budget restricting building credits, began to apply the brakes.

Little Holland's story sounds statistically familiar to Americans, except that we had no Rotterdam deliberately rubbed out by Nazi terrorists.

"Up to May 9, 1940, eve of the German invasion of the Low Countries, rents which were regularly fixed by free and independent agreement between the parties concerned, had remained at a fairly low level." Holland reported to the congress. "Large numbers of houses had been built during the depression. Hence rents for working-class dwellings, built between the wars, had fallen to 80 percent of their original level, and middle-class rents were down to 62 percent."

"In December 1940, the occupation authorities published the rents decree of 1940, pegging rents at the level they had reached on May 9 of that year."

"After the liberation of the Low Countries (May 5, 1945) the 1940 decree remained in force, and the situation remained unchanged until the end of 1950. On last January 1, the 1951 rents law came into force. It allowed a 15-percent increase on the legal level of rents. While the general cost-of-living index showed an increase from 100 in 1938 to 216, rents are now only 15 points above 1938."

We have heard of that 15-percent rise above depression rents in this country.

Public housing, of course, no matter how uneconomical, has been a tempting plum for the bureaucrats in most countries. By hobbling private industry by making rental construction virtually impossible under current costs, socialistic experiments are subsidized and the public is hoodwinked. In Britain's experiment in socialism private construction is effectively throttled.

The resultant crisis abroad has reached the point where M. Petit urged the following on the departing delegates:

"The idea of a Marshall plan in this field would surely be an excellent one."

"Our American friends, whose frankness is exceeded only by their sense of reality, might understand that property investments have a higher economic and social value than industrial equipment credits."

"Who cannot see the 10,000 well or better housed families are a factor equally powerful and far less burdensome than the upkeep of a military division?"

This, indeed, is something to ponder in our cold war against the destructive ideologies at work in the world today. But also there is something to ponder in the manner in which our western economic order has been betrayed by the tourniquet of rent control un-

reasonably tightened on one of its most vital arteries.

Can we fight the forces of slavery with this economic handicap? If we persist in the debilitating practices that have wrought such havoc elsewhere, to whom can we turn for a Marshall plan of resuscitation?

Off-the-Reservation Spending

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. WEICHEL. Mr. Speaker, it was most interesting to read that top brass in the Detroit office of ordnance was transferred overseas because he used some surplus property to build a row-boat and was entertained by those who were receiving contracts at the hands of the Detroit ordnance office.

Mr. Speaker, the Rossford Ordnance Depot at Rossford, Ohio, in my district needs some special attention in the way of investigation as to what has been going on there. I am informed that Rossford Ordnance Depot is part of the Detroit Ordnance District. It has been proclaimed that the Rossford Ordnance Depot is the largest pool of motor vehicles and parts in the world. That it has a record of every motor vehicle owned by the War Department. And for the money invested in warehouses and parts it surely ought to be the greatest motor vehicle pool to service and maintain these vehicles. In fact, the authorization bill for the Armed Forces passed on Friday last requested the sum of \$8,313,533 for Rossford Ordnance, for expansion, so I believe that the operations of the Rossford Ordnance Depot should be completely investigated before millions more are wasted while no efficient use is made of what is already there.

Yet last year with all the equipment, motor vehicles, and their records, the work was not done by this great depot of motor vehicles. There was painting off the reservation while a \$11,000 paint-spraying equipment remained idle simply by saying there was no drying room. The repairing of motor vehicles after being shipped in from around the country and overseas was by off-the-reservation spending at a maximum cost of \$3,600 per vehicle, while there was this great investment in motor vehicles, parts, and equipment to perform the service. I am informed that it was not let out by bids, that such contractors even purchased parts while there were parts by the millions stored in Rossford Ordnance Depot. And that those connected with Rossford Ordnance, instead of performing its own service, farmed out repairing, installation of windshields, painting, and other items even though this vast investment in warehouses, plant machinery, and parts existed in Rossford Ordnance Depot.

Mr. Speaker, how much off-the-reservation moneys were spent by the depot on

the outside? It was not let out by bids and even these contractors on occasions purchased parts in their repair work, while the ordnance depot was supposed to be the War Department's greatest pool of motor vehicles and parts. And that Government equipment, machinery, and other things were freely off the reservation put out for non-Government use.

Mr. Speaker, the investigation of the Detroit district ordnance area should certainly take in Rossford Ordnance Depot as to what it has been doing at least covering the past 5 years. Because of its equipment and parts, motor vehicles came to Rossford Ordnance for repair, but instead of doing the work the Rossford Ordnance Depot farmed it out. What sense was there in bringing motor vehicles from great distances and from overseas, when upon arrival at Rossford Ordnance the work was not performed there?

This whole matter has been quiet over a period of time and I believe that there should be a full and complete investigation of not only the Detroit ordnance district office but those reservations under it, especially Rossford Ordnance Depot. It should be examined thoroughly by a committee of this House as to its transactions for the last 5 years in view of what has gone on, and as to what use is being made of the greatest motor-vehicle pool, when parts and machinery are available for use, yet not performed on the reservation. And also especially in view of an admonition claimed to have been made by top brass that the men must stop "all this talk about work being sent out of the depot or be laid off."

Mr. Speaker, I call special attention to the Armed Forces Committee and the House Expenditures Committee for a thorough investigation of all the records of Rossford Ordnance, with reference to its operation, as to its not performing work in the way of painting, installation of windshields, paying repair bills, and authorizing outside payment of as much as \$3,600 per vehicle while machinery and equipment are or should be at Rossford Ordnance. In view of the fact that there have been established irregularities in the Detroit district office of which Rossford Ordnance is a part, I believe a special committee should hold hearings. People who have worked in the plant at Rossford Ordnance are fearful of reprisals on testimony but I am sure that a committee of the House can go through what has happened so as to stop the wasteful use of Government money.

Mr. Speaker, with the exposure of irregularities in the Detroit district ordnance office and the transfer of a top brass to overseas assignment because he built a rowboat out of surplus property, I believe that the operations of Rossford Ordnance Depot should be thoroughly gone over with reference to its off-the-reservation spending covering automobile painting, automobile repairs, truck repairs, putting in glass windshields, and other off-the-reservation expenditures.

Mr. Speaker, if the top brass was transferred for using surplus property to

build a rowboat, surely it is worth while to examine into the off-the-reservation expenditures at Rossford Ordnance Depot, at Rossford, Ohio. And I believe that a committee of this House, through investigation, should be able to find out how much money has been spent off-the-reservation by the Rossford Ordnance Depot, the details concerning such expenditures, and the use of the reservation property for non-Government uses, so that these matters might be completely examined into with a view of stopping any irregularities as to future expenditures in which the sum of \$8,313,533 was authorized last week for Rossford Ordnance Depot expansion.

Matanuska Valley and Palmer, Alaska, Advance—Alaska: The Land of Opportunity

EXTENSION OF REMARKS OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. HAGEN. Mr. Speaker, because of its important position in the defense of our country, and also because of the tremendous opportunities still existing in Alaska for young men and women, I felt sure that Members of Congress and readers of the CONGRESSIONAL RECORD would be interested in an editorial article concerning the Matanuska Valley and the progress it has made during the last 16 years.

I am happy to get permission to insert into the Record the editorial written by William L. Baker, editor and publisher of the Ketchikan (Alaska) Chronicle in the issue for Monday, July 23. Mr. Baker has just completed a trip throughout most of the Territory of Alaska and has related his impressions and observations in a series of editorials in his excellent newspaper.

The article follows:

PALMER—After 16 years of pioneering, the Matanuska Valley project has arrived. The town of Palmer, once a wide place on the Alaska Railroad, has been incorporated this year with a population of about 1,000, the business district has grown from a few operations owned by the co-op to almost 100, and the beautiful, picturesque valley boasts 3,500 to 4,000 persons, most of them living in part off the farm produce of the valley.

It was a bleak day in 1935 when 202 families arrived in the valley, refugees from the dust bowl of the Middle West, which had had its share of drought and depression. Of those original 202 families, 41 still are in the valley farming, 2 or 3 are in business in Palmer, and 15 others are living in the Anchorage area, some of them farming near Alaska's largest city.

Chief cash crops of the colony are its milk and potatoes, with smaller vegetables coming next. The Matanuska Valley Farmer's Co-operative Association did a gross business last year of \$2,251,260, of which dairy products were the largest item. Milk brought in \$400,000, and the dairy operates a reconstituting plant for the Army at Fort Richard-

son, mixing the ingredients of milk in "iron cows" at a gross of around \$500,000 per year. Butter production was stopped recently, but ice cream is being developed into a major item and its production is being expanded.

Typical of the pioneers who have stayed and made good is Carl Meier, mayor of the newly incorporated town. Originally from Duluth, Minn., the father of five children, he has replaced Walter Pippel as a produce farmer. He operates four trucks, making trips to Valdez each week, and to Anchorage two or three times a week. He and his boys also make coal and oil deliveries in the valley.

Walter Huntley, a member of the Alaska Senate, who came north from Sault Ste Marie, Mich., is another prominent colonist, about to become third division United States marshal. Two of his children who came north in 1935 are now married to Alaskans and two who were born in Alaska are living here in town. Mrs. Huntley is Palmer's postmistress.

Kenneth Foster, who came from Stevenson, Mich., operates Ken's Electric Shop in Palmer, selling appliances and doing much of the wiring work in the valley.

Everett Yohn, from Tomahawk, Wis., and Moose Lake, Minn., operates the valley grocery store. His wife, Jean Mae, is the daughter of Col. I. M. Sandvik, formerly of Moose Lake, Minn. He is one of the second generation who have stayed in the valley and made good.

Oliver Onkka, who came with his parents from Ontonagon County, Mich., is head of the Alaska Road Commission for this district. He is taking his family back to Michigan to visit in a few weeks.

Of the 202 farms in the original colony, 43 have been paid for in full although the owners had 30 years to retire their loans to the Alaska Rural Rehabilitation Corporation. The farmers devoting most of their land to producing ensilage of peas and oats and feeding their own dairy cattle, average around \$1,000 per month gross. The colony operates a bottling and distributing plant in Anchorage.

While many of the original settlers went back to the States—as did a large proportion of those who started out to Oregon and California a century ago—some took jobs with the Alaska Railroad or on military bases, because of the high wages being offered. Some of the colonists have jobs in town or in Anchorage and let their families run their farms. But growth in the valley seems to be steady. Last year and this about 75 homes were begun in the valley or in Palmer proper, including a 25-unit Alaska Housing Authority project. The town now boasts a theater, a weekly newspaper, six grocery stores, two department stores, eight garages and service stations, three doctors, one dentist and various other businesses. The colony itself operates a warehouse, a hardware store, selling appliances; a feed and fertilizer store, a trading post (grocery and department store), a garage and a municipal water system.

Palmer is headquarters for construction of the Eklutna power project, money for which has been appropriated by the United States Congress last year and this. The Army's big Fort Richardson base wants part of this hydroelectric power, and so does the city of Anchorage, its 30,000 people (greater Anchorage) sprawled all over Cook Inlet's shores.

First time we visited the colony in 1939 someone told us that the two mountains which stand as landmarks are also keynotes to what took place in the Matanuska colony. To the south is Lazy Mountain—influential on some of the settlers who wouldn't put in the work necessary to succeed. To the west is Pioneer Peak, the inspiration of those who stuck it out and made good.

Their story is the story of all who have stayed on in Alaska, a land that is not easy to understand, but a land that can reward those who—as Robert Service put it—"Learn to obey."

On Spanish Aid

EXTENSION OF REMARKS

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Danbury News-Times regarding aid to Spain. This is an excellent, hard-boiled, and realistic editorial which reflects my views and the views of millions of other Americans:

AID TO SPAIN

The die-hard opposition to help Spain help us in case of trouble dies very hard indeed.

Public and private citizens who are complacent as we toss billions all around the world, some to countries which either could not or would not lift a finger to help us if we became involved in a war with Russia, balk at giving a few millions to the only government in all Europe which is 100 percent anti-Communist.

We are glad to note that the Senate Foreign Relations Committee has approved an appropriation of some \$400,000,000 to Spain, with no strings attached. A subcommittee had wanted to put conditions on the appropriation. One was that no money be sent to Franco unless his government promoted the freedoms cherished by the Spanish peoples. Quite sensibly the full committee ignored this recommendation.

What we want from Franco now is help in building defenses in Europe against communism. Spain, the military experts tell us, is vital in any successful defense of Europe against possible attack by Russia and her satellites.

We need bases in Spain, we need ports, and we need the aid of Franco's large, efficient, and experienced army. This army at present is poorly equipped. But, while we are arming the nationals of some European countries who appear a little less than wildly enthusiastic at the prospect of fighting Communists, there is not the slightest doubt how Spaniards feel about communism. They hate it and all its works, and realize full well that Stalin would take great delight in conquering the Iberian Peninsula, and planting the hammer and sickle banner there.

The opposition to Spain has stemmed from some who are johnnie-come-latelys to the anti-Communist camp. The pro-Red group in our own State Department was determinedly anti-Spain and anti-Franco for years. It sided with the Red groups in the United Nations, which caused us to sever diplomatic relations with Spain some years ago. Dean Acheson, whose turnabout on the Spanish question has been amazing, declared only a few years ago that we would never have anything to do with Franco until a jury system, freedom of press, of speech, and religion were adopted in Spain, although we have kept up diplomatic relations with Russia, which has none of these.

We could wish there were more freedom in Spain, and we could wish Franco were less of a dictator. However, we do business with a great many countries of whose governments we do not fully approve.

If Franco can help us in our fight to preserve our world, let us have done with all this nonsense, and get him lined up efficiently on our side. We can do what we will to bring about reforms in Spain after the present crisis is over. If, that is, we should think it was any of our business.

Flood Controllers Should Study How Oklahoma Does It

EXTENSION OF REMARKS

OF

HON. ALBERT M. COLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Elmer T. Peterson from the Saturday Evening Post of August 4, 1951:

FLOOD CONTROLLERS SHOULD STUDY HOW OKLAHOMA DOES IT

(By Elmer T. Peterson)

With almost monotonous regularity come reports, usually in spring or early summer, of floods in the great agricultural valleys. With corresponding monotony the tendency seems either to regard these visitations as unpreventable acts of God or to build huge downstream dams in an effort to contain the torrents after they have got well under way.

Oklahoma, forced by climate and the character of its soil to work faster than usual in the conservation movement, comes up with a prescription that rejects both alternatives. And it works.

One of the wildest actors in the State is the Washita River, whose gullies frequently evident in the red mud it carries down into the Red River. In its valley are the beginnings of a project to prevent floods by the same kind of foresight that stops cancer. The method is to halt the evil right where it begins—in the gullies, in the furrows and right up to the stalk-and-root system of grass. Defeating each individual floodlet before it gets started means defeating the big flood, for the river has no way of getting water except from its tributaries.

In May of 1950, 13 inches of rain fell within 36 hours on a section of West Owl Creek, south of Purcell. This is the lowest official report. Other reports ranged upward as high as 15.5 inches for that area. This part of West Owl Creek had been given a thorough soil-conservation treatment, including the use of grass, contour farming, terracing and the building of smallish detention reservoirs, a degree larger than the average farm pond.

In previous years, downpours of less intensity and volume had produced destructive floods, destroying crops and contributing to the main rush of water down the valley. This year the creek stayed within its banks until it had flowed 1 mile past the last conservation-treated section of its valley. By that time the creek had received run-off from untreated slopes, and it began to go out of its banks. The detention reservoirs took care of a substantial proportion of the run-off. The surface treatment held back another substantial share. A regulated flow from a draw-down valve in each reservoir kept the creek within banks. The three-fold system worked even better than had been figured in advance by the conservation engineers.

On May 16, 1951, the Sandstone Creek watershed of 65,000 acres, southeast of Cheyenne, received a downpour ranging up to 4.57 inches. A similar system of detention dams and conservation practices had been not quite completed. The runoff water did not even come up to the draw-down pipes. In other words, none of the permanent pools was filled. Sandstone Creek, which in previous similar storms had been a bad actor, was perfectly tame and did nothing to augment the flow of Washita River, though other creeks in that part of the State were doing great damage.

Barnitz Creek watershed, near Clinton, during the same wet period, received 13 inches of rain within 24 hours, according to several unofficial gage tests. It has an area of 4,000 acres and is equipped with two detention reservoirs with two smaller dams upstream from them, besides the usual surface treatment of terracing, regrassing, and the like. It stayed within its banks while neighboring creeks did great damage with equal precipitation.

"We planned it that way," said one of the conservation technicians. All these agricultural-flood-control-project reservoirs are engineered in advance to hold considerably more runoff water, in proportion to drainage area, than the big Army-engineer projects in the same region. The huge dams built by the Army engineers and Reclamation Bureau have come under heavy fire in recent years. Since one of the chief functions of the big dams, according to the promoters, is flood control, it is up to the opponents of the big projects to propose a practical substitute. They will do well to make a close study of the Washita program.

The Adoption of a Flag for the American Merchant Marine

EXTENSION OF REMARKS

OF

HON. JAMES J. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. MURPHY. Mr. Speaker, under unanimous consent, I extend my remarks in the RECORD on H. R. 5172, a measure which I have introduced, providing for the adoption of a flag for the American merchant marine.

Although approximately 23 countries have merchant-marine flags, which are separate and distinct from the national colors, our American merchant marine has no such ensign. In order to provide for this omission, I have introduced H. R. 5172, which amends chapter 1 of title 4 of the United States Code, entitled "The Flag," by adding a section at the end thereof providing for an American merchant-marine flag.

The bill provides that our merchant marine ensign shall be 13 horizontal stripes, alternating red and white, and the union of the flag shall be a large white anchor set diagonally in a blue field, with the stock of the anchor at the top of the field nearer the hoist. In fact, it will be the same as the national colors with the exception that the anchor appears in the blue field instead of the stars.

I believe that a special flag for the American merchant marine will be a

great contribution to the morale and will enhance the prestige of our ships in every port of the world. The display of the proposed merchant-marine flag on American merchant vessels would be voluntary and would not and could not replace the national ensign of the United States. The merchant-marine flag might be flown from the bow of the vessel where the Union Jack is usually flown.

I do not anticipate any objections to this legislation, which seems so desirable and has the support of those most interested in the development and expansion of our merchant marine.

New Oil Fields

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. BURDICK. Mr. Speaker, with the present unsettled condition of the world today with its many possibilities of war, it is imperative that the principal sinew of war in modern times, oil, be available to those who prize their liberty and wish to preserve it.

The new discoveries of oil in the United States which may result in vast oil fields and vast quantities of oil should be very welcome news to the people of the United States.

The New York Times of July 25, 1951, has this to say about new oil fields:

NEW OIL FIELDS

What may well be the beginning of a new major domestic oil source in the northern Middle West is indicated by two recent important finds 100 miles apart, one last April in North Dakota and another in the past fortnight in Montana. For several decades this country has depended heavily, though not exclusively, upon southern and western areas—such States as Louisiana, Texas, and California. If these new finds in North Dakota and Montana presage the opening of comparable rich fields they are of great importance. The mounting number of cars and oil heaters in this country is steadily increasing our consumption of this material, while from a global point of view the shadows over the future of oil production in the Middle East, particularly Iran, make it most desirable to increase production from more certain sources, as in this country, as rapidly as possible.

In our gratification over these new finds we should not lose sight of the factors which made it possible for oil to be discovered at depths of 7,000 to 11,000 feet underneath the earth. The contributions of geologists, drilling technicians, and related specialists are, of course, of the highest importance, for they make possible the location and then the reaching of this buried treasure. But important, too, are the enterprise and the willingness to bear risks which motivated these efforts. Wells that find oil are well publicized, but the large number which are no more than dry holes in the ground are recorded only in red ink in private ledgers. The men and organizations who search for oil at fantastic depths risk millions in such ventures, and frequently lose them. But they continue even after repeated disappointments because on balance profits can be made if a reasonable proportion of suc-

cesses is attained. In this activity, as in many others, the role of the profit motive in inducing socially useful action is of primary importance, a fact which our people and our legislators might well keep in mind.

A Campaign Against Rent Abuses and Intolerable Living Conditions

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. DOLLINGER. Mr. Speaker, El Diario De Nueva York is an outstanding liberal Spanish newspaper published in New York. At this time it is waging a campaign against rent abuses and intolerable living conditions, as they affect Puerto Ricans, Negroes, and other minority groups.

On July 8, 1951, it published an editorial, which I am inserting in the Record, which summarizes its aims and shows what it is accomplishing. If more newspapers would join in the fight with El Diario, the battle to wipe out slums and provide decent living conditions at fair rentals, would soon be won. The goal is aptly stated in the concluding paragraph of their editorial:

Our campaign for decent living conditions at fair rentals is the cornerstone of our extensive program. We shall persevere in our efforts, with your help and God's guidance, as the framers of our Constitution so aptly phrased it: "To secure the blessings of liberty to ourselves and our posterity."

My sincere congratulations to El Diario De Nueva York on the splendid job it is doing.

The editorial follows:

THE HOUSING AND RENT RACKET—AS OUR CAMPAIGN DEVELOPS

Our campaign against rent abuses and intolerable living conditions, as it affects lower-income persons generally, and Puerto Ricans and Negroes particularly, has awakened hope in the hearts of many of our readers and friends. Inspirational ideas seem to be endless. We summarize and reflect upon some of the reactions and suggestions of our readers and well-wishers.

1. "You are performing a service in the highest and noblest traditions of journalism by shedding light where darkness and indifference prevail." We are flattered and are fully aware that we have undertaken a full-size job. But this is a function of a newspaper in a democracy—to demonstrate to its readers and followers that democracy is real—and surely every effort to promote equality and reestablish self-respect and dignity in the citizen, however humble he may be, is a service in the cause of democracy. Beaten and oppressed men and women cannot be good Americans. We aim to establish equality in rents, in living conditions, in enforcement of the laws as concerns rents and living conditions, in hopes and aspirations, in opportunities, in employment, in the pursuit of happiness, in purchasing, and (when necessary) in borrowing. We know that God helps those who help themselves, and we shall therefore do our utmost to help ourselves, not for purely selfish reasons, but to prove to ourselves, to all Spanish-language newspapers throughout the world, and to our good neighbors everywhere, that democ-

racy and equality are real and alive and available for all who seek true self-government. We hope that the Voice of America will follow our campaign and report to its far-flung audiences how in America, how in New York City, the capital of the United Nations, right is might."

2. "Your campaign will be ignored by the authorities because you represent neither a pressure group nor a block of votes," is a friendly observation we have been hearing. As a newspaper we cannot ignore that challenge to the time-proved truism that the pen is mightier than the sword. We accept that friendly challenge and dedicate ourselves to help the last Spanish-speaking arrival to master the English language in order to make himself better understood; to teach our brethren the fundamentals of American citizenship and history and make him a respected voter; and to guide in the obligations and responsibilities of American citizenship."

3. "Why don't you stress the importance of Puerto Ricans and Spanish-speaking citizens in the defense effort and in keeping America strong?" has been urged upon us. We have no facts to indicate whether Spanish-speaking citizens are contributing more or less than their share in the defense efforts—probably to the same degree and extent as any other group of Americans—but we are keenly aware of a special service we can and will render to make America stronger, better understood, and better loved and appreciated. We are peculiarly equipped to help our fellow-citizens to speak and understand Spanish to facilitate and encourage their traveling in Spanish-speaking areas all over the world and we are also especially equipped to act as hosts to visitors whom we shall invite in great numbers from Spanish-speaking countries who may wish to see for themselves the miracle of America. We are working fervently to aid in this manner so that all ears in Spanish-speaking territory all over the world may become deaf to Communist overtures. This is a special mission which we Spanish-speaking citizens have—which other foreign-language groups have—which with God's help we will accomplish. We have a job to do and we will do it magnificently."

4. "You, by your campaign, are uniting Puerto Ricans to cooperate in a way as has never before been done in New York," is what someone whispered last night. We hope that is true and shall try to make it truer. Given a chance to save a dollar here and there, without having to turn it over to oppressive landlords, installment sellers, and finance companies, we shall be able to build our own churches and hospitals; our own old-age homes and our own recreational and resort facilities for the entire community to benefit."

Our campaign for decent living conditions at fair rentals is the cornerstone of our extensive program. We shall persevere in our efforts, with your help and God's guidance, as the framers of our Constitution so aptly phrased it:

"To secure the blessings of liberty to ourselves and our posterity."

Additional Revenue With No Hardship

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include

the following editorial from the Chelsea Record, Chelsea, Mass., August 13, 1951:

NEW SOURCE FOR REVENUE

With the State and Federal Governments always looking for more and more juicy sources to tap for more revenue to keep the Government running, why not tackle legalized racing?

While the State does take a bite out of the horse and dog tracks, there's every reason to believe that they are not only making money but they are making plenty of it. We have our own two examples close by—Suffolk Downs for the horses and Wonderland for the dogs.

Why not levy 5 percent tax on all parimutuel tickets and a 10-percent tax on all track receipts?

And how about a tax on each race horse and greyhound, too?

Taxes such as these imposed by the Federal Government would raise an estimate \$500,000,000 in a year and help the poor taxpayer a great deal.

After all, you don't have to gamble if you don't want to—and it's definitely a luxury.

NPA Construction Order Defies Interpretation

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. GROSS. Mr. Speaker, on August 9, I telegraphed an Iowan as follows:

NPA's so-called freeze order, entitled M-4A, August 3, 1951, is a nightmare of confusion, entailing new regulations, multiple amendments, and revocations pertaining to six previous lengthy orders. Confusion is so compounded that mobilization agencies themselves are unable to agree on interpretation.

I feel certain that other Members of Congress, attempting to obtain information and interpretation for their constituents, encountered this nightmare and probably are still struggling with it.

The following article from the August 11 Washington Evening Star details much of the confusion:

WEEK-OLD CONSTRUCTION ORDER STILL CONFUSES OFFICIALS AND BUILDERS

If anybody in the construction industry—or in the Government itself—thoroughly understands the new NPA construction limitation order issued a week ago, we have yet to locate that person.

Indeed, the confusion about the latest National Production Administration order is so great as to represent a classic in this sort of thing, in the opinion of persons we have talked to.

One Government man directly concerned said this:

"The whole thing would be funny, if it were not so gruesome."

A representative of the Associated General Contractors of America, queried by the Star, said he didn't believe anybody could fully understand the order as it stands today.

ALMOST INCOMPREHENSIBLE

"It will need an immense amount of interpretation, and even then I cannot see that it will be anything other than so complex as to seem almost incomprehensible. We have

never had anything so mixed up as this is, in all my recollection."

The comments of Government people themselves reflected unmistakable skepticism about the workability of the order.

One Government official closely connected with administering the regulations said flatly he doubted that parts of it would be enforceable.

"If you can't get people at the operating level of Government to understand it, how are you going to get builders to understand it?" he said.

JOB WAS COLLECTIVE EFFORT

Writing the regulations was a collective effort. Team after team of National Production Authority lawyers contributed to it, as well as other officials.

Seemingly so vast was the confusion that the first time the text was distributed to newspapermen it was found to be of a sharply different "earlier draft" than the agency had finally adopted and meant to distribute.

At a press conference called by Manly Fleischmann, NPA Administrator, for the morning of August 3, it was found the text wasn't available at all. When newspapermen returned in the afternoon to a postponed meeting with Mr. Fleischmann, the text still wasn't ready. Shortly afterward, copies arrived and were distributed, and it was this text which was found to have been an early draft that had been sent to the printer by mistake.

The regulation in "final" form was not distributed to newspapers until the following Monday, and officials then discovered that it still needed correction and clarification. Attempts have been made to do this all week with, apparently, little success.

"EXPLANATORY" INFORMATION

As late as last night, NPA issued "explanatory" information in a release which announced two changes in the order and included "administrative interpretations."

The wry comment of one official in connection with this release was:

"This is an attempt to explain some of the things that are in the regulation which the regulation itself doesn't make clear."

One other Government agency and two construction trade associations also issued their "interpretations" of the order this week.

The Housing and Home Finance Agency gave its version of the procedures set up for home builders to follow in obtaining controlled materials; the National Association of Home Builders supplied its members all over the country with an "analysis" of the regulations, and the Associated General Contractors of America—a trade organization of construction firms—also turned out its own analysis.

EVEN ANALYSES NOT SIMPLE

None of these analyses succeeded in being very simple, apparently, because—as one Government official said—"the order itself is an unbelievably complex mechanism that leaves a great deal for subsequent interpretation."

The new regulation, or order, is called M-4A. When it was distributed, the National Production Authority attached to it controlled materials plan regulation 6, direction 1 to regulation 6, amendment to delegation 14, revocation of M-4, revocation of delegation 7, and a copy of—to use NPA's own brand of contractions—form NPAF-24A. All this was done so that people would understand the new order better.

Which may give you an idea of why being a nonlegal NPA employee—not to mention being a builder—is getting to be somewhat complicated.

The simplest thing you can say about M-4A is that it replaces a previous order called M-4.

STARTED AS SIMPLE ORDER

M-4 started out as a mild little NPA regulation which became effective October 26, 1950, and which banned construction of new buildings for amusement, recreational, or entertainment purposes. That was all.

But gradually M-4 was made tougher, through amendments, to hold down both residential and commercial and industrial building.

When the so-called controlled materials plan of allocating scarce materials went into effect, July 1, M-4 was amended to bring construction under the controlled materials plan (CMP) on a "permissive" basis. A builder could be under CMP, or he didn't need to be, as he wished. That was a little over a month ago.

Now the whole M-4 set-up is tossed out the window and the M-4A regulation has been put into effect to take its place. The controlled materials plan is no longer "permissive" in regard to the construction. It now is to be applied to all construction, beginning October 1.

BREAK FOR HOUSING SEEN

Under the M-4A regulation, however, NPA says housing will get a good break in that the regulations "remove the necessity of applications to NPA for permission to begin construction or to get allotments of materials for buildings or projects using relatively small amounts of steel, copper, and aluminum."

In the home-building field the new regulation removed the recently imposed 2,500 square-foot limitation on houses, which replaced the likewise short-lived \$35,000 cost limitation.

The Housing and Home Finance Agency's interpretation of the regulations says that now you can use any amount of controlled materials you want to if they are used before October 1, with the exception that you can't use any aluminum and you can use copper only for certain purposes.

After September 30 a builder will not be permitted to start or continue home construction unless he obtains an authorized construction schedule and a related allotment of controlled materials, or unless the construction requires no more than the quantities of controlled materials obtainable by self-authorization.

SELF-AUTHORIZATION SYSTEM

Self-authorization is a system set up under the new M-4A regulation, which allows builders to certify themselves to receive certain materials.

They will be allowed to do this, says the Housing and Home Finance Agency, provided they will not need—for a single-family house—more than 1,800 pounds of carbon steel and 38 pounds of copper products or 1,450 pounds of carbon steel and 160 pounds of copper products.

Maximum material schedules are, likewise, set up for two-family, three-family, and four-family homes.

In the case of apartment buildings larger than four-family, builders will be permitted to go ahead before October 1 if they do not require more than 25 tons of carbon steel or more than 2,000 pounds of copper, and if no aluminum or stainless steel is required, HHFA said.

KEY PROVISION OF ORDER

"Beginning with October 1, all residential construction must be specifically authorized, either by self-authorization, as in the case of one-to-four-family structures requiring no more than stated quantities of controlled materials, or by an authorized construction schedule of allotment of materials, as in the case of all multiunit structures," HHFA said.

A key provision of the new order is that after September 30 no one will be able to

buy controlled materials for construction except with a CMP authorization—either a self-authorization or one granted by the agency after an application is filed, the Associated General Contractors' analysis pointed out. (You probably will have a tough time getting such materials up to that time without authorization, but if you can get them it won't be illegal.)

SIGNIFICANT POINTS MADE

AGC's interpretative statement to its members made other significant points:

1. New construction requiring more than specified amounts of controlled materials can be started without an application being filed provided all controlled materials needed are delivered by September 30, and provided the job is not a multiunit apartment building or of the recreational, entertainment, or amusement type.

2. Projects of this kind now under way can be completed without filing an application provided the controlled materials are delivered by September 30.

3. Projects under way for which less than specified amounts of controlled materials will be required per quarter may be completed without filing an application.

4. New applications must be filed for authorized construction schedules and related allotments of controlled materials in the case of projects already under way which will require delivery of greater than specified amounts of controlled materials after September 30.

5. Some construction projects already under way, particularly commercial, probably cannot be continued in the fourth quarter of the year because NPA will not grant allotments for delivery of materials in this quarter. This will mean that such projects may have to shut down for lack of materials, though if they have been legally started NPA will not halt them.

The contractors' group told its members NPA said that very little, if any, new commercial construction can expect to receive allotments of controlled materials in the fourth quarter of the year.

By NPA interpretation, said AGC to its members, contractors may use, at any time, materials in their possession on September 30.

In its explanatory release last night, NPA discussed how the order would apply to various special situations. These interpretations of the order served partly as the basis for the explanation sent by the Associated General Contractors of America to its members.

SPECIAL SITUATION CITED

One special situation explained by NPA was as follows:

"(a) A prime contractor has 50 tons of steel and 1,000 pounds of copper in his inventory. He desires to build a motion-picture theater or other table I category which will not require more than that amount of controlled materials.

"Under section 4 of Order M-4A, he may not commence construction unless he is granted an exception under section 7 of that order. Since the proposed construction would not result in a diminution of the controlled materials allocation available for distribution this fact will be considered in processing the application for exception.

"(b) If a motion-picture theater or other table I category is now under construction pursuant to an exception granted under NPA Order M-4, and if it will require more than 2 tons of carbon steel or 200 pounds of copper for completion, the prime contractor may not continue with the construction unless he receives an authorized construction schedule and related allotment under CMP Regulation 6. However, if the prime contractor needs no more than 2 tons of carbon steel or 200 pounds of copper to complete the theater, he may continue with the con-

struction, but he may not self-authorize his orders for delivery."

This may give you a general idea of why we haven't yet located anyone in the construction business—or in the Government itself—who thoroughly understands the new construction regulations.

Covenant of Human Rights

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, August 16, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the RECORD a number of editorials and an article dealing with the proposed Covenant on Human Rights. The editorials and article deal with the basic matter which I have been discussing this afternoon, and which I discussed before the Senate some 2 or 3 weeks ago, the Covenant on Human Rights. We learn from the report from Geneva yesterday that there is some indication that the State Department is finally awakening to the danger that is presented in these conventions and covenants.

One of the editorials is entitled "An International Joker," published in the Cleveland (Ohio) Plain Dealer of July 25, 1951. There is also an editorial entitled "How To Muzzle People," published in the Wall Street Journal of August 16, 1951; an editorial entitled "U. N. and the Press," published in the New York Daily Mirror of August 2, 1951; an editorial entitled "Undermining American Rights," published in the Cincinnati Enquirer of July 29, 1951; and an article entitled "Beware: One World Welfare State," written by James Ratliff and published in the Cincinnati Enquirer of July 29, 1951.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

[From the Cleveland Plain Dealer of July 25, 1951]

AN INTERNATIONAL JOKER

Senator JOHN W. BRICKER, of Ohio, is the author of a resolution declaring that the proposed international Covenant on Human Rights is not acceptable to the United States. It calls on President Truman to instruct American representatives at the United Nations "to withdraw from further negotiations with respect to the Covenant on Human Rights, and all other covenants, treaties, and conventions which seek to prescribe restrictions on individual liberty which, if passed by the Congress as domestic legislation, would be unconstitutional."

Among the rights which the proposed covenant attempts to define are freedom of the press and freedom of religion. But there is a joker in the covenant. Both of these rights are subject to limitation and restriction, as BRICKER pointed out recently on the floor of the Senate.

For example, the section on freedom of the press contains this provision:

"The right to seek, receive, and impart information and ideas carries with it special duties and responsibilities and may therefore be subject to certain penalties, liabilities and restrictions, but these shall be such

only as are provided by law and are necessary for the protection of national security, public order, safety, health or morals, or of the rights, freedoms or reputations of others."

Likewise, the section on freedom of religion is modified by the statement that "freedom to manifest one's religion or beliefs shall be subject only to such limitations as are pursuant to law and are reasonable and necessary to protect public safety, order, health or morals or the fundamental rights and freedoms of others."

Obviously any dictator who was bent on destruction of the free press or curtailment of religious freedom could find legal sanction for his acts in the exceptions cited above. He would merely need to induce a subservient legislature to pass laws giving him the authority to suppress publications which he deemed to be inimical to "national security, public order, safety, health or morals" or to ban the teaching of religious beliefs under the guise of protecting "public safety, order, health or morals."

There are two reasons why the United States should not give its approval to such hypocritical doctrines or to any international covenant which modifies in any degree the rights guaranteed to citizens of this country under the Constitution.

One reason is that if we were to approve the covenant we would in effect be sanctioning abridgment of freedom of the press and of religion in every dictatorship in the world which presently engages in these practices or might attempt to do so in the future.

The other reason is that we would be opening the door to the enactment of laws in this country abridging freedom of the press and destroying religious freedom.

This would come about because approval of the proposed covenant would be in the form of ratifying a treaty, and, as Senator BRICKER pointed out, article VI of the Constitution places the Constitution and treaties on an equal plane of supremacy.

It is undisputed, BRICKER said, that a treaty ratified by the Senate overrides inconsistent provisions of Federal law, State constitutions, State laws, and State judicial decisions.

And it is quite possible that some Supreme Court—that was subservient to the administration, such as the Court which President Roosevelt wanted to establish under his Court-packing bill—would rule that a so-called covenant of human rights, ratified by the Senate, would take precedence over the Bill of Rights in the United States Constitution.

Senator BRICKER made an able presentation of the hypocrisy of the proposed covenant and the dangers inherent in its ratification, as reported in the CONGRESSIONAL RECORD of July 17.

His purpose, he said, was "to bury the so-called covenant on human rights so deep that no one holding high public office will ever dare to attempt its resurrection." He does not want the United States delegates to the United Nations to secure its adoption by that body, and then to have the administration tell the Senate that it must be ratified to avoid the embarrassment that would arise from its rejection.

The Plain Dealer believes the Senate should adopt BRICKER's resolution promptly, so that there will be no misunderstanding about the opposition of the United States to this international joker.

[From the Wall Street Journal of August 16, 1951]

HOW TO MUZZLE PEOPLE

The United States has rejected and denounced the United Nations' proposed freedom-of-information treaty. It was the only possible thing it could do.

Thanks to the insistence of certain nations—not Communist, as it happens—this pact would suppress more information than

it would free. It specifically provides not only for suppression of news but also for prosecution of news organizations publishing things likely to injure the feelings of other nations or undermine friendly relations between peoples or states.

No American needs to have spelled out for him the implications of this kind of talk. It simply provides a great bludgeon for governments to use to prevent publication of things they don't happen to want published. But we are not concerned here simply to pat the United States negotiators on the back for avoiding so obvious a trap. On the contrary, we think they—that is, the executive branch, which is responsible for treaty making—are due for some scolding.

In the first place, they should not have allowed this insidious treaty to have got as far as it has. It has been in the works for a number of years, but it was clear almost from the outset that it could only turn out the way it has. And it isn't simply a case of error seen in time and no harm done.

Even without United States signature, the treaty may still be approved by other nations—and invoked against United States newsmen in those nations. The United States might not have been able to prevent this in any case, but instead of taking a leading part in the negotiations, it might have used its influence to scotch the whole idea in the first place.

More importantly, we think it is time the executive branch awakened to the fundamental fallacy of global treaty making under the aegis of the U. N. The fallacy is the assumption that all nations (these days it's been modified to all non-Communist nations), though they may differ superficially, have essentially the same noble aims and the same type of democratic political institutions.

They do not, of course, and the result is that in just about every case the treaty draft which emerges succeeds in effectively negating the noble aims which activated it. Thus we have seen a treaty to free trade which could only have accomplished its further restriction. There is kicking around a U. N. treaty on human rights which could be interpreted to deny at least some of the rights actually guaranteed under the United States Constitution. Now we have the treaty on freedom of information which would in fact muzzle it.

In negotiating such treaties among governments with divergent purposes and outlooks, something has got to give. The very real danger is that what will be compromised are the rights and liberties of United States citizens.

[From the New York Daily Mirror of August 2, 1951]

U. N. AND THE PRESS

Some politicians believe that there is no harm in whittling away a little human freedom at a time. But experience is that when the strong, protective layer of a free public opinion is destroyed the inner core of human liberty can rot away.

Take a look at articles 13 and 14 of the Covenant on Human Rights, which the United Nations is seeking to impose. Article 13 says:

"Freedom to manifest one's religion or beliefs shall be subject only to such limitations as are pursuant to law and are reasonable and necessary to protect public safety, order, health or morals, or the fundamental rights and freedoms of others."

Compare that very involved limitation on the practice of religion with the simple affirmative statement in the Constitution's first amendment.

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right

of the people peaceably to assemble, and to petition the Government for a redress of grievances."

Article 14 of the Covenant places the same restrictions and limitations upon a free press, and in addition it is provided that a signatory to the Covenant may cancel a free press "in the case of a state of emergency officially proclaimed by the authorities . . ."

Figure out for yourself how easy it is for politicians to proclaim emergencies. If that were all they had to do, they could abolish the free press and you would read only what the State Department and the Voice of America chose to hand you.

The United States (with France and Mexico less so) is just about the only country in which a treaty becomes the law of the land, once it is ratified.

We are stuck with the provisions of article VI of our Constitution, which makes a treaty supreme law of the land—"anything in the Constitution or laws of any State to the contrary notwithstanding."

No matter how this provision is twisted by the advocates of "one world," our courts are already deciding as the Constitution provides, and long-standing laws are being declared unavailing since we signed the Charter of the United Nations, which, so far as the United States is concerned, is a treaty.

So, if this Covenant on Human Rights is ever ratified by the Senate, religious freedom and freedom of the press can be limited and even abolished in the United States.

Don't say that it cannot happen. The people of California never realized that their land laws would be decided on the basis of the Charter of the United Nations, but that happened.

In a test case (*Sei Fujii v. State of California*) involving alien land laws, Judge Emmet H. Wilson said: "The Charter has become 'the supreme law of the land' and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

He then declared the California alien land laws, passed 30 years before, invalid.

In fact, under this covenant, the imprisonment of William N. Oatis, the American reporter, by Czechoslovakia could be justified. If the government wants to call him a spy, that makes him a spy.

Few Americans, we are sure, ever bothered to read the Charter of the United Nations. But now we are all stuck with it. Even fewer read the Covenant on Human Rights, which is a very obnoxious document.

It ought to be read by everybody. Then tell your Senator that you will bat his ears down if he votes for it.

[From the Cincinnati Enquirer of July 29, 1951]

UNDERMINING AMERICAN RIGHTS

It was an unusually well-documented attack which Ohio Senator JOHN W. BRICKER made on the floor of the Senate last week against the proposed United Nations covenant on human rights, and it is not surprising that in the wake of Senator BRICKER's arguments there have come various other expressions of opposition to a treaty which might undermine American constitutional guaranties of freedom of religion and the press.

Typical of the reaction was the expression of Democratic Senator RUSSELL, of Georgia, who asserted: "I am in favor of international cooperation, but I am not in favor of trusting the rights and liberties of the American people to any international agreement."

Senator BRICKER did not mince words in his denunciation of the covenant, which he described as "the instrument for destroying freedom of the press in America" and possessing "the power to destroy religion." The

Ohioan traced the background of the proposed covenant, citing the assistance given to its preparation by a Harvard professor whose appointment was sponsored by Alger Hiss, and linking the sponsorship with others who have been outspoken critics of the type of free press we have in America. Senator BRICKER asserted that the nominal sponsor, Mrs. Franklin D. Roosevelt, was blissfully ignorant of the covenant's effects, and that President Truman doesn't understand enough constitutional law to know what the covenant might do.

There are several potentially deadly jokers in the seemingly innocuous covenant on human rights. The language of the proposed covenant provides for certain restraints and limitations of both the freedom of the press and the practices of religion. Significantly, these restraints would apply in times of emergency, and the interpretation of their necessity would be left to the Government.

As Senator BRICKER pointed out, we have been living in one kind of an emergency or another ever since the first days of the New Deal, and there is still no end in sight. Therefore the danger of Government censorship would be an ever-present one under the terms of the Covenant.

What about the Constitution's guaranties of freedom of the press and freedom of religion? Here is the most vicious joker of all in the proposed Covenant of Human Rights: It would supersede all State and Federal laws on the subject, and would evade the constitutional safeguards. The Constitution says: "Congress shall make no law abridging the freedom of the press." This is the catch—the Covenant, with its abridgments of the freedom of the press, would not be a law made by Congress. Instead of a law, it would be a treaty ratified only by the Senate. Yet, as Senator BRICKER points out, article VI of the Constitution places the Constitution and treaties on an equal plane of supremacy.

On previous occasion we have pointed out the need for the extreme caution in treaty negotiation, since, under our Constitution, a treaty has a far more binding effect upon the United States than most foreign signatories. Senator BRICKER took note of this in saying: "In almost every other country of the world treaties do not become part of domestic law except to the extent that they are implemented by legislation. Other nations, therefore, do not assume the same risks we do in ratifying a treaty. They have the opportunity for a second look. We do not. State Department officials have displayed a callous disregard of this fact in their treaty negotiations."

We doubt if the fancy-sounding Covenant of Human Rights would achieve anything of constructive or practical value to the world. Most certainly it would undermine basic rights which are traditional in the American scheme of government, and therefore in principle it would tend to drag us down to the level of other nations where neither freedom of the press nor freedom of religion is recognized. The most appropriate thing for the Senate to do is, as Senator BRICKER suggests, go on record as not favoring the Covenant and terminate the negotiations looking toward its adoption by the U. N.

[From the Cincinnati Enquirer of July 29, 1951]

BEWARE: ONE-WORLD WELFARE STATE

(By James Ratliff)

William McGrath is the only Cincinnati who has really experienced "one world" in action. And he's been busy scaring his fellow Americans ever since.

The Oakley industrialist (president of the Williamson Heater Co.) has been a member of the American delegation to the International Labor Organization for 3 years. He is just back from his third trip to Geneva,

where this branch of the United Nations still meets.

The ILO consists of delegates from 80 nations who sit down and try to improve working conditions of the world by drafting treaties which Mr. McGrath says would create an international "welfare state." He has looked on in amazement as countries like Liberia gleefully voted to outlaw forced labor, then privately admit that their jungle chieftains draft whole villages to keep their roads open.

William McGrath contends he is as liberal as the next man. He is a Jeffersonian Democrat and "proud of it." He believes in the U. N. and even the ILO. He thinks we should enter into—and respect—international commitments. But he is convinced that no one else in the world appreciates what America has, and even many Americans are so unappreciative that we are in grave danger of losing our liberty by giving it away.

This year at Geneva, Mr. McGrath blasted the drafting of international welfare proposals into treaties. He realizes it is hopeless to get a free-enterprise proposal out of any international conference like the ILO because the world seems determined to choose only between socialism and communism.

Treaties are actual drafts of laws. And they automatically become supreme to any law in America as soon as the United States Senate ratifies them. Our Constitution, almost alone in the world, provides this.

Some U. N. treaties are earth-shaking in their scope. For example, the Covenant of the United Nations Declaration of Human Rights, now awaiting ratification in the United States Senate, is a virtual world constitution. Other countries can sign it as a showpiece. If we sign it our very basic rights may be endangered.

Senator JOHN W. BRICKER, of Ohio, arose on the floor of the Senate the other day to call this U. N. treaty, "monstrous" and "human slavery" instead of human rights. He then bored into the rotten core of what thousands of fuzzy-minded idealists in this country call "equal rights for all."

Article 14 (3) of the Covenant on Human Rights, dealing with freedom of speech and of the press, declares: "The right to seek, receive and impart information and ideas carries with it special duties and responsibilities and may therefore be subject to certain penalties, liabilities, and restrictions, but these shall be such as are provided by law and are necessary for the protection of national security, public order, safety, health or morals, or of the rights, freedoms, or reputations of others."

This is the end of freedom of speech and the press if the Senate ratifies it, say many experts.

Ironically, our Constitution, which declares simply that "Congress shall make no law . . . abridging the freedom . . . of the press . . ." also contains the Trojan horse article VI that makes a treaty supreme in any law of our land. Why? When the Constitution was written 162 years ago, payment of foreign debts was a matter of principal concern. Only debts and allies were settled by treaty then, and we wanted to make them iron-clad. Our forefathers never knew what was to come in the way of treaties.

Senator BRICKER next put his finger on the real reason international conferences, and in truth, potential world governments, ride rough-shod over the American Bill of Rights. We alone in the world consider man's rights to be given to him by God. We are "endowed by our Creator with certain unalienable rights," Thomas Jefferson put it in the Declaration of Independence.

Why was this great philosophy left out of the U. N. declaration? Because "any reference to God was anathema to the Russians," says Mr. Holman. "In attempting to appease the Russians our State Department ignored our traditional concept of individual rights."

With God shelved as a source of human rights it's not strange that the U. N. Treaty describes freedom of religion as . . . "subject only to such limitations as are pursuant to law . . ." Tito and Stalin already practice this kind of freedom of religion. So we appease them by adjusting our version of freedom to suit theirs.

Was it only the same old appeasement this time? Or are some leading Americans actually tiring of an America based on God-given rights?

There is reason for suspicion when you read the report of famed Robert M. Hutchins' Commission on Freedom of the Press. It says coldly, "The notion of rights, costless, unconditional, conferred by the Creator at birth, was a marvelous fighting principle against arbitrary governments and had its historical work to do. But in the context of an achieved political freedom the need of limitation becomes evident. The unworkable and invalid conception of birthrights, wholly divorced from the condition of duty, has tended to beget an arrogant type of individualism which makes a mockery of every free institution, including the press."

Still the treaties come. The U. N. Genocide Treaty before the Senate—outlawing the horrible crime of race murder—contains a remarkable clause making it a crime to cause "mental harm" to anyone because of his race. Some attorneys believe this could open a Pandora's box of insidious charges, with Americans conceivably dragged before international tribunals for spats in Peoria, Ill. What the Russians could do propagandize if we ever established this law (by treaty) any child can predict.

Being drafted now to promote "freedom of information" is a U. N. treaty which the American delegate bluntly terms, "diabolical." Instead of "freedom of information" this treaty will permit governments to censor news, restrict the movements of newsmen and prohibit "slanders" of government. The simple truth could be "slanders against government" in Russian or Argentinian eyes. William Oatis reached a Czechoslovakian cell without even "needing" this treaty.

What can be done about America's predicament of law by treaty?

Mr. McGrath says that any treaty should be introduced by bills like all laws in both Houses of Congress. This would undoubtedly require amending the Constitution, which many leading attorneys already demand.

The American Bar Association appointed a committee which recommends that a special clause be attached to every treaty to insure that it does not become domestic law.

It can be expected that once they are aroused sufficiently, Congress will do something concrete about halting law by treaty. What America can do about remaining a free enterprise island in a socialistic world, and still mingle with that world in vital security measures like the U. N. and Atlantic Pact, only time, and perhaps a new concept of international relations in Washington, can tell.

The Need for Rent Control in Alaska

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. BARTLETT. Mr. Speaker, the need for strong rent-control regulations in Alaska where the housing requirements far exceed the supply is endorsed by the Retail Clerks International Association which met in its twenty-first convention in Washington, D. C., in mid-

July. Because of the tremendous defense-construction program under way in the Territory, areas there can truly be termed critical so far as housing needs are concerned. Under leave to extend my remarks in the RECORD, I include a resolution on this subject adopted by the retail clerks in session assembled July 16 to 20, 1951:

RESOLUTION ON RENT CONTROL

Whereas there is an acute shortage of housing units in Alaska; and

Whereas there is an intensified increase in vital defense construction in the Territory of Alaska, demanding a large increase in workers; and

Whereas only a small percentage of rental units are currently under rent control, since the vast majority of units were constructed after 1947; and

Whereas this condition is being exploited by many landlords, who are charging exorbitant rents to the detriment of tenants; and

Whereas this in itself causes many needed workers to leave the Territory resulting in a slackening of the defense construction; and

Whereas the control of all rents in the Territory of Alaska would do much to alleviate the sad conditions now existing: Now, therefore, be it

Resolved, That this convention go on record as requesting Congress to include a universal rent-control law in the Defense Production Act of 1950, as amended, and that copies of this resolution be sent to E. L. BARTLETT, House of Representatives; the Office of Housing Expediter at Washington, D. C., and at Juneau, Alaska; and to the President of the Senate and to the Speaker of the House of Representatives.

Railroad-Safety Legislation

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. PRICE. Mr. Speaker, score another head-on train collision, with its toll of dead and injured, to the absence of train radio on American railroads. In recent years there has been a series of serious wrecks on our railroads in which hundreds of lives were taken and millions of dollars were lost. This bloodshed and this property loss was needless. It could have been prevented if train radio had been a safety requirement on American railroad systems.

Congress shares the blame with the railroads that have been negligent in adopting train radio as a precaution against such accidents as occurred Friday, August 10, at New Roads, La., and against many similar accidents of the past 3 years. Congress will share the blame for the accidents that will occur in the future for lack of intertrain radio. It is Congress' duty to require the latest and most modern safety devices on our railroads.

A few railroads, too few, indeed, have been progressive and have experimented with train radio. They are showing the way, but the lives of railroad passengers and railroad employees are much too precious to gamble on the convenience of the railroads. Train radio should be required equipment of every system

now—the installation should not be left to the convenience of the companies. We know from past experience how slow they have been in adopting most safety devices. Usually, action was forced by the method I believe to be necessary in the case of the train radio—compulsion by law. Congress should spell out the Interstate Commerce Commission's authority to require train radio.

More than 4 years ago I proposed legislation in the House to do this. It is high time for Congress to act in the interest of safety on our railroads. Time after time I have called to the attention of my colleagues railroad accidents which I am convinced could have been prevented by train radio. I think Congress should absolve itself of the blame for these disasters on our rails by fulfilling its duty without further delay. Legislative action now will prevent another series of wrecks such as we have seen in the past 3 years.

Certainly Congress has had the time to give to this important matter. We might well have produced rail-safety legislation during the many dull days of this session when we were waiting to consider appropriation bills. There can be no logical reason advanced for failure to consider the rail-safety measure. It will require a little financial outlay, so it cannot be attacked as a domestic measure which for economy's sake should be set aside during the present defense emergency.

As a matter of fact rail safety is of great importance to the defense program. It was a troop train, incidentally, which figured in the Louisiana wreck of last Friday. It was not too long ago when another troop train figured in a disastrous Ohio wreck resulting in the loss of many lives.

From another point of view no time could be more opportune than now for passage of rail safety legislation. Railroad earnings are certain to be high during the defense emergency period. A portion of these earnings could be well spent in equipping every system in the United States with train radio. There is an obligation on the part of the railroads to provide this additional safety measure for its passengers and its employees—there is a responsibility on the part of Congress to make certain that the railroads meet this obligation.

Mr. Speaker, under leave to do so, I include herewith an editorial from the St. Louis (Mo.) Post-Dispatch, of Monday, August 12, relating to the Louisiana wreck. The Post-Dispatch has long been an advocate of train radio and has consistently campaigned for legislation requiring its use on our railroads as standard safety equipment. The editorial follows:

GARbled, FORGOTTEN, OR IGNORED

Last Friday's head-on collision of the Kansas City Southern streamliner, Southern Belle, and a troop train on the same railroad, near Baton Rouge, La., was attributed to causes that might have been wholly averted by the use of train radio. A message to the troop train to take a siding and let the Southern Belle by was said to have been garbled, forgotten, or ignored.

Any of these miscarriages of the order would have been a symptom rather than the ill itself—the symptom of a dangerous prac-

tice on the railroads of issuing instructions without an adequate check to determine whether they were properly transmitted, or received, or understood, or obeyed.

In golf, this would be condemned as not keeping one's eye on the ball, and not following through. That is also what it is in railroading. If radio were used, and the recipients of messages were required to confirm that they received and understood and acted upon the instructions, horrors like that on the Kansas City Southern would be things of the past.

Defense Projects Change Alaska

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I desire to submit for the RECORD an article written for the North American Newspaper Alliance by Mr. William L. Baker. Mr. Baker, editor and publisher of the Ketchikan (Alaska) Chronicle, recently made an extensive trip through the Territory; and his observations, which appeared in the Evening Star on August 13, are of general interest:

OUR ALASKAN DEFENSES—CIVILIAN AND MILITARY PROJECTS ARE GOING FULL BLAST IN NORTH

(By William L. Baker)

KOTzebue, ALASKA, August 13.—One notable difference in the worker on Alaskan defense bases today is his age and his attitude, when compared with the man who helped fortify the Aleutian Islands or the Alaska rail belt during World War II.

In those days the average defense worker had no thought of remaining in Alaska; he wanted to help get the job done, fulfill the terms of a military deferment and return to his family in the States.

This year's crop of newcomers, however, is largely made up of middle-aged persons from all over the United States, their children grown up or in college (or else brought along for a vacation) and their roots back home less binding. Many of them came here in the family car, with a house trailer behind, and instead of making a nest egg on which to go back to Missouri or Florida and spend the winter, many are staking homesteads or buying suburban lands to develop into resorts or ranches.

MANY LIVING IN TRAILERS

An Anchorage editor estimated that 2,500 families are living in trailer camps or semi-transient housing this summer, most of them working on the expanding Fort Richardson project around Anchorage, whose population seems to grow several thousand each year. Fairbanks may have another 1,000 or 1,500 transient families, most of them in their own trailers. Some of them stuck it out last winter, though that city had more than a week of 50-below weather.

These modern-day pioneers are mostly craftsmen who draw \$3 an hour and better, with lots of overtime. Unskilled labor starts at \$2.70 this year in either defense area. Plumbers in nonurban camps are guaranteed \$220 per week and \$40 weekly for living expenses. Alaska Road Commission crews—and one sees cars from a dozen States in the roadside camps—are guaranteed 9 hours per day, or they wouldn't stay. They're working night shifts in the roadside gravel pits, rushing surfacing on 700 miles of pri-

mary highway in interior Alaska—designated military roads by the Alaska command at Fort Richardson.

NO FAMILY ACCOMMODATIONS

At remote radio, radar, and antiaircraft installations, no family accommodations are available but some of the families are holding down the homesteads or the newly opened ranches in the Matanuska Valley near Palmer, the Tanana River Valley around Fairbanks or on the scenic Kenai Peninsula which is being opened up by new roads.

Lt. Gen. Nathan F. Twining, now assistant chief of staff of the Air Force in Washington and until last year head of the Alaska command, adopted the policy of linking military operations in Alaska to civilian development. Lt. Gen. William E. Kepner, his successor, has followed the same policy.

Transportation, communications and industries needed for the Army have benefited civilians. Thus the Army buys all surplus food from the Matanuska colony. Federally sponsored Dust Bowl refugee experiment—now 16 years old and growing lustily. It buys Alaska salmon and other seafoods. It consumes thousands of tons of Alaskan-mined coal. It has encouraged Alaskans to form construction companies to bid on defense contracts, and stevedoring and barge companies to handle defense cargoes.

TOURIST INFLUX HEAVY

The roads and airports built for defense have proved magnets for pleasure travelers, and the influx of tourists over the war-built Alaska Highway has been heavy. At Anchorage and Fairbanks, the military strongly supported construction of international airports at a cost of nearly \$9,000,000 apiece, and they are being put into operation this year so that commercial airlines using Elmendorf Field at Anchorage and Ladd Field at Fairbanks could move their hangars and shops away from the Air Force's installations.

Many semimilitary operations under way in the north fit into civilian developments or research, too. The Air Force has an Arctic health laboratory at Ladd Field. The Navy has a geophysical laboratory at Barrow on the Arctic, and the University of Alaska has a similar lab at its campus near Fairbanks, probing the mysteries of the cosmic ray, the aurora borealis, and the north magnetic poles.

The turn of events in Iran is expected to force cancellation of the Navy's plan to abandon oil drilling in the vast Barrow oil reserve north of Fairbanks, called by geologists the greatest reserve in the world. While some small oil wells have been brought in, and the Barrow camp of Arctic contractors is being heated by natural gas from the area, the few test sinkings have not yet uncovered the large deposits that are expected to be found. However, the drillers point out that it was 25 years after the first oil well was struck before the Le Duc fields of Alberta, Canada, were really developed and now they rival the West Texas field. Two private companies are drilling in the Katalla-Yakataga region on Prince William Sound this summer.

MINERAL SEARCH PRESSED

The national emergency has boomed the search for strategic minerals in Alaska, and several large companies have men in the field either developing long-held claims or buying ores from the ones that are producing. A \$350,000 defense-plant loan is enabling a tin operator near Teller on the Bering to go into production this year.

Even glaciologists, busy on the icecap back of Juneau are working for the Naval Research Institute. They think that by reading the glacial moraine of each of 32 glaciers in the field, and comparing them with the movements of glaciers in South America and Europe they may chart the pattern of the world's climate back through several centuries and even learn when sun-spot activity was greatest.

Greatest news of nondefense development for Alaska, however, was the decision of Ketchikan Pulp & Paper Co. to begin work in a few weeks on a \$40 million dissolving pulp mill near Ketchikan in southeastern Alaska. It signed a contract with the United States Forest Service for a 50-year timber supply, but it, too, won a defense-plant certificate for partial amortization as a war plant.

Military Order of the Purple Heart Urges Morality and Religion in National Life

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a resolution adopted by the Department of Illinois, Military Order of the Purple Heart, assembled at their fourteenth annual convention in Chicago, Ill., on June 15, 16, and 17, 1951:

Whereas grave questions of morality in government and in the minds of the citizenry of our country and community have within recent months been suggested by concerned statesmen, citizens, and our great American press; and

Whereas our Nation is now once again in a period of national emergency, which finds brave men of our land again making the supreme sacrifice on foreign battlefields in the service of their country, and

Whereas it is the sense of the convention of the Military Order of the Purple Heart, Department of Illinois, that, in our avowed purpose of defending our Republic and free institutions against the insidious and totalitarian enemy known as communism, we are actually in the role of crusaders for morality, truth, justice, and our great freedoms, while the enemy is the very epitome of the lack of morality and the other of the very basic elements of our way of life; and

Whereas it is the further sense of the convention of this organization that, while we cherish our individual rights to worship as we please, the American people are essentially and historically a religious people; that many of our forebears came to these shores for reasons associated with their religious beliefs; that the enemy of communism is known to be godless and the very antithesis to our most basic beliefs in Deity; and

Whereas it is the further sense of this convention that one of the most potent safeguards which we can employ in combating both the enemy and sabotage of our defense effort is a rededication on the part of leaders of Government and of all of the citizens of this great Republic in general to the ethics, morality, and religious principles of our founding fathers; and

Whereas it is Gen. George Washington, who, in 1782, originated the award of the Purple Heart Medal, also known as the Badge of Military Merit, and it was also the Father of Our Country and our Republic's first President who handed down to American posterity counsel on the very subject aforementioned in his Farewell Address, as published in 1796; and

Whereas it is the sense of this convention that adherence to General Washington's counsel in regard to morality and religion as set forth in the Farewell Address would in itself play a major role in improving our national scene, certainly much more so than any resolution which this body might adopt

bearing upon the pros and cons of any of the many issues and debates now being carried on in many quarters: Now, therefore, be it

Resolved by the Military Order of the Purple Heart, Department of Illinois, and the membership thereof (in convention assembled), That the following excerpt from the Farewell Address of Gen. George Washington be proclaimed and published at the mandate of this body to its representatives and leaders in Government, the same to be adopted by them for their guidance and adherence in the performance of their duties; that the substance of these noble words of counsel be likewise adopted as a code of American living and patriotic performance by our own organizational leaders and membership; that the same practice be recommended for adoption by other veterans' and patriotic groups:

"Of all of the dispositions and habits which lead to political prosperity, religion, and morality are indispensable supports. In vain would that man claim the tribute of patriotism, who should labor to subvert these great pillars of human happiness, these firmest props of the duties of man and citizens. The mere politician, equally with the pious man ought to respect and to cherish them. A volume could not trace all their connections with private and public felicity. Let it simply be asked where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths, which are the instruments of investigation in courts of justice? And let us with caution indulge the supposition, that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure—reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle."

Be it further resolved, That a copy of this resolution be communicated to the President of the United States, members of the President's Cabinet, to each of the Senators and Members of the House of Representatives who represent the people of the State of Illinois, and to the Governor of the State of Illinois, and members of the Senate and House of the State of Illinois; be it further

Resolved, That a copy of this resolution be transmitted to the National Convention of the Military Order of the Purple Heart to be held in the year 1951, with the recommendation of this convention body that a similar resolution be adopted by that convention.

Passed by the Department of Illinois, in regular convention assembled, on the 16th day of June 1951.

LESTER J. STEPEK,
Department Commander,
FERDINAND J. BRONZELL,
Department Adjutant.

Choirboy of Capitol Hill

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. McCORMACK. Mr. Speaker, one of the ablest and best-liked Members of the House is the gentleman from Michigan [Mr. RABAUT]. In addition, he is one of the hardest-working Members of the House.

I am pleased to include in my remarks a splendid article about our friend and colleague, Mr. RABAUT, appearing in

the issue of August of the fine magazine, the Sign, written by James J. Butler:

CHOIRBOY OF CAPITOL HILL—REPRESENTATIVE LOUIS RABAUT, OF DETROIT, IS ONE OF THE MORE HIGHLY RESPECTED CONGRESSMEN, AND A SINGER

(By James J. Butler)

The choirboy of Capitol Hill is not a cherubic, teen-age page, but is a 14-year Member of the House of Representatives, who, despite his 64 years and the demands of congressional service, still finds time to sing in his home-town church in Michigan and occasionally in Washington and elsewhere.

Father of a priest and of two nuns, Representative LOUIS RABAUT, of Detroit, is one of the highly respected members of the National Legislature, to which he was reelected, for the eighth time, in November. He is, for example, on the Joint Committee on Appropriations, currently engaged in financing the far-flung civilian and military obligations of the Federal Government.

On Capitol Hill it is said that no Member of the House has a wider first-name acquaintance with Members of that branch of Congress than Louis. That may seem of little importance to outsiders. It pays off on Capitol Hill. Under the existing system in the Federal Legislature a Congressman may serve on only one major committee (there are minor committees, and the adjective is truly descriptive); therefore the area of influence on the all-important committee level is constricted. But RABAUT, a born mixer, drops in on other committees, a Representative's prerogative, and avails himself of the right to enter upon the discussions to the degree where some of his colleagues, particularly the first-termers, aren't quite sure whether he's a committeeman or not.

Musical vocalizing has given him stage presence that arrests the attention of colleague and witness alike. So, without slightest trace of bluster, he's Louis to just about everybody in the monumental white masses which make up the cluster of Capitol, House Office Building, and Senate Office Building.

Congressional associates envy RABAUT his election district, his made-to-order specifications to meet the requirements of candidacy for election there. Detroit has a strong leaning toward the Democratic Party, and RABAUT is a Democrat. There are more voters of Belgian extraction in his district than in any other in the country, according to United States Census Bureau records. His grandfather was born in Belgium. Like every other community, there is local pride, interest in promoting a home-town boy. The Congressman's father was born in Detroit; so was Louis. As is the case in most metropolitan centers, the political organization and its lieutenants are importantly of Irish extraction; LOUIS RABAUT's mother was born in Ireland. The Catholic population is large; RABAUT and his family are stalwart Catholic communicants. Veterans are strongly organized in his State, and he has been cited by the Veterans of Foreign Wars for exceptional effort in their behalf. The court room is an ideal preparatory school for congressional work, and Counsellor RABAUT has had wide experience there.

Detroit is so heavily industrialized that ambitious communities elsewhere—even overseas—describe themselves as "the Detroit of so-and-so." Naturally organized labor is a major political element. What is RABAUT's record there? The Congress of Industrial Organizations in a pre-election statement analyzed the voting record of each Member of Congress as a guide to locals in determining who should be endorsed for reelection. The CIO selected 12 key bills as its measure of friend of labor. Picked were the legislative fields of labor, minimum wage, rent control, housing, fair employment prac-

tices bill, social security, natural gas transmission control, Marshall plan, point 4 aid to underdeveloped countries, Korean aid.

RABAUT topped Michigan's 18 Congressmen in the reckoning, was reported to his constituents to be the only Michigander "100 percent right."

RABAUT's political independence has often the despair of more partisan-thinking Members of his party. Elected as a New Deal Democrat, he was "off the reservation" more times than he went down the line in the major votes which preceded entry of the United States into World War II.

"I have no apologies to make to any one for my votes against every measure which I believed was likely to lead this country into war," he said defiantly, as he went before his constituents for reelection. They returned him to the House.

Back in Washington, he became a leader in rushing appropriations bills and legislation to win the conflict when war broke out. With him it was not plain isolationism; it was a conviction, and a hope tenaciously clung to, that our involvement in the world struggle could have been avoided.

There is another typical illustration of his independence. Many Members of Congress lost votes when newspapers disclosed they were indulging nepotism—placing members of the family on the official payroll. A reporter for a hometown newspaper approached RABAUT:

"Is it true that you practice nepotism to the extent that your daughter is employed as your secretary at \$3,200 a year?"

RABAUT wasn't the least bit reticent.

"It's true that she is employed as my secretary. But she receives \$3,900, not \$3,200 a year, and she took a special course at a secretarial school to train for the job.

"You might also say," he volunteered, "that another daughter preceded Mary Jane and she resigned to become a nun."

While a nonprofessional by preference, RABAUT has performed before some of the world's most distinguished audiences. That is to be expected. The novelty of a singing Congressman has placed him in great demand, and he loves to vocalize.

Annually, the House of Representatives conducts a memorial exercise for Members who have passed away during the session. It is not uncommon to find in the membership of Congress former professional entertainers, but they're usually of the hi-de-ho school of music. Ex-Senator Glen Taylor, the cowboy banjo strummer from Idaho, was an example; former Senator "Pass the Biscuits Pappy" O'Daniel of Texas was another; and a favorite for many years was the late Representative Billy Connery of Massachusetts, a former vaudevillian. But the memorial program calls for a more dignified repertoire, and RABAUT fills the bill as none of his colleagues can.

In legislative protocol, the Speaker of the House is regarded second only to the President. He's rated higher than the Vice President, who's normally considered to be only a presiding officer, whereas the Speaker is that plus a policy maker of enormous influence. And when a Speaker dies in office, the ceremonials of funeral service take on great formality. Speaker Joseph Byrnes died shortly after RABAUT came to Congress. The Detroit lawmaker was chosen as funeral soloist. Present in the House Chamber were President Roosevelt, Members of both Senate and House, the entire membership of the Supreme Court of the United States, the Cabinet, Ambassadors representing the major world powers, the military brass.

A stilled Chamber heard Congressman RABAUT sing a program of his own selection: "Ave Maria," "Thy Will Be Done," and "Absent."

The professional skill of his accompanist was taken for granted. Few knew that she was the Congressman's daughter, Joan, now Mrs. John Barrett, of Detroit.

Singing was not an accidental sideline of the national legislator. He made his first public appearance at the age of 4 years, and appropriately it was at a parochial-school show. His parents awakened him from a sound sleep to do his turn at the evening performance. And then he went sound asleep again.

But he went on from there. When he was old enough to button a cassock and adjust a surplice he became an altar boy. His musical inclination turned his ear to the music of the mass, and when he joined the tied choir he needed little coaching in that particular.

Early in his career his voice attracted the attention of the famed Gregory Freitag, European-trained choir director who was associated for almost half a century with Sts. Peter and Paul Church in Detroit. Freitag took the boy under his wing, coached him in solo parts, brought him out. Soon he was appearing as soloist for the huge audiences attracted by the renowned Father McClory, who made history with his missions and Lenten devotions in Detroit and Chicago. Attendance passing the 5,000 mark was common.

It was natural that theatrical producers, always anxious to capitalize on youthful talent, would hear of the boy singer of the Midwest. The Shubert brothers (the "Boys from Syracuse") making inroads on Broadway and destined to establish what was to become a virtual monopoly of show business in the New York and east coast area, sent a scout. He listened to LOUIS RABAUT, arranged for a public appearance audition in the Detroit Opera House. Everything went off according to their fondest expectations.

They talked business with the young vocalist and held out the bait of a professional career that would lead to Broadway. It looked like clear sailing for the youngster. His family wasn't too averse, if he wanted it that way. Louis searched his soul. Was it worth breaking family ties, leaving the things upon which he had placed high appraisal? No.

RABAUT went on to further his education. He applied himself to the University of Detroit curriculum leading to admission to the bar. Meanwhile he continued his interest in music, came up with Hall, Alma Mater—words and music by LOUIS RABAUT, undergraduate, dedicated to his school.

Time marched on. Louis became a magnet to political leaders. He was an able member of the bar, popular, constantly in the public eye as a barrister and a vocalist, a family man. He had married popular and beautiful Stella Petz. Congress? He ran, but didn't make it. Waited 2 years, ran again, and when the votes were counted Detroit lost a lawyer and the Nation gained a legislator.

LOUIS RABAUT was certain from the start that he'd like the job, and he was determined to keep it. He has. He's been in many campaigns since that first ill-fated try and he has applied himself diligently to the interests of his constituency. But he never has been able to resist the urge to write and sing music.

In his avocation he has demonstrated a versatility that is, to put it mildly, surprising. His preference from boyhood has been sacred hymns, the music of the Catholic Church, but he has been a prodigious source of parodies, political songs (the Democrats get all the breaks), and sentimental lyrics.

A decade ago, when the centennial of baseball was being observed, there was a call for a song that would give proper credit to 100 years of the American national pastime. The sports immortal, Walter Johnson, Washington Senator's pitcher, was appointed chairman of a committee to select a composer. He was aided by Judge Edward Curran, of the District of Columbia Federal District Court, and Edward J. Hayes, Detroit native and outstanding Washington attorney. They looked over the field, came up with the man

and the song: "Baseball, the All-American Game"—words and music by LOUIS RABAUT.

The Michigan Congressman was programmed to sing his own composition as the centennial program opened, but he was sent to England on congressional business. A substitute had to be engaged. In London, he sang it for the first time, and isn't sure yet whether "our British cousins" understood what it was all about.

Upon his return he again was asked to sing Baseball, the All-American Game. He agreed. When the night arrived he found himself tied down by essential congressional needs and was obliged to send his regrets.

"Come to think of it," he told this interviewer in his office overlooking the Capitol, "I never have sung this song in the United States, so I will do so now—for you." And, before a one-man audience, he sang while the mills of legislation were being prepared for the morrow's business, involving appropriations and war preparation which, conceivably, could affect the future of every person in the world.

Wherever he goes the "Singing Congressman" is bound to be detected. Embassies in the Philippines, China, Japan, Europe, the republics of South America have echoed his vocalizing. There is an interesting story in connection with his visit to the countries south of the Rio Grande. In promotion of the good-neighbor policy, Sumner Welles, then Undersecretary of State, and Nelson Rockefeller, directing work of cementing inter-American friendship, asked RABAUT to tour the capitals. There was more reason for this selection than RABAUT's eminence in Congress. Advance publicity featured pictures of this Catholic Church choir singer with his family—nine children. A survey by the Rockefeller office, based on clipping services and other sources, estimated that the picture was reproduced in 2,500,000 copies of newspapers circulated in this predominantly Catholic area.

His trips have taken him to many other lands, including Ireland. While there, the famed Irish tenor, John McCormack, learned of his presence, invited him to his home in Dublin. That visit remains one of his most treasured memories. McCormack was in his fatal illness, he had sung his last song. (He died 6 weeks later.) The Congressman sang several of his own compositions, some others. When he made ready to leave, McCormack said:

"I want you to sing one more song in my home. I will play the piano to accompany you. I want you to sing, 'God Bless America.'" With national pride and deep humility, RABAUT obliged.

Not all of the Detroit lawmaker's music is of the semiclassical sort. For example, there is the campaign song, The Kick of the Democratic Mule, and the one the late Franklin D. Roosevelt chuckled over and called for encores in the White House, Prohibition, We've Had Enough of You.

The Congressman's vocalizing, more restricted since the Korean crisis broke than theretofore, includes occasional appearances as a soloist at St. Patrick's Church, downtown Washington edifice, whose congregation includes scores of Senators and Representatives as well as dozens of diplomats and their families. Between sessions of Congress, he returns to Detroit and the choir of Saints Peter and Paul, where his voice has been heard for more than half a century. And he is an active member of the Society for Preservation of Barber Shop Singing in America. Recently he sang over a Nation-wide radio-television hook-up on behalf of the Heart Campaign.

But he isn't the only vocalist in the family. Five of his daughters sing as a group in church, collaborated in composing several World War II songs used to encourage productive effort in the all-important Detroit area plants. A son, Vincent, served as a lieutenant in the United States Navy, now is back in civilian life.

Another son, Rev. Francis Dermott Rabaut, S. J., is on the faculty of Loyola University, Chicago; a daughter, Sister Stella Maris, is in the Motherhouse at Monroe, Mich., and another daughter, Sister Mary Palmyre, is a librarian at Mary Grove College, Detroit.

Congressman RABAUT is an advocate of large families. He preaches that goal to associates, taxi drivers, waitresses—into every available ear. Recently he ate at a restaurant he had not visited in several years. The waitress serving him, whom he didn't recall seeing before, looked furtively around, then whispered to him: "Congressman, I have three children now."

"Must have been someone I gave the usual sermon to once upon a time," he concludes.

Trade Agreements and the Oatis Case

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I include an article from the New York Journal, by George Rothwell Brown.

This article shows clearly why the Congress, in spite of the efforts of many of its Members, has been powerless to do anything for the relief and liberation of William Oatis.

The truth is that we are in the power of the United Nations. This transpired in the debate on the floor of the House of Representatives. We have relinquished our high powers to protect our citizenry and by so doing we have lost our sacred honor.

The above-mentioned article follows:

THE POLITICAL PARADE

(By George Rothwell Brown)

TRADE AGREEMENTS AND THE OATIS CASE

WASHINGTON, August 15.—Advocates of an immediate denial of tariff preferences to Czechoslovakia, in retaliation for the jailing of an American newspaper correspondent on trumped-up spy charges, are up against a tougher proposition than they realize.

The House approached the Oatis resolution designed to get this American correspondent out of prison, with little understanding of the extent to which the lawmaking body has permitted the New Deal bureaucracy to deprive this Government of its rights as a free agent.

The amendment to the resolution offered by Representative ARMSTRONG, of Missouri, provided that there be an immediate trade break with Czechoslovakia, to be followed in 90 days by a diplomatic rupture if Oatis were not released.

The President could refuse to accept the credentials of the new Czech Ambassador, who has recently arrived in Washington.

But very few Members of Congress realize the extent to which the State Department outsmarted, hookwinked, and tricked the legislative branch of the Government when it surrendered the constitutional tariff-making powers of Congress into the hands of an international creature of the United Nations, the General Agreement on Trade and Tariffs, generally known as GATT.

Czechoslovakia is the only one of the iron curtain countries that is a member of GATT,

in which it has the same voice as the United States, one vote.

There are now 30 countries in this organization, in which the United States is heavily outvoted, 29 to 1.

If a majority of these 29 countries, including Czechoslovakia itself, refuses to accede to the American request that special trade preferences enjoyed by the Czech Government be withdrawn, this country will lose its case when the GATT countries meet at Geneva in September.

How did we get this way?

In 1947 a trade conference of 23 nations, under a State Department plan, met at Geneva to draft an international trade organization, known as ITO.

The ITO Charter was perfected at Habana and sent to Congress for ratification.

It was, and is still, a vicious scheme to bypass the American Congress, which alone can enact tariff laws, and to transfer that tariff power over the trade of the world, including that of the United States, to a creature of the United Nations.

In the last Congress no attempt whatever was made to secure ratification of the ITO Charter, upon which the State Department had spent months of time and many thousands of dollars in costly conferences.

In the present Congress the State Department has not peeped about ITO. It has asked for no hearings, and none have been held.

That magnificent project, the International Trade Organization, is dead.

But there's a reason. The cunning State Department bureaucracy found that by establishing GATT it could get everything it would have obtained in ITO—by Executive order without obtaining the consent of Congress. President Truman issued the Executive order in December 1947.

Stripped to its skeleton, GATT is a scheme whereby the United States becomes obligated to maintain full employment in all the member countries.

In short, it imposes on the United States the obligation to import foreign unemployment.

Its deliberate design is to raise the standard of living in foreign countries at the expense of the American standard of living.

Under GATT the United States surrendered its right to decide what countries could share in its own resources.

It is from behind the shelter of this highly secret device of the State Department that Czechoslovakia can thumb its nose at Uncle Sam, while she keeps poor Oatis in a stinking jail.

Immediate Statehood for Alaska

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a resolution adopted by the twenty-first convention of the Retail Clerks International Association, which met in Washington, D. C., July 16-20 of this year. That resolution placed the convention strongly on record for the grant of statehood to Alaska and points to the underlying reasons why statehood should be granted now:

Whereas Alaska is a great land, extremely rich in natural resources, presently populated by citizens of the United States, whose

loyalty to, and love for, the United States is unparalleled in this Nation of ours; and

Whereas these citizens are engaged in the prodigious task of developing this grand area in accordance with American ideals under severe hardships, occasioned by nature's forces, far distances, and the emphasized rigors of a new country; and

Whereas these citizens are by nature and the inalienable rights guaranteed under our democratic form of government to the full prerogatives of citizenship, including the right of self-government, enjoyed by all Americans within the boundaries of our Nation; and

Whereas the people of Alaska should not be penalized in their unprecedented effort to mold this land so it will be a credit to our American traditions by the stifling mandates of bureaucratic agencies operating by remote control; and

Whereas the people of Alaska have voted for statehood in a referendum election; and

Whereas the working people of this huge Territory have the greatest stake in forwarding the cause of statehood for their country: Now, therefore, be it

Resolved, That this convention go on record as demanding the present Congress of the United States to grant full and complete statehood to Alaska; and be it further

Resolved, That copies of this resolution be forwarded to Delegate E. L. BARTLETT, of the House of Representatives, and to the President of the United States.

J. A. SUFFRIDGE,
Secretary-Treasurer, RCIA.

Consumers' Advisory Bureau

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. DOLLINGER. Mr. Speaker, I have introduced a bill today to establish a Consumers' Advisory Bureau in the Department of Commerce, which will enable purchasers to get best values for the prices paid for food and other commodities.

In these days of constantly soaring living costs, American consumers must be thrown some life line. My bill would provide one means of protecting American consumers who are now helplessly caught in the upward inflationary spiral which has not yet reached its full height. Already the American housewife cannot afford enough nourishing food for her family; the average wage earner's budget cannot provide even the simplest necessities of life. The predictions of further increased prices made when I urged Congress to pass a strong price and rent control bill are now a tragic and accomplished fact. Authentic reports show that the public is being gouged on every hand in the cost of food, due to the weak controls law passed by Congress. Economic Stabilizer Eric A. Johnston recently stated that we could expect living costs to jump 5 to 8 percent during the coming year. The 16,000,000 families in this country who earn under \$2,000 per year, and the 26,000,000 who earn less than \$3,000 face dire hardships, a meager existence, and a lowering of their standard of living.

The American public spends many millions of dollars each year for consumers' goods—food, clothing, and other merchandise. It also overpays millions of dollars in the purchase of commodities because it does not have complete and accurate information concerning the relative quality, utility, and abundance of the commodities available on the retail market.

Trade and brand names, which are constantly called to the attention of the buying public by producers and manufacturers who can afford to spend millions of dollars in advertising, result in those products being requested by purchasers almost automatically. Yet, the best-advertised product does not necessarily make it the best buy. We read and hear of marks of approval bestowed upon certain commodities by groups or associations, yet we know that they do not have the facilities or finances to make a true comparison of the relative quality of all commodities in that same category. Also, it is possible that such private sponsors or organizations could be swayed by other considerations than recommending the best product for the money, and that their verdicts can harm, rather than help, the consumer.

The American consumer has no way of determining for himself how other makes or brands actually compare with the products expertly advertised by press, radio, television, and other mediums. He is practically forced to believe that the well-advertised product is the best value for his money because that story is given to him repeatedly. The truth is, the consumer more often than not pays a higher price than necessary, as the little-known product can in fact be of higher grade and cheaper. Remember, the millions paid for advertising are eventually tacked on to the cost of the product and the consumer pays for it.

I believe that it should be a function of the United States Government to procure and make such information available to the consumer, so that he may receive full value for every dollar he spends, as no other facilities or organizations can accomplish the desired result.

The Consumers' Advisory Bureau provided for in my bill would establish categories of consumers' goods based upon the various uses and functions thereof; it would investigate, analyze, test, and evaluate consumers' goods within each category for the purpose of determining their relative quality, utility, and abundance, and would make available to the consuming public, by periodic publications and by such other means as the director may deem appropriate, full, complete, and accurate information—based upon the results of such investigations, analyses, tests, and evaluation, and upon such other statistics and data as may be collected and compiled by the director—with respect to the relative quality, utility, and abundance of the consumers' goods within each category.

The Defense Production Act of 1951 was a rank betrayal of the American people in that it paved the way for price increases of all commodities in general, assured still higher food prices, prevented roll-backs, provided for rent

boosts, all of which are increasing the hardships of the already overburdened and harassed wage earner. I maintain that the Federal Government must now give all possible assistance to the citizens of this country. We must do all we can to offset the economic evils which now prevail, and which the new controls law encourages instead of corrects.

The Consumers' Advisory Bureau I propose would render invaluable service to the public; it would save our people millions of dollars yearly and would give them some protection, at least, in these days of tremendous living costs, when every penny counts.

Legal Loophole for Murder

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHAFER. Mr. Speaker, the bizarre story of the wartime murder of an American Army major in Italy by two subordinates, just disclosed by the Department of Defense, focuses attention on a legal loophole which existed in the wartime military code. The loophole amounts to a statute of limitations on the crime of murder, since the accused are immune from trial and punishment by a military court following their separation from military service. Defense Department officials have been quoted as saying that the new uniform code of military justice, which went into effect last May 31, corrects this situation. I believe the Congress, or the Armed Services Committee, would be well advised to recheck the situation to assure that the loophole is completely plugged.

Under permission to extend my remarks, I include the following article by C. B. Allen, which appeared in the August 16, 1951, New York Herald Tribune:

ARMY REVEALS TALE OF MURDER OF OSS MAJOR—WANTS ITALY TO PROSECUTE TWO AMERICANS ACCUSED OF SLAYING BEHIND NAZI LINES

(By C. B. Allen)

WASHINGTON, August 15—The United States, in effect, invited the Italian Government today to prosecute two American citizens for the wartime murder of a United States Army major in Italy.

The action was taken after a 5-year investigation was reported to have solved the mystery of the crime—only to reveal that the alleged American participants, one of whom signed a full confession, are wholly immune from punishment in this country because of quirks in the military-civil laws prevailing at the time of the murder.

Department of Defense officials released the bizarre story with the announcement that the State Department during the day had called it to the attention of the Italian Government. They explained that two Italian participants in the murder, after a long series of legal wrangles, are about to be tried for the crime in the Italian civilian criminal courts and that this Government would be "happy" if Italy would request extradition of the two Americans to stand trial with them.

MAJOR HOLOHAN VICTIM

Defense officials said the victim of the murder was Maj. William V. Holohan, a graduate of Manhattan College and the Harvard Law School, who served as an attorney for the Securities and Exchange Commission before he was called to active duty as a Reserve officer in World War II with the Office of Strategic Services. They added that Major Holohan and three companions were dropped 100 miles behind the German lines in Northern Italy on September 26, 1944, to assist the guerrilla partisans operating against the invaders and that he disappeared under mysterious circumstances the following December 6.

His disappearance was reported by the party's second in command, Lt. Aldo Icardi, then 23 years old and a first-generation American from Pittsburgh where he had been a law student before entering the Army. Another member of the group was Sgt. Carl G. Lo Dolce, of Rochester, N. Y., who like Lieutenant Icardi was an Italian-American and spoke Italian fluently, while Major Holohan did not. The fourth member of the drop party was an Italian named Tullio Lussl, who had been serving with the Army's OSS forces and went under the resistance name of Captain Landi.

Lieutenant Icardi reported over the radio set the party had taken with them and later more fully by courier, that Major Holohan had vanished without trace when German-Fascist forces had raided their Lake Orta villa headquarters and the group had scattered with the understanding they would reassemble at an emergency hideout that already had been selected. Even at the time, Army officials were not fully satisfied with the explanation—though they made the 50 air-drops of arms requested by Lieutenant Icardi between December and April—and an investigation was conducted after the war which threw no additional light on the case.

MURDER IS CHARGED

The Criminal Investigation Division of the Army resumed the inquiry in July 1946, Defense Department's officials said, and recently reported they had completed the collection of evidence showing that Major Holohan was murdered by his two Army subordinates and two Italian partisans named Giuseppe Mannini and Gualtiero Tozzini, because they wanted to supply arms to Italian Communist guerrillas and he opposed this. The two Italians now are awaiting trial for the murder in their native courts and defense officials said Sergeant Lo Dolce "finally confessed" his part in the crime last summer and implicated the other three.

They explained that no attempt was made to obtain a confession from Lieutenant Icardi, since he was in Peru when the Army's CID men finally broke the case last summer only to discover there were no legal grounds on which either Sergeant Lo Dolce or Lieutenant Icardi could be held. This, they said, was because both men had returned to the United States after the war and had been separated from military service—a fact that rendered them immune from punishment by a military court.

Likewise, both the Department of Justice and Judge Advocate General of the Army held that the two men could not be prosecuted in the civilian criminal courts of the United States because these have no jurisdiction over crimes committed in foreign territory. Consequently, as one defense official said, both these men are free and will continue to be so, no matter how convincing the evidence, unless the Italian Government moves to prosecute them for murder on its soil.

This official pointed out, however, that the legal loophole which gives the immunity from punishment by a military court for a crime committed while they were in uniform has been plugged for keeps under the new uniform code of military justice which

went into effect last May 31. Unlike the wartime military laws, this carries a provision that makes former military personnel continuously liable after their return to civilian life for any offense committed while in military service and punishable by a penalty of 5 years in prison or worse.

(Lo Dolce's wife, when reached by phone yesterday at Rochester, said: "Mr. Lo Dolce has nothing to say. Please don't call us any more." Icardi was not available for comment.)

Department of Defense legal experts said there was no doubt in their minds that the evidence assembled in connection with Major Holohan's murder would have resulted in death sentences for his slayers if the present military code had been in effect during World War II.

The St. Lawrence Story—VII

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the seventh of a series of articles entitled "The St. Lawrence Story," which appeared in the August 14 edition of the Minneapolis Star. This article points out that the construction of the St. Lawrence seaway and power project is inevitable as democracy moves slowly and surely toward its destiny.

THE ST. LAWRENCE STORY—SEAWAY PROJECT
IS INEVITABLE, SAY VETERAN SUPPORTERS

(By Leo Sonderegger)

(Seventh in a series)

Completion of the St. Lawrence seaway would develop the greatest remaining natural resource in America and give the mid-continental region a major new outlet to the world.

That is the fundamental argument of the men who have fought to get the project under way. They are inclined to regard all other considerations more or less as fringe on the rug.

These men are willing to debate the fragments of controversy one by one, if you insist. But they always come back to what they consider the basic reason for deepening the channel and harnessing the rapids.

Consciously or not, each of them is guided in some measure by the words of Daniel Webster.

"Let us develop the resources of our land, call forth its powers, build up its institutions, promote all its great interests, and see whether we also, in our day and generation, may not perform something worthy to be remembered."

One of the most persistent and eloquent spokesmen for this group has been Julius H. Barnes, Duluth industrialist and shipping executive. He speaks with missionary zeal of the seaway's potential benefits to agriculture and industry, to the Midwest generally, and ultimately to the Nation.

His feeling about the reasons for building the seaway is often couched in language that harks back to Webster, as when he said recently:

"We're a new people. We still have a spirit of adventure."

We had better keep that spirit alive if we want to continue as a great Nation,

Maj. Gen. Lewis A. Pick, of the Army Engineers believes. Pick is one of those who considers the seaway vital because of its potential role in supplying us with Labrador ore.

LEADERS BACK SEAWAY

He is one of a distinguished company of men in high places who have testified for the seaway. The national-security argument has elicited ringing support from Gen. George C. Marshall, Secretary of Defense; John D. Small, Chairman of the Munitions Board; Dean Acheson, Secretary of State; Charles E. Wilson, Director of Defense Mobilization, and others.

To the men who have fought for the seaway, the security argument is a Johnny-come-lately. They make use of it, but they think that more fundamental considerations justify the project without it.

"Look at the map," they say. "The seaway is as natural as the Panama Canal or the Suez Canal—why put our heads in the sand?"

That is a hallmark of the veteran seaway champions—an unyielding belief in its inevitability. The United States has become a great nation by developing its unparalleled natural resources, they point out, seeing no reason to suppose that this fundamental practice will be changed.

PROPOSERS HAVE PLENTY OF ANSWERS

A perennial argument against the project is that it would cost too much. The proponents insist that the only valid consideration is this: will the seaway be of great ultimate value to the United States? If the answer is yes, they contend, then cost becomes secondary.

The proponents also have answers for the charges that estimates are unrealistically low, and that the seaway will be a heavy drain on our supplies of manpower and strategic materials.

The opposition claims actual cost of projects undertaken by the Army engineers often has been several hundred percent of the original figures. The engineers counter with statistics showing that the increase in the cost of their entire civil works program since before 1900 was less than the rise in construction price levels.

Defense Mobilizer Wilson carried the ball with regard to manpower and materials. He said the average number of workers required on the project would be only one-hundredth of 1 percent of the civilian labor force.

Materials, he testified, would be used in amounts "so small as to be negligible in the total mobilization framework."

Proponents say the cost won't matter much, anyway, since tolls are expected to pay off the full investment, interest, and amortization in 40 or 50 years.

TEN MILLION DOLLAR REVENUE EXPECTED

Army engineers and the Canadian Government estimate that annual capacity of the seaway as soon as it is built will be 45,000,000 to 50,000,000 tons. On the lower figure, the Department of Commerce estimates a toll revenue of \$30,000,000 annually.

That is substantially more than the estimated \$20,000,000 a year necessary to liquidate the investment. Some Government experts figure that potential traffic actually ranges from 57,000,000 to 84,000,000 tons.

The railroads and other seaway opponents have poked a lot of fun at such estimates. But as Thomas W. Davis, Assistant Commerce Secretary, said in a rebuttal statement, "It is of some significance that in none of this criticism have alternative tonnages been estimated."

The Commerce Department people stand by all their estimates—for iron ore, petroleum, wheat, and other commodities.

As a clincher, they point out that their figures are based on traffic from only 7 States, instead of the 14 which are expected to do seaway business.

The proponents have a short answer for another facet of the cost argument; that the expense of deepening Great Lakes harbors has been ignored in the estimates.

The deepening of harbors will be done gradually as it becomes necessary, they say. They point out that the Nation's great harbors—New York, Boston, Baltimore, San Francisco—have all been improved as the need arose over a long period of years.

FULL LOADS CALLED EXCEPTION, NOT RULE

Another motif in the blues sung by the opposition might be called the nine point five theme. This involves frequent reiteration of the fact that only 9.5 percent of the United States ocean-going fleet could negotiate a 27-foot channel fully loaded.

Those who favor the project admit this; they admit that a 30-foot channel would be a lot better. They insist, however, that ship operations under a full load are the exception rather than the rule.

And they add that three-quarters of our merchant fleet could operate in 27 feet of water with loads 75 to 100 percent of capacity.

The proponents also admit that a larger proportion of foreign-flag vessels could use the 27-foot channel. In the next breath, they point out that the comparison is unfair because more than 60 percent of foreign ships are so small they seldom venture out of home waters.

The seaway people carry the fight to the enemy on the matter of rail capacity. They scorn an Association of American Railroads claim that its members will be able to carry all the iron ore that Labrador will produce.

No present rail lines from Montreal to the Midwest steel centers are equipped to handle bulk commodities in heavy quantity. Seaway proponents claim the lines would have to be greatly improved to haul from ten to thirty million tons of Labrador ore.

Besides, they say, the freight-car shortages would prevent the railroads from doing the job. The National Security Resources Board estimates that it would take 10,000 hopper cars to handle 20,000,000 tons of ore a year.

SHARE SEEN FOR RAILROADS

That many cars, it is pointed out, would require 230,000 tons of steel. That is about half again as much steel as the entire seaway project would use if built as planned.

Friends of the seaway do not agree that it would be a severe blow to railroad business. There would be dislocations at first, they acknowledge, and some loss of traffic. But in the long run, proponents claim, the railroads would share in the increased productivity the seaway would stimulate.

The "iceway" charge is thrown into discussions frequently as a minor irritant. Opponents assert that ice would lock the seaway for 5 months of the year.

The answer is pointed. The mining people have done all right at hauling most of this Nation's iron ore down from Duluth under almost identical conditions.

The controversy takes note of all these matters, but it always gets back to national defense. The security argument was summed up by General Marshall about like this:

Getting badly needed iron ore from Labrador will be harder—and much more dangerous—without the seaway.

Although the seaway would be vulnerable to sabotage, that is already true of the vital Soo locks where, "until the seaway is built, almost the whole of our iron-ore supply is subject to interruptions by a single act of sabotage."

The project will produce "cheap and independent power so necessary, especially in the case of all-out mobilization."

"The seaway will facilitate the transportation of munitions to overseas bases."

"The seaway will afford access to additional shipbuilding and repairing facilities." The seaway "will increase the capabilities of mutual defense between Canada and the United States."

The Permanent Joint Board on Defense maintained by this country and Canada has heavily underlined Marshall's final point. Last February 28 the Board recommended: "That the two Governments take immediate action to implement the 1941 St. Lawrence agreement as a vital measure for their common defense."

Northern Minnesota, the Birthplace of the Mississippi River

EXTENSION OF REMARKS OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. HAGEN. Mr. Speaker, the mighty Mississippi has been a vital part of the history and development of this great land of ours. It has inspired awe and wonder since the earliest settlers came to the New World and the Indians, before that, had already called it the Father of Waters. Hundreds of thousands of people have seen the broad reaches of the great river, teeming with commerce and rolling hundreds of miles to the sea, but few know of its source as a tiny stream in northern Minnesota.

The interesting story of the birthplace of the Mississippi is told in an article in the May 1951 *Eagles* magazine published by the Fraternal Order of Eagles. The author is Agnes Harrigan Mueller. Because there is a lesson in the story of this great river with such a humble origin, I commend the article to the attention of the Members of this body:

BIRTHPLACE OF THE MISSISSIPPI

(By Agnes Harrigan Mueller)

At its source the mighty Mississippi is a modest trickle of water which can be cleared in one broad leap. Some tourists take the stepping stones. Others kick off their shoes and wade across.

The infant Mississippi is just one of many lures which drew more than 72,000 tourists to Itasca State Park in northern Minnesota last summer. Here, in one of the Nation's greatest parks, the wind sings through tall pines more than a century old. Near them grow a friendly assortment of aspen, balsam fir, birch, and ash. Some 3,000 deer roam this protected territory. Beavers build dams in the park's streams, and there are porcupines, raccoons, and black bear. Here nature has her own wonderful way, her works unspooled by the ravaging hand of man.

Although Hernando de Soto sailed the Mississippi in the sixteenth century, he remained ignorant of its source. In 1832 Henry Schoolcraft, a United States Indian agent, set out to find the river's birthplace. Yellow Hair, an Indian guide, led Schoolcraft's party to a lake which had been named La Biche by a French fur trader in 1804.

The lake had three curving arms. At the tip of the north arm, Schoolcraft's group found the slender stream which started the mighty Mississippi on its adventurous way, 2,562 miles to the Gulf of Mexico.

In search of a fitting name for the lake, Schoolcraft asked a clergyman in his party

for the Greek words meaning true and source. Unfamiliar with Greek, the minister suggested the Latin *veritas* for true and *caput* for head. Schoolcraft pruned the first syllable of *veritas* and the last one of *caput* and coined *Itasca*.

People come to Itasca Park by bus, plane, and car. The visitor may park his trailer by one of the lakes, rent a cabin or stay at Douglas Lodge, a State-owned log building where food and lodging are provided.

A good way to see the park and learn about its plants and animals is to climb into the station wagon owned by the Audubon Society and take its wildlife tour. Twice a day from June to September, an Audubon representative drives interested persons about identifying points of natural and historical interest.

Or you may join Donald K. Lewis from the staff of the natural history museum of the University of Minnesota, on a nature hike. He will point out differences among the various pines and identify the balsam poplar whose aromatic brownish-green leaves are longer and narrower than those of other poplars. As you start out along the path from Douglas Lodge, he will tell you that the products of Minnesota forests were valued at more than \$128,000,000 in 1947.

Part of your walk will lead you through a peat bog or muskeg swamp. Here the plant growth changes to ferns, tamarack, and evergreen shrubs known as Labrador tea, a plant from which the Indians brewed a bitter beverage.

If you go to Itasca Park after July 4, you will find ripe blueberries and raspberries. In a good season you can scoop the smooth blueberries from their vines by the handfuls.

Wild flowers add color beginning with the pink arbutus of early spring, the May flower, pink, white, and purple violets, columbine, tiger lilies, roses, the graceful meadow rue and—in August—the blue aster and yellow goldenrod. But the queen of them all is the Minnesota State flower, the moccasin. This proud member of the orchid family is fast becoming rare. The law now forbids picking the white and pink, yellow or purple lady slippers.

Lewis will point out a curious plant which is shaped like a pitcher and leads a vampire existence, living partly on insects it traps in its leaves.

As you swing back toward the lodge at the end of a 2-hour hike, you are likely to see a long line-up of cars when you prepare to cross the highway. Bucky, the panhandling deer, is working his beat. From an outstretched hand, he takes a cookie; from another, a juicy apple or a crunchy carrot. When his soft-eyed begging has netted him more than he can eat comfortably, Bucky heads back for the woods. But just before he enters the forest he pauses and faces many watchers. He waits until cameras click and then gracefully leaps away.

Fishing is a popular diversion in Itasca Park. You will find wall-eyes, bass, northern pike, and perch in its clear lakes. Recreational activities also include horseback riding, horseshoes, darts, archery, croquet, and volley ball. In the evenings there are campfire mixers, lectures, movies, dancing, and cards. Launch rides on Lake Itasca are offered, and there are three accredited bathing beaches. A museum is located a few miles from the Mississippi headwaters. A curio shop at Forest Inn offers Indian art work, souvenirs, and photographs.

And always, close at hand, there is the charm of natural wilderness unspooled by factory smoke or the lumberman's ax.

It is fitting indeed that this birthplace of the mighty Father of Waters has been maintained in its natural state—a sample of this continent as we found it.

AMVETS, VFW Favor H. R. 3193

EXTENSION OF REMARKS OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith a letter from the American Veterans of World War II and a letter from the Veterans of Foreign Wars:

AMVETS,

Washington, D. C., August 15, 1951.

HON. MELVIN PRICE,

House of Representatives,

Washington, D. C.

DEAR MR. PRICE: AMVETS (American Veterans of World War II) urge the Congress to pass H. R. 3193 over the President's veto. The bill would increase pensions to certain disabled veterans. All of these men are either helpless or blind or so nearly so that they require the aid of another person.

AMVETS are of the belief that the veterans covered by this bill are by far the most meritorious of the non-service-connected disability class. The suggestion that they should be provided for in other than veterans' legislation is unrealistic when such suggested legislation is not forthcoming. The suggestion that these veterans are dipping their hands in the public till is also unwarranted, since a definite income limitation is placed upon them—veterans covered by this bill cannot have more than \$1,000 annual income, if single, or \$2,500, if with dependents, in order to get the benefits of this proposal.

To deny this increase to these disabled veterans to meet the admitted increase in the cost of living, solely on the wild estimate that this proposal will cost the American taxpayer \$400,000,000 per year by the end of the century is, we submit, to deny public responsibility to these disabled veterans who served their country in time of war and are now so badly incapacitated that they require the aid of another person.

AMVETS urge you to vote for H. R. 3193 over the President's veto.

Very respectfully yours,

CHARLES H. SLAYMAN, JR.,

National Legislative Director.

A PLEA FOR SUPPORT OF THE RECOMMENDATION OF THE HOUSE COMMITTEE ON VETERANS' AFFAIRS TO OVERRIDE THE VETO OF H. R. 3193

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,

Washington, D. C. August 15, 1951.

DEAR CONGRESSMAN: You are respectfully urged, in the name of common decency and justice, to support the recommendation of the House Committee on Veterans' Affairs that the House of Representatives override the Presidential veto which was applied to H. R. 3193, a bill to authorize an extra pension allowance for those World War I and II veterans who are so helpless or blind as to need constant aid and attendance and who can otherwise meet the rigid eligibility requirements to receive a non-service-connected disability pension. It is understood this bill, with the report of the House Veterans Committee, will be brought up for action on Friday, August 17, 1951.

The President, in vetoing this bill, outlined three principal objections: First, the question of cost—present and future; second, that the disabilities for which the veteran would receive the extra pension allowance are not directly related to active service; and, third, that the bill would create a further

spread between the treatment of veterans and nonveterans by the Federal Government. In essence, the President indicates that he is opposed to the payment of non-service-connected pensions to veterans and that there should be no distinction between the treatment accorded veterans and nonveterans by the Federal Government. What are the facts?

1. Costs: According to the veto message the President has estimated that the first year's cost of this bill would be approximately \$16,700,000 and that a projection of the cost, on the basis of experience under similar pension legislation for Spanish-American War veterans, would approach \$400,000,000 a year by the end of the century. The Veterans of Foreign Wars vigorously takes issue with the accuracy of this cost estimate. In the first place it is impossible to accurately project the cost of this bill on the basis of Spanish-American War veterans' experience because the eligibility requirements for the Spanish-American War veterans are more liberal than the eligibility requirements for World War I and II veterans. A Spanish-American War veteran needs only to establish proof that he is so helpless or blind as to require aid and attendance, regardless of misconduct or income. The World War I and II veteran, in addition to establishing proof that he is so helpless or blind as to need aid and attendance, also must show that his disabilities are not the result of misconduct and that he does not have an income in excess of \$1,000 per year if no dependents or \$2,500 per year with dependents. It should be pointed out that the income limitation, along with the growth and extension of social security plus growing industrial pension systems, will serve to keep the number of World War I and II veterans eligible for this pension to the barest minimum.

The present average age of Spanish-American War veterans is 73 years plus. Only 8 percent of all Spanish-American War veterans now receiving age and disability service pensions are receiving the special allowance for the helpless or blind. Taking into consideration the income limitation affecting World War I and II veterans, is it not reasonable to believe that the percentage of said veterans eligible to receive this special allowance will be considerably less than the Spanish-American War veterans? Using the Spanish-American War experience and not taking into consideration the income limitation which applies in one case and does not apply in the other case, the Veterans of Foreign Wars has generously estimated that not more than 20,000 World War I and II veterans would be eligible to receive this special pension allowance the first year at a total cost of approximately \$13,680,000. This is substantially less than the President estimated, using somewhat the same formula. It is our considered judgment that the President's projected estimates of costs did not take into consideration the stern requirements and income limitations which will strongly affect World War I and II eligibility to this particular pension.

In speaking of the costs of this special pension allowance it could well be pointed out that 1 week's cost of the current Marshall-aid program (not including military assistance for Europe would pay this pension cost for a period of 4 years, and that the appropriation which the President is now asking from Congress for 1 year's military and rehabilitation aid for Europe would more than pay the total cost of this pension increase throughout the entire life span of all World War I and II veterans, assuming that the pension legislation remained in effect for that period of time.

2. Pensions for disabilities not related to service: Pensions for aged and helpless veterans has been a tradition and policy in the United States beginning with the early Plymouth colony. Special pension allowances for helpless or blind veterans was first authorized for Civil War veterans and later extended to Spanish-American War veterans. On July 30, 1947, President Truman approved Public Law 270, Eightieth Congress, which increased the special pension for helpless or blind Spanish-American War veterans from \$100 to \$120 monthly. H. R. 3193, which was vetoed, is not something new or a departure from the traditional policy of the United States. If these helpless or blind World War I and II veterans are not worthy and deserving of the \$120 monthly pensions because their disabilities are not directly related to their service, are they deserving and worthy of the present \$60 or \$72 monthly pension which they are now receiving under the same circumstances?

3. Discrimination between veterans and nonveterans: If there should be no discrimination between the treatment and care of veterans and nonveterans by the Federal Government, should there be discrimination between servicemen and civilians in time of war or national emergencies? Should the civilians or nonveterans be subjected to the same rates of pay, the same discipline, the same punishment, and the same loss of personal freedom and independent action as apply to servicemen who later become veterans? The whole theory of special assistance to aged and disabled veterans is based upon the measure of sacrifice, economic dislocation, and loss of personal freedom which applies to members of the Armed Forces on active duty in time of war or national emergencies. Please vote to override.

Respectfully yours,
OMAR B. KETCHUM,
Director, National Legislative Service, VFW.

Congress Is Not Economy-Minded

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. GROSS. Mr. Speaker, the people of this country are demanding economy in Government—make no mistake about that. The following editorial, in a recent issue of the Mitchell County Press, Osage, Iowa, is further evidence that the people of the great Midwest are not being fooled by the spendthrift policies of this administration on one hand and a pretence of economy on the other:

One of the chief reasons that so much of the taxpayer's dollar in this country goes to Washington for the support of Government spending is the fact that there is little tendency toward economy in Congress. In fact, the evidence all points to a rather complete apathy regarding economy in Government.

Last week in a roll-call vote in the House, a question of economy was upheld by only 2 votes—188 to 186. It must be said to the everlasting credit of our Iowa Congressmen that they voted unanimously in favor of the economy program. No other State's Representatives were unanimous in their desire to cut Government spending.

In view of a threat of increased Federal appropriations, there is increasing need for

economy on all fronts. Only by adopting a pay-as-we-go policy can we hope to hold down the amount of new taxes. Courageous expenditure control alone can lighten the tax blow.

The 188 Congressmen, including all 8 of the Iowa House Members, who voted for economy last week are to be commended. The vote came on a motion to send the \$6,800,000,000 independent offices appropriations bill back to the joint conference committee.

One provision in the bill that the economy bloc insists on retaining says in effect that only one out of every four vacancies on the Federal payroll may be filled. It has been well established that such a move will not impair the efficiency of any Government agency. The Federal payroll in May stood at 2,443,076 persons, and was increasing at the rate of 34,000 persons per month.

Resolutions on Flood Control in Kansas

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. REES of Kansas. Mr. Speaker, under consent granted me by the House, I am including as a part of my statement a resolution recently adopted by the city commission of Marion, Kans.; also resolutions approved by the city council and by the chamber of commerce of Florence, Kans. These resolutions are in support of appropriation of funds for flood-control projects. They speak for themselves.

Marion and Florence are in Marion County, Kans., and are in what is known as the Cottonwood River Valley. They are both fine progressive towns in a great agricultural area in the Middle West.

The people of these cities and surrounding communities are victims of the unprecedented and terrible flood disaster that recently overtook a great share of the State of Kansas. Suffering of the people and loss of property by reason of these floods is incalculable.

The resolutions follow:

RESOLUTION OF THE CITY OF MARION, KANS.

Whereas the governing body of the city of Marion, Kans., has on the 6th day of August 1951 met in regular session; and

Whereas George Miser, one of the duly elected and qualified commissioners, offers the following resolution, to wit:

"Whereas the city of Marion, Kans., and the Cottonwood Valley have suffered enumerable floods over a period of years and recently suffered a disastrous flood; and

"Whereas the United States Corps of Engineers have heretofore conceived a plan for flood control for the afore-mentioned area, encompassed within what is known as the Pick-Sloan flood-control plan, which plan envisions, among others, a dam or dams to be built in Marion County, Kans., at points north of the city of Marion, Kans., for the control of floodwaters: Now, therefore, be it

"Resolved by the governing body of the city of Marion, Kans., That the afore-mentioned plan of the United States Corps of Engineers be immediately authorized by the Congress of the United States, and that the Congress make available to said Corps of Engineers sufficient money for both detailed

engineering plans and construction of said dam or dams envisioned by said afore-mentioned plans, and more specifically that funds be made available by the Congress for the immediate drawing of detailed plans and for money for construction of the afore-mentioned Marion County dam or dams; be it further

Resolved, That a copy of this resolution be made available to the Members of Congress and the associations and committees organized for the purpose of the flood control of the above area."

RESOLUTION OF THE CITY OF FLORENCE, KANS.

Whereas the governing body of the city of Florence, Kans., have on the 6th day of August 1951 met in regular session; and

Whereas B. E. Minturn, one of the duly elected and qualified councilmen, offers the following resolution, to wit

"Whereas the city of Florence and the Cottonwood Valley have suffered enumerable floods over a period of years and recently suffered a disastrous flood, and

"Whereas flood relief for the city of Florence and the Cottonwood Valley is desirable and necessary for the well-being of the inhabitants of the area, and

"Whereas the United States Corps of Engineers have heretofore conceived a plan for flood control for afore-mentioned area, encompassed within what is known as the Pick-Sloan flood-control plan, which plan envisions among others a dam or dams to be built in Marion County at points north of the city of Marion, Kans., for the control of floodwaters. Now, therefore, be it

Resolved by the governing body of the city of Florence, Kans., That the afore-mentioned plan of the United States Corps of Engineers be immediately authorized by the Congress of the United States and that the Congress make available to said Corps of Engineers sufficient money for both detailed engineering plans and construction of said dam or dams envisioned by said afore-mentioned plans and more specifically that funds be made available by the Congress for the immediate drawing of detailed plans and for money for construction of the afore-mentioned Marion County dam or dams; be it further

Resolved, That a copy of this resolution be made available to the Members of Congress and the associations and committees organized for the purpose of the flood control of the above area."

RESOLUTION OF THE FLORENCE CHAMBER OF COMMERCE

Whereas the city of Florence and the Cottonwood Valley have suffered three specific floods, June 7, June 30, and July 11, 1951, the last of which was very disastrous;

Whereas flood relief for the city of Florence and the Cottonwood Valley is desirable and necessary for the well-being of the inhabitants of the area;

Whereas the United States Corps of Engineers have heretofore conceived a plan for flood control for afore-mentioned area, encompassed within what is known as the Pick-Sloan flood-control plan, which plan envisions among others a dam or dams to be built in Marion County at points north of the city of Marion, Kans., for the control of floodwaters. Now, therefore, be it

Resolved by the Florence Chamber of Commerce, That the funds be appropriated for the completion of the dam or dams in the afore-mentioned plan of the United States Corps of Engineers; be it further

Resolved, That a copy of this resolution be made available to the Members of Congress and the associations and committees organized for the purpose of the flood control of the above area."

The Teen-Age Outlook

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. FURCOLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "The Teen-Age Outlook," by Charles L. Stevens, headmaster of Wilbraham Academy, Wilbraham, Mass.:

The story goes that a lad of 8 years had been given a beautiful globe in the hope that it would increase his interest in geography. The little fellow became so interested in it the first evening that when the time came for retiring he took it to his room and placed it on the table by the side of his bed. Some time later, in the belief that the youngster was asleep, his father tiptoed in, picked up the globe, and was carrying it out of the room. As he did so the lad sat up and said, "Hey, Dad, what are you doing with my world?"

This is a question every youth in America has a right to ask of the leaders of this generation, "Hey, what are you doing with my world?" Young people growing up today cannot help but recognize the fumbling and uncertainty displayed by their elders in the management of the world's affairs. Teen-age youth have never known anything but war and crisis during all their lives. To live and associate with them is to be acutely aware of their concern about the future. There is a changing, challenging world, so unlike the one faced by us of a generation ago. There are few certainties around which they can build a workable philosophy in this topsy-turvy world.

I don't have to point to the symptoms. In every daily paper we read of some new instance in which some young person, or some group of young people, has broken down under the pressure of living in a disordered, insecure world. We may thank the good Lord that most of our young people are standing up magnificently under unprecedented moral stress. But they need our help and support if they are to build upright lives in a wobbly world.

The America and the world in which we live today is not the same as the America and the world we lived in even a short 10 years ago. The bursts over Hiroshima and Nagasaki did much to effect that change. Faster and faster transportation, television, new weapons for good and for evil, political cross currents growing out of a succession of hot wars and cold wars—all these have added their bit to radical shifts in living habits.

Because we people of the world are used to classifying the various eras through which mankind has lived, we frequently refer to this present cycle as the atomic age. And this term personifies as nothing else does the movement and fluidity—the dread and the promise—of the age in which we play our role.

But just calling this period the atomic age is apt to cause us to lose sight of what lies behind the science that is making possible our mechanical advances. We are likely to forget that behind every new knowledge stand individuals—men and women. Without them, there would be no progress, no change. Thus, like all other eras of man, ours is basically the human age.

Its mechanical attributes are merely a projection of human effort. And while these mechanical advances bring vast physical changes, they bring also social, economic, and political changes that affect the lives

of each individual. As a result, there have developed changes in the condition of society, changes in the way we think, changes in the relation of a person to his neighbor, and, all too frequently, I fear, changes in standards of morality and ethics, in business and government as well as in basketball.

These are human changes. It is for such changes in human relations that we have to prepare our young people. Our boys and girls must be made to recognize the truth of the Jeffersonian dictum that "morality, compassion, and generosity are innate elements of the human constitution." They must be made aware that each individual must embody the degree of wisdom and integrity he or she expects from the society in which he moves and has his being.

What we need are new social inventions that will aid men and women to live together without injustice and without violence, without cruelty and bigotry, without depressions and wars. We have such inventions and devices which enable men to live peacefully and happily within the orbit of a community. Zoning ordinances and stop-and-go signals are inventions of this type. On a complex scale, so are the Bill of Rights, our judicial system, and the United Nations.

Such inventions do not just happen. Like scientific inventions, they spring out of generations of experience and are developed by painful and continuous trial and error. Basically, they grow out of the efforts of the individual.

That is what makes our responsibility as parents and teachers such an overwhelmingly great one. The training and ideals that will build the society of tomorrow rest upon our efforts today. We must accurately evaluate the needs of the future and be certain that we are preparing our charges to fulfill those needs.

Let's take a look at that future. Let's see what kind of a world the teen-ager of today will have to cope with. Some time ago, Kenneth Gould summed it up somewhat like this. He said that it will be a world of constant danger and vast social upheavals and that to face it its citizens would have to have courage and stamina, physical and mental vitality. Also, it will be a world of rapid change, in which its citizens would need good general work habits and the resourcefulness and adaptability to be prepared for unexpected. It will be a world of constantly shrinking communications and ever greater interdependence—a smaller world, growing always more so. Therefore, its citizens must have an increasing awareness of other peoples and their contributions. They must learn to live in harmony, not only with their own kind, but with all. It will be a world where there is more to do—where there will be more leisure in which to do it—and where people will live to increasingly old age. In such a world, inhabitants must develop inner resource of living—must be able to enjoy the many surrounding interests, or give way to crippling boredom. It will be a world in which the conflicts brought on by prejudices will grow more stringent by virtue of world contraction. Yet, if we are to survive, these conflicts must be resolved. This demands the ability to build friendly and cooperative human relations with a variety of peoples. Finally, it will be a world in which democratic living in the family, the community, the Nation, and the entire globe will either come to full fruition or will succumb to some form of totalitarianism.

As parents and teachers, ours is an unprecedented responsibility. The world of the future depends upon how well we do our job of training, on the kind of a life philosophy that we provide for our young people. Knowing generally the type of world in which our children will have to live and work, it is our duty to prepare them for participation in such a world.

To do this effectively, it may be necessary to modify the methods and traditions of the past. Our problem is unique in history. We have to build in our children inner foundations of strength and resiliency—qualities that do not spring from mere book learning. There is no static set of rules. We are compelled to deal with each child as an individual—and to give to each the strength that his particular personality requires in order to cope with the situations he will meet.

Successful education is no longer gaged by how many pounds of history, or English, or mathematics we teach. Our success will be judged, not by how much our young people know, but by how happy the use of that knowledge makes them in the society in which they must live.

In the over-all, what we are trying to do is develop the whole personality of each young person so that while the world continues to shift, he, secure in his inward strength, fortified by a sound philosophy, will go his way, an intelligent, contributing, happy personality. He should have acquired attitudes and ideals that will give him vision and perspective. He should have formed desirable health and character habits so that he may wholesomely contribute to the life of family and community. He should have developed an appreciation of what is finest and best in the past so as better to be able to build for the future. And he should have an open, inquiring, and evaluating mind that will insure him pleasurable intercourse with others and worthy use of his own leisure. Such was the educational ideal of the founders of Wilbraham Academy when they set as their purpose, quote, "to furnish the whole man."

Such an individual need fear no world changes. Such an individual will contribute to those changes and will live within them, drawing security and happiness from a well-spring of inner strength that will never dry.

I am optimistic about the prospects. I believe we have in our younger generation a new hope for the solution of the problems that our own generation has been bungling. No one who has seen the earnestness with which modern young people are studying the problems of the day can doubt that they will ultimately find workable solutions. There are still frontiers for our society. "Voyages of discovery," writes David Lillenthal, "did not cease with Columbus and Magellan, for within the atom are new continents as vast, as full of adventure and of opportunity as any new land ever sighted by the mariners of old. And the modern voyagers are young people, for these are explorations that call for the vaulting imagination, the daring, and the energy of youth." I know from personal contact and observation that our young people are willing to accept responsibility, that they have the inherent physical, mental, social, and spiritual strength which will make for a stronger America and a stronger world.

They understand—more than most of us realize—that the growth of this country has been made possible through that great reservoir of hidden assets within the heart and mind dedicated to worthy ends and made to bear fruit. They know that our society as a whole can be no better than the quality of its individual parts. Our young people, in their own way, possess the same vision, determination, willingness to work, and devotion to high ideals which our forefathers possessed—the same qualities which are the foundation stones on which America was built. They will use those qualities to build for tomorrow. How pertinent is the statement of Robinson Jeffers: "Lend me the stone strength of the past, and I will lend you the wings of the future."

As we look ahead to a better tomorrow, let us not fail to discover and develop the assets to be found in the mental and emo-

tional capacities of our young people today, and guide them into the proper channels for maximum personal development and social usefulness. Above all, in helping our young people develop a strong philosophy of life, let us inculcate in them the idea that there is no substitute for sincere, earnest devotion to the work at hand, that persistence and determination are still the touchstones to success, and that morality and reverence are stepping stones to achievement.

If ever in human history opportunity called to any people to bear the torch of civilization, it calls today to the youth of America. We must stop tampering so heavily-handedly with their world, and help them to grow in understanding, in humility, in courage, in devotion to the public good.

"As long as there are homes where fathers come at close of day,

As long as there are homes where mothers plan and children play,

As long as boys and girls are taught to love the truth, the right—

So long our cities will survive the years, outlast the night.

As long as there are homes where beauty dwells and books are read,

As long as there are homes where kindness reigns and prayers are said,

Although wars fling hatred on the world and nations grope,

With homes like these, and children waiting there, we still can hope.

Our Republic, Bulwark Against the Tyranny of Majorities

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, I am pleased to insert as part of my remarks, an article by United States Senator MARGARET CHASE SMITH, formerly a Member of this House, which appeared in a recent issue of *Spotlight*. Mrs. SMITH clearly points out that we are not living under a democracy but a republic:

OUR REPUBLIC, BULWARK AGAINST THE TYRANNY OF MAJORITIES

(By United States Senator MARGARET CHASE SMITH)

We talk a great deal about our American Government being a democracy. It is said that we fought two world wars within a generation to "make the world safe for democracy."

Yet, do we know what we are talking about?

You may be surprised to know that our Government is not a true democracy. It is a republic. If you doubt this, take a look at the Constitution. Try to find the word "democracy" or "democratic." Then take a look at article IV, section 4, which says, "The United States shall guarantee to every State in this Union a republican form of government. . . ."

If you read the first 10 amendments to the Constitution, these amendments being more popularly recognized as the Bill of Rights, you will see that they directly flout the theory of democracy.

Now what is the difference between a democracy and a republic—what are we instead of what some of us think we are? A democracy is a truly representative government in which the supreme power is retained by the

people and exercised by them. So is a republic. But a republic, such as ours, is a restricted and limited democracy.

The basic distinction between democracy and republic is in the degree of majority rule. Majority rule is unrestricted in a democracy while it is restricted in a republic. The Bill of Rights part of our Constitution places definite limitations on the power of the representatives of the people. They are denied the power to abridge our freedom of speech, right of assembly, press, trial by jury, against unreasonable searches and seizures, and other individual rights, regardless of how much the majority might be opposed to such individual rights. Under a pure or true democracy, there is no protection of such individual rights against the rule of the majority.

Democracy actually means unrestricted majority rule that our Constitution so carefully prohibits. We are inclined to think of democracy in the social sense rather than the political sense. We think of it as signifying equality among human beings. This ideal we do find expressed in the Declaration of Independence with the statement that "all men are created equal." But the ideal is even more basic than the Declaration of Independence. It is in reality the Christian concept of the Golden Rule.

So that there is good reason to distinguish between social democracy and political democracy. By the sheer unrestricted rule of the majority of a political democracy, social democracy could be killed without any protection whatsoever to the minorities.

A republic is a truly representative government. It provides representation for the minority as well as the majority. It places individual freedom and rights above majority rule. If we were really a political democracy, instead of the republic we are, the will of the majority would habitually ride roughshod over the will of the minority. A republic creates and develops tolerance that acts as a bulwark against tyranny by the majority.

The United States Senate, in which I have the honor to serve, is striking proof that our Government is not a democracy but a republic. New York with a population of several million people has no more representation in the Senate than my State of Maine which has a population of less than a million people. Both States have two Senators each. This is a check against unlimited majority rule for the protection of the "minority population" States.

In short, a republic rather than a democracy is the American way simply because this country was settled and founded upon the love for liberty and individual freedom. Our Republic protects our very right to our beliefs even though we be in the minority. It protects differences of opinion.

The RFC Helps the Doughboy of American Business as Vigorously as General Bradley Supports the Foot Soldier, His Rifle, and Bayonet

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. SIEMINSKI. Mr. Speaker, in peace and war, wise-money boys work both sides of the street.

After World War II, they told us that air power was the decisive fighting force

of war. It had replaced the foot soldier, his rifle, and bayonet. Korea knocked that idea on the head.

Today they tell us that banks and the Federal Reserve Board are sufficient to nurse the needs of business. The RFC knocks this idea on the head.

In war the Army, the Navy, and the Air Corps build up fire power to defeat the enemy.

Fire power is the key.

In business, credit is fire power.

The RFC, banks, and the Federal Reserve Board provide credit, or fire power, to promote an expanding economy for the United States.

Facts show that the RFC helps the doughboy of American business as vigorously as General Bradley supports the foot soldier, his rifle, and bayonet.

There is need and room for all, in peace and war.

The Recognition of Russia by the United States

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, August 16, 1951

Mr. BUTLER of Nebraska. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article entitled "Moscow's Red Letter Day in American History," by William La Varre, which appeared in the American Legion magazine for August 1951. This article traces the course of our relations with Communist Russia since we extended recognition on November 16, 1933, and shows the disastrous consequences of that action.

I am informed by the Public Printer that the article will make 3¼ pages of the RECORD, at a cost of \$266.50.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MOSCOW'S RED LETTER DAY IN AMERICAN HISTORY—SOUTH OF THE RIO GRANDE, OUR PAN-AMERICAN NEIGHBORS REMEMBER THAT IT WAS ON NOVEMBER 16, 1933, THAT THE COLOSSUS OF THE NORTH BECAME "EL LOCO RICO DEL NORTE," AND LOST MORAL LEADERSHIP OF THE WEST

(By William La Varre)

The very special agent from Moscow, commissar of all the Red Square's nefarious international machinations, chief of the Kremlin's schemes for communizing the American hemisphere, sat victoriously at the White House desk at midnight, smiling at the President of the United States.

For 15 deceitful years the corrupt Kremlin had tried to obtain a Communist base, protected by diplomatic immunities, within the United States. Four Presidents—Wilson, Harding, Coolidge, and Hoover—had refused to countenance Moscow's pagan ideology or its carriers. But here, at last, was a President the Communists could deal with.

Many patriotic, well-informed Americans, in the old Department of State, in the American Legion, and in the American Federation of Labor, had begged Franklin Roosevelt not to use his new leadership of the United States for the aggrandizement of an evil, dangerous,

and pagan guest—but to send him back to Moscow, red with the blood of the commissar's own countrymen, without a handshake.

But Franklin Roosevelt, plucked by the power of his new office, stimulated by his clique of Marxian and Fabian Socialists posing as intellectuals and liberals—and by radicals in labor unions, universities and his own sycophant bureaucracy—had signed his name to the Kremlin's franchise. Without the approval of Congress, he made an actual treaty with the Soviets, giving them the right to establish a communist embassy and consulates in the United States, with full diplomatic hospitalities and immunities to Stalin's agents, the bloody Bolsheviks of Asiatic Europe.

November 16, 1933, at midnight. That is a date in American history our children will long have tragic cause to remember. That was the day Soviet Foreign Commissar Maxim Litvinov, plunderer of Estonia and the Kremlin's first agent for socializing England, sat down with Franklin Roosevelt, after Dean Acheson and Henry Morgenthau had done the spadework of propaganda, and made the deal that has led the American people, and our once vast resources, into a social and economic calamity to the very brink, now, of national and international disaster.

"In the spirit of Thomas Jefferson," the President reported artfully to his countrymen, "Mr. Litvinov and I have believed that through a resumption of normal relations the prospects of peace over all the world are greatly strengthened." To give his words weight he quoted to his fellow Americans an old letter written by Thomas Jefferson to a Russian friend of 1809, setting forth the thesis—then true but in 1933 a provable falsehood—that Russia and the United States were "in character and practice essentially pacific, with a common interest in the rights of peaceful nations."

Thus began our era of lost integrity, lost statesmanship. There was no truth in the statement that the Washington-Moscow deal had been made "in the spirit of Thomas Jefferson." In the White House, 10 days before the signing of the Roosevelt-Litvinov pact, there was abundant evidence to the contrary, in the form of a comprehensive report on Soviet-promoted Communist activities throughout the whole hemisphere, and documentary evidence that the prospects for peace "over all the world" would be greatly damaged, rather than strengthened, by giving the Kremlin an American base in Washington.

It was known in 1933 that Stalin and his Soviet regime was beginning to topple, and only its diplomatic recognition by the President of the United States—and a subsequent vast economic subsidization—would make it possible to continue to control the Russian people and expand the Soviet's treacherous socialistic activities throughout Europe, Asia—and America.

In the White House, some of us knew—at the very moment of Roosevelt's deal with communism—was a highly detailed report and analysis of the Kremlin's real objective: the sabotaging of the Western Hemisphere's social, political, and economic life and the creation of a Pan-American Union of Socialist states.

M Litvinov, of deceitful smiles, was not the first commissar of the Kremlin to come with a Soviet bag of trickery to America. As far back as 15 years in the American hemisphere history he professed to know so well—and in this instance did know in detail—the President had a dossier of Soviet duplicity, not only in Europe but in America. But in spite of pleas, begging him to give the facts to his countrymen, he hid the truth behind a highly organized Washington plethora of pro-Communist propaganda, banquets, and festivities for the Soviet's agent in the United States.

Here—read it now and weep—is the missing chapter of facts hidden from the public in 1933.

In 1917, when the Bolsheviks seized power and more than a billion dollars' worth of American property and assets in Russia was stolen by the Kremlin, all the American republics, at the request of President Wilson, closed the old Russian Embassies and consulates and refused to recognize the regime of Lenin and Trotsky.

The Argentine, however, had a vast amount of war-boomed surplus wheat, corn, meat, and hides; the armistice had left them facing a national crisis. The first Bolshevik agent to be sent from Moscow to tour America as a "commercial agent" was a Communist-trained Japanese named Sen Katsama. He shrewdly saw Argentina's predicament.

Moscow had a storehouse of gold from the plundered Russian industries, estates, homes, and churches, and needed large amounts of food imports until its Communist agricultural program could regiment Russian farms into a slave-trade monopoly of the Soviet state. Sen Katsama saw, and reported to Moscow, that Argentina, with its urgent need for trade and with its largely European immigrant racial stock, was the most likely nation in which to establish a Western Hemisphere Communist base. Woodrow Wilson, in Washington, was a man with whom the Kremlin could make no deal.

Explaining its predicament to the United States and other Pan-American governments, Argentina welcomed the opportunity to load its food surpluses for spot gold into Soviet-bound ships. They also permitted Moscow to send a "purchasing agency" to Buenos Aires.

The Communist who followed Sen Katsama from Moscow to America, with Soviet gold, was named Boris Kraevsky. He arrived in Buenos Aires with a large entourage of "purchasing" assistants for his Iuyuzh Amtorg office. He placed big, profitable orders for Argentine resources, paid for them in gold, and worked constantly to persuade the Argentine Government to recognize the Soviets, officially, and open Argentina's quarantine to a Soviet ambassador.

To the few North Americans who studied him in Argentina, Boris Kraevsky was a very smooth operator, immaculate in the garb of Bond Street, rather than that of Moscow, and speaking a scholar's Spanish and Portuguese. The sole financial agent of the rich-by-plunder Moscow regime, he was able to weigh his suave arguments for diplomatic recognition and immunities with promises to increase, or sly threats to decrease, his purchases. But it was known to the Argentine police that his orders, early in 1919, were to force, in one final and "victorious conference," the Argentine recognition of the U S S R., "in order that we may proceed to operate, send men and paraphernalia back and forth, under diplomatic immunities."

The Argentine police also discovered the fact that Kraevsky's real title in the Kremlin was not merely that of managing director of Iuyuzh Amtorg, Argentina, but "Soviet Commissar for South America." A secret plan for creating revolutions in South America was obtained by a wealthy and influential Argentinean in Paris. Dated in Petrograd, March 5, 1919, and signed by Zinovieff, Lenin's international schemer, this document showed that the Kremlin's real purpose, behind Kraevsky's polite negotiations and promises of friendship, was to organize all the scattered revolutionary groups in South America—and each country had its own native revolutionists—into a Moscow-controlled union of Communist but native political parties; that these American revolutionists were then to be joined to the Socialists, radicals, and anarchists of England, France, Italy, Germany, Spain, and other Communist-infiltrated areas of the world,

to form a world-wide Communist International which would destroy other forms of government and other economic systems.

Moscow's projected steps in changing Argentina and other American Republics into Communist states were detailed in a document of more than 100 pages, but these are the high lights:

"We confiscate and nationalize all factories, industries, private transportation and communication systems, banks, land estates, both private and those belonging to the church; all buildings, machinery, property, agriculture, dairy, livestock, and turn them over to the state. We abolish all inheritances. All industries will be under the management of organized workers, and taken from the capitalists. We establish, by revolution, a dictatorship of workers into a world union of Soviet socialist republics, with a capital in Moscow.

The Argentine Government notified Kraevsky that diplomatic recognition of the Soviet regime would never be granted and that he and his "Iuyuzh" Amtorg organization in Buenos Aires would be deported if found engaging in any noncommercial activities. Kraevsky began traveling frequently to Brazil and Chile, but the Argentineans beat him to those goals by hastily negotiating a treaty under which each of the three nations pledged itself not to recognize the Soviet regime, or allow a Soviet Ambassador to enter the country, unless all three neighboring nations did so jointly.

The record of Commissar Kraevsky's attempts to get a diplomatically protected base for the Kremlin's program in Latin America was available in minute chronological detail to President Roosevelt in 1933. The Argentineans not only continued to quarantine the Communists, diplomatically, but devoted so much time and documentation to a campaign against recognizing the Soviet regime anywhere in the Americas that they won the lasting hatred of all Communists and pro-Communists throughout the Moscow-dominated world. Kraevsky's purchasing and political strategies, throughout Latin America, brought him no diplomatic success until 1924 when, in Mexico City, he negotiated an agreement with Gen. Alvaro Obregon, the Mexican President, which was to sell Mexicans into a Communist and turbulent era very costly to Mexico and the hemisphere.

Mexico in 1924, like Argentina in 1918, was in an economic depression, caused mainly by dishonest Mexicans in high government positions. General Obregon needed money to keep his personal military clique loyal to him and in national power. Calvin Coolidge found good reasons not to subsidize him out of the United States Treasury. Following the transfer of a large amount of gold and gold certificates to Obregon by Kraevsky, and an official loan of \$25,000,000 worth of gold to the Mexican Government, Obregon announced that he was exchanging Ambassadors with Moscow and welcoming the U. S. S. R. "into the Brotherhood of Friendly International Nations."

With a great fanfare of hands-across-the-sea goodwill to a "Brother Republic," Soviet Ambassador Petrovsky arrived in Mexico City with 30 "diplomatic" attachés—and with the gold that was the price of hospitality—and opened a lavish Soviet Embassy, Boris Kraevsky, well praised by the Kremlin returned to Buenos Aires and his "Iuyuzh" Amtorg headquarters.

The Soviet coup in Mexico, Commissar Zinovieff wrote Kraevsky, made Mexico "the brightest vista for the future, the greatest possibilities for international expansion, and source of possible difficulties for the United States. Mexico is the natural connecting link between the Communist movement in North and South America. Latin America must now become the China of the Far West, and Mexico the Canton of Latin America."

Kraevsky, making no headway with the Argentineans for a South American embassy, began capitalizing on the increasing trade jealousies of the Argentines with their neighbors, the Uruguayans, across the Rio de la Plata. Much to the dismay of the Argentineans, the President of Uruguay, on August 23, 1926, announced that Montevideo was extending full diplomatic recognition to Moscow and that a Soviet ambassador was on his way to Uruguay.

To Uruguay—quickly to become the Kremlin's favorite South American nation, and as blatantly praised by Communists and fellow travelers as Argentina was smeared—Moscow sent Soviet Ambassador Alexander Minkin and a group of 47 "diplomatic attachés." Their baggage and freight passed into Uruguay uninspected, but the Argentine police had channels for discovering that it contained a comprehensive file of Communist literature, booklets, school primers, revolutionary engravings, a high-speed printing press, a portable engraving plant, and 20 radio outfits—also portable—powered by gasoline-motored generators.

With Montevideo as its southern and Mexico City as its northern base, the Kremlin now increased its revolutionary campaign throughout all the Latin-American Republics, ready to pick off whichever nation or nations it found weakest—in spite of the Soviet's pledge to both the Mexicans and the Uruguayans not to engage in any activities affecting the internal affairs or inter-American relations of their hosts. Montevideo became the Moscow of South America, visited by a stream of Soviet revolutionists; and from that picturesque city went out a network of secret workers, financed by Soviet gold, and propaganda in many forms, to Brazil, Argentina, Chile, Bolivia, Peru, Ecuador, Colombia, and Venezuela.

Shrewdly foreseeing that foreigners would not be allowed permanently to operate subversive and propaganda programs in Latin America, the Soviet Ambassador in Montevideo combined with the Soviet Ambassador in Mexico City in organizing "student tours" to Russia; they selected and subsidized native Latin Americans—from all the major Latin-American universities and labor organizations—for education in Moscow. Between 1926 and 1930 many thousands of young natives were transported to the U. S. S. R., trained as Communist organizers and agents, and sent back to their native communities to become secret "citizen workers of the Communist International." These native Communists could not be deported, though at certain times they hastily went into exile in other Latin-American Republics, and especially in the United States.

The Mexican-Soviet Brotherhood of Friendly International Nations lasted only 6 years. President Calles, after the death of Obregon, ordered the Soviet Ambassador, on January 23, 1930, to get out of Mexico—within 48 hours. Mexican police rounded up trainloads of foreign Communists and deported them. Soviet files were seized and we had a complete record of the Third International's blueprints for the conquest not only of Mexico but the entire hemisphere. Mexican railroad riots, university revolts, and strikes in the mines, utilities, and industries were proved to have been financed out of the Soviet Embassy.

With only one diplomatic base in America, the Kremlin, in March 1930, began stepping up its campaigns in South America. Riots and armed revolts broke out simultaneously in Peru and Chile. There was a wave of rioting in the universities of Argentina, Brazil, Ecuador, Colombia and Venezuela. The Western Hemisphere's oldest university, San Marcos of Peru, older than Harvard, was closed by the government; it had become a major base of socialistic and revolutionary plots and propaganda, financed by the Soviet Embassy in

Montevideo. By January 1941, the Argentine police were defending Buenos Aires against hordes of suddenly armed workers and small farmers and the capital was only saved by a hastily formed Legion for Emergency of Buenos Aires citizens. They raided Kraevsky's commercial headquarters and seized his records. Kraevsky fled across the river to Montevideo. Argentina's President Uriburu canceled Iuyuzh Amtorg's Argentine charter, distributed copies of Kraevsky's files to all the other American Republics.

Revolution almost captured Chile and Peru; martial law had to be established in many Latin-American cities. Violent and costly riots damaged native as well as United States-owned mines, utilities, and industries. Hundreds of Soviet documents were intercepted or seized by anti-Communist intelligence agents. One, dated Moscow, February 5, 1932, signed by R. Tomasoff, Moscow Secretary of the Communist International, is here sufficient:

"The examination of reports from our commissars in Latin America during the last 3 months of 1931 leads us to decide to begin a period of concentrated revolutionary action. The lower classes of Argentina, Brazil, Chile, Peru, and Uruguay are ready to fight and bring down the established governments."

In Montevideo President Terra went before the Uruguayan congress, obtained special powers, seized guns and ammunition imported and stored by the Soviet Embassy preparatory to smuggling into Argentina. He imprisoned many Communist agents. Claiming that Uruguay by its continued hospitality to the Soviet Ambassador and Iuyuzh Amtorg had created international liabilities, Argentina recalled its Ambassador from Montevideo and closed its ports to Uruguayans and their commerce. The Brazilian Government, tracing a plot for the overthrow of the federal government to revolutionists exiled in Uruguay and organized by the Soviet Embassy and Kraevsky's agents, sent an ultimatum to Montevideo and set aside an off-shore island as a prison barracks for its native Communists.

By the end of 1932 Mexico, though without a Soviet embassy, had put many of the Third International's programs into its national laws—including the Veracruz expropriation decree which seized United States and British-owned property in Mexico. The National Revolutionary Party was declared a legal Mexican political party, and its native Communist leaders promised Moscow a sweeping control over Mexico in the subsequent elections. The Kremlin's success, after only 6 years as a diplomatic guest of the Republic of Mexico, in infiltrating Communists into labor and government offices and in building up a powerful clique in the Mexican legislature, gave Moscow a new idea—the use of ballots rather than bullets. The Kremlin suddenly changed its American program and ordered its agents to hold revolts in abeyance throughout the hemisphere until it could be determined whether Mexico and the other American republics might not be seized by ballots. May Day 1933, for the first time in five costly years, was riot free throughout the American hemisphere. Stalin's agents in America, beginning May 19 of that year, were directed to work behind and from within, specific native political parties, all of them financed from Montevideo, for the nomination and election of pro-Communists for all future electoral offices and important government positions.

In Mexico, for example, the Kremlin's choice of a candidate for the Mexican Presidency was Lazaro Cardenas, "The Indian," and three now powerful native Communists pledged the Kremlin to organize his election—through the new legal National Revolutionary Party.

It was at this critical moment of American history that a South American ambassador to Washington was tipped off to the fact that

President Roosevelt, in office barely 7 months, had sent a personal letter to the Kremlin inviting Stalin to send an emissary to Washington for confidential talks "to end abnormal relations between 125,000,000 people of the United States and the 160,000,000 people of Russia." The South American ambassador gave his information to other Latin American embassies in Washington and soon many of the governments south of the Rio Grande were dispatching reports to Washington, documenting the Soviet danger to America, its record of consistent double-dealing and intrigue.

"A very great misfortune for both the governments and the people of Pan America," one wise Latin American statesman wrote, to a personal as well as official friend in the old State Department, "will be the certain and irrevocable result of a diplomatic recognition by the great United States of North America, the rightful moral and as well as economic leader of Pan America, of the Soviet regime, its criminal masters and agents."

More than 100 Latin-American patriots rushed long letters and evidence to the State Department and the White House, urging the people of the United States to stand firm with them in an adamant bloc against the Kremlin, its ambassadors, and agents. But these documents of October 1933 were hastily stamped "Top Secret" and kept from the citizens of the United States, and from the United States Congress.

Space, in this review of a tragic error in American leadership, is too limited for quoting details of the Washington record of November 1933 but researchers will find that the pro-Communist officials of Washington used the identical propaganda for softening up United States citizens to the reception of the Kremlin's agents that had been used to fool the people of Mexico in 1924, and the people of Uruguay in 1926: great economic benefits would result from welcoming a Soviet Ambassador to the United States. Stalin was said to have promised a billion dollars in new Soviet-United States trade.

Many well-informed citizens thought otherwise and said so, but their warnings were smothered by a wave of bureaucratic counterpublicity. The American Legion's resolution opposing the recognition of the Kremlin was challenged by the President as a philosophy of Tories and doubting Thomases. The American Federation of Labor's warning that we shouldn't, and couldn't, do legitimate business with a regime under which men, women, and children were perpetual state slaves, was buried under the publicity campaigns of radical labor leaders, pro-Communist agitators, of already Communist-infiltrated labor unions.

One of the greatest concentrations of factual information, wise analyses, police records, and military intelligence ever to pile up spontaneously on one subject in Washington, all documenting the liabilities of dealing with the Kremlin, had no effect on Franklin Roosevelt. He had appointed Henry Morgenthau and Dean Acheson, both protégés of Felix Frankfurter, to study trade opportunities between the U. S. S. R. and the United States, and he praised their report of the benefits to come to all United States citizens from Soviet friendship. The President thought acting as his own Secretary of State—he had a deep-rooted prejudice against the members of the American Foreign Service and against the permanent officials of the Department of State—had Cordell Hull and William Bullitt busily at work with the Communist agents in a building in Washington to which the American press could gain no access.

On November 16, 10 minutes before midnight, while most good Americans slept, the President of the United States raised the 15-year quarantine against the disease of communism, which four other Presidents had preserved, and signed the treaties of his own dictation with the Union of Soviet

Socialist Republics; agreed to accept Stalin's Ambassador, A. A. Troyanovsky, his attachés, and consuls with full diplomatic immunities; and appointed William Bullitt the United States Ambassador to Moscow. It was, indeed, a fait accompli over which the Kremlin's Litvinov could smile satanically, as he drank his vodka toast in the White House.

"A courageous leader." Stalin was to acclaim Franklin Roosevelt in the celebrating Kremlin, while the American President's health was copiously drunk in Moscow.

But there was no jubilation among the statesmen and informed citizens of Latin America. Many of them had seen evidence in Europe that Stalin and his Soviet regime were already in trouble, threatened increasingly by two other rising tides of European power, nazism and fascism. Recognition by the United States, in November 1933, was just what Stalin urgently needed to preserve his hold over the Russian people and expand his international prestige and power.

The Soviet government, the White House publicity emphasized, had promised to refrain from engaging in any political, propaganda, or subversive activities. "The conversations which were successfully concluded," President Roosevelt said, "between Russia and the United States were motivated by the desire of both countries for peace and for the strengthening of the peaceful purpose of the civilized world."

The Kremlin, Secretary Hull promised the governments of the other American republics, at the 1933 Pan-American Conference, agreed to refrain from any act "overt, liable in any way whatsoever to injure the tranquility, prosperity, order, or security of the whole or any part of the United States, or any agitation or propaganda having as an aim the violation of the territorial integrity of the United States, or to bring about a change in the political or social order of the United States."

This pledge, the United States Secretary of State promised the Latin American statesmen, also covered the peace and tranquility of all the other American republics. Did President Roosevelt—in spite of the contrary evidence—really believe that Stalin, Litvinov, the Kremlin, and a Soviet ambassador would abide by such an agreement? The people of the United States can join the statesmen of Latin America, now, in skeptical wonder. A promise of the Kremlin had never been kept on any occasion beneficial to others, prior to 1933.

History, in time, may disclose what secret ingredients were hidden in the Litvinov-Roosevelt deal, they have not yet been divulged in any New Deal memoirs. The Soviet pledges were not 1 year old when Stalin's agents, working out of the Soviet embassy in Washington, engineered the "election" and inauguration of Cardenas as President of Mexico, and proceeded to use "the Mexican Indian," as they had planned in early 1933, as a legal front for communizing the Republic of Mexico. There is much evidence to sustain the belief that the Soviet's coup was materially aided by pro-Communists in President Roosevelt's Washington entourage.

The Soviet pledge of 1933 was less than 2 years old when the key Communists of the Western Hemisphere were summoned to Moscow and given the Comintern's new plan for America: "a temporary alliance with moderates, democrats, and liberals, in order to bore from within and be strong enough to control, as we did in Mexico, all future elections." A copy of a secret report of this Moscow conference, the Seventh Communist International Congress, was obtained by a Latin American government and rushed to Washington in the hope we would cancel our hospitality to the Kremlin's agents. It was signed by Secretary General Dimitroff.

The supposedly secret meeting of the Communist congress had agreed on six tech-

niques for its Western Hemisphere agents: (1) a campaign for "greater democratic rights" from each American government; (2) the creation of a Pan-American bloc of nations "opposed to nazism and fascism and their ideologies"; (3) the labeling of "all prominent industrialists and property owners as fascists or fascist sympathizers"; (4) the uniting of all voters into worker, farmer, and professional unions, with political and economic objectives, which are to be obtained when the proper time arrives by means of general strikes"; (5) the organization of "political parties from these elements so as to obtain in coming elections control over government departments and governments; the initiation of a 'People's Front Government' as a step in transition to the Soviet form of government"; (6) by a "coalition of such new 'People's Front Governments' against the United States (and all other non-Communist countries) to bring the entire Western Hemisphere under Soviet control."

The record shows that Cordell Hull, upon the receipt of this authentic document disclosing the Soviet's continuing duplicity, sent a note of protest to Moscow, but President Roosevelt could not be persuaded to withdraw his diplomatic recognition. He began, instead, the "reorganization" of the State Department in Washington and the dispatching to far, isolated posts of its anti-Communist career officers.

In December 1935, however, the Government of Uruguay, after conferences with its South American neighbors—and after waiting in vain for the United States to join its decision—summarily canceled diplomatic recognition and ordered the Soviet Ambassador to leave Montevideo within 24 hours. Uruguay charged the Soviet Ambassador Minkin and Boris Kraevsky with financing and manipulating, in spite of its promises, antigovernment Communist political campaigns in Brazil, Argentina, Chile, Peru, Bolivia, Ecuador, and Colombia, as well as in Uruguay and Paraguay. The Uruguayan police seized the luyuzh Amtorg Montevideo files and obtained Moscow's complete record of South American propaganda and activities, as well as duplicate records of Central and North American plans, sent to Kraevsky from the Soviet Embassy in Washington.

Again evidence was given President Roosevelt of the Soviet program, dictated from Moscow by the same Stalin that Roosevelt, in 1933, thought he could do business with. This disclosed among other things that Stalin's agent for the sovietization of Mexico, Central America, and the Caribbean was Constantine Oumansky, who had accompanied Litvinov to Washington and partaken of White House festivities in 1933.

The Soviet Ambassador to Uruguay, Minkin, went back to Moscow. Boris Kraevsky stopped off in the United States, under a diplomatic passport arranged for him by the Soviet Ambassador in Washington. He was to master-mind the expansion of the Kremlin's Amtorg Trading Co. headquarters in New York City—the agency which was to be used by Moscow for spying out our most valuable defense secrets, including the atomic bomb.

There was no longer a Soviet ambassador anywhere in Latin America. But Stalin could still gloat; he had the diplomatic base he most wanted in the American hemisphere—Washington. And out of that Soviet Embassy and its consulates a horde of secret agents, protected by diplomatic passports, could roam and plot throughout the Americas, assisted, as the record shows, by powerful pro-Communists in the Washington Federal Government. To the list of Stalin's very good friends in Washington could now be added a former impoverished New York social worker, Harry Hopkins.

Thus, quite unrealized by the good people of the United States, our great Nation, once respected by all our neighbors of the Western Hemisphere, lost its philosophical and moral

leadership of Pan America. We no longer stood, in Latin-American eyes, astride 48 States as the great, respected colossus of the north. We became, instead, *El loco rico del norte*—the rich fool of the north.

The Roosevelt-Stalin deal, of November, 1933, has been so costly to us, as a Nation and as a hemisphere, that the full appraisal of our losses and liabilities will not be known for several generations. The Kremlin's gains within the United States and communism's cost to us is only now, in 1951—after 18 years of suffering a Soviet Embassy in our Capital, and its agents to roam the States—coming to public consciousness.

It has truly been a costly era of mysterious friendship for an appeasement of the devil, of un-American compromises with deceit and pagan ideologies. Some of its protagonists are now dead, their graves monuments to our present predicament, but others, again mysteriously, have been allowed to step into their strategic places.

A colossus of the north no longer sits in the well-earned place of honor at Pan-American conferences. We have exchanged our once unchallenged prestige for a mess of suspicions. With one side of their mouths, our politicians and State Department manipulators had preached a beautiful, new good neighbor western hemisphere policy—but out of the other side they welcomed Stalin's Asiatic and European agents into the neighborhood. Our Latin-American policy since 1933 has been in fact no honestly founded program of sincere hemisphere statesmanship, but merely another case of Washington double talk. The meeting of inter-American foreign ministers, in Washington during March and April 1951, found United States and Latin America far apart on big issues, as our newspaper headlines too briefly recorded. The statesmen of our hemisphere neighbor republics listened politely to President Truman, now mired in a fiasco of Soviet international intrigue, read a speech bidding our neighbors gird against a Red blow by Soviet Russia at the Western Hemisphere, listened to us telling them—at this late date—that the aggressive expansion of Soviet power threatens the whole world.

They listened, too, to our Secretary of State, Dean Acheson, warn them, now in 1951, that "this freedom of ours is faced with a mortal threat. The small group of men who rule the Soviet Union and pull the strings of the international Communist movement have a doctrine which is opposed to freedom. . . . There is no free nation anywhere, large or small, whose freedom is secure."

The statesmen of our neighbor republics have very long memories, and massive dossiers. Acheson: their files on him go far back, complete with enlightening details, to the year 1933, the fateful year when they tried to warn us of the dangers ahead. Is it strange that the Latin-American statesmen, in Washington during April 1951, looked realistically at the busy Soviet embassy's blood-red flag, flying over Sixteenth Street just a few paces from the White House and the State Department, and felt exasperated to be told, like children with short memories, that the Soviet's plan was a new imperialism or that its instruments are a formidable machine of war and the international Communist movement; to be told these long evident facts by the man who had worked night and day, in 1933, to give the Soviets their major base in America—who had celebrated the fifteenth anniversary of the Third International and the fourth anniversary of Stalin's supreme dictatorship of the Kremlin, in a White House party honoring Stalin's emissary, Litvinov, on November 7, 1933?

The protocol of diplomacy requires soft words, innuendo rather than exhortation. Consistent protagonists of a Pan American Union adamantly blocking Soviet expansion,

and cooperatively quarantining its ambassadors, consuls, and other agents from the society of honest, God-worshipping mankind, the statesmen of the rest of the hemisphere replied to our Secretary of State with stoical restraint.

At a time when the threat of a third world conflict is knocking at our doors, Brazil's Foreign Minister Jao Neves de Fontoura suggested, the first thing we must do is to correct the mistakes of the past decade. . . . We are undoubtedly faced with a denial of the idea of nation, just as categoric as the denial of God. There exists an ostensive philosophy which, if it came to pass, would consecrate as a hero Ephialtes, the Spartan traitor convicted of crime against his mother country, having delivered to the Persians the very lives of those who stood in defense of the Pass of Thermopylae.

It was not the Washington Monument, or the remodeled White House, or the Capitol, or the modernistic Department of State edifice which the Latin-American statesmen concentrated on photographing during their sightseeing tours of our Nation's capital. It was the big Soviet embassy, behind its iron fence, with its big red bolshevik flag staining the Washington skyline.

Inside that massive, ugly building, of vaults, dungeons, and short-wave radio code instruments, there is the complete record of Soviet duplicity in and cost to America. If a building could scream we would, before it's too late, know the whole story.

Encourage Revolution Behind the Iron Curtain

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, on August 6, Senator PAT McCARRAN made an excellent speech in the Senate strongly urging the institution of a United States foreign policy aimed at the overthrow of the Soviet Communist regime and its satellites. Senator McCARRAN's speech appears on page 9486 of the CONGRESSIONAL RECORD for that day.

I have heretofore introduced several resolutions for the same purpose, which resolutions appear in the CONGRESSIONAL RECORD of July 3, 1951. Each of the resolutions which I introduced is directed to the peoples of the various countries now enslaved by communism including the Russian and non-Russian peoples of the Soviet Union.

Mr. Frank Rockwell Barnett, assistant professor of English and history at Wabash College, Crawfordsville, Ind., has prepared a detailed program whereby America can assist these enslaved people to overthrow their tyrants.

During World War II, Mr. Barnett served in Germany as a Russian interpreter for the military government section of the Sixty-ninth Infantry Division, the first unit of the western allies to make contact with the Red army at the Elbe River. Following VE-day he worked with Red Army repatriation officers in the mass exchange of Soviet displaced persons for American and British airmen

liberated from German prison camps by the Russians.

Transferred to Berlin in the fall of 1945, he was discharged from the Army so that he could accept a civilian job with the War Department as a public relations official on Gen. Lucius D. Clay's military government staff. From January to August of 1946 he attended meetings of the Allied Control Council in Berlin, prepared background material on political and economic aspects of the German problem for the world press, and escorted British and American correspondents into the Soviet zone of Germany.

From 1947 to 1949 he studied in England under a Rhodes scholarship. During this time he had the opportunity to revisit Germany and Berlin during the Russian blockade and the airlift, to attend a 6 weeks' seminar on the postwar problems of Europe at the University of Zurich, and to talk with many of the exiles from the iron-curtain countries who were crowding into London.

He has been teaching at Wabash College for 2 years and is now on leave of absence in an effort to win support for the plan outlined in this paper.

The program of Mr. Barnett follows:

COLD WAR, ATOMIC WAR, OR LEGION OF LIBERATION?

(By Frank Rockwell Barnett)

A PROPOSAL FOR THE ESTABLISHMENT OF A LEGION OF LIBERATION

Throughout the Soviet Empire, there burns an implacable hatred for Communist tyranny. America can arm that hatred and give it purposeful direction.

Everywhere behind the iron curtain, suspicion and fear are cracking the Communist system. Uncompromising psychological warfare can make those tensions intolerable and widen the gulfs between Red army and secret police, commissar and peasant, believer and atheist, bureaucrat and worker.

America can organize the exiles from the slave world, send them back as liberators of their own people, and so save the world from global, atomic war.

The formation of a legion of anti-Communist exile peoples is vital to our campaign to protect America and our European allies from Soviet aggression and to combat, on its own grounds and with its own weapons, the political and military machine of international Communism. A strong Legion of Liberation would fulfill four major purposes:

1. To defend Western Europe without committing too much American military strength to one hemisphere and without rebuilding the German army to a dangerous level of power.

2. To serve as a concrete symbol of freedom which will—

- (a) encourage anti-Communist undergrounds everywhere behind the iron curtain,

- (b) act as a political magnet that will attract such dissident elements in the Soviet Empire as Red Army troops stationed in Germany and Eastern Europe, scientists, businessmen, peasant leaders, technicians, anti-Russian military, political and religious leaders in the satellite nations.

3. To counteract the anti-American propaganda of the Soviets by guaranteeing to the enslaved masses of the Communist world that the United States does not intend to destroy and occupy their countries, but to help them win freedom.

4. To furnish the disciplined leadership, organization, and weapons which a people's revolution in the twentieth century must have in order to succeed.

ASSUMPTIONS

Democracy cannot do business with men whose fundamental beliefs on morals and politics are irreconcilable with our own. Dictators always break contracts when defaulting is to their advantage.

It is both immoral and impractical to negotiate with our real enemies, Communist governments, while we ready ourselves to use atomic bombs against potential friends, the enslaved peoples in the Soviet orbit.

Atomic warfare may unify the Soviet peoples behind their leadership, just as Pearl Harbor unified a seriously divided America. To defeat Soviet Russia in total war and to garrison and feed an impoverished world, America might become so socialized and militarized that she would fail to maintain her own tradition of freedom.

America can avert a global, atomic war only by actively encouraging millions of potential allies to fight and win their war of independence.

PROPAGANDA IS NOT ENOUGH

We must plan, organize, and finance the liberation of enslaved peoples. Anti-Communists in the Soviet empire are ready to risk their lives for freedom if they have outside help and some chance of success. But they need submachine guns as well as slogans, and an unequivocal promise that America will not turn her back on their struggle to regain their land, their national culture, their freedom, and their God.

FACTS

1. There is potential resistance to the Communist regime everywhere behind the iron curtain.

Between 1919 and 1939 there were 30 sizable revolts, rebellions and plots against the Kremlin dictatorship.

At least 12,000,000 Soviet citizens are in Communist prison camps. Most of those people have been accused of political crimes.

In the U. S. S. R. it is necessary for the regime to employ 2,000,000 security police, including special agents to watch the secret police.

In Hungary, Czechoslovakia, and Poland, as well as in Russia, frequent purges of the highest ranks of the party, the army, and the bureaucracy are necessary to prevent treason.

Undeclared civil war between peasant and commissar rages continuously in the Ukraine, Russia's richest province. Today, in spite of the secret police and the Red army, the Ukrainian insurgent army (UPA) keeps alive the resistance movement.

There are other underground groups in the U. S. S. R. directed and financed by anti-Communists in exile. The framework of revolution already exists.

2. The Germans, in 1941, almost overthrew the unpopular Soviet government by promising freedom to oppressed nationalities.

At least 3,000,000 Red army troops surrendered to the Germans in the first 8 months of the war, and a Russian general, Vlasov, led three divisions against Stalin.

Three hundred thousand Ukrainian nationalists fought against the Kremlin.

Only Nazi atrocities enabled the Communist Party to regain temporarily the loyalty of the Soviet peoples.

3. The Red army itself is unreliable.

At least 75,000 officers and men have already deserted to the West—with little or no encouragement.

Red army ideology was corrupted by its contact with the luxuries of Europe. To check desertions, Communists have ordered Russian soldiers on occupation duty in Germany behind barbed wire and returned to the U. S. S. R., as hostages, the families of occupation personnel.

Communist leaders do not trust Red army officers. The high command of the army is frequently purged or reshuffled. Military

heroes disappear into the shadows when they grow too popular with the Russian people.

A police state can never answer the question, "Who will guard the guard?" Mutual fear and distrust between political and military leaders, and the hatred of Red army officers for the police spies of the MVD are corroding the Soviet dictatorship, just as the rivalry between the German Wehrmacht and Hitler's SS helped to disintegrate Nazi power.

PROPOSALS

1. Recruit a Legion of Liberation of approximately 10 regiments from among the Ukrainian partisans, Red army rebels, veterans of General Anders' Polish Army Corps, Baltic and Balkan nationalists, and other anti-Communist refugees who are already on this side of the iron curtain. Find suitable jobs with the legion for thousands of Czech and Polish airmen who flew with the RAF against Hitler and would like to fly with the legion against Stalin.

2. Train the legion in north Africa, Europe, or the Middle East and station it in the American zone of Germany as part of General Eisenhower's Western European defense forces.

Insofar as practicable, combat units of the legion should be comprised of separate nationality groups fighting under their own flags.

3. Invite anti-Communist Red army officers and men stationed in Eastern Europe to transfer their allegiance to the legion in ranks commensurate with their abilities and present grade.

(Do not bribe these men with promises of American citizenship. Guarantee them full citizenship in their own countries when the police states have been abolished.)

4. Vest policy-making decisions, intelligence, supply, and strategic command functions in United States (or U. N.) officers, but leave command of guerrilla armies in the field to officers who understand the psychology of their own peoples.

5. Use part of the United States Air Force, if total war is forced upon us, to parachute the legion into the satellite nations, the Ukraine and the vast reaches of Asiatic Russia, where poor lines of communication will make it difficult for the Communists to bring immediate force to bear against the guerrilla armies organized by those units.

6. Maintain the Legion of Liberation with an airlift while it seeks reinforcements from the sympathetic peasantry of its homeland, subverts the reluctant armies of satellite dictators, and liberates the millions of political prisoners in the concentration camps.

The legion will be a rallying point where anti-Communist Red army units can reform for civil war against the commissars and the secret police.

The legion will furnish arms and equipment to the already existing undergrounds. It will arouse all oppressed peoples by speaking to them in their own language, assuring them that the legion stands for liberation, not conquest.

7. Institute positive intelligence operations to prevent the infiltration of the legion by Communist agents. All-out intelligence is less expensive than all-out atomic war. America, with her "melting pot" society, has the human resources to do the job.

8. Withdraw recognition from outlaw governments which do not rule with the consent of the governed. Publicly proclaim that the principles of the American Declaration of Independence are universally valid. Do not apologize for the violation of the "sovereignty" of international kidnapers.

9. Explore the possibility of establishing a temporary asylum in north Africa for the families of men who volunteer for the legion and for all anti-Communist refugees who

are not of military age. These people will eventually be repatriated to their liberated homelands, but, in the meantime, they, too, should be given the opportunity to work for freedom—on farms, on American air bases in Africa and the Middle East, perhaps in factories producing small arms for guerrilla armies.

10. Employ full-scale psychological warfare to prepare the way for liberation by the legion. Guarantee self-determination and the basic human freedoms to all of the oppressed majorities behind the iron curtain. Do not unify the camp of the enemy by talking "unconditional surrender" and "collective guilt." Separate the people from the Communist Party and distinguish between nominal adherents to the party and the Politburo. Do not abandon the anti-Communist majority by discussing "spheres of influence" with their totalitarian rulers.

ANSWERS TO OBJECTIONS

1. That we ought not provoke the Russians.

We have already provoked the Soviet Government with the Marshall plan, the Truman doctrine, the Atlantic Pact, and our stand in Korea. To form a legion is another "calculated risk" well worth taking. It is a less dangerous gamble than to talk peace with our enemies and threaten our friends with hydrogen bombs.

The legion, unlike the use of atomic bombs, will not provoke the Russian people. It will give them hope.

When dictators are not ready to fight, they are not easily provoked. When they want war, they can always find some excuse to begin. Why let the enemy take the initiative and start war at a time of his own choosing? Disable him now with psychological warfare and the threat of the legion, while we still have supremacy in atomic weapons.

2. That to encourage revolution in the U. S. S. R. is impractical.

No one accuses the Communists of being impractical in their efforts to conquer from within. We regard them as dangerously clever opponents who have had terrifying success in waging underground warfare and recruiting fifth columns.

But subversion could be a thousand times more dangerous to Moscow than to Washington, for reasons already outlined. With courage and planning, and the hearts and hands of all the oppressed peoples, America can turn the Kremlin's weapon of world revolution back on itself.

3. That we can coexist peacefully once we are strong.

The Soviets, like other dictators, thrive on permanent crisis, which justifies their repressive measures at home and undermines the political and economic stability of their opponents. It is doubtful that liberal democracy can survive an indefinitely protracted period of cold war, partial mobilization, and increasing centralization.

CONCLUSIONS

1. A relentless campaign of psychological warfare, based on the creation of a Legion of Liberation and the promise of self-determination, will not guarantee victory over communism without total war. But, by opposing America's greatest strength to the U. S. S. R.'s greatest weakness, it is entirely possible that we can paralyze the enemy without losing our young manhood, our free economy, our whole civilization in a prolonged global struggle. Revolution will mean fewer casualties for Soviet and satellite peoples.

2. Throughout most of her history, America has offered hope to the wretched of the earth. America exposed the divine right of kings as a barbarous superstition by proving

that revolution against tyranny was both possible and honorable.

But modern America sometimes seems to be defending privilege and the status quo. To millions of downtrodden, a selfish America appears to be willing to trade other peoples' lives and property to dictators for the leisure to enjoy her own great good fortune.

Soviet communism, with its false but effective propaganda, gains strength by pretending to promote the welfare of all peoples. American democracy must regain its old vitality by proving that the only genuine revolutionary principle is American and worth fighting for—everywhere in the world.

It is time to repudiate the divine right of dictators and to disregard the imaginary rights of totalitarian rulers who hold power by force and unlimited cruelty. It is time to remember that in America, England, and France freedom was wrested from sovereign authority by armed insurrection, not by negotiation.

We are strong enough to afford moral consistency. We need not stoop to set petty tyrants against the greater villain, when we can have all honest men on our side for the asking. When America abandons expediency and stands firmly for the rights of men against their oppressors, armies of brave men will stand by our side overnight.

Governments Rob Man of His Soul

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, the problem that faces mankind everywhere and especially in those countries where communism dominates is that of oppressive governments. Mr. William Faulkner, Nobel prize winner and outstanding author, in a public appearance at Oxford, Miss., on May 29, made the categorical statement that the world's governments are using fear to rob man of his individuality and of his soul. This is an outstanding pronouncement of the evil that confronts mankind today. It is not limited to other governments but even the Government of the United States is becoming so centralized that it seeks now by virtue of its bigness to control the daily lives of its citizens. As part of my remarks, I am including the news item that appeared in the Washington News on Mr. Faulkner's address:

GOVERNMENTS ROB MAN OF HIS SOUL

OXFORD, MISS., May 29.—Nobel prize winner William Faulkner, in one of his rare public appearances, warned that the world's governments are using fear to rob man of his individuality and of his soul.

He spoke last night to 1,200 towns-people and to his 17-year-old daughter Jill's high school graduating class.

"What threatens us today is fear," the author said. "Not the atom bomb, nor the fear of it, because if the bomb fell on Oxford tonight, all it could do would be to kill us, which is nothing, since in doing that it will have robbed itself of its only power over us: which is fear of it, the being afraid of it."

"Our danger is not that. Our danger is the forces in the world today which are trying to use man's fear to rob him of his

individuality, his soul, trying to reduce him to an unthinking mass by fear and bribery—giving him free food which he has not earned, easy and valueless money which he has not worked for.

"The economies or ideologies or political systems, Communist or Socialist or Democratic, whatever they wish to call themselves; the tyrants and the politicians, American or European or Asiatic, whatever they call themselves, who would reduce man to one obedient mass for their own aggrandizement and power, or because they themselves are baffled and afraid, afraid of, or incapable of, believing in man's capacity for courage and endurance and sacrifice.

"That is what we must resist if we are to change the world for man's peace and security."

A Doctor Reports on Red China

EXTENSION OF REMARKS OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, Dr. Ernest M. Lippa traveled and worked for 7 months in Communist Red China. Dr. Lippa was born in Vienna, graduated from the University of Vienna, and trained as a surgeon in Paris and Berlin. In 1938, after he was driven out of Austria by the Nazis, he went to China where he practiced medicine until recently. He was working as a surgeon in the Catholic Mission Hospital in Kalfeng, which lies about 300 miles from the coast on the Yellow River, when this area was captured by the Communists. Dr. Lippa tried to continue his medical work in Communist China but soon found that medical practice as required of him by the Chinese Reds more resembled butchery than surgery and so he finally managed to get out of Red China.

He is now in New Zealand practicing medicine. Because he could speak many of the dialects of the nation Dr. Lippa was much better able to discover the feelings of the people in Communist China than most western observers.

Dr. Lippa wrote a series of articles in the Saturday Evening Post issues of April 28, May 5, and May 12, 1951, about his experiences in Red China. I include herewith a few excerpts from these articles which vividly portray conditions behind the bamboo curtain:

COMMUNIST JUSTICE

One of the first things I observed in the old liberated area was that the foreign missions had disappeared. The churches, with sickle and hammer replacing the cross, were being used mostly for political meetings.

In regard to the foreign missions, I had an opportunity to observe the communist technique at the walled town of Weikweifu. This market town had been taken over by the Red army only about 4 months before I arrived. I immediately called on Bishop Civelli, whom I had known previously. He had presided over a once beautiful but now neglected mission. The bishop had long been a well-known figure in China, a towering Italian in his middle sixties with sharply chiseled features, a forest of unruly white hair, a beautifully groomed beard, and a hearty laugh.

But the man who came to meet me was a gaunt, haggard, and bleary-eyed figure. There was a tremor in his voice and his hands shook. The white beard of which he had been so proud was unkempt. My first thought was that he had been mistreated, but it was not that simple. The Communist troops in Weikweifu were from Yen-an and had never before seen a Catholic priest. They asked where his wife was, and when he explained that no priest had a wife, they simply didn't believe him.

That night they came back to the mission and searched everywhere for a wife. They poked around his bedroom, shining torches in his face, looking under the bed and in the wardrobes. The next night they came back and did it all over again. Night after night they came to search. In addition, they forbade the mission to lock its doors at any time and the population was encouraged to enter and make themselves at home. The bishop's study, for instance, was always full of children, and he did not dare tell them to leave. It was understandable that after 4 months the old man appeared to be on the verge of a breakdown.

The campaign to close the churches was still more indirect. The people in the old liberated area told me that in the beginning the Communists had declared they were opposed only to foreign domination and that the Chinese Christians could continue their church work without molestation. This was said publicly, while privately the population was encouraged to make accusations against churchmen just as they were encouraged to denounce the large landowners as "enemies of the people."

PEOPLE'S COURTS

Such accusations usually were made before the so-called people's courts, which were village gatherings at which the accused stood on a platform in the middle of the crowd while anyone who desired spoke against him. Then the crowd, after being harangued by a party official, gave the verdict. Landlords charged with cheating the peasants were the main targets of these trials at first, and harsh punishments were customary. But many persons were tried as enemies of the people merely because they owned a wrist watch or because they ate three meals a day instead of the two that were customary for most persons in the old liberated area.

Sometimes even these charges were trumped up against persons whom the party wished to intimidate or punish for other undisclosed reasons. On one occasion I treated a man whose back had been slashed to ribbons as a result of a flogging ordered by such a court. He was accused of owning too much land, a charge I could hardly accept as the real cause of his trouble because his trial occurred 7 years after all the land in that area supposedly had been "justly" redistributed.

Nothing much happened to many others called before the people's courts, except that they had to stand for hours and listen to the charges against them, and then usually had to apologize for their offenses or alleged offenses. But if a man got off with an apology he was expected to take the hint and get into step with the Communist program. And if he failed to do so, he usually disappeared from the community within a short time. Usually it was said that he had been killed by bandits. If only half of the stories told me were true, hundreds of priests and thousands of Chinese Christians vanished in this manner.

I discussed these trials not only with the peasants but with various party officials during my stay in the liberated area. Communists frequently assured me that many untrue or exaggerated stories had been circulated abroad about the fate of those who appeared before the people's courts. Ordinarily, they repeated the statements of some

of the high party officials, who had declared that, while there may have been occasions in the beginning when the peasants were too harsh on the landlords, the party itself had always done everything possible to protect the landowners from unjust treatment.

A CHINESE LANDLORD'S STORY

On one occasion at the town of Ling-shien I recall that a party functionary gave me a long lecture on this subject. Later I went for a walk with my two dogs along a lonely country road and came upon a man hunched up on a bank at the roadside, resting beside a small pushcart. I spoke to him and, as he seemed willing to talk, I chatted for awhile and then asked him whether he felt the landlords had been treated fairly by the people's courts.

"Perhaps," he said, after a few moments' thought, "those who were quickly tortured to death were the fortunate ones."

"I have heard such stories," I said, "and I have seen some evidence, but I have also been told that the party does its best to protect the landlords from real injustices."

He fell silent again, and then said he would tell me of one case. I cannot reproduce his exact words, but the story was a simple one.

"There was near here a landlord, an elderly man who had never had trouble with his tenants," he began. "This man and his family fled when the Communists arrived, and soon thereafter he died. But his eldest son decided to return and see if he could collect rents due him or, if not, to work the land himself, as it was all he possessed."

"He made inquiries and was assured of just treatment, but when he returned he was arrested and led before a people's court. The witnesses against him were men he had never seen before, but they accused him of mistreating his tenants and of being an enemy of the people. However, something went wrong with the stage managing of the trial. Several of his father's tenants appeared and boldly stood up to defend him, and his father as well. They spoke strongly and the crowd was with them. The local party officials then announced they were happy his innocence had been proved and said he should appear at the magistrate's hall to claim his land."

"He did appear, but there were delays and red tape and, since he had no means of livelihood, they gave him a permit to carry on a hawker's business between his village and Ling-shien until matters were straightened out. A few days later he went to Ling-shien and, as was required, appeared at the police station to get a permit to remain overnight. In the station yard several men rushed up and began shouting accusations at him, calling him an enemy of the people. They were the same men who had falsely accused him in his own village. He was again taken before a people's court, but this time at Ling-shien, where no one knew him."

"His accusers repeated their charges and demanded that the people punish him. One of them pushed him hard against a guard, and the guard shoved him roughly around the platform. The crowd jeered him and a party official urged them on, shouting, 'What kind of punishment does he deserve—this blood-sucking Kuomintang dog.'"

"'Kill him,' the crowd yelled. 'Look at those land-grabbing hands,' one of his accusers yelled. 'They robbed you. But if we cut them off, those hands can't grab any more land.'"

"At that moment he was given a hard push which sent him over the edge of the platform and into the arms of the angry, shouting crowd. He was dragged along the road to a butcher's shop, where his tormentors shoved him up against the chopping block and raised a cleaver. A moment later, half conscious, half crazy, he was turned loose and permitted to stagger away * * *

but not until after he had seen his own severed hands lying in the dust beside the chopping block."

When my companion had finished his story, he sat motionless, his head bowed. I thanked him for answering my questions so vividly. "But," I added, "I'm told that such stories often are exaggerated. It is hard to get proof. Can you be sure of the facts?"

This time he didn't answer. But he looked at me with a terrible expression in his eyes and held up two arms that were handless stumps.

AGRARIAN REFORM IN CHINA

I discussed the farmer's problem with many old-timers in the rural villages. I found most of them highly skeptical of the party's achievements. The Chinese farmer's vocabulary is limited and his language primitive, but he is by no means stupid. Within his limitations he is often a born orator and has a knack of putting his finger on the sensitive spot. I cannot hope to reproduce these conversations exactly, because of our limited ability to communicate, but, in general, the attitude expressed was about as follows:

"I've been told that all landlords are bad men who oppressed the common people and let them starve. But, as it happens, my landlord was a pretty good fellow. Of course, there must have been bad landlords, too, but in the old days even a bad landlord would not have let his tenants starve as long as he himself had something. Otherwise, who would have tilled his fields the next year?"

"Our landlord never told us to work longer hours, because he knew we would do everything to make the crop grow. But now, every day, we must go to meetings where we are told to work harder and raise bigger crops, because China belongs to the common people. That's us. But if everything belongs to us, why am I not allowed to do what I want with my land? Why can't I decide what kind of crop I plant, how much grain I will keep for food and how much I will keep for seed?"

"When my father had a big crop he paid the same rent to his landlord that he paid in years when the crop was small. But now, if my harvest is good, I must donate to so many organizations that nothing is left over for the bad years. When my father wanted to visit his relatives, he asked nobody. If I want to visit my brother, I have to ask the magistrate for a permit. And before I get it he asks whether I am behind in my work and whether the work will be done during the time I am away. Yet they tell me that my father was a slave and that I am a freeman!"

MARRIAGE AND FAMILY LIFE IN RED CHINA

As I moved from town to town in the old liberated area, I was shocked to see how far the government had gone in breaking down the ancient family traditions and ancestor worship which for centuries had been the backbone of Chinese life. Marriage in many ways had become an almost casual relationship. Families were more often separated than not.

If a boy and girl want to marry in China today, they must petition the Government which, in most cases, grants the permit on the understanding that marriage will not interfere with the assigned duties of either of the petitioners. Wedding ceremonies are a mixture of old superstition and the new Communist cult of hero worship. Instead of bowing three times before the shrine of their ancestors, as had long been customary, the couple now bow three times before a picture of Dictator Mao Tse-tung. If the newly married are Government employees, they are permitted to live together for about a week, but thereafter each sleeps at his or

her place of work, except on Saturday nights, when they are permitted to be together.

There are exceptions to these rules among the higher party officials, most of whom have their families with them. But a majority of married couples are fortunate if they can work in the same town and see each other once a week. For many who work in different towns, even though they may be only 20 miles apart, it is so difficult to get permission for a visit that they may not see each other for long periods—even for years.

With only a brief notice, a husband or a wife may be ordered to report at a new working place, sometimes hundreds of miles away. If it is the mother who is sent away, she is not permitted to take her children. She must board small children with a peasant family. But if the children are older, the Government ordinarily puts them in a boarding school. It is rather rare for such families ever to be reunited.

Government employees and party members are taught that family attachments are reactionary sentiments that have no place in the Communist state. Such feelings are tolerated by the Government only when they do not interfere with the interests of the state. Marriage, or at least sexual relationship, is necessary to keep up the birth rate. But beyond that any attachments are regarded as detrimental to the productive capacity of the masses.

The government's methods of enforcing these ideas on the mass of people are normally indirect—that is, by transfers of workers, or by refusal of educational facilities to those who fail to conform, or by various kinds of economic pressure. But rigid rules are enforced for members of the Communist Party. A party member's child usually is taken away from its mother when it is 6 to 8 weeks old and boarded with a peasant family while the mother goes to her job. The mother may see the child once a month until it is 2 or 3. At that time it may be returned to her if there is a government nursery at her working place. But when the child reaches the secondary-school age it is separated from its parents again. Except for occasional chance meetings, it is unlikely ever to see them again.

The separation of families, the transfer of government workers from one end of the country to another and the frequent changes of personnel in party offices are all part of a calculated policy. Communism can succeed in China only if the family unit, as it has been known for centuries, is eliminated. The perpetual reshuffling of government employees is necessary to prevent formulation of friendships, to keep the workers suspicious of one another and to make them willing to spy on one another. In every government office there is at least one official who does nothing but report on the behavior and the Communist fervor of the others.

I had often heard it said before I entered the liberated area that the Communists were licentious. But I regard this as false. Immorality and vice were less evident in Communist territory than in Nationalist China. But in the Communist moral attitude there was something far more terrifying: the procedure of mating, begetting children, and bringing them up has become altogether dehumanized.

This government policy has resulted in more frequent divorces and, as a consequence, many more casual attachments between men and women—the basic intention of the policy makers.

MEDICAL CARE FOR REDS ONLY

Only government employees, members of the Communist Party, and soldiers received free medical care at hospitals in the liberated area. The peasants were required to pay for whatever they got, but in practice there was very little they could get, even when they

had the money to pay. There were not enough medicines, not enough doctors, and not enough hospitals in the liberated area—and the government saw that Communists were served first.

One peasant child, for example, was brought to me suffering from a purulent inflammation of the middle ear. He had been turned away from the government hospital without any kind of treatment because the doctors there said they had no medicine. I gave him medicine from my own stores, but I later discovered that on the same day the hospital had given 50 tablets of sulfadiazine to a Communist official who had a small boil on his neck. Yet when I prescribed sulfa tablets for a woman with childbed fever, she was told that they were not available at the hospital. Several times peasants who took my prescriptions to the hospital to be filled were deliberately given charcoal or antacid tablets instead of the prescribed drugs.

This attitude toward the medical care of the peasants was by no means limited to Ling-shien. Late in March I was permitted to continue my journey to the provincial capital of Mah-pu, a small town up in the mountains to which the government officials had retreated some time earlier in order to avoid bombing by Nationalist warplanes. From there I was able to proceed over steep mountain roads on a little narrow-gauge railroad that follows the bed of what was once a glacial river and, finally, by bus to my destination at Luanfu. On this trip I continued to receive patients and found the problem of medical care much the same.

My observations then and later convinced me that the official attitude was not prompted merely by the shortage of medicine in the liberated area. For instance, at one of the government hospitals I examined a small boy who had a tumor growing from the roof of the pharynx. His parents had paid for an operation, but the Chinese surgeon had merely snipped off the tumor, and of course it soon grew back again. I talked to hospital officials, offering to operate radically.

The hospital superintendent turned down my offer when it was discovered that the family had spent all its money on the first operation and could pay nothing for the second.

"In that case," I said, "I will supply all the necessary materials from my own stores, use my own instruments, and perform the operation without charge."

This was translated by my interpreter to the superintendent, but he again shook his head. The interpreter, who was also a party official and an important figure in the distribution of medical supplies, said, "No, you cannot do that. It is against the policy of the Government to dispense free treatment to the lao-pel-shings (non-Communist peasants)."

These incidents were the rule instead of the exception in Communist territory. And if I had needed further proof of this governmental policy, I received it some 6 months later, when I was leaving the old liberated area, en route to Shanghai. On the train I met Anna Wong, the European-born wife of one of the top Communist officials at Peiping. She had just come from Peiping, where she had taken part in a conference with high officials regarding the future handling of all relief organizations in Red China, since she was one of the officers of China Welfare Fund.

Here, I thought, is the right person to speak to about some of the unhappy things I have seen. I did speak to her and, it seemed to me, she replied candidly in regard to the use of relief supplies.

"We have dispensed with the sloppy humanitarian viewpoint that wastes valuable time and material on useless drags of humanity merely because they are sick," she said. "We have only one interest and one duty: to keep fit those who are of value to our future Communist state. These are the

ones who will get our attention and our best care. We are not interested in the people of China as they are now. They must die anyway before we can build a new China. To help them to prolong their lives by adequate medical care would not only be a waste but it would retard progress."

Proposed Removal of Veterans' Administration Office From Boston to Philadelphia

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following communications relative to removal of the Veterans' Administration office from Boston to Philadelphia:

BOSTON, MASS., August 15, 1951

HON. EDITH N. ROGERS,
House of Representatives,
Washington, D. C.:

VA jumps Congress re consolidation of VA district offices. Speeding plans. Original date for Boston transfer was February 1952; 2 weeks ago date stepped up to November 1951. Latest order is for September 10, less than a month. Can anything be done?

RICHARD ABRAMS,
Brookline, Mass.

BOSTON, MASS., July 31, 1951.

HON. EDITH NOURSE ROGERS,
House Office Building,
Washington, D. C.:

Urge hold in abeyance question of proposed transfer of death claims from Boston to Philadelphia. Savings immaterial and negligible for this item. Strongly urge action on your part to leave as is.

GEORGE W. GRADER,
Department Commander, American
Legion, Department of Massachusetts.

BOSTON, MASS., August 15, 1951.

HON. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.:

Removal of VA district office from Boston to Philadelphia to take place in September. No consideration given employees with regard to time for settling affairs here.

DOROTHY CADY AND GERTRUDE HURW,
Dorchester, Mass.

BOSTON, MASS., August 15, 1951.

EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.:

Received verbal instruction today to either resign or go to Philadelphia District Office. Threat that finance could not process our pay and retirement at later date if such decision was not made now. Strongly urge you to do what you can for me and my fellow Boston VA employees. We are desperate.

GEORGE C. HALE,
Belmont, Mass.

WATERTOWN, MASS., August 16, 1951.

HON. EDITH NOURSE ROGERS,
House Office Building,
Washington, D. C.:

I am veteran's widow 16 years' Government service. Has Veterans' Administration right

to deprive me of reemployment rights under civil service because removal to Philadelphia in September; impossible account recently buying home and minor daughter's attending college here. No employment available with other Government agencies due to freeze.

EMILY M. FLYNN.

VETERANS' ADMINISTRATION DISTRICT OFFICE.

Boston 8, Mass., August 1, 1951.

You have been informed of the Administrator's plans to consolidate the Boston, New York, Philadelphia, and Richmond district offices, to be located in a single district office in Philadelphia.

2. You are requested to indicate in the attached questionnaire whether or not you are interested in transferring at Government expense to Philadelphia in your present grade. Failure to accept offer of transfer to the Philadelphia district office may result in your separation from service. Since this movement is a consolidation of functions within the agency, you will not be entitled to any reassignment rights in the Boston commuting area.

3. This questionnaire must be completed and returned through your supervisor to the personnel office no later than 5 p. m. August 7, 1951.

4. The effective date of this move has not yet been determined. However, the earliest possible advice of individual action will be given to all employees concerned.

GEORGE D. LIEBKE,
Acting Manager.

QUESTIONNAIRE FOR TRANSFER TO PHILADELPHIA OFFICE

Date-----

1. Name-----
2. (a) I desire to transfer to the Philadelphia district office.
- (b) I do not desire to transfer to the Philadelphia district office.
3. If you signify your desire to transfer to the Philadelphia office, complete the following:
 - (a) Married----- Single----- Number of dependents-----
 - (b) Give the age and relationship of each dependent who will accompany you to Philadelphia-----
 - (c) What mode of transportation do you expect to use?-----
 - (d) Give the approximate weight of the furniture and/or household effects that you expect to take with you-----

Signature of employee.

JAMAICA PLAIN, MASS.,
August 14, 1951.

HON. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR MRS. ROGERS: The people of today are always so willing to criticize and never say thanks for a favor that I wish to take this opportunity to sincerely thank you for the splendid objection you raised against the moving and consolidation of the district offices of the Veterans' Administration.

It is gratifying to know that not only the veteran but the Federal employee has a friend in Washington who is ever ready to defend their rights, privileges, and even positions.

Perhaps this may help to show you what we in Boston are up against in the present plans for moving to Philadelphia.

One of my friends, who just bought a house, has a wife and three children, has been applying for work in private concerns. Being only 33 years of age, he has found that he is too old to be hired as a new employee.

We in the VA were declared as defense workers and have been made to understand

that we cannot transfer to another agency with status but if we are lucky to obtain another position we must resign and then are hired as a temporary employee.

The enclosed notice gives you an idea of what we are up against if we cannot move to Philadelphia for any logical and reasonable cause.

Please note paragraph 2b, which shows that the VA employee is patriotic and believes in his Government to such an extent that he even volunteers to die for it in an emergency.

Relative to the present situation, we have been made to believe that if we do not go to Philadelphia we may lose our rights as permanent Government employees and be severed from the service.

It doesn't seem just that in one instance we should be told that we are defense workers and frozen on our jobs and in another be told that we move or we have no job.

Incidentally, the move will affect close to 1,000 of us, as the departments within the regional office which service the district office are also affected.

I am 43 years of age, have 10 years' Government service (including 2 years' Army service), am a major in the Artillery Reserve, never have been arrested even for as much as a small charge as speeding, have been a good citizen, am a disabled veteran, plan to be married, and am the present chief of staff of the Veterans of Foreign Wars, department of Massachusetts. However, this letter is written not as a member of the Veterans of Foreign Wars, but rather as an individual employee who wishes to express his gratitude to you.

It is my desire to remain in Massachusetts, but will go to Philadelphia if it becomes necessary. This seems quite possible, since there appears to be a surplus of unemployed in this area, and my disability and age are strictly two strikes against me.

Mrs. Rogers, although I am not in your congressional district, I simply wanted to express my deep appreciation for the action you took in Congress in regard to this plan of the VA, and I am also reflecting the attitude of all the VA employees in the Boston district office.

Sincerely,

CHARLES R. LOVEJOY.

JOINT RO AND DO MEMORANDUM No. 81

VETERANS' ADMINISTRATION,

Boston, Mass., May 7, 1951.

Subject: Revision of reemployment rights program.

1. The following letter from the Deputy Administrator, Veterans' Administration, Washington, D. C., dated April 20, 1951, subject as above, is quoted for your information:

"1. It will be the policy of the VA, except as provided in paragraph 3 below, to deny reemployment rights to VA employees being appointed in other defense agencies. Accordingly, managers of field stations and the Departmental Personnel Officer, Central Office, are delegated authority to deny reemployment rights to VA employees, including physicians, dentists, and nurses in the Department of Medicine and Surgery being appointed in other defense agencies without prior approval of this office.

"2. The adoption of the above-stated policy is in the best interests of the VA and will permit this agency to accomplish its mission. Among the factors considered in establishing this policy were the following:

"(a) The VA has been declared a defense agency in compliance with 38 United States Code 693 and it is essential that the accomplishment of the mission assigned to the VA by the various acts of Congress providing benefits to veterans not be disrupted through the loss of employees especially trained in VA operations and procedures.

"(b) Approximately 30,000 VA employees are reserve members of the various civilian components of the Armed Forces and, as such, are subject to being ordered to active duty if that contingency becomes necessary. A major portion of the employees occupying key positions in the VA are reservists. In the event these employees are mobilized, naturally it is anticipated that their replacements would be selected from trained nonreservist employees. As of the present time and since the beginning of the Korean situation, over 4,500 trained employees have been called or ordered to extended active military service.

"(c) During the same period indicated in (b) above, the VA has experienced the loss of 49,612 employees for all reasons. This turnover very greatly exceeds the turn-over which normally occurs.

"(d) Many VA positions are of a shortage category type for which recruitment has been proven to be difficult in different areas. While locally in certain areas, conditions may exist whereby replacements would be available for employees released, positions of that same type would be in a shortage demand in other areas.

"3. However, it is recognized that there may be instances where VA employees possess various specialized skills not being used in their present position in the VA, and which may be better utilized in the interest of national defense in the work programs of other defense agencies. In such exceptional cases, when a request is received from the appointing officer of another defense agency for the appointment with reemployment rights of such a VA employee possessing special technical, scientific, or professional skills, the following procedure will be used. The request together with complete data with respect to the employee's special skills including the other agency's basis for effecting the appointment to the position in question in the furtherance of the defense program will be forwarded to central office, office of personnel, for agency adjudication. In addition, there will be submitted a statement by the manager as to the availability of a suitable replacement for such employee. Consideration will thereupon be given to (a) the transfer and reassignment of the employee to a position in the VA wherein such special skills can be used, or (b) the denial of release with reemployment rights, or (c) the grant of release with reemployment rights.

"4. Additionally, when a request is received from the appointing officer of another defense agency for the appointment with reemployment rights of a VA employee for whom a qualified replacement is immediately available, the assistant administrator for personnel will be notified of the name, title, grade, and organizational location of such employee. A determination will be made in Central Office whether such position is of a shortage category in other areas in order to ascertain whether an offer of transfer and reassignment within the VA may be made to the employee.

"5. Managers and the Departmental Personnel Officer will be responsible for replying to the appropriate office of the Civil Service Commission when advised by the Commission of an appeal by another defense agency which was based upon VA denial of reemployment rights. Decisions adverse to the VA which are rendered by the Commission will be reported to the Assistant Administrator for Personnel, by the most expeditious means, with complete information relative to the case. The information should set forth the name, grade, position title, organizational location, and the immediate effect on operations which would be caused by the release to another defense agency in order that further appeal to the Central Office of the Civil Service Commission may be considered.

"6. Agency policy as stated in this letter will be disseminated by memorandum to all employees in order that they will be fully cognizant of the VA's position with reference to release with reemployment rights for appointment in another defense agency and to transfer and reassignment to shortage category positions in the VA.

"7. The provisions of paragraph 3 b (1) of letter from this office dated March 5, 1951, subject: 'Revision of Reemployment Rights Program, are hereby rescinded.'

By direction of the RO and DO managers:

ARTHUR T. NOREN,
Assistant Manager.

VETERANS OF FOREIGN WARS OF THE UNITED STATES.

Kansas City, Mo., August 15, 1951.

HON. EDITH NOURSE ROGERS,

House of Representatives,
Washington, D. C.

DEAR MRS. ROGERS: Just a note to express my grateful appreciation to you for the extension of remarks in the August 14 issue of the CONGRESSIONAL RECORD regarding Quintus E. Camp.

I have known Quintus for a great many years. It was always a pleasure to work with him while I was an official of the Federal Government and since I have occupied my present position with the Veterans of Foreign Wars. I know of no man in veterans' work who was more sincerely interested in the welfare of the disabled veterans of this country, and in their dependents, than Quintus Camp, nor do I know anyone who has given more of himself to the cause of our disabled veterans than he did.

Again may I express my grateful appreciation to you for the very kind remarks you made on the floor of the House of Representatives.

Sincerely,

GEORGE E. IJAMS,
Director.

NEWTON, MASS., August 14, 1951.

Congresswoman EDITH NOURSE ROGERS,
Washington, D. C.:

The 260 delegates of Middlesex County Council, representing 18,500 Legionnaires, unanimously and vehemently protest the transfer of the district office of the Veterans' Administration from Boston.

The so-called economies that are claimed for such a plan fade away under close scrutiny.

The lack of service to the veteran and the hardship imposed upon 800 workers and their families are very real, however.

We of Middlesex call upon you, our representative in the Congress, to militantly and zealously resist the move. Our cause will be aided and your position will be made clear if we may have a public declaration on your part.

JOSEPH L. WALSH,
Commander.

Attest:

LIONELL J. SADLER,
Adjutant.

LOWELL POST, No 87, Inc.,
THE AMERICAN LEGION,
August 13, 1951.

EDITH NOURSE ROGERS,
Member of Congress, Washington, D. C.

DEAR MADAM: No doubt by this time you have received a telegram advising you of the action taken Saturday, August 10, 1951, by Middlesex County Council protesting the consolidation of the 12 insurance services offices into 3 and their endorsement of your bill H. R. 9515.

Every county council of the American Legion has presented a like resolution to be acted upon at our State department convention to be held in Holyoke the 16th,

17th, and 18th of August. The resolutions of the several States and Territories will be acted upon at our National Convention at Miami in September.

Very truly yours,

JAMES E. BARRETT.

DEPARTMENT OF MASSACHUSETTS,
DISABLED AMERICAN VETERANS,
Boston, Mass., August 9, 1951.
Congresswoman EDITH N. ROGERS,
House Office Building,
Washington, D. C.

MY DEAR MRS. ROGERS: I arrived home this morning and immediately went out in search of figures which we talked about yesterday. Please note the figures in the rental space of the Boston district office. They are on the enclosed sheet.

I am also enclosing here for your information the cost estimate of moving the district office to Philadelphia. I am sure that you will appreciate these figures. It appears to me that they are congressional material. You use them as you see fit.

Also enclosed are two forms which were handed to me by one of the employees. Many of the members of our organization who are employed in the insurance and death-benefit division here in Boston have signed this form "Yes" but they actually signed the form under protest, because they were told that if they would sign "Yes" their job would be prolonged even though they did not go to Philadelphia. They asked me whether they did right, and my reply to these members was that they should have signed the form "Yes" but with protest, and that the Administrator should permit them to sign "Yes" with protest and to submit a supplementary form showing whereby they signed "Yes" with protest so that they may show their hardship which they would suffer in accepting the position in Philadelphia.

I trust that these figures are of help to you, and I am sure they will offset many of the false figures which were quoted to us in Washington.

Very truly yours,

ANTHONY D. TIESO,
Past Department Commander.

*Estimated rental cost of space occupied by
Boston district office*

Total space used by district office and for district office operations (by regional office) square feet.....	100,800
Total usable space in building (including space occupied by PBS) square feet.....	274,100
Total net space occupied by VA regional office and district office square feet.....	256,600
Percent total VA space occupied by district office.....	40
Percent total space occupied by district office.....	37
Annual rental cost of building (borne by GSA).....	\$100,000
Annual rental cost chargeable to district office.....	\$37,000
<i>Cost (estimated) of moving Boston district office to Philadelphia</i>	
Cost of moving household goods of 950 people (846 district and regional office).....	\$311,385.00
Cost of railroad fare, 950 people (not including dependents).....	15,846.00
1st class.....	14.13

Cost (estimated) of moving Boston district office to Philadelphia—Continued

Cost of per diem, 950 people, 1 day at \$9 (not including dependents).....	\$8,550.00
Cost of moving district office as now operating, 1,646,775 pounds (estimated); rate, \$3 per hundred pounds.....	49,403.25

Total..... 385,184.25

Approximately 75 percent married, 712; approximately 25 percent single, 238. Married person is allowed 7,000 pounds (maximum). Single person is allowed 2,500 pounds (maximum). \$5.42 per hundred weight is rate. Maximum weight figures.

The Servicemen's Indemnity and Insurance Act of 1951

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. ELLIOTT. Mr. Speaker, one of the foremost laws pertaining to veterans passed by this first session of the Eighty-second Congress is the Servicemen's Indemnity and Insurance Acts of 1951, which became law on April 25, 1951.

This law provides:

First. A free payment of \$10,000 to a widow or widower, child or children, parent, brother, or sister of a deceased serviceman, who died while serving in the Armed Forces on June 27, 1950, or on any subsequent date, thus achieving for the survivors of our deceased armed services personnel complete coverage, which, try as we might, we were never able to attain in World War II with respect to national service life insurance and United States Government life insurance.

Second. This coverage continues for a period of 120 days following discharge or separation from the service under conditions other than dishonorable.

Third. The discharged serviceman may, by application within 120 days after discharge purchase Government term life insurance up to \$10,000 in amount, without physical examination, at a rate greatly lower than the cost of such term insurance under the provisions of NSLI and USGLI. The lower rate allows the the ex-serviceman to pay only the cost of his term insurance, instead of paying more, as is true under NSLI and USGLI systems, and then receiving the overpayment back as a dividend, at great administrative cost to the Government.

There are many other provisions of the new law, as will be hereinafter set out, and in a matter so complex as insurance, there will undoubtedly develop certain inequities, and certain administrative difficulties, as is the case with all laws of broad coverage, that could not reasonably be foreseen. Attention of the Congress is invited to the new law with

the view to such improvement from time to time, as experience may warrant.

In addition to the universal coverage provided by the law, it has the outstanding feature of cutting administrative costs to the bone, and saving for the Government, not only this year, but throughout the years to come, millions of dollars in administrative costs.

As part of my remarks, I include the following outline of the new law and regulations taken from the Disabled American Veterans' Semimonthly of July 24, 1951:

OUTLINE OF NEW INSURANCE LAWS AND REGULATIONS

1. DATE OF ENACTMENT

The Servicemen's Indemnity and Insurance Acts of 1951, a two-part measure, was signed by the President on April 25, 1951, as Public Law 23, Eighty-second Congress, and became effective on the same date.

2. WHAT THIS LAW DOES

The Indemnity and Insurance Acts of 1951 (a) Limit the granting of new national service life insurance (NSLI) and United States Government life insurance (USGLI).

(b) Give to persons in the active service with the Armed Forces certain options and privileges regarding NSLI or USGLI they may hold.

(c) Provide free indemnity up to \$10,000 for death of persons in the active service with the Armed Forces and certain others.

(d) Provide new types of insurance for those in the service after they are separated or discharged.

(e) Establish basis for computation of premiums for the new types of insurance provided; establish conditions under which indemnity is forfeited and makes several administrative provisions.

3. LIMITATION ON ISSUE OF NEW NSLI AND USGLI

Except under certain conditions—discussed later in this fact sheet—no new insurance under NSLI or USGLI can be granted after April 25, 1951.

A. What this provision does: Since April 25, 1951, veterans who are not and have not been in the active service since June 27, 1950, including National Guard men and reservists not called to temporary service since that date:

a. Who allow their term NSLI or USGLI insurance to expire without converting it to a permanent plan or without renewing it, are no longer eligible for any type of Government insurance;

b. Who were, because of their wartime service, eligible to buy NSLI or USGLI, and did not do so on or before April 25, 1951, are no longer eligible for Government life insurance;

c. Who surrender for cash their entire NSLI or USGLI—even if the amount surrendered is less than \$10,000—have no further rights to Government insurance.

4. PRIVILEGES GRANTED SERVICE PERSONNEL HOLDING NSLI OR USGLI

Any person who is now in the service with the Armed Forces and who holds NSLI or USGLI, has the following options regarding that insurance:

A. Term insurance: If the serviceman holds term NSLI or USGLI, he may apply for a waiver of premiums. The policy will remain in force from the time the waiver is granted until 120 days after the insured is discharged or separated. After discharge, the veteran may keep his insurance in force by payment of premiums falling due after the 120-day period. (See E below.)

B. Permanent insurance in force for less than 1 year: If the insurance held by the serviceman is of this type, he may apply for a waiver of a part of the premium (the part representing the cost of the protection, as distinguished from that part of each premium which goes into the reserve). The policy will remain in force by payment of the reduced premium, for as long as the person is in the service plus 120 days. After discharge or separation, the veteran may keep his insurance in force by resuming payments of full premiums falling due after the 120-day period. (See E below.)

C. Permanent insurance in force for 1 year or longer: The serviceman holding this kind of Government life insurance may:

1. Apply for a waiver or a part of the premiums (see B above), or;

2. Surrender this policy for its cash surrender value and stop paying all premiums. Such a person, within 120 days from discharge or separation, may either apply for new insurance on the same plan and up to the same amount as he surrendered for cash (new premiums will be based on the age of the veteran at the time of application), or within the same period of 120 days from discharge, apply for reinstatement of the policy he formerly surrendered. In this latter case, the premium would be the same as he was paying before surrendering, but he would have to pay back the amount received at the time of surrender, plus that part of the premiums not paid representing reserve, plus interest.

(A serviceman will not be protected by the policy surrendered if he chooses the option described under 4, C, 2. He may be protected by the indemnity provided by the act (see 6), after separation from service, for 120 days, within which period he may apply for reinstatement or new insurance.)

D. Physical examination: No physical examination is required for granting new insurance or reinstatement as described under B and C.

E. Caution: While in applicable cases, it has been said that veterans must resume payments falling due 120 days after discharge, it is strongly recommended that they make suitable arrangements well in advance of the end of this 120-day period, to avoid possible lapse and/or expiration.

F. Waivers—When granted and their effect: Applications for waiver of premiums will not be acceptable until the person has been in the service for 31 days or longer. Waiver will not extend to premiums falling due: (1) prior to application for waiver, (2) before the second day of the second calendar month following entry into the service by the applicant; or (3) before June 2, 1951, whichever is later.

While the policy is in force under a waiver of premiums the policy does not earn any dividends.

G. Expiration of term policies while insured is in service: Any term policy whose term expires after waiver of premiums has been granted, and while the insured is in the service . . . is automatically renewed for an additional 5-year term. If the term policy expires while the insured is in the service (not under waiver) he has the right to new term insurance up to the same amount—if he applies for it within 120 days from discharge, and meets health requirements. Premiums on the new policy will be based on the age of the veteran at the time of application.

5. INDEMNITY PROTECTION

A. What it is: The indemnity granted by this law is an automatic payment made to certain survivors of those granted this protection. This protection is free of charge, and no application is necessary. It is a gratuity, and not an insurance contract.

B. Who is covered by indemnity protection: Persons covered automatically by this indemnity include all those who, on and after June 27, 1950:

(a) Are in active service of the Army, Navy, Air Force, Marine Corps, Coast Guard, or their reserve components, including the National Guard if called to active duty or active training for 14 days or more;

(b) Are cadets and midshipmen of the Military, Naval, and Coast Guard Academies;

(c) Are commissioned officers of the Coast and Geodetic Survey while assigned to duty during a period of war or an emergency as proclaimed by the President or the Congress on projects for the Army, Navy, or Air Force in areas outside the continental United States or in Alaska or in coastal areas of the United States determined by the Department of Defense to be of immediate military hazard;

(d) are in the Reserve components of the Armed Forces, including the National Guard, while engaged in aerial flights in Government owned or leased aircraft for any period, with or without pay, as an incident to their military training;

(e) are provisionally accepted for service in the Armed Forces and directed or ordered to report to a place for final acceptance and who die as a result of disabilities incurred while en route to such place and within 120 days of the incurrence of the disability;

(f) are inductees who, in response to an order to report for induction and who, after reporting to a local draft board, die as a result of disabilities incurred while en route from the draft board to a designated induction station, and within 120 days from the incurrence of such disabilities.

C. Period of coverage: Persons ordered for, or in, active service for more than 30 days are covered as long as they are in the service and shall be covered for a period of 120 days after separation or discharge. If service is 30 days or less, the person is covered only while in service. (See also B, e, and f.)

D. Amount of coverage: The amount of the coverage is \$10,000, less the amount of any NSLI or USGLI held in force by the person protected—under waiver or otherwise—at the time of death.

E. To whom payable: The indemnity is payable only to following classes of survivors: (1) widow or widower; (2) child or children; (3) parent, (4) brother or sister. The serviceman may, under the classes specified, choose one or more beneficiaries in any order of preference. If no choice is made, the indemnity will be paid to surviving relatives in the order given. No payments will be made if no one among the classes specified survive.

F. How payable: The indemnity will be paid in 120 equal monthly installments.

6. NEW TYPES OF INSURANCE

A. Term insurance: Anyone entitled to indemnity protection (see 5) and who is ordered to, or has been in, active service for more than 30 days at any time since June 27, 1950, is eligible for Government term life insurance in an amount up to \$10,000, provided he applies for it in writing after April 25, 1951, and within 120 days from discharge or separation. No physical examination will be required.

The new insurance has these characteristics:

It is term insurance: Hence, it will not accumulate cash or loan values.

It is renewable: It can be renewed for additional terms of 5 years, each with premiums based on the age of the veteran at the time of each renewal.

It is nonconvertible: It cannot be converted into any kind of permanent plan of insurance.

It is nonparticipating: In other words, it does not earn any dividends.

Premiums for this insurance are lower than those for NSLI or USGLI term insurance granted before enactment of this law.

It carries the same privileges regarding choice of beneficiaries, waivers, and settlement options as similar contracts issued under NSLI before April 25, 1951.

B. Special insurance for the disabled: A special type of insurance is authorized for certain disabled veterans (see (a) below). This insurance may be granted on any of the plans authorized by the NSLI Act of 1940, as amended. It carries the same rights and privileges regarding choice of beneficiaries, settlement options and conversion as NSLI, but with the following differences:

It is nonparticipating, hence will not earn any dividends.

Premiums are lower than premiums on corresponding plans of NSLI granted before April 25, 1951.

(a) Who is eligible: To be eligible for this insurance, veterans—

1. Must be discharged or separated from service on or after April 25, 1951, under conditions other than dishonorable;

2. Must have a service-connected disability or disabilities, recognized by the VA, and for which compensation would be payable if more than 10 percent in degree;

3. Other than disabilities described under (2) above, must be insurable under the good health requirements of NSLI.

Persons who are granted indemnity protection under this law will be considered as having been in the service, as far as eligibility for this particular type of insurance is concerned.

(b) When to apply: Application for this type of insurance must be made within 1 year from the date that service connection of the disability is determined by the VA. (Persons disabled under conditions described under paragraph 5, subheading "B, e, and f," must apply within 1 year of the incurrence of disability.)

(c) Waivers: The law provides that waivers of premiums on this insurance cannot be denied because the disability became total before the effective date of the insurance.

7. OTHER PROVISIONS

A. Forfeiture of indemnity: The law established that any person guilty of mutiny, treason, spying or desertion, or any person who, because of conscientious objections, refuses to serve in the Armed Forces or refuses to wear the uniform, shall forfeit all rights to indemnity protection. Such rights will be restored, however, if the person is restored to active duty. No indemnity will be paid for death inflicted as a lawful punishment for crime or for military or naval offense, except when inflicted by an enemy of the United States.

B. Tables of mortality: For the new types of insurance described under paragraph 6 the law stipulates that premiums, cash, loan, paid-up and extended values shall be based on the Commissioners 1941 Standard Tables of Mortality and interest at 2¼ percent per year. Annuities under 6 shall be computed under the Annuity Table for 1949.

C. Revolving fund: The act establishes a revolving fund in the Treasury of the United States to which all premiums collected for insurance described under 6, shall be credited and from which any payment shall be made. It also authorizes appropriations to this fund.

D. United States liability: If the insured dies while a waiver of premiums on his NSLI or USGLI is in effect (4, A, B, and C), the United States will be liable for the difference between the reserve of the policy at the time of death of the insured and the value of the benefits under the policy.

Lincoln on Korea

EXTENSION OF REMARKS
OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks in the Record, I wish to bring to the attention of my colleagues and of the country a very timely article entitled "Lincoln on Korea," written by a well-known Denver attorney and historian, Wayne C. Williams.

The article received commendation of the President when it was brought to his attention; it has been publicized in the Nation's press by Mrs. Eleanor Roosevelt in her syndicated column; and the Department of State has seen fit to use it in one of its overseas publications for distribution abroad. It is my further understanding that the Voice of America is considering it for possible use on one of its broadcasts.

I am of the firm conviction that an article such as this one should receive the widest possible distribution because it clearly sets out in a few compact words some of the factors in the United Nations' decision to repulse the Communist aggression in Korea and this is done in the immemorial style of Lincoln's Gettysburg address. What was true then is still true today and will be so tomorrow, for as long as man wishes to enjoy freedom he will be willing to fight for it. It is man's most precious jewel, it must be constantly guarded if benefits and enjoyment are to be derived therefrom.

Mr. Speaker, I desire to include Mr. Williams' article as it appeared in the Denver Democrat of July 7, 1951; Mrs. Roosevelt's column, My Day, and as it appeared in the Denver Rocky Mountain News of July 26, 1951, together with President Truman's letter to Mr. Williams.

[From the Denver Democrat of July 7, 1951]

AN ANSWER TO 'THE GI'S

Numerous GI's write home asking their parents the question, "What are we fighting for?"

Wayne C. Williams, well-known Denver attorney and writer, in the Lincoln way has answered the question in the following article, which appeared in the Washington Post:

"LINCOLN ON KOREA

"What is the cause for which our soldiers are fighting in Korea?

"The issue is historically clear and admits of no doubt

"Let us use the logic of Lincoln and borrow some of his immortal phrases to describe it for this present generation.

"Out of the travail, suffering, and death of two world wars the free nations of the world which had overthrown the aggressors, Hitler and Mussolini and Tojo, assembled at San Francisco, under the flag of America, framed a charter and brought forth a new international organization called the United Nations, and dedicated to the proposition that all nations are free and equal and are entitled to live in peace and freedom from aggression.

"We are now in the throes of a mighty conflict between the aggressors who have defied the United Nations by invading one of its members, to determine whether this international union or whether any international organization, so conceived and so dedicated, can long endure.

"The brave men struggling in Korea against Russian and Chinese communism are fighting in this noblest of causes and have hallowed that sacred ground far above our power to add or detract.

"It is for us the living to sustain the forces of freedom in the United Nations in their struggle to free the world of aggression, of slavery and to end the brutal assault of the aggressor nations against the least and weakest of the free nations.

"If we can prevail now in this conflict we will have established an organization of free nations that can hereafter stop aggression, and enforce the ideals of liberty through law, to the end that the free and peace-loving peoples of the world may now be free to live their lives in peace and freedom so that war may perish from the earth.

"WAYNE C. WILLIAMS.

"DENVER, COLO."

[From the Denver Rocky Mountain News of July 26, 1951]

MY DAY

(By Eleanor Roosevelt)

HYDE PARK, July 20.—I hear people so often ask the question, "What are our boys fighting for in Korea?" that I was delighted to be sent a clipping from the Rocky Mountain News.

In this Wayne C. Williams put the reasons for the struggle in Korea so simply and so plainly that I would like to publicize it as widely as possible.

Mr. Williams is a well-known Denver attorney and writer and student of President Lincoln, having recently published a book on our Civil War President. He entitled his newspaper article "Lincoln on Korea." It follows:

"What is the cause for which our soldiers are fighting in Korea?

"Let us use the logic of Lincoln and borrow some of his immortal phrases to describe it for this present generation.

"Out of the travail, suffering and death of two world wars the free nations of the world which had overthrown the aggressors, Hitler, Mussolini, and Tojo, assembled at San Francisco, under the flag of America, framed a charter and brought forth a new international organization called the United Nations, and dedicated to the proposition that all nations are free and equal and are entitled to live in peace and freedom from aggression.

"We are now in the throes of a mighty conflict to determine whether this international union or whether any international organization, so conceived and so dedicated, can long endure.

"The brave men struggling in Korea against Russian and Chinese communism are fighting in this noblest of causes and have allowed that sacred ground far above our power to add or detract.

"It is for us the living to sustain the forces of freedom in the United Nations in their struggle to free the world of aggression, of slavery and to end the brutal assault of the aggressor nations against the least and weakest of the free nations."

It is really very important that we get to our soldiers fighting in Korea, and to their mothers here at home, a realization of the greatness of the cause which the United Nations has undertaken.

Perhaps out of the Korean decision to resist aggression there may come a stronger organization within the United Nations,

bound together to oppose aggression and, therefore, to fight for peace.

THE WHITE HOUSE,
Washington, July 30, 1951.

WAYNE C. WILLIAMS, Esq.,

Denver, Colo.

DEAR MR. WILLIAMS: I congratulate you upon the inspiration which brought forth your letter captioned "Lincoln on Korea" and which happily has received widespread publication in the newspapers.

I was particularly pleased that that discerning judge of values, Mrs. Roosevelt, embodied it in a recent column.

The analogy is impressive and the Lincoln-esque touch is masterly. All in all, a very forceful presentation of a great principle.

Very sincerely yours,

HARRY S. TRUMAN.

Investigation of All Hate Mongers Is
NeededEXTENSION OF REMARKS
OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. YORTY. Mr. Speaker, I desire to call the attention of the House to the following letter which I am filing with the House Committee on Un-American Activities:

AUGUST 16, 1951.

HON. JOHN S. WOOD,

Chairman, Committee on Un-American Activities, House of Representatives, Washington, D. C.

DEAR COLLEAGUE. I know you agree with me that whatever divides us internally weakens our ability to meet the external threat to our liberties which daily mounts about us. The shield of the Republic, held up to foreign onslaughts, can be no more effective than the strength of the Nation's arm which supports it. Surely there is meaning for us in that solemn injunction of old, a house divided against itself cannot stand.

Holding these views, I am the more sensitive to the divisive programs being espoused by political factions on both left and right. Fortunately we have in the United States a number of agencies devoted to the task of exposing these factions through pitiless publicity. The free press, your committee, and the American Legion's Americanism Commission have been stalwarts in this cause.

In recent years your committee has quite rightly found it exigent to devote the limited funds placed at its disposal to exposing the Communist threat in America. In direct proportion to the increasing danger of the Soviet Union to our security, the threat of domestic Communists has risen. But it is my firm conviction that we are now at such a point of danger in world affairs that any group dedicated to the gospel of hate instead of union constitutes a threat to our security and cannot be overlooked. Whether the effort is to pit class against class, or religion against religion, or race against race, the effect is the same; to destroy that sense of oneness as Americans which is the arm upholding the shield of the Republic.

My attention has been recently directed both by the American Legion and by literature coming to my office to the activities of

one of these hate groups operating in the United States. I refer to the writings of one Robert H. Williams, of Santa Ana, Calif. In addition to his serial publication, the Williams Intelligence Summary, he also has distributed such monographs as *Know Your Enemy* (copyrighted 1950).

I have perused these two publications with care and have found their central theme to be that Jews are a threat to the security of the United States. His entire attack seems to stem from the one scintilla of evidence that a number of Communists happen to be Jews. In the dishonored tradition of all poisoned minds, Williams then proceeds to spawn the most contemptible agglomeration of half-truths, innuendos, and false accusations that I have encountered in a long time.

I offer these examples. Williams refers in his intelligence summary of May 1951 to nine prominent Jews in the United Nations—including United States adviser Ben Cohen—as all evidently Marxists. He makes an outright distortion in saying that "Eban—one of the nine—is the delegate from the Marxist-dominated Zionist state." A few paragraphs later his all evidently Marxists become the nine Marxists. In attacking Gen. Mark Clark because his mother was Jewish—a fact pointed out by Williams—Williams then disparages the use of the six-pointed star of David as the emblem of the Sixth Army. This was, to Williams, another indication of Jewish control over America.

Williams' attack on HERBERT H. LEHMAN, distinguished former Governor of New York and now United States Senator from that State, is typical of his character assassination of other loyal American citizens of Jewish descent:

"LEHMAN is a vice president of the Communist-aiding Anti-Defamation League, the real power behind the Red revolution in the West. Banker-Zionist LEHMAN now is promoting a fantastic movement called Crusade for Freedom, which has enlisted many good men and many old-time Communist liners, such as the Jewish movie producer Walter Wanger—put in charge of the Los Angeles division. A spokesman said the organization had no intention of opposing the Truman-Acheson policies. Drew Pearson is plugging it over the radio. Obviously it is a deceptive move, not really bent on combating communism. What it contemplates is the building of five huge short-wave propaganda stations in Europe and perhaps Asia. In the hands of international banker LEHMAN and associated Reds, this gigantic project can move the masses of Europe and Asia to please its planners * * * " (*Know Your Enemy*, p. 34).

The venom of this poison penster is nowhere better indicated than in the crude mathematical formula he adduces to identify Jews. He refers to the daughter of a gentile father and a Jewish mother as a Jew because, in Williams' formula, a half-Jew is a Jew (*Know Your Enemy*, p. 33).

Does Williams recommend the traditional American way of amalgamating minority groups into our national whole? On the contrary:

"The only solution to the Communist-Zionist revolution is to deport all the activists and any successors who become active. Deport all members of the Communist Party and all Zionists of influence, together with their principal proselytes; deport the Frankfurters and Lehmans, the Achesons and Hisses. * * * Put them on a suitable island where they can be self-supporting and charge the Navy with keeping them there. This may never be possible; it may be too late. But such is the price of survival, if we can accomplish it. History does not indicate any other solution except deterioration, violence, bloodshed, and subversion and grad-

ual disappearance of the whites" (*Know Your Enemy*, p. 54).

The doctrine of racial supremacy is as foreign to our way of life as is the doctrine of the dictatorship of the proletariat. Both are un-American; both are corrosive poisons eating away at our foundations; both need to be counteracted by the scrutiny which your committee can provide.

I find that the charter of the Un-American Activities Committee as set forth in Public Law 601 (sec. 121Q) of the Seventy-ninth Congress is broadly worded to encompass all varieties of subversion:

The Committee on Un-American Activities, as a whole or by subcommittee, is authorized to make from time to time investigations of (i) the extent, character, and objects of un-American propaganda activities in the United States, (ii) the diffusion within the United States of subversive and un-American propaganda that is instigated from foreign countries or of a domestic origin and attacks the principle of the form of government as guaranteed by our Constitution, and (iii) all other questions in relation thereto that would aid Congress in any necessary remedial legislation.

In view of the clear authority vested in your committee to investigate un-American propaganda activities, and in view of the divisive effect of the anti-Semitic propaganda now being circulated by him, I respectfully urge and request an investigation by your committee of Robert H. Williams, of Santa Ana, Calif.

With kindest regards,
Sincerely,

SAMUEL W. YORTY,
Member of Congress

Extending Point 4

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. THOMPSON of Texas. Mr. Speaker, consideration of the extension of the Economic Cooperation Administration is necessarily of very deep concern to every Member of Congress. In the past 24 hours, I have wished many times that I could consult with the thinking people in my district and check their opinions against my own.

This morning a copy of my hometown morning paper, the Galveston News, reached my desk. In it I read an editorial on the subject of the extension of point 4. The News is the oldest Texas daily and is a sound and conservative paper. Its favorable endorsement of point 4 and of the Marshall plan in general is refreshing and encouraging. The editorial follows:

EXTENDING POINT 4

It has now been proposed that the point 4 program, which calls for technical assistance to underdeveloped areas of the world, be broadened to include gifts of physical goods such as farm machinery. The proponents of an expanded program believe that countries which are improving their standards of living are less likely prey for the Communists.

The original point 4 program as outlined by President Truman sought to give aid in the form of technical assistance to countries which needed it. In short, we would export

American know-how, and it was felt that we, in turn, might be able to make use of some of the materials produced under improved systems.

If we are to remain allied with countries which intend to resist aggression, it would be desirable to have those nations as self-supporting as possible. If we could stimulate their agriculture and industry to the point where they could produce more of their own food and goods, there might in the long run be less of a drain on our resources. A healthy economy among our allies is important. The chain of our united stand against communism may prove no stronger than its weakest link.

Recent reports show that America can now import some of the steel we need in our defense effort from Europe. The ability of Europe to export steel, after its industrial production had sunk so low, is largely the result of Marshall-plan aid. Perhaps the point 4 plan might bear equally happy fruits.

The Craving for Security

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. REES of Kansas. Mr. Speaker, on last Sunday morning Albert Joseph McCartney, D. D., LL. D., L. H. D., a former pastor of the National Presbyterian Church in Washington, D. C., was guest minister at the First Congregational Church in Washington.

Dr. McCartney delivered a most interesting and effective sermon. I deem the sermon of sufficient importance to include it in the CONGRESSIONAL RECORD in order that Members of Congress and others may have a chance to read this splendid message.

Dr. McCartney is recognized as one of the outstanding ministers in this country. I commend your reading this sermon:

THE CRAVING FOR SECURITY

Our great American obsession would seem to be the quest for security. Man's chief end is no longer to "glorify God and enjoy Him forever," but his chief concern seems today to be for security—a roof over his head, sufficiency of food and clothing, a guaranteed job, a fireside, an easy chair, and slippers, perhaps, at the end of the day. The great hue and cry on all sides is for security—social security, economic security, health security, old-age security, job security—security from the cradle to the grave.

The prophet Jeremiah was sure that security didn't lie in these directions. He kept warning his people that if things kept on as they were in his day—very much, it would seem, as they are going on in our day, gaining momentum on the downgrade—something irretrievable would happen: the very nation itself might collapse and pass away. His sensitive soul instinctively recoiled from the evil features of the Nation's life, and he was trying to find the answer to the moral and social conditions of his time. What, he asks himself, are the true sources of peace and satisfaction in a people's life? Groping for an answer, he gives us the profound and simple statement of the text—Jeremiah 9: 24—"But let him that glorieth glory in this, that he understandeth and knoweth Me, that I am the Lord, which exercise loving kindness, judgment, and righteousness

in the earth: for in these things I delight,' saith the Lord."

Let us seek to appraise these proscriptions of Jeremiah on the level of collective society; that is, in the State, the Nation, and in international relations.

I

First of all, he warns us not to count too much upon our accumulated knowledge. Let not the wise man glory in his wisdom. Why not? It is our proud boast that we have built a schoolhouse in every green valley, established a university on every high hill, and opened a library at every crossroads village. Through visual and oral education our children are made familiar with the facts of life both beautiful and ugly, before they are into their teens, and they have second-hand knowledge of the nastiness that is in the world that our grandfathers never acquired in the full reach of their three score years and ten. Our universities and colleges are turning out their product on the assembly line process by the thousands. We have poured out unmeasured billions into our educational hopper, and the cry keeps rising for more. We dedicated nine billion alone, and justly so, for the education of our demobilized soldiers. What is the result of all this vast investment? Ask J. Edgar Hoover and he will tell you the graph for juvenile crime seems to be keeping ever on the upgrade. The headlines in our papers dramatize a harvest of crime and dishonesty in high places that would be a disgrace to the most backward countries on the face of the earth. These crimes are committed by a generation which has been the beneficiary of our most costly and wide-spread education. We mean no disparagement to the place and program of the schools, but if life teaches us anything it teaches that heaven lies beyond the reaches of the mind. Evidently wisdom, knowledge, education are no guarantees for national or social security and satisfaction. This is clearly corroborated when we take the long view of history. Every great empire that has passed away was in the very hour of its passing the wisest, the most knowing, the most technically equipped people on the face of the earth. The fallen columns of Tyre, proudest city of antiquity, exposed by every ebbing tide; the fading paintings on the walls of Petra; the crumbling monoliths of Baalbec, that protrude from the sands of the desert like jagged teeth set in the sunken gums of the ages; these furnish mute testimony to the unreliability of man's wisdom. If the accumulation of sheer knowledge were the open road to peace and security, we should long since have arrived there. If the claims of the school men are valid, that the road to utopia lies through more and better educational processes, certainly by now we should have sighted the domes and minarets of the New Jerusalem. Evidently there has been miserable mismanagement somewhere. Is it in the fact that we have neglected the education of man's spiritual nature, the education of the heart? It is possible that we have nurtured in our national family circle a generation that knows little of God, and cares less for the moral law? Let not the wise man glory in his wisdom.

II

Jeremiah warns us furthermore against relying upon our national defense: "Neither let the mighty man (i. e., the military man) glory in his might." Why not? Our national security would seem to be the absorbing concern of people, press, and politicians. Concerned as we all are for what is happening in other parts of the world to defenseless peoples, we must naturally be on the alert to garrison every possible access to alien philosophies and personalities that threaten our once decent way of life. Yet no matter how complete our defense, it will not guarantee us the security for which the heart

longs. It is not for an embattled peace about which we are concerned, though we may have to endure it for a decade or more. Cannot a people with all the accumulated knowledge that we have, and all the sad experience through which we have so recently passed and are still passing in Korea—can we not learn anything from history? Can we not manage to have our statesmen think more clearly, speak more softly, act more sanely, and set forth a foreign policy on the levels of values that reach out beyond the range of sheer military might? Can we not engage to dedicate our great privileges, our wonderful resources, to the service of mankind by sharing our heritage of ideals and blessings? We must defend the freedom of the world not with guns and dollar diplomacy alone, but quite beyond these by the mobilization of the spirit, of the mind, and of the heart. Our real battle is for the conquest of the souls of men. Neither let the mighty man glory in his might.

III

Jeremiah's third proscription lies in the realm of economics: "Let not the rich man glory in his riches." Why not? In our economically minded age, business prosperity is believed to be the open sesame to the security and the satisfaction of life. It is to the bank account and the ticker tape that we are all inclined to "ascribe majesty and honor, dominion and power, now and forever, amen." But the deeper question is, What are we going to do with our vast riches? We have allowed our economy to become honeycombed with sheer materialism. Dishonesty has been spreading like a plague throughout our country, as witness the disclosures in the academic world, in the field of politics, and on the witness stand before so many courts. The conflicting assizing of the West Point revelation is a sad commentary on how far the moral standards have slipped.

The root of our present moral chaos lies in the fact that men and nations have been seeking the glory of life in money and in things that money can buy. But there is no certain magic in prosperity which will bring about peace and satisfaction and security, as witness our present fears and tensions, for riches are forever taking wings unto themselves and flying away. Jesus told us that long ago in his unforgettable language—"a man's life consisteth not in the abundance of the things which he possesseth." We are coming to realize that it takes more than commercial prosperity and accumulated wealth to secure a Nation's well-being. Robert Burns summed it all up when he sang in his upland dialect:

"It's no in titles nor in rank;
It's no in wealth like Lon'on bank,
To purchase peace and rest;
It's no in making mickle mair;
It's no in books, it's no in lear,
To make us truly blest;
If happiness hae not her seat
An' centre in the breast,
We may be wise, or rich, or great,
But never can be great;
Nae treasures nae pleasures
Can make us happy, lang;
The heart aye's the part aye
That makes us right or wrang."

Let not the rich man glory in his riches. When we turn back to reread what Jeremiah had to say to the people of his time we realize that it is something worth listening to across the centuries, even though it was said so long ago, and to so small a people. It makes a thinking man sit up and take notice. In substance it is this: That which gives a people or a nation its adhesiveness, its solid character, its dependability, that which assures it a place in history, and evokes respect upon the part of other peo-

ples and gives it power to survive, is in the last analysis not its wisdom, nor its educational system, nor its military preparedness and national defenses, not in its accumulated wealth and business measured in billions, but the thing that really matters is the spirit of a people, that mysterious thing called integrity of character, in short, the soul of a people. Jeremiah is trying to tell us across the centuries that we are putting the accent in the wrong place, and on the wrong things, for it is the soul of a nation that matters. What shall it profit a nation if it gain the whole world and lose its soul? It was Daniel who said "the people that do know their God shall be strong and do exploits."

So all this heads up in an appeal to every individual and his sense of responsibility for saving what we call our American way of life, insofar as it is Christian. It is there that you and I can each stand up and be counted, and take an unequivocal stand in the realm of the spirit. Jeremiah had the only answer: "Let him that glorieth glory in this that he understandeth and knoweth Me, that I am the Lord which exercise loving kindness, judgment, and righteousness in the earth: For in these things I delight, said the Lord." There you have the keys to the kingdom, the exercise of loving kindness, of good will, of justice, good behavior, and these keys to the kingdom are within the reach of every one of us.

I know of no more enduring counsel than to commend to you a personal knowledge of God and all those values in which He would delight and you can gain that through knowing Jesus Christ, who is the express image of the Father, and whom to know aright is life eternal.

So the answer to the quest for security lies just there: "Let him that glorieth glory in this, that he understandeth and knoweth Me." Do you know Him? How well do you know Him?

Commissioner of Internal Revenue

EXTENSION OF REMARKS OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. THORNBERRY. Mr. Speaker, on August 1, 1951, I was privileged, along with other members of the Texas delegation, to attend the ceremonies in which Gen. John B. Dunlap was sworn in as Commissioner of Internal Revenue. The oath of office was administered by the Honorable Tom C. Clark, Associate Justice of the Supreme Court of the United States.

General Dunlap has a distinguished record of public service, both in the civil government and in the military. The President and the Secretary of the Treasury are to be congratulated upon the appointment of a man of the character and the capacity of General Dunlap to this important office.

I was impressed by the remarks made by General Dunlap just after he had taken the oath of office. I think his remarks show that he will conduct the affairs of the Bureau of Internal Revenue with efficiency and with integrity. I believe all of the Members of Congress will be interested in his statement, and I

am, therefore, including it in these remarks. The statement is as follows:

STATEMENT OF JOHN B. DUNLAP, COMMISSIONER OF INTERNAL REVENUE, UPON TAKING THE OATH OF OFFICE, AUGUST 1, 1951

During the past 10 years an almost unbelievable metamorphosis has taken place in the internal revenue service. In the fiscal year 1940 the service received only about 19,000,000 returns. During the fiscal year 1951 we processed 90,000,000 returns, plus 120,000,000 related documents. In 1940 Internal Revenue collections amounted to \$5,300,000,000, while in 1951 our collections totaled over \$51,000,000,000. Taxpayers' accounts on our books increased from 12½ million in 1940 to over 60 million in 1951. In 1940 there was no tax refund problem. In 1951 the Bureau made 30,000,000 individual refunds. This tremendous growth in the workload of the Bureau of Internal Revenue called for a miracle of cooperation and management.

Solving the many problems, involving everything from space to decentralization of various functions to the field, which arose during that period called for great management ingenuity at all levels of the Service. They could only be solved through the introduction of modern scientific sampling techniques, the utilization of new mechanical devices, establishment of a central management staff, development of new tax return forms, introduction of a comprehensive cost reporting system; and numerous other improvements. They could never have been accomplished without the sympathetic cooperation we received from the Treasury Department under Secretary Snyder's management-improvement program.

We must have failed in our attempt to reach our present high state of efficiency without the wholehearted and loyal support of all of that vast body of employees who make up the Bureau of Internal Revenue and its many field offices. Their integrity and their devotion to duty, without regard for the difficulty of the task ahead, or for the long hours involved, have been the basic factors contributing to the solution of our problems.

Even as fine as our employees have been during this trying period, they would have been helpless without the far-seeing, intelligent, and sympathetic leadership which has been so ably furnished for the past 4 years by my friend and predecessor, the Honorable George J. Schoeneman, who, in my opinion, has furnished us with the finest example of a true public servant throughout his 42 years in the Federal service it has ever been my pleasure to know.

George J. Schoeneman and I have at least two things in common. The first is a deep and abiding interest in, and affection for, the Internal Revenue Service, including our goals of raising the level of tax administration, giving more sympathetic consideration to taxpayers' problems, and rendering better service to the public through adoption of more efficient methods of operation, strengthened supervision, and management controls. The second is that we share a tremendous respect and admiration for the integrity of the people who make up the Internal Revenue Service. They are honest, hard-working and efficient. They are loyal. They are the Bureau. I think the fact that out of a total of over 57,000 members of our official family we have had a mere handful of individuals who have failed to measure up to our traditionally high standards of loyalty, faithfulness, and honesty, bears striking witness to the seriousness with which our people treat the important public trust which is theirs.

I have recently completed a trip around the entire United States during which I discussed many problems with the heads of

all of our various field offices and their assistants. My high opinion of our service and its people has become even higher after these visits.

There may be some few within our service who, even now, do not measure up to our standards, possibly some who may have betrayed their high trust. I assure you and the public that these few will be eliminated from our service quickly whenever and wherever their irregularities are detected. In simple fairness to all of our honest and loyal employees, it is necessary that no one be allowed amongst us who might cause the splendid reputation of our people and our service to be smeared by any faithlessness to his public trust.

During this same period of expansion, we have received splendid cooperation from the Congress. Even now, a subcommittee of the Ways and Means Committee of the House of Representatives is working with us in order to provide the Congress with a complete picture of our operations for the purpose of assisting us in bettering the service through constructive suggestions. I wish to assure the King subcommittee that it will receive my wholehearted and complete cooperation as well as that of every other employee in the service in the accomplishment of its important goal.

The task I am assuming is a heavy one. I will need the help of all of our people in the service. I feel confident I will receive it. In that knowledge, I wish to assure the President of our country, and our Secretary of the Treasury, the Honorable John W. Snyder, as well as the Members of our Congress, that the Bureau of Internal Revenue will continue to go forward in its efforts to better its service to our Government and to the people who comprise it.

Celebration of First Year's Existence of Novy Svet, Cleveland Czechoslovak Daily

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mrs. BOLTON. Mr. Speaker, it was with great pride that I read in the August 13 issue of the Plain Dealer, one of Cleveland's great metropolitan newspapers, an editorial entitled "It Fights for Freedom." This editorial salutes Cleveland's Czechoslovak daily newspaper, Novy Svet—the New World—which this month ended the first year of its existence—a year dedicated to serving the interests of the Czechs and Slovaks alike, impartially, efficiently, and regardless of creed or nationality.

We Clevelanders are proud of our foreign language newspapers which give expression to the deep love of America felt by the very large part of our cosmopolitan citizenry whose backgrounds reach into practically every country of the world.

Such men as Mr. Kratky, editor of the Novy Svet, are doing a splendid job interpreting the fundamentals of our great free country to the Czechs—and many others—who have come and are still coming to Cleveland. I am happy to

salute him and his staff for the fine courage they have displayed in the year that has passed, and wish them a happy and ever increasingly successful future.

Mr. Speaker, under unanimous consent to revise and extend my remarks, I include therein the editorial which appeared in the Cleveland Plain Dealer.

The editorial follows:

IT FIGHTS FOR FREEDOM

It is just over a year since Novy Svet (The New World), Cleveland Czechoslovak daily newspaper, was established. In a day when the lot of the foreign language publication is a difficult one Novy Svet, under the able editorship of John F. Kratky, has amply demonstrated its value.

While for years before the war, due to immigration restrictions, the reading public of foreign language newspapers was shrinking, there was an impetus after the war with the influx of DP's and persons fleeing the new dictatorships.

But, whether the audience was large or small, the foreign language press was often the only medium for the conveyance of ideas. In the Czech community in Cleveland, which once boasted two dailies, the situation had become critical. The old Svet American adopted a pro-Communist line and much poison was spread and a great deal of damage done.

The old daily died of repudiation. The Novy Svet was founded on American principles, on a commitment to freedom around the world. As Editor Kratky said: "We want a daily which will serve the interests of all the people, the Czechs and the Slovaks alike, impartially, efficiently and regardless of creed or nationality and which at all times will try to bring them as close as possible."

To this end the first year's existence of Novy Svet has been tirelessly devoted. We have confidence it will continue for many more years to come.

Air Force Program

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I offer herewith an article by Joseph and Stewart Alsop entitled "Huge AF Demands Seen":

HUGE AF DEMANDS SEEN

(By Joseph and Stewart Alsop)

WASHINGTON.—Before very long, the Air Force issue is going to come out, or perhaps burst out, into the open. The preliminary drumfire has already been heard from the friends of air power on Capitol Hill. Secretary of Defense George C. Marshall, and Under Secretary Robert A. Lovett, now have before them the air staffs' program of requirements for an expanded force of 150 groups.

Even if the plan is accepted by Secretary Marshall and the President (which seems likely) its first disclosure is bound to be a bit explosive, if only because of the immense outlays and grave issues involved.

As a minimum, the cost is estimated at several billions of supplemental appropriations by the present Congress and \$15,000,000,000 additional in the 1953 budget, with

recurring huge appropriations in the subsequent budgets.

The chief issue raised is, of course, the proportion of defense investment between the services. The Navy is considered to be approximately large enough already. The Army is reaching its planned manpower ceiling, although still deficient in many types of vital equipment.

But while the curves of expansion of the brother services are thus leveling off, the Air Force expansion curve is to shoot upwards precipitately, and it is not to level off until annual Air Force expenditure is far above either Army or Navy expenditure. The kind of trouble this can give rise to is only too easy to imagine.

Building the Defense Establishment squarely around the Air Force; increasing the already vast defense budget by such huge further sums—these are serious steps to take. But the reasons why a greatly expanded Air Force is needed at this time are quite unanswerable.

First, the air defense of the continental United States is rapidly becoming a larger and larger job. The existing Soviet strategic air force, of imitation B-29's, is expanding. And at the recent air show in Moscow, the Soviets displayed a truly long-range heavy bomber of B-36 type, which air intelligence credits with a 5,000-mile striking radius.

Since the smaller and less costly standard Soviet heavy bomber can efficiently hit targets anywhere except in this hemisphere, the production of this huge, very long-range bomber can have only one purpose—to attack this country.

TWO JOBS AT ONCE

Second, the threat of the Soviet strategic air force, to our allies and to us, also increases the requirement for the American strategic Air Force.

It was originally designed solely to destroy the industrial vitals of the Russian war machine. Its first priority must now be the destruction of Soviet strategic air. Thus, in effect, the American strategic Air Force must now be built big enough to do two jobs at once.

Third, the importance of tactical air in ground war is now so great that General Eisenhower's staff has evolved a rule of the thumb—"The fewer divisions you have, the more air groups you need."

For the defense of Western Europe, it is necessary for General Eisenhower to have a tactical air force ready at all times for combat, which will be capable of dominating the very large Soviet tactical air force from the moment when the first shot is fired.

NO PROPAGANDA

These requirements, and the Soviet air threat that begets them are not mere dreams of air propagandists. The new Soviet bomber of B-36 type is not the 10-engine jet that has been wildly reported. It is a huge four-engine plane, of fairly conventional design. But it exists, has been photographed, and by the magic of the intelligence analysts has been shown to have approximately the characteristics given above.

Equally, the air force actually has in its hands a MIG-15 engine, and has more than ruefully examined the decidedly superior high-temperature alloys and remarkably skillful welding that make this the best jet engine now in production.

In plain language, the Soviets have now been proven capable of building air power on an all too impressive scale. And if we do not wish to commit national suicide, American air power cannot be allowed to fall behind.

Necessary Defense Housing Program

EXTENSION OF REMARKS

OF

HON. HAMILTON C. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. HAMILTON C. JONES. Mr. Speaker, I wish to state that it was very wise legislation on the part of the House to include in the passage of Senate bill 349 the provision as set forth in the amendment offered by Congressman DEANE, of North Carolina to give the Federal Housing Administration a one-and-a-half-billion-dollar increase in its authority to insure mortgages especially in those cases where the Government contracts had been let and contractors were ready to proceed with the construction of defense housing which could not proceed until the necessary backing was given by the Government to negotiate the loans with the banks and insurance companies.

Without the passage of this amendment these necessary housing construction programs are at a standstill. For example, in the State of North Carolina, there is a project for the construction of 1,421 housing units at the Marine Corps Air Station at Cherry Point, N. C., which is being absolutely held up because of the difficulty in financing same since the features of the Federal National Mortgage Association have not been reenacted to cover a situation of this character. In addition, there are a number of units to be constructed at Fort Bragg, N. C., of the same character under the same plan with the contracts already let, but whose construction is being held up because the contractor is unable to make financial arrangements because of the absence of the Federal National Mortgage Association provisions.

There is also in the South Carolina area a housing project of 500 housing units at Shaw Field, S. C., the construction of which is being held up for the same reason. These are just some of the housing units that are being necessarily constructed in military facilities in North Carolina and South Carolina and the same is true throughout the country generally where military housing is necessary because of the inability of the contractors to make necessary financial arrangements.

The contractors have reached a dead-end street in the matter unless the amendment offered by Congressman DEANE is passed. They are unable to handle the construction program with either the banks or life insurance companies for the reason that these institutions cannot afford to accept the mortgage bonds unless they are definitely supported by legislation as provided for in Congressman DEANE's amendment.

I understand that some several weeks ago the President by procedure authorized home and housing agencies through the Federal National Mortgage Associa-

tion, to purchase as much as \$350,000,000 of the Wherry bill title VIII military housing mortgages, but the banks on contacting the heads of the agency cannot secure a written commitment to purchase, as they were not authorized to issue written commitments for purchase by law.

Congressman DEANE's amendment would authorize these commitments, would solve the situation, would finance this necessary construction in a practical way and permit all of these necessary defense construction projects to proceed to a satisfactory conclusion.

I sincerely hope that this amendment and its provisions will be included in the conference report and the necessary legal authority be furnished by Congress to complete this necessary construction of housing units in defense areas which is so vitally important to the development of our national defense program.

Inactive Reservist

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following newspaper article by Hal Clancy which appeared in a recent issue of the Boston Traveler, Boston, Mass.:

INACTIVE RESERVE GETS DIRTIEST DEAL—MANY OFFICERS STILL IN KOREA ZONE WHILE ACTIVE RESERVISTS NOT CALLED

(By Hal Clancy)

The inactive reservist continues to get the Nation's dirtiest deal—and no one seems in a mood to do anything about it.

These men—who accepted no pay for being in the Reserve, who had their contract with the Government changed after they had signed it—are being victimized for the casual convenience of the services.

Take the case of Lieutenant A; it's typical of many:

Lieutenant A was a combat infantryman in World War II and was commissioned in battle. Upon discharge, he stayed in the inactive reserve with the tacit understanding he would be called only in event of all-out war.

He was 35 years old when his recall came. He told his wife and three children that it was a mistake because he was over age in grade for a combat platoon leader. That's what he thought.

After a brief training period, he was flown to Japan and Korea. At 35, he was assigned to a rifle platoon which he led until he was wounded and hospitalized in Japan.

At home, his wife sold their small house and took a tiny apartment. She protested to her Congressman that it wasn't fair for her husband to be overseas when most of the Nation's paid Active Reservists had not been called.

The Congressman agreed it was a very sad thing. Period.

Lieutenant A was released from the hospital after a few weeks and told to stand by for shipping orders. The shipping orders came all right—back to Korea.

That's where he is now.

Lieutenant B is another case—also typical:

This officer was more than 30 years of age and had served 4 years during the last war, three of them overseas. World War II had forced him to close a small business he had started, but he reopened it when he was discharged.

He did pretty well. It wasn't easy. For 2 years he had to take an extra job—nights—to make up the money he was losing. The third year he broke even. The fourth year he showed a small profit.

It seemed as though 1950 would be his first really successful year. It looked like the opportunity to buy the house he and his wife and two children were renting.

He was recalled and sent to a southern camp. Back home, those of his friends who were accepting regular pay from the services for being in the Reserves, kept their jobs and civilian status.

For the second time, war had forced him to close a business. But the second time was infinitely more tragic than the first—because he seemed on the threshold of success, and he was older.

Lieutenant B is in Korea now.

The Defense Department has admitted that inactive reservists were called up in panic because those charged with our defenses had woefully underestimated the emergency until it was upon us. The Defense Department said it planned to do something about it.

That was several months ago. It's true that the Defense Department did discharge some Inactive Reserve enlisted men—and deferred others because of age or dependents.

But officers were the real sufferers. With them, age didn't seem to matter. Dependents definitely didn't.

College students were deferred. Active Reserves were required to perform certain drills—but were not called except in scattered instances, or when they volunteered.

This, of course, is by no means the fault of the Active Reserves. They have provided, in the present emergency, our greatest hope for security while the services were frantically trying to mobilize.

But there were two definite reasons why the Inactive Reserves received callous and shabby treatment:

One reason—frankly admitted—was because the United States was caught short and the mobilizers just grabbed the cards of men who weren't assigned to organized units.

A more insidious reason—not admitted—is because many of the top brass felt a personal resentment toward men who didn't want to stay in the Active Reserve and—even though these men had served and fought and been wounded and decorated—the feeling too often was.

"Give them the business"

That's an actual quote. Those words were said to be by one Army official in an off-the-record discussion. How typical his attitude is of the service hierarchy, I don't know. There is reason to suspect it is shared by many in authority.

Report on the New England Economy

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Christian

XCVII—App.—329

Science Monitor, Boston, Mass., of Thursday, August 16, 1951:

REPORT ON NEW ENGLAND ECONOMY CITES PROBLEMS OF AREA

(By Everett M. Smith)

BOSTON.—New England, although poorly endowed with natural resources in comparison with many other areas of the country, owes much today to its major attractions of scenery and recreational facilities.

An investigation into certain specific aspects of the area's economic development serves to explain the nature of New England's current problems.

New England's limited natural resources its slower growth of population, its labor and manufacturing prospects, its skilled management, its capital accumulation, and its income payments all are brought into sharp focus in the study of the area's economy—transmitted recently to President Truman by his council of economic advisers.

This detailed study serves to demonstrate that the failure of New England to grow or expand its industries as fast as the Nation as a whole is not a matter of recent origin.

Nor is it a condition peculiar to New England, the report shows. There have been great variations in the economic trends of older regions.

Whereas New England's relative rise in manufacturing was largely concentrated in the first half of the nineteenth century, the Middle West has been advancing for the last 150 years, the study shows.

Finally, it is pointed out that there have been significant differences between the rates of growth of northern New England and southern New England.

WATER RESOURCES CITED

The area's natural resources played an important part during the colonial period—particularly its forests and its fisheries. New England's forests, the survey shows, cover a larger proportion of its land area—77 percent—than in any other region of the country.

Although the ocean fisheries off New England have lost some of their relative importance, a solution of some of their present problems, the report indicates, would increase that industry's contribution to support of the entire region.

Water is seen as another of New England's outstanding natural resources, with average rainfall providing adequate supplies for both industrial and consumer use. Water power also was a major factor in the original location and prosperity of the region's textile and paper industries.

With the development of electrical power, proximity to water power became less important, although about one-fourth of the area's electric power is still generated by its rivers and streams, and there is opportunity for much further development of New England's water power, the report states.

Meanwhile, the rapid development of one of New England's major natural resources—its recreational attractions—continues. New England's vacation industry grossed approximately \$850,000,000 in 1949.

So much for New England's natural resources.

Its population trends are another thing. In 1809, one in every five Americans lived in New England. But, by 1950, this figure had changed to 1 in 16.

"We can easily be misled by these figures," the report emphasizes. "Despite the failure of New England's population to grow as rapidly as the Nation as a whole, there has been and still is continuous growth in absolute terms."

Even the growth of population in New England has been by no means equal among the various States. Southern New England has more nearly maintained its share of the

total population of the country since 1809 than has northern New England.

There are two distinct periods recognizable in the history of New England's population growth during the past 150 years. During the first half of the nineteenth century, the three northern States speeded ahead of those of southern New England. This was due to the agricultural, forestry, and fishery resources available in that section.

COMPLACENCY SEEN

During the past 100 years the situation has been reversed.

Going further, the report turns to the characteristics of New England's labor force, which is significantly large in relation to total population. Also, the report shows that New England's industry benefits to some extent from the higher-than-average education of its labor force.

The average New Englander, the study reveals, has received 8.8 years of schooling, as compared with 8.4 years for the Nation as a whole. However, the proportion of the region's inhabitants who attended college is not as high as it is in some other areas.

Hope is expressed by the compilers of the report that a greater clarification of some of these problems of declining industry may result in aid by private initiative, or by Federal, State, or local governments.

Coming forthrightly to the point, the survey asserts that, to some extent, New England's manufacturing success in the nineteenth century and the early part of the twentieth seems to have bred lethargy and complacency among some New England industrialists.

These factors, it is asserted, have handicapped the region in its competition with newer areas.

The Fights of Bishop Sheil

EXTENSION OF REMARKS

OF

HON. DONALD L. O'TOOLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. O'TOOLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Saul Alinsky from the Catholic Digest:

THE FIGHTS OF BISHOP SHEIL

(By Saul Alinsky)

It was 1939. The CIO was young, bursting with energy, surging with wild dreams. A whole new world was coming around the corner. General Motors, Chrysler, U. S. Steel—they were all going down like tenpins before the bowling drive of the CIO.

Chicago, a really tough town, had shrugged its shoulders and sloughed off the CIO. But the CIO kept coming. In Back-of-the-Yards, Chicago's nationally famous jungle, 25,000 Poles, Slovaks, Negroes, Germans, Irish, Lithuanians, and Mexican-Americans were banded together in the CIO. They were heading for the great showdown with the meat packers. Neither side asked quarter or gave any.

Then it broke, news editors shook their heads unbelievably, and asked for a reckoning on the story. It was true. Chicago's Catholic Bishop Sheil was going to open the packinghouse workers' last-ditch-strike mass meeting. And he would appear on the same platform with CIO chief, John L. Lewis. It would be the first time that a Catholic prelate had publicly appeared with the bulldog-faced labor leader since the beginning of the CIO. The bishop's presence would be taken as a

church blessing of the cause of the workers. It would torpedo the entire publicity campaign of the packers, which said the CIO was a Communist conspiracy.

But the fight was for stakes higher than the man on the street dreams about. All the chips were blue, and they were all down. Everything went. If a Catholic bishop had to go, too, it was just too bad.

Yet, after all, he was a bishop, and entitled to a warning. He was warned not to show. His life was threatened. A bullet shattered the window of a restaurant where he was lunching.

On the night of July 16, 1939, the bishop "showed." He showed, even though Chicago police had to clear eight blocks between his office and the Coliseum, and a personal bodyguard of 50 police had to be assigned for protection. Once there, 20,000 packing-house workers inside the Coliseum, and 10,000 standing outside, took over. They would have torn to bits anyone who as much as looked sideways at their "good Little Bishop."

The Little Bishop made history that night. He did not plead for the peaceful, orderly way of democracy. He demanded it; he fought for it. Alternately praising and scolding the workers, he went on to denounce the meat trust mercilessly. He fought, with all he had, to prevent the strike. He knew the passions of the times and what must happen when thousands of men who earned their living using knives, went to war. And he won. The union won. There was no strike. The democratic process prevailed. The democratic cause went forward.

For days afterward, the packing-house workers kept saying that Shell had pitched another no-hitter. They knew the bishop's background. It went back to 1906, when Bishop Shell, then Benny Shell, pitched for small, unknown St. Viator College against the University of Illinois, Big Ten baseball champions for the year. Shell pitched a no-hit victory against a team from which seven members went on to the major leagues. Benny Shell turned down four major-league offers.

Ever since he has played against the kind of opposition in which he has had to pitch almost constant no-hit ball. On issue after issue Shell has calmly and courageously enunciated and acted in accordance with the most radical doctrine known in the history of mankind: Christianity.

Bernard James Shell was born February 18, 1888, in a small, poor flat over a coal yard on Chicago's shabby west side. The house was shaken alternately by the horse-drawn coal wagons, with their regular dumping of tons of coal, and the elevated trains. Here Bernard grew up, a laughing, tough west-side kid, who never ducked an argument. More important, he never ducked the fight that invariably followed. His gang called him Benny, and Benny it was ever since.

He worshiped his mother, Rosella Shell, and he took it for granted that everyone else did, too. Rosella, or Mother Shell, as she was known to hundreds, kept open house every day and night. That quaking, 5-room flat was security and home for those in hunger and in need. There was always a giant pot of boiling coffee, and a mammoth kettle of stew on the wood-burning stove. People were constantly coming in for a meal, and young Benny Shell never forgot the sight of his hungry visitors.

His father, James B. Shell, was possessed of an incredible thirst for knowledge, for knowledge's sake. He was a graduate of Rush Medical School, yet never practiced medicine. He was a graduate of the Illinois College of Pharmacy, yet never pursued pharmacy. He was a registered certified public accountant, but never professionally audited a single ledger. Why? No one really knew, except that Jim Shell wanted to know about things, and when he knew he went on to other fields.

Jim Shell went into the coal-and-ice business. He was Irish, and that was the business for Irishmen. He prospered and became active in politics. Then one of the Democratic Party chiefs sent down the word that a certain businessman in the neighborhood was to be forced out of business for political reasons. Jim Shell refused to be a party to this action. He told the political bigwig, "You are putting precinct politics above Christian charity." Jim fought ballot stealing. The machine went out to get him. A campaign of political persecution finally succeeded in breaking his heart. Once he turned to young Benny and said, "Power without Christian charity is truly the devil at work." And Benny never forgot.

Young Benny went to St. Columbkille's Parochial School, St. Viator's College, and its seminary. On May 21, 1910, Benny Shell became Father Shell. He was assigned as an assistant to St. Mel Church, and Father Shell again was back on the West Side. Then the First World War broke out, and Father Shell became a chaplain at Great Lakes Naval Training Station.

With the war's end, Father Shell was assigned to Holy Name Cathedral, Chicago. He was given also the additional duties of Catholic chaplain for the Cook County jail. Here he saw human misery at its worst. He walked in many a death march to the gallows. Here he became deeply conscious, not only of criminals but of a society largely responsible for their crimes. And once again Father Shell did not forget.

In 1924 Cardinal Mundelein, of Chicago, named Father Shell chancellor of the Chicago archdiocese. On young Father Shell's shoulders rested the main burden of administration of the affairs of the largest Catholic archdiocese in the world. In 1926 Father Shell led in the planning and was treasurer of the Twenty-eighth International Eucharistic Congress in Chicago. For this he was made a monsignor. Two years later Pope Pius XI named Monsignor Shell auxiliary bishop of Chicago.

In 1930, with the blessing of Cardinal Mundelein, Bishop Shell founded the now-famous Catholic Youth Organization of America, more familiarly known as the CYO.

The movement now extends through the United States, Canada, and Hawaii. Its religious, athletic, educational, vocational, and social-service programs are open to youth of all creeds and colors—thousands of non-Catholics are in it.

The bishop's interests are translated into numerous projects. He began, and now operates, the Lewis School of Science and Technology, the Master-Eye Dog Foundation, two social centers in Chicago, the West Side Community Center, and on the South Side the Shell House, the CYO boys' camp, the Mercy Mission, a special Puerto Rican program, an FM radio station, the Shell School, and extensive city-wide summer supervised recreation programs.

Behind all these projects comes the practical question: Where do the scads of money required come from? I asked Bishop Shell that question. "God provides, as He always does," he replied.

However, there are a goodly number of affluent Americans who report, "Well, maybe the bishop's answer is right, but our checking accounts take a beating when he shows up." One prominent financier told me, "You know, I'm opposed to practically everything that Bishop Shell represents. I don't like his stands on labor, housing, and lots of other things. I'm not even sure that I like his brand of Christianity. Furthermore, whenever he comes to me, I know it's for just one thing—money. Each year I say to myself, 'This time the bishop doesn't get a red cent.' Just like the last time. Well, he didn't get a red cent; he got \$15,000."

The bishop appreciates the fact that the way to a man's heart is through his stomach.

Once a year the Knights of Columbus give their annual barbecue, with the proceeds going to the good little bishop. The take is substantial.

Chicago's corned-beef-and-cabbage dinner is famous. Once a year, in the largest hotel ballroom in Chicago, more than 2,000 dinner guests sit down to a plate of corned beef and cabbage at \$10 a plate. At a long speakers' table sit the city's dignitaries and every sports editor in town. On a platform are the best current entertainers in the stage and screen world, doing their best, for free. As for the audience—well, as Herb Graffis, news columnist, who was acting as master of ceremonies one year, said, "Fellow suckers, now that you are here, the bishop has ordered the doors closed and we will put the gun on you for all you've got."

But ask any newsboy or panhandler who the worst sucker or "softest touch" in Chicago is, and he'll tell you, with an affectionate caress to each word, "The little bishop. He's good for a buck to a sawbuck anytime, anywhere, and place."

Bishops are people, and all work and no play would make them dull, too. But even those who play with the bishop find the going hard, for on a golf course the 63-year-old bishop whacks the ball around in the low eighties. Or, if he is bowling, something is wrong when he bowls under 195.

He loves getting outdoors in sweatshirt, baseball cap, ball, and glove to throw a few. He still throws a "spitter," saying truculently, "According to baseball rules, all those using the spitball before it was outlawed can still use it, and I am one of those." It is not uncommon to see the bishop's priestly assistants nursing split fingers after the boss has tossed a few.

The bishop is a wizard at some of the so-called indoor recreations. Once, disturbed over reports of card playing and dice games among the members of one of his boxing teams, he accompanied them on their next trip. It took the kids a little time to start fading the bishop, but they did. In 2 hours, the bishop had won every nickel they had, and that ended the craps and cards. He returned the money to a chastened group of fighters. The way the bishop can roll sevens and elevens has made some folks say, "You know, if he wasn't a bishop, I'd think—but he is a bishop."

These same fingers are pretty expert on the piano, and he is completely at home with the masters. He loves good music, and his record collection is one of the best.

Driven by a burning passion to help children, Bishop Shell's search for the causes of juvenile delinquency inevitably brought him face to face with the delinquencies of our social order. He uncovered the foul sores of a society filled with the pus of prejudice, racial discrimination, anti-Semitism, economic injustice, poor housing, disease, and inadequate medical care. At first he was appalled, then consumed with anger. His capacity for indignation is as deep as his sense of justice and Christianity.

He has never forgotten the incident that took place some years ago in one of his CYO summer schools. A rugged 6-year-old youngster regularly attended each daily session, rain or shine, and just as regularly disappeared immediately after being given his free half-pint bottle of milk. One day a curious priest trailed the youngster to a crumbling shack and found the child carefully dividing the milk into three portions for his 4-year-old sister, 2-year-old brother, and a 6-month-old infant. For himself he kept none. When the bishop tells the story, his emotions are mixed between tears and anger. He says, "That boy will always haunt me; and I will stop at nothing to wipe out conditions like that."

The bishop does not pull his punches on any issue, including the dynamite-laden subject of labor and capital. He is for the guaranteed annual wage, for adequate—and he

means really adequate—unemployment compensation, and even more. "The labor union, as a recognized social and economic force, must have a voice, along with capital, in the management of industry. The time has long since passed when labor will be satisfied with what is left over."

On discrimination the bishop really swings from the floor: "The Negro has not received a square deal, an honest deal, nor a new deal from white America. Times without number, he has been denied a job simply because he was black. He is not accepted on an equal plane in the drawing rooms of the white group. In some parts of the country his vote is sidetracked by legal tricks. The Negro is denied entrance to many of our educational institutions. Some of these, unhappily, are Catholic. Even where separate educational facilities are provided, the Negro receives second-rate equipment and teaching. He is pushed into undesirable living quarters, frequently indescribably filthy and unfit for human habitation. How long are we going to continue to give second-class privileges to first-class citizens?"

On anti-Semitism, the bishop has curtly commented, "The only Jew the gentile need fear is the imaginary one he has created in his own mind."

However, it is not so much what the bishop says as what he does. Just before Pearl Harbor, the bishop, overriding the protests of associates, went unannounced and uninvited to a mass meeting sponsored by a number of groups, such as the Christian Front. Here, in a hall full of hate, Bishop Bernard Shell for 15 tense minutes denounced anti-Semitism, white supremacy, and every vile lie that had been bellowed by a demagogue on the platform. The audience listened restlessly, glaring, seething with hostility.

Finally, he ended, turned, and slowly began to walk out down the center aisle. Suddenly the silence was shattered by a scream of anger. It came from a fanatical old woman who stepped out and blocked the bishop's way just as he was passing her row. She shrieked, "I'm a Catholic, but you, you—you're not a Catholic bishop. G—— you! Nigger lover! Jew lover! A bishop! Ha, ha! Rabbi Shell!"

Now completely hysterical, she deliberately cleared her throat, and with all her strength spat over one side of the bishop's face. The bishop did not raise his hand to wipe it off. By this time, most of the people were standing on their chairs. A mad roar began and suddenly died. The bishop, with the dignity of immortality, had turned the other cheek! He waited. The old woman froze, as did hundreds about her. Then, as though a sudden chill had gripped her, she began to shake violently. What an instant before had been a mob of snarling faces became hundreds of lowered heads.

The bishop waited another moment, then spoke softly. "Rabbi? That is what they called our Lord." He walked out in silence.

Let Us Eliminate the Annual Appropriations Snarl

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. DONOHUE. Mr. Speaker, I wish to include an elucidating article on the annual congressional appropriations problem which appeared in the August

16, 1951, issue of the Wall Street Journal.

This editorial is a common-sense explanation of the reasons why the appropriations procedure becomes snarled and, by implication, urges Members of Congress to recognize and correct the repeated confusion that surrounds us each time this vitally important legislative responsibility comes up.

Without question the way to a sensible solution lies in the appointment of an adequate technical staff to solely engage in the preparation of information, not only for the Appropriations Committee members, but for every individual Member of Congress, as the basis for intelligent, economical action.

I urge my colleagues to read this article and join with those of us who are earnestly trying to promote the corrective remedy outlined. This article follows:

THE APPROPRIATIONS SNARL

Congress meets in January of each year. The Federal Government's fiscal year opens the following July 1. So to legislate the appropriation measures necessary to keep the Government functioning Congress has about 6 months.

Until recently this was considered ample time for the committees to frame the bills and for the House and Senate to pass them. As a matter of fact, in the days when each alternate session of Congress ended automatically on March 4, there was no great difficulty about passing the money bills before adjournment.

But for the last several sessions of Congress the beginning of the fiscal year has seen some of the money measures not finally passed, and to keep the various departments functioning Congress has had to resort to a make-shift device known as a continuing resolution. The present Congress has the record for a log-jam of appropriation measures.

This condition occurs not because recent Congresses are inferior to preceding Congresses. The various Members work just as long and hard as did their predecessors and they are no less conscientious.

What has happened is that the whole structure of Federal Government has become larger and more complex. In a day when a Federal budget of \$4,000,000,000 was considered large and when the activities of Government were comparatively simple, it was not a hard job for the committees concerned to hold hearings on requests for funds, frame a dozen pieces of legislation and get them through two Houses of Congress. It was not difficult for the committee members and their few technical assistants to have a good working knowledge of what was going on in the various Government departments.

The Government has grown to a size where all this is no longer possible.

When Congress comes into session it is confronted by what is known as the budget. The document is not a budget in any proper sense. It is merely the executive department's proposals for amounts of money to be spent. It contains literally tens of thousands of items, some of them small and some very large. Obviously no group of men meeting that imposing, telephone-book-size document for the first time can hope in a short period of months to investigate a fraction of the proposals it contains.

If Congress and its Appropriation Committees wished to take the executive proposals with only casual examination, they could do away with the delay in passing appropriation bills. It is because the committees of House and Senate insist on doing more than progress of the money bills seems so slow.

The difficulty is that the congressional system of investigating and passing appropriation bills no longer is adequate to the job entailed. It is as though General Motors was trying to get along on an accounting system which might be wholly adequate for a good size retail store.

What Congress needs is an expert staff which will familiarize itself with the so-called executive budget while it is in the process of creation. The staff itself need have no authority either to deny or encourage a proposed request for funds. But it could be given authority to assemble the information on which the request was based and this information would be ready for Congress when it assembled.

Before the request for an appropriation comes before Congress it must be approved by the Director of the Budget, an officer of the executive department. The Bureau of the Budget spends 12 months on the exclusive job of getting together the appropriation proposals. In half that time individual Congressmen who have a multiplicity of calls on their time are expected to investigate single handed what an organization of many people has produced.

Senator McCLELLAN, of Arkansas, has proposed a reform whereby Congress would have a trained staff of full-time technicians to assist it on appropriations. Such a measure is past due.

What Foreign Aid Is Costing the Taxpayers in the Ninth District of Minnesota

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. HAGEN. Mr. Speaker, as we debate the ever-constant issue of where are we going to save the taxpayers' money, we ought to get the figures down to where the average taxpayers can understand them.

We sit here and toss off talk about billions and there are those closely connected with these debates who fail to realize just what those billions mean to the man on the street and on the farm. How, then, can we expect the people back home to get a clear picture of what Government spending does to them unless we get the talk down to figures we can easily grasp?

We are making a great show of saving money by putting the bite on Federal employees, by perhaps giving them a small salary increase, by increasing their hours of work, and by other methods without regard to the loyal, efficient service that is being rendered by thousands of these Government workers. I think we ought to go slow in holding up to ridicule all Government employees or we may find it hard to recruit capable, honest, and efficient workers in the future.

All the time I have been a Member of Congress, I have fought against Government waste, useless spending, inefficiency, all the things that run up the tax bill and are paid for by the men and women who toil in America.

I would like to point out where many billions of dollars of our taxes are going

and what it means to the people of my district.

The administration now has proposed a new budget for foreign aid of \$8,500,000,000. The people of Minnesota will pay \$153,850,000 of that sum.

In a further breakdown, I present the following figures which show how much the taxpayers in each of the 15 counties in the ninth district of Minnesota will pay toward that \$8,500,000,000. Red Lake County, with a population of only 6,805, will pay \$338,470. The largest county in my district, Ottertail, with a population of 51,094, will pay \$2,615,450 toward this new foreign-aid program. This means that every man, woman, and child in that county will pay more than \$50 toward this one particular expenditure and this is only one of many large expenditures in recent years.

When we get that \$8,500,000,000 broken down so that we can see what it means to the people we represent, maybe we should begin to study that item very carefully to see what can be done to reduce it. It may be found that it is not necessary.

The complete schedule of what the people in each of the 15 counties in my district will pay is as follows:

Ninth Congressional District (Minnesota's share of the \$8,500,000,000 foreign-aid cost is \$153,850,000)

County	Population	Percent of total State population	Estimated cost to county
Norman	12,851	0.0042	\$646,170
Mahnomen	6,998	.0023	353,850
Clay	30,202	.01	1,538,500
Becker	24,691	.0082	1,261,570
Pennington	12,953	.0043	601,550
Red Lake	6,805	.0022	338,470
Polk	35,863	.0119	1,830,810
Clearwater	10,158	.0033	507,700
Kittson	9,622	.0032	492,320
Roseau	14,491	.0048	738,480
Lake of the Woods	4,904	.0016	246,160
Marshall	16,208	.0054	830,790
Beltrami	24,850	.0082	1,261,570
Wilkin	10,542	.0035	538,470
Ottertail	51,094	.017	2,615,450
Total			13,861,860

Inflation Unlimited

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHAFER. Mr. Speaker, despite all of the administration claims as to the efficacy of price control and of the necessity of the heavily staffed OPS, a report of the Joint Committee on the Economic Report acknowledges, perhaps unwittingly, that it expects a steady continuation of inflation and a steadily continued decrease in the purchasing power of the dollar for at least the next 3 years.

Under permission to extend my remarks, I include the comments of Mr. Paul O. Peters, well-known student and writer on economics and governmental

expenditures, made in a bulletin issued today. In this statement Mr. Peters calls attention to the anticipated Federal expenditures for the next 5 years and to the anticipated inflationary effect of these projected expenditures. In addition, he reduces to terms of the purchasing power of the dollar the inflation forecasts made in the committee report. Mr. Peters' bulletin is as follows:

THE AMERICAN PEOPLE ARE CONFUSED AND UNINFORMED ABOUT THE ECONOMIC CRISIS WHICH MAY OCCUR IN THE NEXT 5 YEARS

(By Paul O. Peters)

The Joint Committee on the Economic Report, so-called, in a recent committee print of materials prepared by the committee staff and entitled "National Defense and the Economic Outlook," brings out certain forecasts which are worth serious consideration by all American citizens.

The forecast reveals the confidence of the committee's staff that the present administration is sufficiently entrenched in office that the spending at an accelerated rate will go on well into the fiscal year 1956. This is illustrated by table 1, on page 36 of the committee print, which indicates that funds totaling \$445,000,000,000 will be available for expenditure to June 30, 1956. This table, which can be interpreted in more ways than one, is as follows:

TABLE 1.—Authorizations, total funds available, and administrative budget expenditures for Defense Department military functions, actual fiscal year 1951, estimated 1952-56

[Billions of dollars]					
Fiscal year	Brought forward, prior years	Net new authority	Total funds available	Budget expenditures	Carry over to next year
1951	9.4	47.6	57.0	19.2	37.8
1952	37.8	60.7	98.5	40.0	58.5
1953	58.5	45.0	103.5	55.5	48.0
1954	48.0	35.0	83.0	50.0	33.0
1955	33.0	35.0	68.0	40.0	28.0
1956	28.0	35.0	63.0	35.0	28.0

The total new spending authority estimated for the five fiscal years 1952 through 1956, plus the carry-over of \$9,400,000,000 from 1951, less the carry-over to fiscal 1957 of \$28,000,000,000 indicates military expenditures estimated at \$192,100,000,000 for the 5-year period.

Total budgetary expenditures of the Federal Government for the same 5 years are estimated to be as follows: 1952, \$68,400,000,000; 1953, \$87,300,000,000; 1954, \$84,000,000,000; 1955, \$72,000,000,000; 1956, \$60,000,000,000; the total for 5 years being \$371,700,000,000.

The estimated expenditures of all governments, Federal, State, and local, for 1952, are put at \$77,000,000,000; for 1953 at \$92,500,000,000; and for 1954 at \$90,500,000,000.

At page 39 of the committee print another table projects the Federal administrative budget expenditures and receipts for the fiscal years 1952 through 1954. This table, No. 7, is summarized as follows:

[Billions of dollars]		
Fiscal year	Expenditures (estimated)	Receipts, estimated (including House increases to tax)
1952	61.4	68.4
1953	87.3	66.0
1954	84.0	70.0
Total	232.7	204.4

This would result in an estimated deficit of \$28,300,000,000 in the 3-year period.

The inflationary effect of the Federal spending is reflected in table 3, at page 37, where the index reflecting the purchasing power of the dollar at 1950 levels is shown as follows:

1950	100.0
1951	110.6
1952	119.3
1953	124.6
1954	128.1

In practical terms, this report indicates that the purchasing power of the dollar will decline from the 1950 level as follows:

1950	\$1.0000
1951	.9041
1952	.8382
1953	.8025
1954	.7806

The estimated depreciation in the purchasing power of the dollar shown by this table is at a rate faster than interest accumulates on investments in Federal savings bonds, or almost any current security.

It is an indicator that the progress of inflation, spurred by Federal spending also encourages people to spend in order to beat off the losses to savings caused by inflation.

This situation poses new problems for both public and private fiscal and budgetary management. The huge appropriations made by the Congress during the present session are indicative of a growing tendency to appropriate faster than the bureaucrats can spend or obligate the appropriated funds. For example, on August 10, 1951, the daily Treasury statement reports the amount to the credit of disbursing officers and certain agencies of the Government was \$59,177,428.485. The funds in the Treasury amounted to \$5,510,712,863. Before the balance of the funds credited to the disbursing officers can be spent it must either be collected as revenues or borrowed from the banks and the public.

We are in a period of "frenzied finance," with no one able to say what the dollar will buy in 1956.

Let Us Stay on Guard Against Inflation Dangers

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. DONOHUE. Mr. Speaker, I wish to include a very pertinent editorial entitled "Weak Defense Bill" which appeared in the August 11, 1951, issue of the magazine America.

As one who vainly fought for a stronger Defense Production Act, particularly with respect to sensible temporary control of price rises and protection for our average consumers, against the disastrous consequences of inflation, I commend this succinct presentation of the essential deficiencies of the current act.

I earnestly hope that, with the first evidences of unbridled and unrestrained profit gouging by unpatriotic operators, which will destroy the general economic stability of this country, the Congress will take the necessary corrective action.

The editorial follows:

WEAK DEFENSE BILL

About the best that can be said of the 1951 Defense Production Act is that it could have been worse. For a time it appeared that Congress might send a bill to the White House which would positively invite inflation. The new law, while weaker than the one it replaces, will at least enable the administration to fight a rear-guard action against further price rises and, with luck, slow them down to a trot.

So far as we can see now, the chief weaknesses in the law are these:

1. It prohibits the rollbacks of beef prices scheduled for August and October.
2. It continues to give the green light to farm prices.
3. It renders extremely difficult the job of rolling back prices of manufactured goods which have gotten out of line, or even of keeping industrial prices at their present level.
4. It denies authority to maintain slaughtering quotas, without which OPS will find it difficult to halt black markets in meat.
5. It does not permit the administration to control commercial rents.
6. It weakens the Federal Reserve Board's tight controls over installment buying.
7. It leaves the control agencies inadequately equipped to enforce their regulations.
8. It denies to the administration power to curb speculation in the commodity markets.

Some of the Congressmen responsible for this flabby bill have argued that indirect controls (taxes, savings, credit controls) are a much more effective answer to inflation than direct controls (ceilings on wages and prices). The sincerity of this argument may be judged by the reaction of these same gentlemen to the President's request for an additional \$10,000,000,000 in taxes and to the Federal Reserve Board's recent plea that Congress do nothing to weaken its curbs over consumer credit. In the new defense bill, they gravely undermined FRB's controls over installment buying of automobiles and other durables, and now they are talking of giving the President not much more than half the taxes he wants. Yet they profess to be staunch proponents of "indirect" controls.

The fact is that the southern Democrat-Republican coalition is gambling that present consumer apathy to the threat of inflation will endure until after the next election. Meanwhile they have earned the gratitude and support of almost all the major pressure groups in the country. Politically, the gamble may pay off. If it does not, however, if prices, following the present lull, blow upward again, the coalition will have badly served the Nation's welfare.

In this connection, a passage from the June 3 pastoral of the Spanish archbishops is very apropos. Describing the duty of the state to assure the basic needs of the masses in a period of inflation, they write:

"In normal times prices are regulated by market transactions. However, in periods of production shortages, inflation, and high living costs, a legal ceiling price is advisable which assures the producer a fair profit but, at the same time, prevents any abuses by his taking advantages of shortages to extort prices which are higher than the just maximum and which make goods inaccessible to the masses."

To the extent that the new law does not permit the administration to fix and hold fair prices, Congress has failed in its duty to the country. It has violated that justice which dictates that the burdens of society be equitably apportioned, and which moralists call "distributive." In these days when a Senate subcommittee is studying the problem of morality, as distinguished from legality, in Government, this ethical observation may be of some interest.

Penny-Wise

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. ZABLOCKI. Mr. Speaker, the whole Nation is awakened to an apparent lack of morals. Pointed up by several recent events the people are alarmed over the circumstances. Mr. D. A. Huley, president, United States Chamber of Commerce, recently stated:

There is need for a code of ethics in government. The science of government has become a profession. It should have markers warning all who enter such a profession against betraying the public trust.

The evidence of loose morals in all walks of life and in various enterprises brings to my mind this thought: Do the people of America, who are shocked and aroused by any impropriety or misdemeanor on the part of West Point cadets or Government officials, ever bother to look at their own actions, and see where the trouble really lies?

Does the purchasing agent who wrote to me, berating the general who allowed someone to pick up the bill for his 2-day stay in a hotel, ever bother to think about those dinners and drinks which the various salesmen bought for him? And the executive who is shocked at "Government corruption," does he ever look at his own expense account and be able to say in all truthfulness that he has not padded it, even a little bit? And the controller of a small business firm, who wrote to me condemning the RFC, did he remember how many times he had contacted a Senator or a Congressman asking them to exert pressure in behalf of his firm's application for accelerated amortization certificate? And the parents, who are shocked by the spreading use of narcotics by our youth, did they ever stop to think whether they have conscientiously performed their duty in giving their children the home they should have and in bringing them up in moral principles? And the businessman, the preacher, the man on the street—do they look at their own actions before they start condemning others?

The ethics and the morality of the entire country, not only of a few persons in the public limelight, are lower today than ever before. Just pick up any newspaper, and you will see that it is so. If we want to remain a strong nation, we cannot allow our strength to be sapped and rotted from within.

Ethics in public officials must always be above reproach. It is a sorry state when those entrusted with public faith and good, desecrate their trust and abuse their positions for personal gains. I hope that the congressional committees on ethics in Government may restore a high level of ethics in our national politics, and show the way for similar reform on State and local levels.

And I also hope that the people of this country—the people who elect their own officials and expect them to be above re-

proach—will choose their representatives with care and, having chosen them, give them a like measure in return. For unless we clean house in our private affairs and regain that strength which comes from abiding by principles, we cannot very well expect our officials not to be tainted by our own weaknesses. After all, the public official is only a human being, and he will always have a tendency to act the way those around him do.

Mr. Speaker, under leave to extend my remarks, I include the article, Penny-Wise, by Maurice R. Franks, editor of Partners, the magazine of labor and management.

I recommend his message to the Members of Congress:

PENNY-WISE—IF WE WOULD WIN BETTER MEN AS GOVERNMENT OFFICIALS, EDUCATORS, AND LABOR LEADERS, WE'LL HAVE TO DROP REAL CASH IN THE KITTY

We Americans have managed pretty well throughout our history to avoid pitfalls of false economy. We discovered fairly early in the game the futility of pinching mere pennies when such meant pinching off future dollars. We have learned well the basic rule of investment. The Scriptural statement, "As ye sow so shall ye reap," has made a lot of sense to the business minds of our Nation. Dollars, not pennies, were sown by American enterprise; hence the harvest has been in gold rather than in copper.

Americans, in a word, have been dollar-wise—not penny-wise. The result of our economic wisdom has been our exalted standard of living—a standard which is the envy of the entire world.

To appreciate the scope of our bright and continuing harvest, we need only pause long enough to realize that our dollars, even while financing the reconstruction of most of the civilized world, are still numerous enough to provide the vast majority of our own people with every essential, along with an incredible inventory of pure luxuries.

No; surely we Americans have no reason to hang our heads when less successful people point fingers of scorn at our coffers and taunt us for our dollar wisdom. If anything there be for which we should be ashamed, it is that our dollar wisdom is not as yet complete—that in a shocking number of vital instances we are still penny-wise and dollar foolish.

The situation is all the more shameful because of who and what we are—and because it is we, more than any other nation, who have come up with the right economic answers.

THE CASE OF THE UNDERPAID

Two streams of poison afflict our American way of life. The one is mediocrity. The other is crookedness.

Both, unfortunately, descend from the high places and dribble their paralyzing potions down across the entire face of our national life and into the deepest reservoirs of our future security.

We suffer from mediocrity and corruption in Government. We suffer from both poisons in the field of education. The dual affliction is obvious in many social services—particularly in the profession of labor leadership.

In each instance, the reason for this deadly condition is the same—insufficient investment—penny wisdom and dollar foolishness. And in each instance the remedy, tested and true, is already written in gold in the book of American accomplishment.

PENNY ANTE FOR GOVERNMENT SERVICE

Have mediocrity and corruption made of government in the United States a top-heavy and inefficient machine—one which is

completely out of step with the powerful and efficient machine represented by our industry? All right, we are getting precisely what we pay for. In hiring governments to represent us, we offer each officeholder comparatively speaking—a pittance. And that goes for all Government officials, from the small ward politician to the highest officeholders in Washington.

By offering small change for running the largest and most complex Government machinery in the world, we attract mostly small change in terms of human capacity and integrity. By setting up a scale of remuneration we otherwise pay to average men, we get exactly what we pay for: mostly average men, with their modest store of experience and their limited ability in the handling of out-size problems. By playing penny ante for Government service, we staff our public offices for the most part with men whose horizons are circumscribed and whose spirit of enterprise does not go beyond an unenlightened willingness to indulge in a bit of a killing whenever and however they can.

If our halls of Government swarm with two-for-a-cent characters—when billion-dollar decisions are confided to their inadequate care—we have only ourselves to blame for the obvious results of penny wisdom.

Until we rise to the occasion and make a proper investment in good government, we are doomed to witness a continuance in office of just such a squander trust as is losing billions of our good dollars today. Worse, we shall be progressively afflicted by armies of petty government job holders morally and temperamentally prepared to sell out. Already the boys in the Kremlin are licking their chops over the prospect, based on current symptoms.

Here again, penny wisdom on our part can turn out to be the open sesame to Moscow's dearest hopes for this country. Here again, dollar wisdom—sound and lavish investment—is immediately called for.

Labor leadership is a fast-moving and responsible profession. No other profession, it is safe to say, comes closer to holding the keys to our future as a nation. All right, with what kind of material are we going to people this profession. With rats and racketeers? With stumblebums and ignorant? With short-sighted contractors for socialism? Or with men of superior intelligence, moral fiber and social vision? We'll get what we pay for—make no mistake about that. The choice is up to us.

NOT A HOPELESS PICTURE

The picture is not a pleasant one, most of us will admit. Government, education, labor leadership—three powerful machines manned by individuals who, in character and capacity, but slightly resemble the men in better-paid walks of life who through the years have created American industry and commerce and enabled all of us to realize a fabulous return on their investment. The picture is not a pleasant one because of the damage our long neglect has piled up in our midst. But the picture is not a hopeless one.

With the book of the past open on our knee, the answer to our dilemma is clearly defined. In exploration, industry, commerce, finance, etc.—in all that is wrapped up in our American business world—we have invested heavily in the excellence which resides in our people, and have reaped a mighty harvest. In government, education and labor as a profession, the field is still fertile. As we sow, so shall we reap. This we know from experience. Here, as elsewhere, the dollar must be our trusted servant. We cannot afford to be penny-wise.

Joe E. Brown

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. BOW. Mr. Speaker, one of God's great noblemen will receive a well-deserved honor of recognition from his country tomorrow, August 18, 1951.

Joe E. Brown, a native of Ohio, actor and public servant, will receive a certificate of appreciation from the Department of the Army for outstanding and conspicuous patriotic service.

I know of no American who has given more unselfishly of his time and energy to the Armed Forces of his country than has Joe E. Brown.

It was my honor to serve as a war correspondent during World War II in the South Pacific. Much of my service was with Ohio's Thirty-seventh Division. In June of 1945 Joe E. Brown came to that division on Luzon in the Philippines while the division was committed to combat. He brought to those war-weary veterans of 3 years of jungle warfare great inspiration as well as entertainment.

Mr. Speaker, I saw Joe E. Brown with troops in the front lines; he visited with them; he brought them messages of encouragement and stories from home. I saw him entertain, on an improvised platform, a group of the One Hundred and Forty-fifth Infantry Regiment while under fire—interrupted by small-arms fire and the operations of tanks. He was the first American to enter the town of Baombong at the time of its liberation. It was "Hi, Joe," every time a GI saw him. They were all his "kids" and he loved them as they loved him.

He made 11 trips during World War II. He went to every theater of operation: Alaska, southwestern Pacific and Pacific itself, China, India, North Africa, Sicily, Italy, France, Germany, and so forth.

He will receive three awards: First, certificate of appreciation; second, citation; third, lapel button.

The Honorable Frank C. Pace, Jr., will personally present the awards. This is the highest recognition the Army can give a civilian.

The Army will be well represented by members of the higher staff, including Gen. Omar N. Bradley, Chairman of the Joint Chiefs of Staff, and Gen. John E. Hull, Vice Chief of Staff, United States Army, who have all volunteered to show respect to Joe E. Brown for his valiant service.

The certificate of appreciation will read as follows:

CITATION FOR CERTIFICATE OF APPRECIATION

Joe E. Brown, actor and public servant, for outstanding and conspicuous patriotic service to the Department of the Army. During war years and in peacetime, Joe E. Brown has generously and untiringly given of his time and talents to bring happiness and entertainment to the soldiers of the United States

Army wherever they were stationed. At no time has he refused the call to serve his fellow Americans under arms and has willingly traveled to remote places to entertain and talk with soldier personnel. He was the lone personality to volunteer to welcome the first Army personnel returning from Korea. His gracious personality and wholesome entertainment have won him an enduring place in the hearts of Army personnel and his patriotic service to his Nation merits the recognition of all his fellow Americans and the thanks and appreciation of the Department of the Army.

Federal Affairs Forum Celebrates First Anniversary

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. RODINO. Mr. Speaker, on August 19, 1951, television station WATV in Newark, N. J., will celebrate 1 year of programming the popular Federal Affairs Forum.

During these times, when there are so many threats to democracy and our way of life, accurate and reliable information is more than ever necessary. WATV has been televising Members of both the House and Senate from New York and New Jersey, as well as chiefs of various bureaus and departments of the Federal Government. They are interviewed by top-ranking students from colleges throughout the metropolitan area.

I have had the pleasure of appearing on Federal Affairs several times. It has not only been an enjoyable experience, since WATV is in my own congressional district, but also a duty, because I have felt that this was one of the most effective ways of reaching my constituents quickly and with first-hand information about the latest happenings here in Washington.

It has been heartening to have this contact with our college students. They are an alert and intelligent group, who are keenly aware of the problems facing America today. Their searching questions and their interest have benefited me since I have an additional insight into the intelligent grasp of domestic and foreign affairs shown by these future leaders of our Nation.

At the present time we are hearing a great deal about educational television and the fact that so few television programs have a serious informational content. It is indeed gratifying to know that in my home district, and in the State of New Jersey, WATV has taken the lead in producing educational programs. In addition to Federal Affairs, WATV is also producing a program of particular interest to the residents of New Jersey, Know Your State. Both of these continuing series of programs are, I feel, important civic functions that fulfill a great need on the part of our citi-

zens. Only with leadership like this in our radio and television stations can we here in the Congress be assured that our citizens are being fully informed through all modern media of communication.

I am happy to have this opportunity of congratulating WATV on the occasion of the first anniversary of Federal Affairs.

United States Air Force Must Match Red Air Power, Say Alsop Brothers

EXTENSION OF REMARKS

OF

HON. DONALD L. O'TOOLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. O'TOOLE. Mr. Speaker, for the past several weeks a constantly rising tide of discussion and comment has been poured out about an expansion in the size of our Air Force. Personally, I am gratified that at long last this Nation and this Congress is beginning to realize that the might of our strategic Air Force and its atomic bomb have been the sole things which have kept Russia from making all-out war. Public opinion is now crystallizing on the fact that United States air supremacy is and will continue to be the greatest single element of defense and that our air power must remain dominant.

Mr. Speaker, were it not for the consistent and persistent battle conducted by farsighted lay leaders and those of the Air Force to achieve what they in conscience deem essential to the security of the Nation, the United States—with its vacillating, short-sighted, conventional armed-service concept of air power—could have brought this Nation to complete vulnerability. Now, however, the press as well as the public have come to a belated realization of the part the Air Force has played and will in the far future play in insuring peace and security to our country.

Mr. Speaker, I have just come upon an article written by Joseph and Stewart Alsop entitled "Dimensions of an Air Force":

Building the defense establishment—

Write the Brothers Alsop—

squarely around the Air Force * * * are serious steps to take. On any realistic appraisal of the world situation, however, there is no alternative to taking these steps * * * except to take unforgivable risks with the American future.

Mr. Speaker, for the past 4 years, ever since the services were unified, we have heard many elaborate incantations about what is termed a balanced military program. As the Alsops imply, this, in actuality, has come to mean that equal apportionment of the total military appropriations is to be made among the services, regardless of need. A moment's reflection, will I believe, fully demonstrate the fallacy of this pernicious creed.

I submit that our thinking must take us to the heart of the matter—that, to assure our survival as a Nation, the United States Air Force must be made ready to meet its obvious challenger, the Russian Air Force. National security demands that we build an Air Force that can do the job that has to be done. If we are to seek balance, it is balance against our potential enemy that is required.

Our worry must be about the power of the nation we may have to fight, and it is stark truth that the real objective of the great effort now being made for national defense is to stand off Russia. Instead of blindly believing that all will be well if we match appropriations among the armed services, we must be greatly concerned with matching our Air Force against the air force of the Red world.

Mr. Speaker, the article entitled "Dimensions of an Air Force," carried in the Washington Post, expressing the studied findings of these analysts are so cogent and compelling that, under unanimous consent of my colleagues, I place the same in this day's record of our proceedings.

That article reads as follows:

MATTER OF FACT

(By Joseph and Stewart Alsop)

DIMENSIONS OF AN AIR FORCE

Before very long, the Air Force issue is going to come out, or perhaps burst out, into the open. The preliminary drumfire has already been heard from the friends of air power on Capitol Hill. Secretary of Defense George C. Marshall and Under Secretary Robert A. Lovett now have before them the Air Staff's program of requirements for an expanded force of 150 groups.

Even if the plan is accepted by Secretary Marshall and the President (which seems likely) its first disclosure is bound to be a bit explosive, if only because of the immense outlays and grave issues involved. As a minimum, the cost is estimated at several billions of supplemental appropriations by the present Congress and \$15,000,000,000 additional in the 1953 budget, with recurring huge appropriations in the subsequent budgets.

The chief issue raised is, of course, the proportion of defense investment between the services. The Navy is considered to be approximately large enough already. The Army is reaching its planned manpower ceiling, although still deficient in many types of vital equipment. But while the curves of expansion of the brother services are thus leveling off, the Air Force expansion curve is to shoot upward precipitately; and it is not to level off until annual Air Force expenditure is far above either Army or Navy expenditure. The kind of trouble this can give rise to is only too easy to imagine.

Building the defense establishment squarely around the Air Force; increasing the already vast defense budget by such huge further sums—these are serious steps to take. On any realistic appraisal of the world situation, however, there is no alternative to taking these steps, except to take unforgivable risks with the American future. The reasons why a greatly expanded Air Force is needed at this time are, in fact, quite unanswerable.

First, the air defense of the continental United States is rapidly becoming a larger and larger job. The Soviet atomic-bomb stock is increasing continually, which means that the Kremlin is getting nearer and nearer

to the point where the war planners in Moscow can hope to deliver a crippling blow against this country. The existing Soviet strategic air force, of imitation B-29's, is expanding. And at the recent air show in Moscow, the Soviets displayed a truly long-range heavy bomber of B-36 type, which air intelligence credits with a 5,000-mile striking radius.

Since the smaller and less costly standard Soviet heavy bomber can efficiently hit targets anywhere except in this hemisphere, the production of this huge, very-long-range bomber can have only one purpose—to attack this country. Moreover, it is the Soviet practice never to display new aircraft types until they are ready for actual production, which means that this new Soviet very-long-range bomber is already going to combat units.

Second, the threat of the Soviet strategic air force to our allies and to us also increases the requirement for the American Strategic Air Force. It was originally designed solely to destroy the industrial vitals of the Russian war machine. Its first priority must now be the destruction of Soviet strategic air. This is an immense task in itself. Furthermore, it is essential for the destruction of the Soviet industrial vitals to go forward concurrently; otherwise the defense will learn from experience to take the measure of the offense. Thus, in effect, the American Strategic Air Force must now be built big enough to do two jobs at once.

Third, the importance of tactical air in ground war is now so great that Gen. Dwight D. Eisenhower's staff has evolved a rule of thumb—"the fewer divisions you have, the more air groups you need." For the defense of Western Europe, it is necessary for General Eisenhower to have a tactical air force ready at all times for combat, which will be capable of dominating the very large Soviet tactical air force from the moment when the first shot is fired. For this purpose alone, it may be necessary to double the present requirement for American tactical air power.

Nor are these requirements and the Soviet air threat that begets them mere dreams of air propagandists. The new Soviet bomber of B-36 type is not the 10-engine jet that has been wildly reported. It is a huge, four-engine plane of fairly conventional design. But it exists, has been photographed, and by the magic of intelligence analysts has been shown to have approximately the characteristics given above. Equally, the Air Force actually has in its hands an MIG-15 engine and has more than ruefully examined the decidedly superior high-temperature alloys and remarkably skillful welding that make this the best jet engine now in production.

In plain language, the Soviets have now been proven capable of building air power on an all-too-impressive scale, and if we do not wish to commit national suicide, American air power cannot be allowed to fall behind.

Reviving Korea

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. CASE. Mr. Speaker, pursuant to leave granted me in the House today, I include herewith the following editorial from the Washington Post of Sunday, August 12, 1951, on the subject of the

work of the United Nations Korean Reconstruction Agency:

REVIVING KOREA

This newspaper does not go along with the idea that no funds can be cut from the foreign aid bill without dire results. It questions, however, whether the decision of the House Foreign Affairs Committee to pare \$100,000,000 from the \$162,500,000 requested for operations of the United Nations Korean Reconstruction Agency is a wise one.

There is considerable doubt, to be sure, that UNKRA could usefully spend its full budget of \$250,000,000 within the current fiscal year even if large-scale reconstruction were to start in Korea immediately. It is also true that the United States pledge of \$162,500,000 is a promise by the executive department which is not binding on Congress. Nevertheless, the spectacle of the United States slicing this particular contribution by more than half would be a demoralizing one to the other nations which are expected to support UNKRA. It is largely because of United States initiative that some \$230,000,000 of the \$250,000,000 goal has been pledged, and other nations would not understand what they would consider a default by this country. UNKRA, incidentally, is currently embarrassed for cash, for only about \$7,000,000, mostly from Canada, has been paid in.

A congressional decision to vote the whole American quota of \$162,500,000 would not mean that the money would be wasted. Funds that could not be productively spent this year would be carried over, just as \$50,000,000 of the \$162,500,000 American quota represents unexpended ECA funds transferred to UNKRA. The important thing now is to give UNKRA stature enough to induce more nations to assume a larger share in its activities. This in turn would enable UNKRA to be more insistent in its representations to the Army, which so far has kept a tight hold on relief and reconstruction in Korea without doing much of either. Surely there are large areas in South Korea where UNKRA could safely assume responsibility in the near future—for the longer a start on reconstruction is delayed, the more difficult it will become.

A Few Kind Words for Harry Truman

EXTENSION OF REMARKS OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. ZABLOCKI. Mr. Speaker, Dr. Henry Steele Commager, now professor of history at Columbia University, has taught at Harvard, the University of Chicago, and at Cambridge University in England. He is the author of several historical works and numerous magazine articles, which established for him a prominent place in the ranks of outstanding American historians.

Recently Dr. Commager wrote an interesting article entitled "A Few Kind Words for Harry Truman," which appears in the August 28, 1951, issue of *Look* magazine.

I do not believe that a man of Dr. Commager's stature would have anything to gain by risking his reputation through a departure from the principles which guide the works of historians for the

sake of pleasing any one person or group. For that reason, I sincerely hope that his thought-provoking article, which was inserted in the *Record* of Wednesday, August 15, 1951, by Hon. ERNEST W. McFARLAND, Senator from Arizona, received the careful and impartial consideration of the membership.

Needed: Freeway From the Holland Tunnel to the Bayonne Naval Base

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. SIEMINSKI. Mr. Speaker, for the *Record*, I should like to list below the full text of a telegram received from the Honorable Edward F. Clark, mayor of Bayonne, N. J. It concerns the desperate need of a freeway from the Holland Tunnel to the Bayonne naval base:

BAYONNE, N. J., August 15, 1951.

HON. ALFRED D. SIEMINSKI,

House Office Building,

Washington, D. C.:

The Board of Commissioners of the City of Bayonne and the citizens of both parties which we represent heartily endorse and sincerely commend your stand on the very vital importance to our national defense of the proposed freeway from the New Jersey entrance of the Holland Tunnel to the Bayonne Naval Base.

Your representation of the Thirteenth Congressional District has been outstanding, but you can win no finer victory for our Nation, for the rapid implementation of the handling of aid to the western Democratic bulwark against communism, for speedy and safe transport of necessary supplies and ammunition to our Armed Forces, and incidentally for the people of your district, to have this ingress and egress road built with all possible speed.

As you know, our children's lives are constantly endangered by the present heavy trucking on our city streets. I do not have to call your attention to several recent tragedies.

In addition, our streets, particularly Avenue E, have been all but ruined by heavy Federal Government traffic during and since World War II.

The people of Bayonne, never lacking in patriotic endeavor, who sent more than 1,100 of their sons into combat in World War II, and who are presently sharing the sacrifice of the Korean war, stand ready to aid our Nation with every resource.

But the wear and tear on our streets and the danger to our people involved through defense traffic is rapidly becoming too heavy for our taxpayers to bear.

The Congress is appropriating a very large amount of money dedicated to building up our defense installations. We do not feel that we are asking aims when we most emphatically insist that the Congress consider our problem in the light of the tremendous importance of the Bayonne Naval Base which we are proud to have located on our shores.

As mayor of the city of Bayonne, I can assure you that our chamber of commerce and our many local civic groups, as well as my colleagues (one of whom is a Republican) are behind your fight for Bayonne 100 percent; please feel free to call upon us for any aid we can give you.

We would be glad to have an opportunity to present our case before any congressional hearings that may be held on this matter. You may rest assured that the citizens of Bayonne will never permit the Department of Defense to have to resort to a "Bayonne airlift."

With kindest personal regards and every good wish I am in behalf of your constituents.

Sincerely,

EDWARD F. CLARK,
Mayor, Bayonne, N. J.

Personal Statement

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. SHELLEY. Mr. Speaker, at the time the bells rang announcing a vote on the President's veto message on H. R. 3193, the veterans' pension measure, I was in my office talking to my family doctor in San Francisco who was informing me that my mother was in the hospital, the victim of a stroke, and advising me that I had better return home to San Francisco as soon as possible. By the time I completed my conversation and got to the floor of the House, I was too late to qualify for the vote. If I had been present to vote, I would have voted "aye" to override the veto.

Further, Mr. Speaker, I have arranged to leave for San Francisco by plane at 11 p. m. Eastern daylight time this evening. In the event the final vote on the economic and military assistance bill, H. R. 5113, is not taken by that time, I take this means of saying I certainly would have voted for the bill, and state that it is only such unfortunate circumstances as afore-mentioned that would keep me from doing my duty on such an important measure as this.

Water Resources: A Key to Agricultural Progress—Part 1

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. ELLIOTT. Mr. Speaker, at the halfway point of the twentieth century, we are confronted with new emphasis, new realization, new understanding of what the scholar Pliny meant 2,000 years ago when he said: "Of all things, water is best."

As our population increases, as the arm of our industry extends itself yearly as a horn of plenty to bring a new array of its productions within the reach of the average person of this world, we use more and more of our basic resource—water.

In the scientific age in which we live, our scientists through research and experiment are unlocking nature's box of secrets pertaining to water and causing us to realize that conservation and proper use of our water resources provides a keystone for the arch of expanding development of our agricultural and industrial resources.

As a part of my remarks I enclose the first half of an address styled *Water Resources: A Key to Agricultural Progress*, by Dr. Paul W. Chapman, associate dean, College of Agriculture, the University of Georgia, delivered by him on February 6, 1951, at Memphis, Tenn.:

WATER RESOURCES: A KEY TO AGRICULTURAL PROGRESS

(By Paul W. Chapman, associate dean, College of Agriculture, the University of Georgia, Athens)

Two thousand years ago, Pliny—a recognized scholar and leader of the period in which he lived—said: "Of all things, water is best."

The passing of 20 centuries, and in the meantime, the development of science, technology, and engineering, have in no way detracted from the soundness or importance of the conclusion reached by the great naturalist and philosopher of the Roman Empire.

In fact, the words of Pliny mean more to-day in relation to human welfare than ever before in the entire history of civilization.

May we undertake to list a few of the fundamental reasons why water resources are increasing in importance? Here are seven—with brief explanations and comments concerning each:

WE USE MORE WATER

1. Increasing populations

There are constantly, day after day, year after year, more and more people in the world who must drink, otherwise consume, and use water.

The world's population has increased fourfold within the past 200 years.

Today there are 60,000 more people in the world to drink and use water than there were yesterday. There will be 60,000 more tomorrow than there are today. In the opinion of experts on the subject of population, this average rate of increase will continue throughout the second half of the twentieth century.

Consider the United States.

During the past 10 years, the population of our country has increased more than 19 million.

This number, perhaps, means little. But it may mean more to say that in terms of water requirements our increased population during the past 10 years is exactly like adding the personal water requirements of all the people who, in 1940, lived in the following 21 States: Arizona, Colorado, Connecticut, Delaware, Idaho, Kansas, Maine, Minnesota, Montana, Nebraska, Nevada, New Hampshire, New Mexico, North Dakota, Oregon, Rhode Island, South Dakota, Utah, Vermont, Washington, and Wyoming.

Yes, the water requirements of the United States are increasing very rapidly.

2. City supplies inadequate

It is common knowledge that the water supplies of most American cities are inadequate.

Of this fact, the recent experience of New York City is the most glaring and dramatic example. Many others might be cited.

This item, incidentally, is extremely important in the South—the region in which the largest number of cities are growing most rapidly.

3. Higher per capita use

No people in any country on earth at any time in history have used so much water as do Americans today.

Our increasing usage is due to factors related to our improving living standards. For example, consider plumbing including bathtubs with running hot and cold water—these are but one of many water-using developments that have come for the first time with the current century.

Average water requirements of the typical American citizen—for direct personal use—are now in excess of 125 gallons per day. Ten years ago, they were 100 gallons per day.

Many cities in the United States now use, without waste, an average per capita consumption of 500 or more gallons each day.

4. Industrial uses increasing

Manufacturing, which contributes so much to the prosperity and world-wide leadership of America, and which makes possible the highly diversified occupational pattern of the Nation—more than 40,000 kinds of jobs with an ever-increasing production per worker—is a major user of water.

It is said that American industry uses 70,000,000,000 gallons of water per day (Source: *A Water Policy for the American People*, vol. 1, p. 177.)

But because it is so big such a figure may mean little. It may be more impressive to say that it requires 65,000 gallons of water to finish a ton of steel, that steel mills in the Nation have operated at or near capacity for years—and no doubt will continue to do so, and that there will be an enormous increase in steel mills' plant capacity during the years immediately ahead.

For some persons, the water needs of industry may be better visualized by saying that it takes 30 gallons of water to make a pound of paper or 770 gallons to refine a barrel of gasoline.

Again, it is desirable to call attention to the fact that the industrial water requirements of the South are increasing at a more rapid rate than those of other regions in the Nation.

5. Ever-increasing output of electric energy

For years the electric output of the Nation has increased, it will continue to do so throughout the remainder of the current decade, and probably throughout the remainder of the century.

In the South the output has doubled since 1940, it will double again before 1960.

For the South and the Nation this means increasing water demands.

Some persons may be of the opinion that the above statement applies only to hydroelectric plants—those operated by the force of running water. This, however, is not the case. Every increased output of electric energy requires more water. Even in the so-called steam plants—in which coal, gas, or other fuel may be used—the weight of the water used is 1,000 times the weight of the fuel consumed.

6. Larger food-production demands

Obviously, more people—especially more people employed at higher wages and salaries than ever before—means increased food demands.

Increased food demands per person, always in direct relation to income, will be up not less than 3 percent in 1951.

Everyday, throughout the past 10 years, there has been added to the Nation's total number of buyers of food and fiber an average net increase of 5,555 persons.

Increased water requirements to produce these additional foods and fibers are positively gigantic.

Some agricultural engineer, who has the time and curiosity, should calculate the added national water requirements daily just to provide the increased foods and fibers for our new consumers for each new day.

Agricultural production and human nutrition are such exact sciences that these added water requirements in food could be calculated with a fair degree of accuracy.

7. Water needs of animals multiplying

In calculating ever-increasing water needs, the requirements of livestock must be taken into account. On a unit basis these water requirements are, of course, far greater than actual human consumption.

A high-producing dairy cow may, for example, drink about 200 pounds of water each day. And, after all, milk is something like 87 percent water.

Increasing water requirements for livestock are a major concern to the South—a region in which every State has a farm program designed, primarily, to balance animal production with crop production—a region where, due primarily to recent increases in livestock population, the farm income of five States—Kentucky, Oklahoma, Tennessee, West Virginia, and Virginia—on the bases of preliminary figures, indicates that in 1950 a larger income was earned from animals than from crops.

WATER—SUPPLY AND DEMAND

The previous seven items listed indicate some of the Nation's newer, more urgent, and increasing demands for water resources. But they do not, by any means, exhaust the total needs of human beings for water.

Fortunately, water is not a one-crop resource, like, for example, fuel oil.

Regarding distribution for any given year, our information about the amount of water to be provided for use is a trifle indefinite, but we are confident that there will be no substantial reduction in the total supply available in any given locality over a period of years.

It is because of this knowledge that scientists and engineers may work in implicit confidence with respect to the possibilities for materially increasing economic gains in the future, so far as these relate to water and other renewable resources.

But bear in mind that the law of inertia operates with respect to the rate at which new knowledge is applied. In a democracy there must always be infinitely more followers than leaders. Please do not forget this fact, upon the rapid multiplication of followers or applicators of scientific and technical knowledge depends the solution of the water-resource problems on American farms at the present time.

FARMERS DEFINED

It may be noted, also, that of the seven newer and increasing demands for water, five are concerned primarily with urban needs (but not exclusively urban needs by any means) and two with what may be called segments of farm needs. All seven, in some measure, compete for the total available supply of water.

Now, let us analyze or examine the specific problem: Water—a key to agricultural progress.

First, it is essential to understand what a farmer is, the following definition may help.

A farmer is an individual who works with such natural resources as soil, water, sunshine, and plant food for the purpose of converting these resources into commodities having a higher value than the raw materials he uses.

Some such definition is essential to any real understanding of the nature and objectives of the occupation of farming.

THE LAW OF GROSS FARM INCOME

There is also a law—a fixed law—of economics which indicates how much money a farmer will earn in relation to other farmers, as well as the comparative living standard that he will be able to attain and support. The law may be stated as follows:

The income of any farmer for any given year, in relation to all farmers, will be

affected directly by the volume of natural resources converted into commodities. This law may be more important than all other income factors combined.

PROCESSES OF PLANT GROWTH

The definition of farmers and the so-called law of gross farm income are given as desirable foundation or background information.

There are countless other laws of science and principles of engineering involved in a consideration of the subject—Water: A Key to Agricultural Progress. Of course, we cannot deal with all of them, but the definition of a plant—plants (farm crops) are the basis of all farming—seems to be another minimum essential. The definition follows:

A plant is a foundation through which water passes from the soil into the air. And, since a plant extracts most of its food from the water that passes through it, growth is normally in direct ratio to the constant and total supply of water available.

THE LAW OF FARM PROGRESS

Before considering specific localities, it might be well also to present another law that has a direct bearing upon the subject, namely, the law of farm progress, which may be stated as follows:

The relative rate of progress in farming for any locality, State, or region is in direct proportion to the application of known technology and science in terms of the percentage of total potential applicants, and varies with the speed and volume of the applications.

PROBLEMS AND SOLUTIONS

Applying this subject and these principles to the South, which is, of course, the primary interest of those who suggested the topic, it is possible to state the primary principles involved in three questions, as follows:

- 1 What are the relative quantities of natural resources (raw materials) available to the typical southern farmer?
- 2 What are the relative results obtained?
- 3 What are the simplest and most practical ways to insure change or progress that will result in economic gains?

SIZE OF FARMS

A allable natural resources for farming can best be measured by acres of land; at least that is one universal measure commonly accepted in the United States.

Forty-five percent of the farms in the South are less than 50 acres in size; 86 percent are less than 180 acres in size. The average for all farms in the Nation is approximately 200 acres, or was in 1945.

America's typical commercial farm has increased in size throughout this century and will probably continue to do so. This trend applies to commercial farms throughout the South.

Selecting more or less typical States, the farms of Alabama, Louisiana, and Mississippi average, for example, 71 acres in size; those of Iowa, Minnesota, and Wisconsin average, for example, 149 acres—or almost exactly twice the size of the average for those of the Southern States selected.

If one wishes to compare the relative farm incomes of the six States, it will be found that the law of gross farm income applies.

That this should be true is inevitable. Because, if all the farmers in all the six States produced the same crops (and animals), and made the same yields per acre (and per animal unit), and sold the commodities for the same price, the incomes of one region would be twice as large as the other.

While not an integral part of the subject under consideration, it seems somewhat related and certainly is of major importance. And, after all, it is one and the same thing because it involves the relative quantities of natural resources (raw materials) handled, including—as the No. 1 item—water

in terms of the total percent and quantity (by weight) of the total raw materials sold.

YIELDS—PER ACRE AND PER UNIT

Average crop yields per acre in the South are relatively low. Consider, for example, the following typical field crops:

Corn (10-year period): Average production per acre for the Nation, 31.4 bushels; for the South, 17.9 bushels. During recent years, corn yields per acre in many Southern States have increased greatly, but, for the region as a whole, no more than the national average increase.

Sweetpotatoes (10-year period): Of 13 Southern States, 11 were below the national average of 90 bushels per acre. Two—North Carolina and Virginia—were above the national average. With an average production of 154 bushels per acre, Maryland topped the list of States growing sweetpotatoes commercially.

These examples are typical. To add other commodities would not change the relative position of the region with respect to crop yields per acre.

The same relative position is held with respect to production per animal unit. Consider milk production per cow.

For the first time in the Nation's history, the average, annual production per cow went above 5,000 pounds in 1948. During the most recent 5-year period, average, annual milk production per cow in the South Atlantic States was 4,128, as compared with a national average for the period of 4,992 pounds. This was a gain for these Southern States of 510 pounds per cow over a 25-year period, as compared with a national gain of 413 pounds. For the South Central States, an average production of 3,322 pounds per cow was made during the most recent 5-year period; for this section of the South, there has been a gain of 94 pounds per cow in 25 years.

Animal-production records are always correlated with crop-production records. This is true because feed is such an important factor in animal production. Or, to say the same thing in another way—all flesh is grass.

That these unit yields are relatively low—as applied to crops and animals—is extremely unfortunate, since Southern farms are also smaller than the national average. The result is inevitable—low relative average incomes on a per farm per worker, and per farm family basis for the region. And, most important of all, there can be no change in the relative income position of the region—regardless of whatever else may be done—until these conditions are changed and the relative handicaps in one or both removed.

To make a worth-while contribution to increasing average production per unit—per acre and per animal unit (and also per worker) should be the major goal of all workers in public agricultural agencies and all others who are primarily interested in the welfare of the region. Have you accepted this challenge? Are you willing to do so? These are questions that every individual may ask himself; he will not be expected to give an answer to anyone but himself.

What Progress Have We Made Toward Peace Since VJ-Day?

EXTENSION OF REMARKS

OF

HON. CHARLES B. DEANE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. DEANE. Mr. Speaker, on yesterday I participated with my esteemed

colleague, Representative WALTER H. Judd, of Minnesota, in Columbia's television program, Peoples' Platform, with Mr. Charles Collingwood, CBS White House correspondent, acting as chairman of the program. This was a special program commemorating the anniversary of VJ-day, August 14, 1945. Under unanimous consent, Mr. Speaker, I insert my remarks prepared for this program:

HAVE WE MADE ANY PROGRESS TOWARD REAL PEACE IN THE PAST 6 YEARS?

On a world-wide front we have, Mr. Collingwood, despite tremendous obstacles I consider that today we are nearer a lasting peace, especially in view of the fact that within 3 weeks forty-odd nations will sit down together in San Francisco and sign a peace of reconciliation with Japan.

John Foster Dulles is to be commended for pointing up that phrase, "peace of reconciliation." This San Francisco conference is being thought out in terms of a Christian peace without vindictiveness and it is without precedent in the history of peace treaties.

Furthermore, we have made real progress in many areas of the world—through the Truman Doctrine, the Marshall plan, the point 4 program of technical assistance to underdeveloped areas, and the mutual aid under the North Atlantic Treaty Organization.

Last Friday, around midnight, the House approved legislation which wrapped all of these programs up in one package to be known as the Mutual Security Administration. And, incidentally, my colleague here this evening, WALTER Judd, played an important role in the passage of this legislation by the House.

Further evidence of progress toward peace can be found in the very fact that we have such an instrument as the United Nations. For the first time in history 60 nations are banded together in an international organization for the purpose of resolving their differences in a peaceful way.

HAS OUR FOREIGN POLICY BEEN EFFECTIVE?—IS IT A WORKING POLICY?—WHAT SHOULD BE THE POLICY FOR THE FUTURE?

I would say our foreign policy has been effective in three fields:

Economically, in stabilizing Greece and Turkey and other areas of Europe through the Truman doctrine and the Marshall plan.

Politically, in the results of the Italian elections of 1948, in the various international agreements, such as the North Atlantic Treaty Organization, and in the approaching Japanese Peace Treaty.

Militarily, in the tremendous accomplishments of the Berlin airlift and in courageous response to aggression in Korea.

Yet, I sense a basic weakness in a fourth field which may, in the long run, prove to be the most decisive of all—the ideological field. We as a nation have not yet fully grasped the fact that we are in an ideological war—a war of ideas.

Our opponents for 30 years have woven into their military, economic, and political strategy principles and ideas based on the ideology of Karl Marx. Communism has pioneered a new type of war strategy by winning the minds, hearts, and loyalty of millions of people without firing a shot.

This line of thinking has been convincingly expressed by an outstanding newspaperman I met here in Washington recently, namely, Mr. Peter Howard. Incidentally, the press will soon carry the announcement of his new book, *The World Rebuilt*, which will be in the bookstores early in September. I just received this advance copy and I found it most informative. It's an answer to Washington Confidential.

Our future foreign policy besides economic, political, and military programs must include a more thought-through and worked-out

program of ideological warfare. The Voice of America program has done a certain amount. The formation of the psychological strategy board under the leadership of Dr. Gordon Gray, president of the University of North Carolina, is a step in the right direction.

It is not propaganda we need but a great national rededication to the basic ideas of democracy. What we need is a return to absolute honesty and the simple principles stamped on every coin, "E Pluribus Unum" or teamwork, and "In God We Trust." Our national policy must embrace not only military rearmament but moral rearmament.

OUR RELATIONS WITH OUR ALLIES HAVE THE INTERVENING YEARS SINCE THE END OF HOSTILITIES WEAKENED OR STRENGTHENED THEIR FRIENDSHIP OR SUPPORT?

To me, that's the key to our discussion this evening. Mr. Collingswood. Properly developed relations with our allies is the most important aspect of our foreign policy.

Early in January, I attended a public meeting at Washington's Shocham Hotel and heard a former Communist from the German Ruhr say, "True unity in the West would be like an atom bomb on the Kremlin." About this same time I witnessed a marvelous musical stage production, "Jotham Valley." I understand this show is now playing in Hollywood at the Carthay Circle Theater and is booked for San Francisco during the Japanese Peace Conference. A cowboy quartet in Jotham Valley sings a catchy little song. It goes like this: "When I point my finger at my neighbor, there are three more pointing back at me." That's it. Teamwork is a lot more likely to happen if we deal with our own faults instead of spotlighting the other fellow's.

That's certainly true in the family. I know in my own case when I stopped telling the kids what was wrong all the time and began to study these three points, things changed and the kids straightened up on their own. Maybe what's good for one family is good for a family of nations.

We Americans have to face the uncomfortable fact that we do not enjoy the complete trust and confidence of many of the peoples of the world. They may like us but do not love us.

I found this to be true when as a member of a congressional committee in 1949, I had the opportunity of meeting key leaders in 10 far-eastern nations. Conversations with U. N. leaders here in America this year have confirmed my conclusion.

This situation must be remedied and I feel that it can be—and quickly.

Confidence can be restored if we are willing to do two things:

First, admit mistakes when we make them. There is nothing more disarming than an honest apology.

I remember how deeply moved I was to hear a member of the Japanese Diet, Mr. Kitamura, just over a year ago speak to the House of Representatives. With sincere emotions he expressed our "deepest regret for the tragic trouble that we have caused to the people of the United States."

This honest apology from a leading Japanese—which, incidentally, was carried by the newspapers from coast to coast—was encouraging evidence that there are forces at work in Japan which will insure that that great nation will become a democratic and peace-loving country.

We have created the ideal paper plans for a sound Japan—first, by helping them with their democratic constitution, and second, by giving them a peace of reconciliation.

But we also need to help them build up the spirit of democracy within the hearts of the people if the paper plans are to be a success.

Second, we must export the basic ideas of democracy on which our country was originally built. The House of Representatives Friday authorized an additional \$7,500,000,000 for material and military aid for mutual defense. If we only send this type of aid, without at the same time giving these people our hearts, we will incur not their gratitude, but their resentment.

IS THE UNITED NATIONS WORKING?

Mr. Collingswood, the U. N. is like democracy—"Democracy works if you do." Like democracy, the U. N. has shown remarkable strength and remarkable weakness. Yet, surely the credit side far outweighs the debit side.

1. U. N. intervention, by forcing Soviet troops out of Iran in 1946, preserved the independence of that vital middle-eastern country.

2. The 1949 accomplishments in Palestine by United Nations representative Dr. Ralph Bunche were magnificent.

3. I am reminded of the U. N. mission to Indonesia in 1949, which provided the basis for the transfer of sovereignty to the Indonesian people.

4. Prompt action by the United Nations in stopping aggression in Korea, to my thinking, strengthened this international body and certainly enhanced its prestige.

5. Presently, as a United Nations representative, Dr. Frank Graham of North Carolina sojourns in India, attempting to mediate by peaceful settlement the serious differences between India and Pakistan over Kashmir.

At the same time there is plenty of room for improvement in the United Nations. As one of the U. N. delegates stated recently, whenever a U. N. committee meets, there are two sets of problems—the problems that are on the table and the problems that are around the table. He meant the problems of human nature among the delegates themselves.

It is like this handkerchief I hold in each hand. When I pull to the right and insist on my way and you pull to the left and insist on your way—there is tension. When I stop wanting my way and you stop wanting your way and both want the right way—there is no tension and there is unity.

That is the sort of spirit needed in the U. N.

OUR POLICY IN THE FAR EAST

The problems of the Far East, as my colleague WALTER JUDD so well knows, are more complicated than in any other place in the world. It is in Asia, in my opinion, where the great events of the future will take place.

Lenin has said that the road to London and Washington lies through Peiping and Calcutta.

I am thinking of the fact that there are more people in the Far East than all the rest of the world put together. These millions of people are undergoing a revolutionary ferment.

What will be the answer?

Which ideas will win the minds and hearts of the millions of Asia?

It is going to be the revolution of materialism fostered by the Kremlin or will it be the kind of revolution based on absolute moral standards and the guidance of God?

It is largely up to you and me—America, and the lead that we give.

SUMMARY

To summarize my position, Mr. Collingswood, on the challenging theme we have been discussing I will say we can eliminate friction in our homes, within political parties, and furthermore we can as a great nation win the peace if we are willing to make our decisions on the basis of what's right

instead of who is right, remembering that it's no good to point our finger at our neighbor—without first dealing with the three pointing back at ourselves.

To win the peace—we need to know what peace really is. I like the definition of Frank Buchman, who has been nominated for this year's Nobel Peace Prize when he says, "Peace is not just an idea, it is people becoming different." And, that's where every man, woman and child has a part. It is from the little private wars that big wars grow. The small boy's remark is correct: "If you want to stop war in the world, stop war in the home."

It is the wars between husband and wife, between labor and management and between races, that make possible wars between nations.

And everybody, whether he has a television set and can have the benefit of all this wisdom that Walter and I have been putting out tonight—or not—everybody can do something about ending their little private wars and start to do things differently tonight.

With all the international treaties, aid programs and United Nations in the world—they will all succeed or fail according to the way you and I live.

Postal Union Expert on Retiree Deficit

EXTENSION OF REMARKS

OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. McCARTHY. Mr. Speaker, the following article, written by Mr. Jerome Keating, executive secretary of the National Association of Letter Carriers, is an excellent explanation of the present condition of the retirement fund for Government employees. Mr. Keating presents a strong argument in support of the contention that retirement benefits for Government employees can be increased without impairing the solvency of the retirement fund.

[From the Washington Times-Herald of August 17, 1951]

POSTAL UNION EXPERT ON RETIREE DEFICIT

Early in this congressional session, it appeared that legislation to improve the present civil service retirement act and to provide an increased annuity for retired people now on the rolls stood an excellent chance for early enactment. The picture has changed considerably and now prospects do not look so favorable. The difficulty confronting this legislation hinges on the old controversy as to how a government retirement system should be financed. Civil service employees are keenly aware that, despite the fact they contribute 6 percent of their salary to the civil service retirement fund—compared to 1½ percent under social security—survivorship benefits under social security are much more liberal than those under civil service retirement. S. 995, now before the Senate Post Office and Civil Service Committee, if enacted, will go a long way toward eliminating this discrimination. S. 995 will also help materially in mitigating the hardships to retired civil service employees who now find their present annuity pathetically inadequate in the face of today's high cost of living.

The hope for early enactment of S. 995 bumped up against the rock of "actuarial solvency." Social security is not concerned with actuarial solvency—it is practically on a pay-as-you-go basis. Despite the fact that on May 31, 1951, there was \$4,236,696,470.33 in the civil service retirement fund, chairman Robert Ramspeck of the Civil Service Commission has made the statement that the fund is deficient to the extent of \$5,000,000. To the lay mind, this is confusing and contradictory.

It is confusing even to actuaries and we find that many of them actively dispute the necessity of having an actuarially funded Government retirement system. To have a fund completely actuarially solvent, it would be necessary to have on hand sufficient money to not only pay the present and future claims of all those now on retirement, but to pay the future claims of all active employees until the time of their death and, if the employee should leave a widow with survivorship rights, long after their death. In addition, it would provide the fund with sufficient administrative funds to operate the system until all such benefits had been completely paid. It is difficult to compute the amounts required for an actuarially funded plan. It is extremely difficult even for insurance companies whose benefit provisions are exact and precise. In the case of a Government retirement system it is impossible—one might also add, unnecessary.

On the subject of estimating pension costs, I think it well to quote from a statement made by Murray W. Latimer, an expert in the pension field, in a report to the trustees of the United Mine Workers. The statement was carried in a bulletin put out by the University of Illinois under the title, "Pension Plans in Collective Bargaining." Mr. Latimer's statement reads as follows:

"Data relating to the ages, lengths of service, and number of miners are, of course, desirable. But these factors, without more, will not give an accurate indication as to what the pension load of the miners' welfare fund would be initially or in the years to come. That load would be the result of individual decisions made by tens of thousands of individuals having a wide variety of conditions to face and a host of considerations to take into account. If every remote relevant fact were collected about every miner who has worked in an American coal mine since 1776 and all the actuaries now alive were to do nothing for the next 10 years but make estimates of what the proposed pension plan would cost, they would still not know the answer. All their data would not tell them what the miners themselves would think, and that, in the final analysis, would be controlling.

"The shortest, quickest, cheapest, and, in fact, the only way to find out what a pension plan costs is to try it out—and for several years. The collection and analysis of data for the railroad retirement system cost many millions, and none of the estimates were borne out. Some were too high, some were too low—and if the life of the system depended upon the infallibility of prognosticators, it would never have left the ground. And so it is with all pension systems."

I believe this, in a brief way, pretty well sums up exactly what you are up against when you attempt to estimate what retirement benefits and survivorship benefits are going to cost. The only factor that you can absolutely rely upon is the factor of experience, and the experience of the civil-service retirement fund has shown the fund increasing rapidly from \$1,876,227,651.70 in 1945 to \$4,236,696,470.33 in May 1951.

The funded system usually results in excessive accumulation of reserves.

Since the civil-service retirement fund was first established in 1821 down through the

present day, the board of actuaries of the civil-service retirement fund have been consistently conservative in their cost estimates.

In their third annual report, submitted on January 19, 1924, the board of actuaries declared: "Experience of other systems promises that the annual payments required of the Government may be expected to increase ultimately to over 20 percent of the payroll if they are not met as they accrue."

For the first 9 years of its operation, Congress did not appropriate a single cent for the operation of the fund. Since that time they have appropriated amounts far less than what has been recommended by the actuaries. Yet in no single year has the Government's share, according to the actuaries' own figures, including normal and deficiency costs, equaled as much as 12 percent. For the year ending June 30, 1945, the Government's share was placed at 6.50 percent—a far cry from the 20 percent prophesied in 1924.

When the Langer - Chavez - Stevenson amendments were before Congress in 1947 and 1948, the board of actuaries was requested to submit a report. The report was submitted to Chairman EDWARD H. REES under date of May 21, 1947, and predicted that the amended bill would cost 12.82 percent of the payroll. This figure applied to normal costs only and did not include deficiency costs. The report for the year ending June 30, 1949, which is the last one published, placed the normal cost at 8.60 percent of the payroll.

Much could be said on how a Government retirement fund should be financed. Without delving too deeply into the intricacies of the matter, let us listen to another qualified witness—this time the witness is Mr. A. A. Weinberg, consulting actuary, of Chicago, who in the second annual statement of the board of trustees of the retirement system of Illinois on June 30, 1945, stated:

"Some variations to the funding method of financing retirement provisions have been adopted by various government agencies. A number of these agencies provide for the financing of the retirement benefits strictly upon the basis of cash requirements, meeting the cost of the benefits as they mature, and making no advance provision for these obligations. Other agencies have modified the accepted method by providing for the accumulation of a moderate reserve, which in some instances represents a substantial proportion of the reserves required under a funding plan.

"The State employees' retirement system of Illinois provides for the latter method of financing. Current contributions by the State are substantially above cash requirements for the matured benefits. These contributions to a fiscal year are equal to an amount representing the anticipated average annual expenditures of the system for that part of the benefits for which the State is obligated, covering a period of 10 years next following that for which a contribution is made. This method of financing is considered appropriate and practicable in cases in which the State is the employer, on the theory that the State is a perpetual entity having unlimited taxing authority and can always raise the funds necessary to meet the revenue requirement of its various agencies and departments."

We hope that the Senate and House Post Office and Civil Service Committees will look past the recommendations and estimates of the board of actuaries and the Civil Service Commission and pass this legislation that is so sorely needed. We hope that the practical side of cost and needed reform will not be smothered in a theoretical projection of imagined costs of the future.

The People Will Drive Out of Washington All of the Minks, the Pinks, and the Stinks Who Are Destroying the Moral Fiber, the Very Warp and Woof of Good Government

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I include an address I delivered at a Republican rally and clambake, Newport, R. I., August 19, 1951:

We meet today in this beautiful and historic city of Newport, R. I., to renew our fealty to a great political party and to dedicate our services to making it a stronger and more useful instrument of government—veritably, the only instrument available through which the principle of liberty, individual opportunity, and our system of enterprise of free labor and free management can be saved.

Rhode Island was once a banner Republican State. Today it is widely recognized as one of the strongest Democratic States in the Union. This transformation has come to pass notwithstanding the fact that no State in the Union has been more handicapped by New Deal maladministration than your own State.

True, you get some Federal hand-outs. These have been made to appear most alluring. Yet, for every dollar you get from the Federal Government, the State of Rhode Island has to send 10 in tax money to Washington. A citizen who would arise and protest this as bad business would, of course, at once be labeled as a reactionary and one who is living in the past.

But worse still, along with your purchases of Federal grants with your own money comes Federal dictation, regimentation, and a loss of your personal freedom. We travel the old merry-go-round—Federal pap to purchase support at elections, higher taxes to pay for Government spending, higher prices because of the higher cost of Government; and some day—the collapse.

It is hard to believe that the sound-thinking people of Rhode Island really believe in such policies. Your presence here indicates that all the sparks of freedom have not been extinguished. Here is the nucleus for the organization of a fight that can restore good government and sound government to the people of Rhode Island and the Nation.

Effective and intensive efforts at the precinct level will constitute the difference between victory and defeat not alone in Rhode Island but in many other States at the 1952 election. A revitalized and an aggressive Republican Party will be a tremendous factor in the future progress and prosperity of this State. As in the country itself, Rhode Island needs a strong, two-party system to achieve and to maintain good government.

It is a simple fact of history that any administration—be it Federal, State, or local—will soon subordinate the best interests of the people to its own interests unless there is a vigorous, intelligent opposition party, devoted to a fearless, relentless appraisal of the actions of the majority party.

A party too long in control becomes callous and indifferent. In its ambition to perpetuate itself, it seeks more and more power over the people it claims to represent. It finds

that power feeds upon bigger appropriations and heavier taxes. A little corruption here and there begets more and greater corruption, and finally the people discover they have been sold into a bondage of debt and taxes which will be a burden upon their families as long as they live. Lenin, just before his death, made his great prediction when he said, "England will expand herself into destruction, Germany will arm herself into destruction, and the United States will spend herself into destruction." The first two have come true and we are rapidly approaching for the very reason Lenin gave.

There is a particular cause today to organize to fight this battle for America.

We are faced with crises never equaled before in our national life. We hysterically shower money abroad to build up defenses against communism. We are obliged to regiment and fetter American life that we can prepare for the big day they tell us is ahead.

How did this all come to pass in six short years? Who is responsible for the decline of our national prestige abroad and our national defenses at home?

When the awful agony of World War II came to an end, America was the one great star in the world. We had the mightiest armaments and we had the power that comes from an apparently inexhaustible treasury. We stood at the pinnacle of history. All nations were looking to us for support, guidance, and inspiration. We could have laid down the terms and insisted upon a just peace, a peace that would give us the opportunity of realizing the ageless ambitions of man.

But we frittered away that opportunity. We listened to the subtle voice of the man whom President Truman once called "good old Joe Stalin." At Yalta, Tehran, and Potsdam, we appeased the "Red brothers," and literally gave away our security. We sat silently by and let the Communists absorb Poland, Czechoslovakia, Rumania, Hungary, Lithuania, Latvia, Estonia, East Germany, Manchuria, Outer Mongolia, Port Arthur, and the Kuriles. One by one they fell. And we hoped each would be the last. Could you imagine such a tragedy happening if your distinguished townsman, Henry P. Fletcher, had been Secretary of State?

We sold out our faithful ally, Nationalist China, at Yalta and Potsdam, even at a time when the Chinese were fighting side by side with our troops against the Japanese. Instead of cementing a friendship with the Chinese people which would have given us a free and peaceful Asia, we tried to force the Red government down the throat of Chiang Kai-shek. These architects of disaster and defeat were foolish enough to believe you can make a lasting deal with the Communists.

By now I hope these fuzzy thinkers realize the only time a coalition with a tiger can succeed is when you are inside the tiger.

I hope we learn the bitter lesson before it is too late. Communism thrives on weakness. Fear, vacillation, and hesitancy are an invitation to the Communists to walk in. In dealing with Communists we should lead from strength and not from fear.

The only thing that will ever stop the Kremlin is a show of strength, a display of will and incisive leadership. Milquetoast leadership is the Kremlin's dish. And that is the kind of faltering, blundering leadership the American people have had in this critical period.

It is the kind of leadership that makes the future uncertain.

That is the kind of leadership that enabled Soviet Russia to gobble up nation after nation and spread its domination from 170,000,000 to 400,000,000 people in 5 years.

That is the kind of leadership that in five short years reduced us from the high posi-

tion we held at the close of World War II to a position where we are literally cringing before Russia and its satellites.

I tell you we cannot expect these same architects of our misfortune, the same designers of our disasters, to provide the solution that will save America. After a crew had carelessly wrecked a ship, no sane person would employ that same crew to salvage it.

The real problem which faces America now is how to prevent these disciples of socialism, these suborners of our Constitution and our liberty, from wrecking our country beyond repair.

Of course, there is no escape now from the tremendous cost of war armaments. It is the price we must pay for the blunders of this administration. We must spend billions to make ourselves secure from our former comrades; those whom we rescued from the bloody hands of Hitler. We must build our Army, Navy, Air Force, and Marines to such proportions that we will be safe from attack.

And we should not forget the great record which that Republican Eightieth Congress made in providing for an adequate national defense. That Congress knew exactly what it was doing. And if President Truman had followed the direction and properly administered the defense legislation sent to him by that Republican Eightieth Congress we would not now be authorizing an armed-services budget in excess of \$75,000,000,000 for this fiscal year—and I might go even further in saying that in all probability we would not now be engaged in a war in Korea. The Eightieth Congress fixed the size of our Armed Forces at 2,040,000 men, and provided ample funds to support those forces. But President Truman decided that only about 1,000,000 men were needed in the armed services at that time. That same Eightieth Congress authorized an Air Force of 70 groups and provided funds for those 70 groups, only to hear the President say a 48-group Air Force was enough, and then refuse to enlarge the Air Force or to use the money we had provided for that purpose.

The Eightieth Congress authorized and expanded the naval air program, including a super-aircraft carrier upon which work was begun and then ordered stopped by the President, at a dead loss of \$20,000,000.

The Eightieth Congress also blocked the attempt to put the Marine Corps completely out of business.

This great record was being made while President Truman was running up and down the country denouncing the Eightieth Congress.

We now have 3,500,000 men in our Armed Forces. We have an 89-group Air Force. And, believe it or not, we are now building that new superaircraft carrier, after more than 2 years of precious time has been lost, and at a great increase in cost.

The Republican Eightieth Congress was so far ahead of the President in preparing our national defense for these troublesome days that only last week the Democratic chairman of the Armed Services Committee admitted that the Republican Eightieth Congress had actually done more to build a strong national defense than any peacetime Congress in history.

And that Republican Eightieth Congress not only provided funds for strong national defense, but it balanced our national budget and created a surplus for the first time in nearly 20 years, made payments on the national debt, and in addition to all this, Federal taxes were reduced for the first time in a generation—reduced by more than \$5,500,000,000 a year, and more than 7,000,000 low-income Americans were taken entirely off the tax rolls.

But equally important, this Republican Congress tried in every way to get the President and his Secretary of State to change

their policies concerning China which have proven so disastrous to us and the world.

And I might add all this was done in the House under the leadership of your neighbor and friend, Speaker JOSEPH W. MARTIN, and in the Senate under the leadership of that able statesman, ROBERT A. TAFT.

We must help the countries of Europe to realize the threat they face from communism.

This fight against communism is not confined to the European front. We face danger in a dozen sectors. Each is important; each is vital.

If the restraint of communism is our goal, we cannot fail to give support to Nationalist China, Turkey, Spain, and every country which can be enlisted in this fight.

Old passions and old prejudices must be cast aside. In this struggle against communism, we need all the military support we can possibly secure.

Faced with these tremendous expenses abroad, we might expect a little reason in our spending at home. But this is apparently a futile hope. Spending for politics-as-usual goes on without interruption at the same old stand. To the spenders, what happens to the country is of no great importance, if it will win the next election.

"After all," as a top New Dealer once said, "we owe it to ourselves." Again, we should remember Lenin once said, "If I can control the currency of a country I don't care who may control its army."

The sad consequences of that type of thinking are now revealed in high prices and high taxes. One chases the other.

The household budget of every family in the land feels the daily pinch of inflation—sky-high prices which leave the workingman's family with a reduced standard of living—and the trouble with the new controls bill is it controls everything except inflation.

We all recognize that Washington pay-rollers are doing more to stoke the fires of inflation than any other force in the whole national economy.

Runaway Federal spending, waste, and extravagance which shocks even the most calloused observer, is the one great impulse to runaway prices today.

The President himself recently warned us, "Buy only what you need and cannot do without. . . ." He told us we must forego some of the luxuries and conveniences of life. That was reassuring. We had hoped for a few hours that the administration was going to reform.

But the news came out a few days later that the Army had purchased 68,000,000 can openers, or about 22 for every man and woman in the military service.

And the Army recently purchased 6,000,000 gallons of paint, estimated to be enough for a full year's requirements. But the Army demanded delivery in 60 days. You can realize what that meant to paint prices.

A little while later the Quartermaster called for bids on about 12,000,000 pairs of boots and shoes, although actual needs for a year were stated to be less than 5,000,000 pairs. That didn't make shoe prices slow down.

Last January the Quartermaster Service purchased 5,000,000 pounds of oleo at 25½ cents a pound. And at the very same time the Department of Agriculture was selling 5,000,000 pounds of surplus butter abroad for 15 cents a pound. The record production this year will do more to keep prices down than a dozen Government agencies.

In the current budget the State Department asked Congress for \$25,000 for lunches to entertain visiting officials and scholars from abroad. The Appropriations Committee of the House found that each of the lunches figured out to \$8.73 per person. That's very fancy eating at the expense of the American taxpayers. Well, Congress

knocked that item out of the bill. And we shall knock out many like extravagances before the session is over.

On the appropriation bills for 1952 the Republicans in the House have cut more than \$3,000,000,000.

The President says we must "make the most efficient use of the Nation's manpower." But we find the Government agencies expanding at the rate of almost 2,000 workers every day.

It was revealed recently before the House Appropriations Committee that one of the so-called new emergency agencies was hiring many more stenographers than were authorized in its budget. The answer? Well, it was "stockpiling stenographers" against possible future needs—hiring people and carrying them on the payroll until they might be needed.

These shocking examples give you a picture of the tone and tenor of spendthrift Washington today—spend and spend, tax and tax. You all know that immoral slogan—the battle cry of spenders bent on making America over in the image of socialism and the police state.

But to a man, America says: "They shall not pass."

America is desperate for clear and consistent policies and for truthful presentation of facts by their leaders.

How can our people avoid confusion when the administration itself is apparently so confused that Secretary of Defense Marshall told the House Appropriations Committee the United States knows very little about Russia's military strength, while Secretary of State Acheson tells us the Russians have 4,000,000 troops, 200 divisions, and the world's largest jet air force with 20,000 front line planes, including excellent jet fighters. Whom are we supposed to believe?

And how do we reconcile the statement of Army Secretary Pace that we are ready for war with Russia with the testimony of General Vandenberg that we have only a "shoe-string airforce"?

The Congress has appropriated billions upon billions to build up our armaments. Since World War II we have appropriated for defense nearly \$200,000,000,000. If we are not now better prepared than some of our administrators say we are, it is high time the American people demanded some new administrators.

There is abundant evidence of waste and extravagance in some of our military expenditures. We must continue to spend billions for defense, but the strain of this burden is so great we cannot continue to support waste in any way, shape, or form. The Congress should create a Joint Committee of the House and Senate to carefully scrutinize military expenditures. Such a committee would exercise a restraining hand over bureaucratic excesses and would provide some assurance that the people who pay these vast bills are getting a dollar's worth of value for the dollars they pay in taxes.

Ten years ago, the cost of government—Federal, State, and local—took approximately 14 percent of the national income. When the war ended in 1945, taxation was taking 27 percent of all our income. This year the best available figures indicate that taxation will take approximately 29 percent of the people's income.

A study committee for the Foundation for Economic Education under Dr. Leonard Reed recently reported that when taxes went beyond 25 percent of a nation's income dictatorship was near.

And next year, on the basis of the administration tax bill which recently passed the House over the opposition of myself, and most of our Republican colleagues, taxes would

take 32 percent of all our income. Remember Lenin's great prediction that the United States would destroy itself by spending.

It should be crystal clear that when government confiscates a third of what the people earn—when people work 1 day in 3 for the government—they can no longer be free and independent. They must look to government for help. They have become exactly what the Socialists dream of—incipient wards of the state.

Just as 14 percent became 29 percent, and 29 percent became 32 percent, unless the people bring this wicked trend to an abrupt halt and fire the spenders, the 32 percent will soon become 40 percent as it is today in Socialist Britain, and eventually 60 percent as it is today in Communist Russia. When that happens, you can be sure our great American concept of freedom, opportunity, our system of enterprise, and a better way of life will have vanished forever. When that happens the last bulwark of free government, here and abroad, will have been destroyed.

Our forefathers founded this Republic upon the principle of liberty and individual opportunity, and the Communist concept that the people belong to the government is repugnant to every provision of our Constitution and to every instinct of the American people. The American people do not belong to the Government; the American Government belongs to the people—and the people belong only to God.

The people of the Nation are turning to the Republican Party as the instrument to restore integrity, decency, and morality to their Government. They recognize in our party the instrument through which they can regain confidence in the competence, the honesty, and the good faith of their administrators. They are hungry for leadership whose own example of ethical conduct will establish a pattern of moral standards that will command the respect of our own country and the world.

The vast majority of our people are disgusted with mink-coat and deep-freeze scandals, RFC loans to political favorites, influence peddlers, and 5 percenters—they are disgusted with all the minks, the pinks, and the stinks in Washington who are destroying the moral fiber, the very warp and woof of good government. They know that the only way the mess can be cleaned up is by a new, crusading leadership, dedicated to reviving the moral health of the United States Government.

Yes, the voters of America have a job cut out for them. Our workers, our businessmen, our farmers, and our housewives have a job cut out for them. In all history, the responsibility of citizenship never rested so heavily upon the people—it rests upon each of us just as heavily as if we were on the firing line in Korea.

The task cannot be mistaken. We must run every last one of these appeasers, these blunderers, these corrupters of power, these disciples of alien philosophies out of Washington.

If we don't do it, America is gone.

Once again, we must place lights in the belfry of the Old North Church.

Once again, not one Paul Revere, but thousands like him must ride forth.

American liberty was born in New England. Let New England be true to its heritage and give American liberty the rebirth that will save our country.

The task is not for the few, but for the many. Every single one of us must join in the crusade. We cannot run the risk that if one fails, all fail. Each must do his job.

We must dedicate ourselves to restoring faith in freedom, in individual liberty, and in God. We are joined in a battle that we cannot and must not lose.

Hub of the Trouble for Our Machine-Tool Industry

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mrs. BOLTON. Mr. Speaker, in the long study made by the Committee on Foreign Affairs much interesting testimony was brought before us relative to the whole program of production for the security and defense of this country and of the free world in which we must play a leading part. It interested me to have civilians and defense witnesses alike echo the words of the National Machine Tool Builders Association relative to one of the key production problems with which we are faced.

At various times I have laid before you some of the problems of this essential industry, essential both in war and in peace. Unable to amortize their machines in a reasonable length of time, the industry has had to slow down production until it reached a point of something like one-third of its capacity at the beginning of World War II. A ruling of the early thirties stood in the way, and foreign factories leaped into the field. Nor were orders forthcoming from the services which might have stepped up the renewals, due apparently to lack of programs and plans.

At the same time the new type airplanes, guns, and weapons of all sorts require a pretty complete retooling. If our military needs are actual and emergent—and we have no reason to believe them otherwise—then certainly the machine-tool makers have been curtailed beyond both reason and wisdom in the materials and the freedom to move which they require.

On Thursday of last week, Mr. Speaker, August 16, the Cleveland Plain Dealer ran an editorial pointing up one side of the problem which I include in my remarks:

WHERE BOTTLENECKS BEGIN

After all the hurrah it now appears that the mobilization program is in trouble. June deliveries of military aircraft are reported to have dropped below those of a month before, and the entire program was reported running about 20 percent behind schedule.

The big trouble has been the shortness of machine tools, particularly those used in building jet aircraft.

One is impressed with the reply of the machine-tool makers, who offer no apologies, and whose remarks make sense, which appeared in the August 6 edition of Newsweek, as follows:

"We've been predicting this for more than a year," an official of the National Machine Tool Builders Association said last week, "and our committee has been in Washington every week trying to get something done. * * * We repeatedly begged and urged help from Washington."

Newsweek quoted a Warney & Swasey official as having said:

"The airplane boys and Washington brass are looking for a whipping boy," he said, "and

we're it for the time being, as we were in the last war, but we produced then, and will do it again when and if it's necessary and when and if Washington tells us how much it wants, and when and if they give us the materials to do it with."

The machine-tool bottleneck may properly trace its existence to Washington's inability to make up its mind in time and to give the necessary orders and cooperation.

Water Resources: A Key to Agricultural Progress—Part 2

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. ELLIOTT. Mr. Speaker, our scientists in the field of agriculture have demonstrated that crops can be produced in water alone, provided the water contains plant food in solution. A shortage of water is usually the direct cause of low crop yields. The crux of the problem in the South where we have the largest rainfall in the United States, is the conservation and proper use of our water resources. In other words, as Dr. Chapman so ably points out in his illuminating address styled "Water Resources: A Key to Agricultural Progress" every farmer must learn how to increase the water-holding capacity of his land.

The second half of Dr. Chapman's address follows.

WATER RESOURCES A KEY TO AGRICULTURAL PROGRESS

(By Paul W. Chapman, associate dean, College of Agriculture, the University of Georgia, Athens)

WHY ARE SOUTHERN PRODUCTION AVERAGES LOW?

Have you thought about this question; that is, low unit production on southern farms? Do you realize how serious and important it is? Can you answer it? What is the answer?

Is it poor soil or impoverished land? Is it an unfavorable climate? Is it due to unschooled masses of people, from the standpoints of science, technology, and engineering?

In some measure, it is, of course, all of these things and perhaps other factors as well.

But simply to say "poor soil" is not saying anything—because as everyone knows, crops can be produced in a water culture containing plant food in solution; that is, plants can be grown successfully without any soil at all.

Neither can conditions be blamed entirely upon climate, because it, too, is a general term. Furthermore, under favorable conditions, the tonnage of vegetation produced per acre tends to increase as one moves toward the equator. And, good farmers in the South usually make high yields. In fact, some of the Nation's all-time crop production records were made in the South.

Specifically, an inadequate water supply is more often than not the direct cause of low crop yields in the South.

THE MIRACLE OF IRRIGATION

Has it been proved that adding water at the proper time increases crop yields?

Yes. Countless times.

In one recent year, more than 30 cents out of every dollar earned from crop production in Texas came from 10 percent of the cropland that was irrigated.

Naturally, water made the difference.

Results obtained in Texas are rather typical; they apply, in general, to all crops everywhere, including, for example, the so-called supplementary irrigation program increasing so rapidly in popularity throughout the Southeast. For example:

Irrigation of truck crops normally pays large dividends. In east Tennessee, a section of normally high rainfall, yields of beans and cabbage are increased by irrigation from 50 to 300 percent. In a recent year, when rainfall was above average (1949) yields of beans and turnip greens were increased, in many instances, more than 75 percent.

The same relative increases apply to all crops.

In the case of an experimental test with alfalfa hay, the yield was increased more than 1 ton per acre by applying 3 inches of water.

Such results are universal.

In Virginia, for instance—the Southern State with the highest corn yields per acre—corn yields, even in a very wet year, were increased 50 percent by the application of water at the critical period in the growth and production period.

In South Carolina, here are some typical results expressed in terms of net dollars of profit per acre resulting from irrigation:

Corn: Net increased returns per acre, \$36.9

Alfalfa: Irrigation increased net profits \$40.05 per acre

These facts were reported by the State experiment station, the research work was done in cooperation with the Soil Conservation Service. Remember these are increased returns over and above the average production on check plots and are expressed in terms of added net profits per acre resulting from using more water than nature and the previous treatment and use of the soil provided.

In relation to southern farming it is conservative to refer to the miracles wrought by irrigation.

In numerous cases in the South, the increased profits resulting from irrigation have been, during recent years, enough per acre in 1 year to buy the land irrigated at the prevailing per-acre price.

WATER-HOLDING CAPACITY OF LAND

Do higher income and increased production results from irrigation mean that all agricultural-agency workers should concentrate their efforts upon extending irrigation farming, including supplementary irrigation in the Southeast?

No. They do not. But if agencies make known the results achieved by farmers using irrigation water, tens of thousands of farmers will install irrigation systems themselves, because it is an infallible way to increase yields per acre and net profits per worker.

Then, what do these results mean?

First of all, they mean that every farmer and all who work with farmers must learn how to increase the water-holding capacity of land. This may well be called the first lesson in successful farming.

MORE WATER—KEY TO GREATER FARM PROFITS

Among all raw materials or natural resources with which farmers work, water comes first. More often than not, it is the limiting factor in crop yields per acre.

That water is the key to agricultural progress and profits is certainly indicated in the following seven concise statements:

1. Thirty percent of a productive soil is water.

2. Seventy-five percent of a typical growing plant is water.

3. It requires 710 pounds of water to produce 1 pound of rice—a southern crop.

4. It takes 2 barrels—100 gallons—of water to grow one ear of corn.

5. To produce a bushel of oats, 146 barrels of water must be available for use.

6. Crop yields are most frequently limited by water. It takes enough water to cover an acre to a depth of 21 inches to make 100 bushels of corn per acre—something thousands of southern farmers are now doing every year.

7. Water and air furnish 95 percent of the ingredients of crops, only 5 percent comes from the soil.

The importance of water in relation to farming and life is understood in the West, where every flake of snow that falls upon the mountain tops in winter is treasured and held for use the following summer.

It is understood in the Southwest, where the total, average annual rainfall, in some sections, is 20 inches or less per year.

But water, like other precious gifts, is not appreciated in localities that seem to have an overabundance. Of this truth as it applies to water, the Southeast is the ideal example.

For generations the farm people of the Southeast have been told that they have the best (optimum) rainfall of the Nation.

This may be true.

But it is seldom, if ever, so distributed that it serves in an efficient manner all the diversified crops produced in all the seasons—fall, winter, spring, and summer—in which farming is done in the Southeast.

And another thing. How much is left for use after run-off, evaporation, and leaching each takes a heavy toll.

Run-off alone accounts for an average total loss of 20 percent of all the water that falls upon the farm lands of the Southeast. In the mild, salubrious climate of the Southeast, where, with the exception of unusual short periods, it is warm and comfortable throughout the year, and where the sun shines so many days out of each 365, evaporation takes a heavy toll—of course, this water is returned in most cases to the general locality from which it came, but there is no guarantee that it will go back to the same farm, or that it will be returned at the time it is needed most.

Then, there is leaching which not only takes out the water useful for farm production but the plant food as well. And, unless a crop is growing on the land 365 days a year, it, with the exception of short intervals in winter, goes on continuously year after year, and has gone on for generation after generation.

Countless things might be said about intermittent rains (short periods of drought) and leaching. Here are two:

Farmers have always known that there were intermittent periods of drought in the over-all annual supply of rainfall in the Southeast. About this, they have said many things. For instance:

"Cotton is a crop well adapted to our conditions. When it rains, it grows. When it stops raining, it stands still and waits for the next rain. Then, it picks up and goes to growing again. It is one of the best crops we can grow to meet our conditions."

This seemed, years ago, to be good logic. But we live now in an age in which logic has been replaced by science. And in light of the average cotton yields now being made in California and west Texas under irrigation, every thoughtful and well-informed person has already compared, in his own mind, the relative values of logic and research.

Any study of fundamental production problems always comes back to a consideration of water. Please consider the following:

In the Southeast, the best relative yields per acre, as compared with the nation as a whole, are most often made in such crops

as oats that are fall-sown. The same applies to winter pastures—perennial grasses and legumes. Why? Could it be that water losses in the fall, winter, and early spring are so much less than those during the growing season of summer? (This is a question directed to scientists and engineers, not to logicians and philosophers.)

CLIMATE-WATER IN SOIL EDUCATION

With good farmers, water is always the most reliable index to probable production.

In the Corn Belt, for example, the annual corn crop can be forecast annually on the basis of the July rainfall. This is not possible for the South, because of variable climatic conditions and wide range in planting dates.

Recently, there has been a South-wide campaign to increase corn yields per acre. Since corn occupies our greatest cropland acreage, such a campaign is most desirable. But no substantial, permanent gains will be made—in this or any other crop-production campaign—that are not associated with establishing a system of farming that increases the water-holding capacity of the soil.

Our farming system in the past, built too largely upon row crops, was undesirable for many reasons. Perhaps the most important reason of all has not been discussed by the public, because the public in the past was not trained or schooled in the sciences. (And is, in the field of conservation, trained very little even today; that is, if one realizes that mass knowledge and reaction are essential to progress in all technical occupations, including farming.)

Row-crop farming, with plowing, land turning, and cultivation, "burns up" organic matter in soils—the only substance that can increase the water-holding capacity of the land.

Thus the primary climatic land-management problem of the South is aggravated; namely, the normal and continuous burning up of organic matter—that is inherent in all mild-temperature localities where soils are seldom, if ever, frozen solid.

Have you realized that while opportunities are greater in a mild climate, so also are problems? Have you considered seriously the fact that it requires more knowledge—that is, education—to manage land efficiently in the South than in the North? This is true because southern farmers have personal responsibility for conserving soil and water 12 months in every year, where in the North God locks up these natural resources several months each year, so they cannot escape and man, even if he wished to do so, could not use or move them.

But in the South the resources of soil and water may, and should, be used 12 months during every year, in most localities.

Water and plant food may be held and used to a greater extent by the simple process of using the land throughout the year—that is, planting crops that will conserve it and increase cash returns. Crops, for instance, like a winter pasture of fescue grass and ladino clover; and other water-holding covers as parts of rotation systems. Of course, every available and known mechanical means for holding and increasing the water supply must be used, too.

By practicing a wiser system of farming than now is universal, the water-holding capacity of land will be increased. For example, At the Southern Piedmont Conservation Experiment Station, Watkinsville, Ga., the infiltration of water was increased 2.5 inches simply by planting cotton after lespedeza. As a result, crop yields per acre are much higher.

We live in an age of science. Education becomes increasingly important daily. Knowledge becomes essential at an ever-accelerating rate of speed.

Years ago, Thomas Jefferson said: The success of a democracy depends upon the education of all the people.

Jefferson was right. But he lived before the day of science. He lived, too, before the division of work that has so increased our dependence upon each other. As progressive as he was, he could not visualize the rapidity with which one man would, in reality, become his brother's keeper.

MASTER KEYS TO FUTURE ACHIEVEMENTS

The broad highways that will lead to more efficient use of natural and human resources in the South, as they relate to more effective utilization of water, seem fairly clear. Three are now obvious. They are:

1. Research: Our technical leaders including, of course, agricultural engineers, must study and present the facts that must guide us in the wisest possible use of water resources. Knowledge is power.

2. Leadership training: Our leaders who are associated intimately with our people, including agency workers, teachers—at all levels—and technicians, must be well trained in science, technology, and some of the broad principles of engineering, they must keep up to date relative to the practical and useful findings of research.

3. Mass education. But this so-called leadership effort will be of no avail unless the results are understood and accepted and in a large measure applied by all the people. Some, perhaps many, individuals in high places should realize that unless there are followers, there can be no leaders. And all should realize, too, the present-day division of labor—more than 40,000 kinds of jobs—cut up as it is into tiny little bits, makes us more dependent today upon each other than ever before. Recently, this thought has been on my mind very much in connection with the book, *Conserving Soil Resources*,¹ from which the following thoughts, if not the exact words, are taken:

In the use of water resources, as in all other aspects of conservation, every man is his brother's keeper. When any person charged with the management of resources fails to use them wisely, he lowers the living standards of his neighbors and his nation.

You are your brother's keeper and he is yours.

What can you do for your brother? You can help give him understanding. That is all.

We cannot control the amount of rain that falls. We cannot alter the climate in which we live. We cannot change, materially, the topography of the land. But, through the processes of education, we can change the attitude and actions of human beings, therein lies the hope of the future—the promise that every tomorrow can be a better day.

Defense Housing and Community Facilities and Services Act of 1951

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. RODINO. Mr. Speaker, the prompt enactment of the defense housing and community facilities bill—S. 349—

is essential. I come from a thickly populated industrial area in New Jersey. My district is facing all the problems which come from the expansion of defense activities by industry. In addition, we have all the problems which come with the expansion of military installations in that area.

One of the Newark newspapers has published a series of stories on the housing conditions around these military installations. The story of Fort Dix is almost unbelievable. How can we expect our servicemen to go out and fight for a way of life if their own families are forced to live in squalor and filth.

There were pictures of shanty towns in which the servicemen rent shacks and pay exorbitant rents for them. In many cases their families have access only to community sanitary facilities. Many of the wives are forced to carry water. In some of the houses they sleep with some of the lights turned on to keep the rats from biting the children.

Private enterprise is slow to build housing around military installations. There is always a question as to how long such housing will be needed and whether it is a good investment. Builders and bankers have to be sure that their investment is safe.

The defense housing bill contains a continuation of the Wherry Act FHA housing program. This program is designed especially to encourage and assist private enterprise to furnish housing around military installations. In addition, the bill contains other special FHA mortgage insurance aids to help attract private financing of homes in critical defense areas. Even with these aids it may not be possible for private enterprise to provide the housing needed to correct situations like those at Fort Dix. The bill would authorize the Federal Government to build housing where private enterprise has shown plainly that it will not provide the housing which is necessary for the defense effort in a critical defense area. The bill contains provisions, however, which would assure the prompt disposal of such housing to private investors when such disposition is feasible.

I hope the builders and bankers in New Jersey are as ashamed as I am of the housing conditions around Fort Dix and all the other camps about which we have been hearing the same stories. I am sure they are and that they will be quick to take advantage of the assistance which will be provided by this bill and go in there and provide the necessary housing. If they do not, the Federal Government must do it. This bill would authorize the provision of housing which is essential to the national defense only where private enterprise has demonstrated that it will not do so. It is a good bill. It should have been enacted months ago. We must not delay longer. Mr. Speaker, I urge the House to act favorably on this bill and to defeat the amendments which would cripple action under the bill.

¹ *Conserving Soil Resources*. 1950. Turner E. Smith & Co., 441 West Peachtree St., Atlanta, Ga.

Congress Seen on Right Track in Plan for Reservists' Law

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. VAN ZANDT. Mr. Speaker, the Brooks subcommittee of the House Armed Services Committee has been working for weeks in an effort to perfect what may be called the Reserves' bill of rights.

On August 14, 1951, the New York Herald Tribune carried the following article by Gill Robb Wilson, which outlines the study being made of the Reserve program.

Our colleague, Hon. OVERTON BROOKS, chairman of the subcommittee is entitled to a lot of credit. He has handled the hearings in a very able manner and when the job is done the Reserves of the country will realize that it was under his leadership that the Reserves' bill of rights was perfected.

The article in the New York Herald Tribune, August 14, 1951, by Mr. Gill Robb Wilson, follows:

THE AIR WORLD—CONGRESS SEEN ON RIGHT TRACK IN PLAN FOR RESERVISTS' LAW
(By Gill Robb Wilson)

Since July 30, Congress has been exploring the merits of a proposed law—Armed Forces of United States Reserve Act of 1951—which might serve as a Magna Carta for armed civil components.

Hearings by the Brooks subcommittee of the House Armed Services Committee show a congressional trend to resolve the unstable status of the week end warriors. The disposition of the committee to seek the guidance of the Reserves themselves is notable.

Hitherto the legal status of armed civil components, with the exception of National Guard and Naval Reserve, has been of permissive character. The act under discussion proposes to give all civil components a legally required status. Furthermore the law proposes to establish categories of reserves whereby the individual can know exactly his status as to liability of active service, responsibility for training, and other basic details.

Testimony to date reveals complete unanimity among various civil component organizations as to the need for the reserve act. The National Guard showed up to testify with 36 of 48 State adjutant generals present as witnesses. The Reserve Officers Association, the Marine Officers Reserve Association, and the Air Reserve all have endorsed the proposed law.

HOW FAR SHOULD LAW GO?

Chief point of contention between regulars and reserves involves the question of how far Congress should go in spelling out provisions of the 1951 act. Reserves want Congress to legislate in considerable detail. Regulars want Congress to legitimize the Reserves but leave details up to the secretaries of the Army, Navy, and Air Force.

Under merely permissive existence the reserves traditionally have been the victims of expediency. Long-range policy has been impossible. A state of irritation between Regular and Reserves has been fostered. Each year has brought the Reserves a fresh set of circumstances. Incentive to volunteer has been lacking. Individuals have been left in

doubt and confusion. Shuttling uncertainly between military and civilian responsibilities has worked hardship on reservists, their families and civilian employers.

But the national defense has suffered equally. For example, in this time of crisis the Air Force already has practically exhausted its reserve. Some 12,000 reservists have returned to active duty since the outbreak of war in Korea, where up to 80 percent of combat crews have been reservists. All Organized Reserve wings and their corollary units have gone back to uniform. Autumn will see the last 15 of the National Guard squadrons in the field.

VOLUNTEER LIST REMAINS

All that remains to the Air Force is a sifting of lists of some 120,000 officers and 60,000 airmen in the Volunteer Air Reserve. These constitute a mass of names and addresses of persons whose physical fitness, availability, or willingness to reenter service is wholly unknown to the Air Force. Not even an educated guess as to what may be salvaged is possible.

When the Volunteer Air Reserve is culled, the Air Force Reserve will be totally exhausted. If 140 groups are activated this year, the big problem will be manpower rather than airplanes.

The Air Force is making an attempt to rebuild its Reserve ranks by an increase in the number of universities and colleges offering Air ROTC training. During last year 63,000 ROTC air cadets were enrolled in 120 different institutions. The number of institutions is now being increased to 187 and by 1955 the output of graduates will have somewhat fortified the Air Reserve. But 1955 is a long way off in view of current world conditions.

In the meantime, it seems evident that the Reserve can be built back sooner and better if legislation gives it legally required status. Congress is on the right track and listening to the right advisers.

Disappearance of Report Relating to the Katyn Massacre

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution introduced by me in the House on July 31, 1951, creating a select committee to conduct an investigation and study of the disappearance of the report, relating to the Katyn massacre, dictated by Lt. Col. John H. Van Vliet, Jr., on May 22, 1945:

Whereas the report on the massacre of more than 4,000 Polish prisoners of war at Katyn, Union of Soviet Socialist Republics, dictated by Lt. Col. John H. Van Vliet, Jr., on May 22, 1945, in the private offices of Maj. Gen. Clayton Bissell, then Assistant Chief of Staff, G-2, of the Department of War, disappeared in the Department of the Army; and

Whereas the Department of the Army has been unable to produce the report or to discover who was responsible for its disappearance; and

Whereas this report would be of tremendous importance in establishing the guilt of the persons (1) who committed the mass murder of more than 4,000 Polish prisoners of war in the Union of Soviet Socialist Re-

publics, and (2) who caused the disappearance of an additional 11,000 Polish officers on Soviet Russian soil: Therefore, be it

Resolved, That there is hereby created a select committee to be composed of five Members of the House of Representatives to be appointed by the Speaker, one of whom he shall designate as chairman. Any vacancy occurring in the membership of the committee shall be filled in the same manner in which the original appointment was made.

The committee is authorized and directed to conduct a full and complete investigation and study of the disappearance of the report, relating to the Katyn massacre, dictated by Lt. Col. John H. Van Vliet, Jr., on May 22, 1945, in the private offices of Maj. Gen. Clayton Bissell, then Assistant Chief of Staff, G-2, Department of War.

The committee shall report to the House (or to the Clerk of the House if the House is not in session) as soon as practicable during the present Congress the results of its investigation and study, together with such recommendations as it deems advisable.

For the purpose of carrying out this resolution the committee, or any subcommittee thereof authorized by the committee to hold hearings, is authorized to sit and act during the present Congress at such times and places within or outside the United States, whether the House is in session, has recessed, or has adjourned, to hold such hearings, and to require, by subpoena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memoranda, papers, and documents, as it deems necessary. Subpoenas may be issued under the signature of the chairman of the committee or any member of the committee designated by him, and may be served by any person designated by such chairman or member.

Americans of Japanese Ancestry in Hawaii Under Attack by Foe of Statehood From Denver—Allegations Disproved by Record—Statehood for Hawaii Still Supported by Denver Chamber of Commerce

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. FARRINGTON. Mr. Speaker, I present for publication in the RECORD, correspondence on the subject of statehood for Hawaii that will be unusually illuminating. It illustrates the tactics that have been employed for many years by foes of statehood for Hawaii. I am indebted to Representative WAYNE N. ASPINALL, of Colorado, for bringing to my attention the letter on this subject addressed to him and other members of the Colorado delegation by E. W. Fishburn, of Denver. His letter contains many serious misstatements.

The comment on this letter of Benjamin O. Wist, a member of the Hawaii Statehood Commission, and for many years, dean of the college of education of the University of Hawaii, is an eloquent reply to these allegations and is deserving of the attention of all Members of Congress.

The correspondence follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 5, 1951.

Hon. JOSEPH FARRINGTON,
Delegate from Hawaii, House Office
Building, Washington, D. C.

DEAR COLLEAGUE: Attached hereto is a letter which I have received today from the director of the public relations department of the Denver Chamber of Commerce. It is self-explanatory.

Before I reply to Mr. Fishburn's letter, I should appreciate having your reaction to the thoughts which he has expressed and any comments you may care to make.

With kindest personal wishes, I am

Sincerely yours,

WAYNE N. ASPINALL,
Member of Congress.

DENVER CHAMBER OF COMMERCE,
Denver, Colo., July 2, 1951.

Hon. WAYNE N. ASPINALL,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ASPINALL: Mrs. Fishburn and I have just returned from a 6 weeks' tour of the Hawaiian Islands—we had a glorious time and visited all the islands, spending considerable time on each of them. While there we were apprised of the widespread concern among the people there on the subject of statehood.

As you probably know, the Japanese hold the preponderance of voting strength throughout all the islands and they are naturally very anxious to see statehood for the island accomplished—the contrary is the consensus of everybody else that I came in contact with.

The Japanese are united to bring about their objective, are behind Wilfred Tsukiyama for governor, Tom Okino and Tommy Sakakihara for Senators, or other men who are equally Japanese champions. If statehood goes through, such men would undoubtedly be elected by the Japanese vote. It would give the Japanese positive domination politically over the entire area, resulting in appointments being made favorable to Japanese interests to the detriment of all other interests, American included.

Deep in the heart of every Japanese is an inherent regard for the mother country. There are many loyal Japanese among the younger generation—this is not true of the middle-aged and old Japanese, many of whom forsook their status on the islands to serve in the Japanese Army. To my personal knowledge many are back in business again on the islands and still hold commissions in the Japanese Army.

No one knows the possible eventualities of the future years. It is my firm belief irreparable damage to our Nation could very logically result by the passage of House bills 49 and 1646, now referred to the Committee on Public Lands.

I strongly urge your opposition in every way possible to Hawaiian statehood, and should be happy to have your thought on the matter.

Cordially yours,

E. W. FISHBURN,
Director, Public Relations Department.

JULY 30, 1951.

Hon. WAYNE N. ASPINALL,
House of Representatives,
Washington, D. C.

DEAR WAYNE: I appreciate very sincerely your thoughtfulness in bringing to my attention the letter that you received, under date of July 2, from E. W. Fishburn, director of the public relations department of the Denver Chamber of Commerce.

The letter from Mr. Fishburn contains many misstatements and grossly misrepresents the situation in the Territory.

The question of statehood for Hawaii has been under active consideration in the Territory itself and Congress for a period of close to 20 years.

Every poll of public sentiment, public or private, and every vote has shown an overwhelming majority of Hawaii's people in favor of immediate statehood for Hawaii. It shows the opposition is confined to an extremely small, although active minority.

The statement that "the Japanese hold the preponderance of voting strength throughout all the islands" is false. The position of the Japanese politically, economically, and socially, both with respect to the past, present, and future, has been the object of the most searching investigations through a period of more than 30 years. The results of these investigations are readily available to anyone who desires to study them. They completely disprove this allegation. They show not only that the Japanese do not dominate the islands, but that the implication that they are not good citizens is completely false.

The fact is that all of the statistics covering the political, social, and economic position of the Americans of Japanese ancestry reflect great credit upon them. They are industrious, thrifty, and law abiding. They make excellent citizens. Their sacrifices during World War II can leave no doubt of their patriotism. To accuse them now of anything else is to ignore the record and to do them and the people of Hawaii, who have trained them for the responsibilities of citizenship, a very great injustice.

The charge that "the Japanese are united to bring about their objective" apparently intends to give the impression that they desire as a racial unit to take control of the islands politically as well as economically. The record of many years shows that the Americans of Japanese ancestry are divided along economic, political, and social lines as are people of every other racial group. It proves that they have been assimilated into the citizenry of this country as have people of many other racial origins.

The author of this letter shows his ignorance of our situation when he refers to Wilfred Tsukiyama, who is now President of our Senate, as Wilfred "Stukiyama." Senator Tsukiyama is an outstanding American. He would do credit to any community. He was elected to the Senate from the Island of Oahu, where the votes of the Caucasians are predominant. Most of them supported him. He was opposed by a very considerable number of Americans of Japanese ancestry.

Senator Tsukiyama is a graduate of Coe College, Iowa, which recently gave him an honorary degree, and of the University of Chicago Law School. He is a veteran of World War I and was denied service in World War II only because of his age. His son is at present fighting with American forces in Korea.

It is interesting to note that the election of Senator Tsukiyama as president of the senate was opposed by Tom Okino, who is a Japanese-American senator from the island of Hawaii and a Democrat. Senator Okino is a graduate of Oberlin College in Ohio and a good American.

Representative Thomas Sakakihara from the island of Hawaii is on the other hand a Republican.

The allegation that they all work in union is disproved by the record of every election and by the record of the legislature itself.

The so-called Japanese vote does not predominate the islands. In some areas where the Americans of Japanese ancestry are particularly strong, as in the Kona area on the island of Hawaii, all four of the representatives are of races other than Japanese.

I could cite an unending series of incidents to prove the untruth of the state-

ments made by Mr. Fishburn. They are in the character of charges that have been made for a period of 30 years and completely disproved in the minds of fair and impartial persons.

He challenges the loyalty of Americans of Japanese ancestry. I can't imagine any charge that is less justified and more shameful in light of the record that was made in World War II and is now being made in Korea. I am sure that those who see Japan in the future as our most important ally in the Pacific would deplore the circulation of falsehoods of this character.

Among the men who testified in support of statehood in 1947 was Admiral Chester W. Nimitz. He fought most of the Pacific war from his headquarters at Pearl Harbor. Probably no one is in a better position to measure the attitude of the Americans of Japanese ancestry than was Admiral Nimitz. On the basis of his vast information and his devotion to the interests of national defense, he declared that he was confident that these people were as loyal as other Americans.

I suggest that you send Mr. Fishburn the record of the hearings before the House Committee on Public Lands in 1947 containing this statement and others from military leaders who are fully informed on this problem.

Mr. Fishburn addressed his letter to you as director of the public-relations department of the Denver Chamber of Commerce. Is he speaking for the Denver Chamber of Commerce in this letter and, if so, to what extent has his letter been circulated? If the answer is in the affirmative, then I should like to request that this letter be sent to the same persons who have received Mr. Fishburn's letter. If he is speaking for himself, I would like to have you bring this letter to the attention of the president and the board of directors of the Denver Chamber of Commerce.

Yours truly,

J. R. FARRINGTON,
Delegate from Hawaii

CONGRESS OF THE UNITED STATES,
House of Representatives,
Washington, D. C., July 31, 1951.

Mr. E. W. FISHBURN,
Director, Public-Relations Department,
Denver Chamber of Commerce,
Denver, Colo.

DEAR MR. FISHBURN: Immediately upon receipt of your letter of July 2, in which you, in your capacity as director of the public-relations department of the Denver Chamber of Commerce, set forth your opposition to the legislation providing statehood for Hawaii, I forwarded such letter to the Honorable JOSEPH R. FARRINGTON, Delegate from Hawaii. I followed such procedure—

First, because your letter differed so materially from the evidence which we had taken during the hearings on this legislation held in 1949 and 1950—as I remember such hearings, there was no evidence whatsoever to substantiate your position;

Second, because I have come to know my colleague and personal friend, JOSEPH R. FARRINGTON, to be one of the finest and most loyal Americans we have in Congress—one for whose integrity and honesty I hold the greatest respect;

Third, because I personally doubt if any person, American or otherwise, can go into another part of the world, even a State or Territory of his own Nation, and correctly analyze political and social situations, and

Fourth, because in your letter you speak not as an individual but rather in an official capacity for an organization to which I personally belong and for which I have high respect, and for my fellow members for whom I desire that information received by them be presented in a factual rather than an emotional manner.

We, all of us, differ in our thinking and naturally we arrive at different conclusions. This, of course, is as it should be in a freedom loving land such as ours. Nevertheless, we should seek to present our position in a rational manner at all times. The people of Hawaii are fellow citizens of ours and have a right to all the considerations and respect which any fellow citizen enjoys—this, until they are proved individually to be disloyal to our country and its institutions.

You are more fortunate than I, in that I have not yet had the pleasure of visiting Hawaii. However, I have met many of its citizens of the various races represented and of the different political parties present in its citizenry. I have found them to be equally loyal and patriotic as the continental Americans themselves.

I am enclosing a copy of Delegate FARRINGTON's answer to your letter. I am sure that you will receive it in the spirit of an understanding citizen just as it was sent to me by a loyal and understanding citizen.

Under separate cover, I am forwarding to you a record of the hearings held before the House Committee on Public Lands in 1947, when it was taking evidence on the statehood for Hawaii bill. I refer you especially to the testimony given by Admiral Chester W. Nimitz.

This matter has been treated by the Committee on Interior and Insular Affairs (formerly Committee on Public Lands) almost wholly as a non-partisan matter. We look at it presently as such. Delegate FARRINGTON happens to be a member of the Republican Party. I belong to the Democratic Party. Partisan politics should have no place in the consideration of such legislation.

Sincerely yours,

WAYNE N. ASPINALL,
Member of Congress

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 31, 1951.

Mr. GEORGE COLLISON,
Secretary-Manager, Denver Chamber of Commerce,
Denver, Colo.

DEAR MR. COLLISON: Soon after the first of the month I received a letter from Mr. E. W. Fishburn, copy of which is enclosed herewith. Because of the implications conveyed in his letter I immediately got in touch with my colleague, Delegate JOSEPH R. FARRINGTON, from Hawaii, requesting him to give to me his reaction to the charges made by Mr. Fishburn. Today I am in receipt of Delegate FARRINGTON's reply, and I am enclosing a copy herewith for your study.

I would be pleased if you would write to me at your earliest convenience and advise me as to whether or not Mr. Fishburn wrote as the official representative of the Denver Chamber of Commerce and as to whether or not his thought is the prevailing thinking, in your opinion, of the members of our chamber.

Sincerely yours,

WAYNE N. ASPINALL,
Member of Congress

P. S.—Copy of my reply to Mr. Fishburn also is enclosed.

DENVER CHAMBER OF COMMERCE,
Denver, Colo., August 6, 1951.
Hon. WAYNE N. ASPINALL,
Congress of the United States,
House Office Building,
Washington, D. C.

DEAR MR. ASPINALL: I have just returned to my desk following an absence of 3 weeks, and find your letter to me of July 31 on the subject of statehood for Hawaii.

I was not previously aware of Mr. Fishburn's letter to you, and am unable to reach him today, because he is at home ill. Rather than delay a reply, I am writing immediately. Any expressions by Mr. Fishburn on this

subject are strictly his own, and such should have been made clear in his letter to you.

The Denver Chamber of Commerce, by formal action of its very sizable board of directors, favors statehood for both Hawaii and Alaska. I am enclosing marked copies of our membership magazine, in which announcement is made of the chamber's position.

It should be explained that the board of directors of the chamber consists of 27 members elected from the chamber's general membership, and, in addition, some 25 directors, known as honorary directors, named by and from the governing boards of that number of other Denver organizations, including the leading service clubs, trade associations, and civic bodies. These latter directors participate in all discussions and actual voting on matters considered by the board.

I am grateful to you for the opportunity of clarifying our position on a matter of such extraordinary importance.

With kindest regards to you and yours,
I am

Sincerely yours,

GEORGE COLLISON,
Secretary-Manager.

HAWAII STATEHOOD COMMISSION,
Washington, D. C., August 6, 1951.
Hon. JOSEPH R. FARRINGTON,
Delegate to Congress, Old House Office Building, Washington, D. C.

DEAR JOE: I have just received your letter of July 30, together with copies of (1) a letter from E. W. Fishburn, director, public relations department, Denver Chamber of Commerce, addressed to Congressman ASPINALL, and (2) your own forceful reply to Mr. Fishburn's undocumented charges in a letter to Congressman ASPINALL.

I can sympathize with your indignation at the charges made by Mr. Fishburn—indignation I share. His position focuses attention upon what you and I know to be the basic reason for the failure of Hawaii to have been granted equality with the States of the Union—an American racial prejudice. It emphasizes anew the fact that all other arguments, such as noncontiguity and communism, are specious rationalizations.

Yesterday the one millionth American to give his life for his country in the wars fought by the United States died on the battlefields of Korea. His name has not as yet been released, but the probabilities are three to one that it will not be Smith, or Brown. In all likelihood, it will be Hashimoto, Sakai, or Toshiyama. It could well be Tsukiyama; for the son of Senator Tsukiyama, and who is so unjustly maligned by Mr. Fishburn, is in Korea fighting for the American way of life—if indeed he has not already made the supreme sacrifice that you and I and other Americans may continue to enjoy the freedoms granted by the greatest document penned by the hand of man—the Constitution of the United States of America.

Apparently, Joe, there are still those among us who have "eyes that see not"; apparently, too, there are persons who have souls so dead that they never to themselves have said, "This is my own, my native land." How can a man, after even 6 weeks' visitation, have failed so completely to understand Hawaii's most conspicuous characteristic—its deep-rooted faith in the American ideal? Blind, indeed, and lacking in soul must be he who has so little faith in the efficacy of the principles which made us a Nation—who believes that these principles have not, and cannot be, implemented in the minds and hearts of those of different ethnic strain from his own.

As you know, Joe, I too am of immigrant parentage. This country of mine made it possible for my immigrant father to assist creatively in the Americanization of his kind. This country of mine has given me the privilege of training some 80 percent of Hawaii's public-school teachers—Americans all. Some

30 percent of these American teachers are of Japanese ancestry. I challenge the imputation that they are other than American. I challenge the imputation that I have lived my life in vain. I challenge the Americanism of the one who dares to imply that the Nisei of Hawaii, born under the aegis of the American flag and educated in America's most cherished social institution—the public school—have "deep in their hearts . . . an inherent regard for the mother country." I know whereof I speak; I believe I have the right to speak; I question the right of a 6 weeks' tourist to his undocumented opinion. And no man, Joe, is entitled to an opinion until he has examined the evidence. Nothing in the evidence supports a single allegation made by Mr. Fishburn.

1 "While we were there (Hawaii)," asserts Mr. Fishburn, "we were apprised of the widespread concern among people there on the subject of statehood."

Concerned? Yes. But not concerned over the possibility of such political status, concerned rather with the long-drawn-out delay in the attainment of this objective.

2 "As you probably know," continues Mr. Fishburn, "the Japanese hold the preponderance of voting strength throughout all the islands." This categorical statement is not borne out statistically. The last available figures indicated that this ethnological group in 1943 represented approximately 32 percent of the electorate. The same statistics—and they are of congressional origin—show that only 9 percent of elected officials were of Japanese ancestry.

There is, furthermore, the inference that voters of Japanese ancestry vote en bloc—and for those of their own ethnic group. What is the evidence? I refer here to the vote for delegates to our State constitutional convention. Surely, if it were the intention of the group to dominate politically it would be reflected in that vote. Of the 63 elected delegates, 19 were of Japanese ancestry. On the other hand, 38 were of Caucasian or part-Hawaiian ancestry. To delineate even more clearly: I was personally one of 31 candidates in the fourth representative district, from which 6 were elected. Racially, these six represented three Caucasians, two part-Hawaiians, and one Chinese. Defeated was one of the best-loved and highly respected Nisei veterans of World War II—largely on the score of his youth and inexperience.

3 "They (Japanese) are naturally very anxious to see statehood for the island(s) accomplished—the contrary is the consensus of everybody else that I came in contact with," says Mr. Fishburn.

Of course, Americans of Japanese ancestry are anxious for statehood. It would indeed be an admission of the futility of the American plan of government and ineffectiveness of its social institutions were this not to be true. What American does not cherish the privileges as well as the obligations of his citizenship?

I can only wonder how a man can spend a day in Hawaii, to say nothing of 6 weeks, and meet none but persons of Japanese ancestry who favor statehood. How can this be reconciled with the 2 to 1 favorable vote in the plebiscite of 1940—before the days of World War II? How reconciled with a 3-to-1 favorable vote in ratification of the State Constitution?

I wonder, too, at a man trained in public relations who accepts without question the misstatement of the relatively few persons he met during 6 weeks of visitation in Hawaii. Who failed to ascertain whether there is another side to the story in view of his apparent interest. He certainly could not have sought information or opinion from the Chamber of Commerce of Honolulu—as one might assume he would.

4. Says Mr. Fishburn, "The Japanese are united to bring about this objective: Are behind Wilfred Tsukiyama (Tsukiyama), Tom

Okino and Tommie Sakakihara for Senators. . . . If statehood goes through, such men would undoubtedly be elected by the Japanese vote."

Again, there is the implication of bloc voting—a practice not borne out by any survey or study made by any agency, institution, or individual in the entire history of the Territory. You have ably answered this charge in your own rebuttal. I voted for Senator Tsukiyama; I hope to have the privilege of doing so again. I also voted for Senator Heen (Chinese-Hawaiian ancestry) and for one Joseph Rider Farrington. None of the three I have referred to could have been elected without a majority of the votes of Americans of non-Japanese ancestry—or without those of Japanese ancestry, for that matter.

5. "It (the election of persons of Japanese ancestry), would give the Japanese positive domination politically over the entire area, resulting in appointments being made favorable to Japanese interests to the detriment of all other interests, American included." So says Mr. Fishburn.

What, I ask, are the interests that are peculiarly Japanese and detrimental to other interests? Is not our democracy predicated on the thesis that "what is good, is good for all"?

But there is something far more insidious in this apparently naive statement. There is the implication that Americans of Japanese ancestry are Japanese, not Americans. Does Mr. Fishburn not know that Japanese aliens residing in Hawaii represent less than 25 percent of that ethnic group, that less than 1 percent of the youth enrolled under compulsory education in our public schools are foreign-born?

6. "Deep in the heart of every Japanese," says Mr. Fishburn, "is an inherent regard for the mother country."

Not only does he contradict himself in his very next statement—"there are many loyal Japanese among the younger generation"—but he fails to credit the findings of anthropological and sociological studies which, without exception to my knowledge, prove that attitudes and habits are the results of social environment—not of biological heritage.

7. Continues Mr. Fishburn, "this is not true of the middle-aged and older Japanese, many of whom forsook their status on the islands to serve in the Japanese Army. To my personal knowledge" he adds, "many are back in business again on the islands and still hold commissions in the Japanese Army."

Of all the misstatements in Mr. Fishburn's letter, this is perhaps the most offensive. Whom are we to believe—Mr. Fishburn or the FBI and the Army and Naval Intelligence Services? Mr. Fishburn should be made to name one—just one, not many—persons of Japanese ancestry, back in business in Hawaii while still holding a commission in the Japanese Army, who forsook his status in Hawaii to serve in that army during the recent war.

Mr. Fishburn has made one single statement with which I can heartily concur: "No one knows the possible eventualities of the future years." And in this one sentence he refutes his entire thesis; for elsewhere in his letter he has had the temerity to predict the future—and that on the basis of a 6 weeks' vacation in Hawaii.

I am grateful for the well-established fact that a majority of Americans are better posted on Hawaii and more objective in their reasoning than Mr. Fishburn appears to be.

Please feel free to use this letter in any way you see fit in the enhancement of the American way of life through the granting of statehood to Hawaii.

Sincerely,

BENJAMIN O. WIST,

Member Hawaii Statehood Commission.

Meat Eaters and "Beefers"

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. MADDEN. Mr. Speaker, Mr. Patrick E. Gorman, secretary-treasurer of the Amalgamated Meat Cutters and Butcher Workmen, A. F. of L., in the following article, reveals in a practical and unique manner, some of the facts and problems concerning the high cost of living:

The United States is both a country of meat eaters and a nation of "beefers." The high price of steak seems to be our chief topic of conversation. In times like these, anyone in the meat business who doesn't have a tough hide feels practically isolated from the rest of society. A meat market owner in Chicago recently became tired of his customers complaining that he was a "robber." He decided to do something about it. The first customer the following morning noticed that the meat cutter was wearing a mask and toted a pistol at his side. "What's the mask and gun for?" asked the customer. The owner then stepped up and said, "Don't blame it on the meat cutter. I set the prices here, but everyone calls me a robber, so I thought I would make my meat cutters look like gunmen. You can't blame the high price of meat on the man who works for me, and you can't blame me either, because my margin of profit is very small. Honestly, I am hardly able to make a decent living."

Who then is to blame for the high cost of meat? Certainly not the worker—he only works for a living. Competition among market owners is keen and, with many people not buying meat, some operators are knocking down prices for the sole purpose of keeping up volume. If we ask the meat packers who is responsible, they only say, "Certainly not us, why don't you take a look at what we are compelled to pay for livestock!" This brings us down through the commission men, the operators of railroads and trucks, and the livestock raiser himself. Far be it from us to cast a suspicious glance at agriculture, except to say that until recently this group alone seemed to have no particular "beef" to make about the whole meat situation.

Our present per capita consumption of around 150 pounds of meat—all meats—ranks us about fifth in the world. Argentina, New Zealand, Australia, and Uruguay are ahead of us. However, when it comes to "beefing" and griping we take the cake. We are the winners with no challengers even in sight.

On the other hand, the picture is not really as dark and dismal as it may seem to be. There have been changes—substantial changes—during the past 70 years in the methods of producing and supplying the Nation's meat needs. Thanks to the widespread use of scientific methods and careful handling, the loss of meat animals by injury and disease has been drastically reduced.

Wages and working conditions of packinghouse workers and retail meat cutters have been materially improved through the years and will continue to be improved in the days ahead by every legitimate means available to the locals and the international union. However, in spite of these improvements it is generally agreed that the cost of the labor factor in the production of meat has remained relatively stable over a long period of years.

This "eating your cake and having it, too," so to speak, is due in no small measure to

the tremendous volume and increased efficiency in the packing industry, including the almost complete utilization of every part of the livestock meat animal, resulting in a constantly expanding list of byproducts. In part, it is also due to the increasing productivity of the workers in the industry. The finger of suspicion must thus cease to point to labor cost as a major factor in the high price of meat.

Nutritionists call attention to the fact that probably the biggest culprit in the meat price muddle or puzzle is the consumer himself. Insistent demands for high-priced cuts that aren't there must share the blame for rising prices in normal times. Add to these the demands of the increasing number of customers regularly entering the market for high-priced cuts, and the problem staggers the imagination.

The housewife and other shoppers who frequently fume about the high cost of meat would do well to remember a few additional meat facts: (1) That the high-priced, quick-cooking steaks and roasts make up only about 26 percent of the side of a beef; (2) that the remainder which comprises almost three-fourths of the side is made up of the more economical, slower cooking, but just as nutritious cuts such as shanks, short ribs, brisket, round steak, chuck, flank, stew meat, and the like. The best advice on how to cook these economical cuts is slow and low—cook slowly on low heat.

Here on the home front we have given a miserable demonstration of patriotism and devotion. We have lost all sense of unity. We seem to have no direction and but little leadership. We have stumbled and bungled our way from one series of gripes and bickering to another. Business "as usual" continues to be the order of the day. Every group advocates sacrifice—but for the other fellow. We constantly violate regulations and defy controls.

The job we face is one for the whole Nation to tackle. In this struggle no proxies are allowed. Every single member of the crew must stand in his place wherever he is and shoulder his load, whether it be simple inconveniences or supreme sacrifice, high meat prices or lowered standard of living.

Polish Rebels Declare Reds Prepare War

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the Washington Post of August 17, 1951:

POLISH REBELS DECLARE REDS PREPARE WAR

STOCKHOLM, August 16.—Two young Polish sailors said today they fled to Sweden because they did not want "to fight the West on Russia's side."

"There are more like us in Poland," they said. "Our feelings are shared by most enlisted men and by many officers. We will not carry arms against the West."

The two seamen, Ignacy Hazel, 21, and Henrik Skorupka, 22, acted as spokesmen for a dozen crew members of the Polish minesweeper who locked up their officers 2 weeks ago and guided the ship to political asylum in Sweden.

Poland asked Sweden formally yesterday to return the mutineers but the demand apparently will have little effect.

The sailors said the Poles are preparing for war under Russian direction.

"Russia has turned the whole country into a gigantic slave camp where life is unbearable for anybody but Communists," they said.

The sailors said Moscow has Russians in "every key position."

Their minesweeper, the sailors said, had been busy preparing to lay new mine fields in the Baltic.

Their hopes of escaping, they said, were boosted along by broadcasts of the Voice of America. Everybody listens, they said, even at the risk of "5 years in jail if you pass on what you have heard."

Budget for Foreign Aid Program

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. ZABLOCKI. Mr. Speaker, the action taken by the House last Friday reducing the mutual security bill by \$350,000,000 may prove penny wise and pound foolish. No doubt, many Members were and perhaps still are of the opinion that cuts were anticipated and that the requests for foreign aid were padded to allow in advance for appropriation reductions.

No prudent individual would intentionally risk the security of our Nation and the peace of the world. Since no one will deny that the present and immediate future hold great responsibility and threat to our security and peace, it follows that the sooner we are prepared to meet and avert the danger, not only by building our defense but by aiding our friends toward an identical end, the better and greater our assurances are for peace in our time and for all time.

To the extent we put off the preparedness of the free world, to that extent we are inviting and tempting the Soviets to initiate aggression and perhaps global war.

Under leave to extend my remarks, I am including a letter of the Honorable Thomas D. Cabot, Director of the International Security Affairs Committee of the State Department, written to the editors of the Washington Post, calling attention to misstatements of fact by the Alsop brothers' column of August 17. I believe Mr. Cabot's reply is a sincere, frank, and conscientious attempt to correct misunderstanding regarding the budget for foreign-aid program.

I recommend his letter to the Members of Congress for it may aid in correcting misapprehensions, perhaps even aid in correcting our errors in judgment on the much needed authorization and appropriations for our security through cooperative world effort.

BUDGET FOR FOREIGN AID PROGRAM

The column by Messrs. Joseph and Stewart Alsop appearing in the August 17 issue of the Washington Post contains a misstatement of fact about the foreign aid program which I want to call to your attention. After reporting that "no more than routine

cuts of from \$700,000,000 to \$1,000,000,000 are now expected," the writers go on to say that these cuts "were, of course, allowed for in advance when the appropriation requests were compiled."

I found this statement surprising in view of the consistent and intelligent support which the writers have given the foreign aid program and the entire national defense effort, and especially in view of the fact that the remainder of their column clearly recognizes the dangers which would result from a substantial cut in foreign aid. It would appear that the statement was based primarily upon the popular notion that governmental budget requests are regularly "padded" to allow for congressional reductions, a reflection upon the state of public morals which I find it extremely difficult to accept.

In any event, I have personal knowledge that the foreign aid request now under consideration by the Congress was not padded. It represents an honest estimate of the minimum requirements for our own national security interests, developed jointly by the State Department, the Defense Department, the Economic Cooperation Administration, and the Bureau of the Budget. These estimates were carefully screened, and in fact sliced to the bone, before presentation to the Congress.

Obviously, no estimate of this kind can pretend to be accurate to the last penny. There is always some margin of error. In this instance, however, the margin of error will beyond question be on the low side. Knowledge of how the estimates were developed will make this fact clear.

The bulk of the funds requested, whether labeled military or economic, are designed to build military strength to resist Soviet aggression, either by providing free nations directly with the guns, tanks, etc., needed by their armed forces or by providing raw materials, machine tools and the like in order to permit them to expand their own military efforts. Everyone knows that, at present, the armed strength of our allies is below the minimum requirements for effective defense. Even assuming a maximum effort on their part, which we have assumed in developing the aid estimates, the remaining gap between existing strength and required strength is still very large.

Our own national security demands that this gap be closed as rapidly as possible. Every year of delay increases the danger period in which we are vulnerable to attack. Obviously, this task is so great that fully adequate defenses can be built only over a period of 3 or 4 years. However, it is equally obvious that the utmost speed is vital and that orders placed now will produce the required military equipment none too soon. In other words, we must do as much as possible as quickly as possible.

The governmental agencies concerned with this program estimated that about \$10,000,000,000 could be used effectively during the coming fiscal year. However, a new factor had to be considered. An interagency study revealed that the American industrial plant currently lacks capacity to turn out tanks, guns, and so forth, for ourselves and our allies fast enough to use effectively the larger sum. Therefore, the original estimate was slashed approximately \$1,500,000,000 before it was presented to the Congress.

I want to emphasize the fact that, if productive facilities had been adequate, the foreign aid request for this year would have been substantially greater than it is, in order to shorten the danger period.

There is another factor which shows the foreign aid estimates are, if anything, too low. These estimates did not allow for the rising prices of equipment here and abroad,

simply because such price increases cannot be reliably predicted at this time. However, the present inflationary trend leaves little doubt that the foreign aid funds, when authorized, will buy considerably less than was originally planned.

In view of the shrinkage that has already taken place, any further reduction in the aid program is both perilous and pointless. A cut in this year's appropriation, however great or small, means that the gap next year and the following year will be just that much larger. It means delay and every day of delay lengthens the period within which the Soviet Union may be tempted to try its luck in the dangerous adventure of global war.

THOMAS D. CABOT.

Balloons Give Clue to Way Into Redland

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Drew Pearson, from the Washington Post of August 17, 1951:

AN EXPERIMENT—BALLOONS GIVE CLUE TO WAY INTO REDLAND

(By Drew Pearson)

(Drew Pearson is on another tour of Europe, studying conditions there. Herewith is another of his dispatches from close to the Czech border.)

NEAR THE CZECHOSLOVAK BORDER.—The current experiment in penetrating the iron curtain by balloons may be a great success or it may fail. It is too early yet to say. But the important thing is that it's an attempt by private individuals under the free-enterprise system to try out certain methods of psychological propaganda—or call it psychological warfare if you will—which governments will not and perhaps cannot tackle.

Today the State Department's propaganda effort is seriously hamstrung by congressional penny pinching, while the American military men who now dominate our foreign policy believe that the only way to stop Russia is to have more and bigger guns. They have little faith in psychological warfare. Accordingly, the National Security Council has ruled out any strong appeals to the people in the iron-curtain countries to revolt, sabotage, or disrupt their Cominform governments.

Yet psychological warfare to be successful must offer something—a change for freedom, for peace, more food or an end of oppression. American propaganda frequently fails because it offers nothing.

The citizen of Czechoslovakia is not interested in hearing foreign radio broadcasts tell him the Soviet system is evil. He knows the Soviet system is evil; what he wants to hear from the Voice of America are ways by which he can throw off the yoke of oppression. Such advice under the National Security Council's present policy cannot be given officially. Meanwhile, Soviet psychological warfare offers excitement, intrigue, revolt against colonial oppressors, and nose thumbing at bourgeois masters.

STALIN'S ACHILLES' HEEL

These are some of the reasons why private individuals tackled this experiment of trying

to make the iron curtain a lace curtain. Personally I am convinced from my last winter's study of the iron-curtain countries and from other information that it's not the atomic bomb but contact with free peoples that the Soviet fears most. The unrest of Soviet peoples is Stalin's real Achilles' heel. He's not worried over American air power—great as it is—or even over new atomic weapons, but he is worried over the general dislike of the satellite and Russian peoples for Moscow's unpopular regime.

Therefore, if we are to win the subjugated nations over to our side, we must inspire them, encourage them and above all, keep in contact with them. It was because Stalin mortally feared such contact that he erected the iron curtain and it is to hit this Achilles' heel that a group of private individuals and organizations, has now launched messages of hope, friendship, and encouragement by balloon into Czechoslovakia.

The people who had the courage to sponsor this project are the American Crusade for Freedom organization, the Inter-American Federation of Free Trade Unions which has been fighting communism throughout Latin America, veterans or prisoners of war chiefly from Belgium, France, Holland, and Italy, the General Federation of Women's Clubs with 5,500,000 members in 32 countries plus another 5,500,000 in the United States, the AFL Trades and Labor Congress of Canada, the CIO Canadian Congress of Labor, and the International Federation of Free Journalists, comprising about 1,000 newsmen exiled from Soviet countries.

The chief dynamo in this intricate operation has been Abbott Washburn, loaned by General Mills of Minneapolis to the Committee for Free Europe which has done such an important job of beaming broadcasts into Czechoslovakia and placed the freedom bell in Berlin last year. Harold Stassen, who heads the Crusade for Freedom, has also helped to mastermind the operation. At the initial balloon launching from Munich, Germany, were Boleslaw Wierzbianski of Poland, George Jonescu of the Rumanian Federation of Free Journalists, Frau Lotte Stoehr of Germany and Mrs. Robert Taylor, both of the Federation of Women's Clubs.

It is considered especially significant in Europe that these balloons are being aimed at Czechoslovakia after the imprisonment of William Oatis and that among their sponsors are the Federation of Free Journalists. Hitherto the United States official policy has leaned toward paying virtual ransom money when its citizens have been seized by the Cominform. Thus, important concessions were given to Hungary to obtain Robert Vogeler's release from jail.

However, it is now realized that the more you pay out in concessions to the Soviet the more Moscow demands in ransom money and the more it is inclined to maltreat American citizens and to increase the blackmail demands. America's cracking down on Czech trade is an indication of this new stiffening of policy by the United States and the current balloon operation supplements it. This may help to show the Cominform that, instead of taking the abuse of our citizens lying down, we intend to retaliate.

STORY OF FRIENDSHIP

Around Europe Germans crowd around the balloon truck convoy when it sets up operations at night like kids watching circus wagons unload at home. One trouble is to keep the crowds from smoking when near the hydrogen tanks. Radio Free Europe, operated partly by Czech refugees in Munich and financed by the Crusade for Freedom, has poured a daily barrage of messages to the Czech people giving them the story of friendship balloons. It suggests plastic pillow

balloons be used for food containers. Leaflets are found inside the pillow balloons after they settle on the ground. The large rubber balloons burst at 30,000 feet altitude and the leaflets inside them are scattered gradually to the earth.

National Democratic Chairman William M. Boyle, Jr.

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Three Questions," published in the August 13, 1951, issue of the St. Louis Post-Dispatch.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

THREE QUESTIONS

If the Hoey subcommittee wants to get at the facts on National Democratic Chairman William M. Boyle, Jr., it will set itself three basic questions to answer:

Question No. 1: Why did the RFC, after turning down the American Lithotoid Corp. loan three times, reverse itself and grant the loan?

Mr. Boyle's defense, accepted by President Truman, is that he had nothing to do with the loan. Yet it is a fact that the loan was granted only after Mr. Boyle went on the company's payroll. It is a fact that E. Merl Young, an associate of Mr. Boyle, told the St. Louis RFC office that national Democratic headquarters was interested in the loan. It is a fact that James P. Flinnegan, another associate of Mr. Boyle, pleaded the company's case in St. Louis.

If the RFC did not change its mind because of influence emanating from Mr. Boyle, then why did it change its mind?

Question No. 2: What services did Mr. Boyle perform for the company to warrant a monthly fee of \$500?

Mr. Boyle's defense, accepted by President Truman, is that he was retained as general counsel. Yet it is a fact that the president of the firm has said he performed no service. It is a fact that the company's books originally listed the payments to him as commissions and not legal fees. Commissions for what? Why was the No. 2 man in national Democratic headquarters worth \$500 a month to the company in 1949 and why has his former law partner continued to be worth that much ever since?

Question No. 3: Exactly what are the relations between Mr. Boyle and his former law partner, Max Siskind?

Mr. Boyle's defense, accepted by President Truman, is that he gave up his law practice altogether when he became executive vice chairman of the Democratic National Committee at \$30,000 a year. But this defense rests entirely on Mr. Boyle's unsupported word. If the Hoey subcommittee insists that the statement be proved, it will ask Mr. Boyle to document the exact nature of the agreement which he claims liquidated his law practice. And it will ask Mr. Boyle and Mr. Siskind to show their bank accounts to prove that the partnership actually ended when Mr. Boyle said it did.

If Mr. Boyle is as pure as he says, and as President Truman assumes, he should not object to giving this kind of testimony to prove his statements. Certainly the Hoey subcommittee cannot claim to have made a thorough investigation unless it seeks such testimony.

Pending Requests for Withdrawals of Land in Alaska, Etc.

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. BUTLER of Nebraska. Mr. President, for some time I have been interested in trying to bring into use the farm lands and mineral resources of Alaska. During the course of the hearings on Alaska statehood last year, we discovered that a vast area of the most valuable resources in the Territory had been withdrawn from use by various Government agencies. It is my feeling that the development of the Territory has been hampered by this policy of reserving these resources from development by private enterprise.

At that time the Secretary of the Interior informed the Senate Committee on Interior and Insular Affairs that he had set up a committee to survey the problem and to attempt to restore some of these resources to the public domain so that the potentialities could be developed. On June 9 of this year I wrote the Secretary reminding him of my interest in the matter of revoking some of the unnecessary reservations. After some exchange of correspondence, I received a list of all the withdrawals and revocations in Alaska over the period of the last year, together with a list of pending requests for withdrawals and of pending suggestions for revocations. I ask unanimous consent to insert these lists in the Appendix of the Record.

With particular reference to the first table, which shows revocations and withdrawals which have actually been put into effect through June 30 of this year, it is interesting to note that existing reservations being revoked were about 2,094,000 acres of land during the 14-month period. Now reservations aggregate 284,000 acres. On the surface it would appear that reservations revoked are far greater in area than the new ones estimated; however, a careful examination of the table shows that the biggest part of the acreage in the column entitled "Acreage revoked" is made up of the two native reserves at the bottom of this list. Revocation of these two reserves represents a change in policy in handling the native question in Alaska which is highly commendable. Aside from these two native reserves above the total area revoked amounts to only 45,883.

APPENDIX TO THE CONGRESSIONAL RECORD

A5249

Additional requests for withdrawals that were pending on a recent date amounted to the tremendous area of 11,-

816,000 acres, while pending suggestions for revocation of previous withdrawals amounted to only 1,388,000.

There being no objection, the lists were ordered to be printed in the RECORD, as follows:

Pending requests for withdrawals in Alaska, July 20, 1951 (areas estimated in part)

Reference	Type of reserve	General location	Acreage	Reference	Type of reserve	General location	Acreage

Coal Still King

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Wilkes-Barre Times-Leader, the Evening News, on

August 14, 1951, entitled "Coal Still King":

COAL STILL KING

It is reassuring to hear from Coal Age that approximately half of the Nation's dwelling units with central heating are kept warm with coal. Centrally heated homes, using coal, total 9,430,000 while 5,127,000 dwelling units, not centrally heated, also use this fuel. Gas and oil running neck and neck for second place, are far behind coal. The emphasis that has been placed on the progress coal's principal competitors have made in recent years had given many the impression coal was out of the picture entirely. This is far from the facts in the case, as these figures so forcibly demonstrate.

Newspapers Support Opposition to Hand-out for Grandview, Mo., Airport

EXTENSION OF REMARKS

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. GROSS. Mr. Speaker, support for my defeated amendment to eliminate from the \$5,800,000,000 military construction bill a \$19,019,000 hand-out to

the virtual cowpasture airport at Grandview, Mo., seemed to come from almost everywhere except Congress.

Letters and telegrams urging adoption of the amendment reached my office in considerable volume from Iowa and elsewhere in the Nation, including New York, New Jersey, Ohio, Indiana, and the District of Columbia.

One of the heartiest letters of support came from a citizen of Grandview, Mo.

Newspapers of the country, in the rural as well as the metropolitan areas, have likewise joined in opposition to this misuse of tax money. Here are some of the editorials that have come to my attention:

[From the Waterloo (Iowa) Daily Courier]
PORK BARREL DEFENSE PROJECTS

Representative H. R. Gross will probably be defeated in his attempt to remove a pork-barrel item from the \$5,767,000,000 military construction bill, but he demonstrated that those seeking economy in government should not overlook defense expenditures.

The Waterloo Congressman noted that included in the military construction bill was a \$19,000,000 item for an air base at Grandview, Mo., where President Truman lands on trips to his home at Independence, Mo.

He pointed out that there is an expensive and largely unused air base at Ottumwa, Iowa, which could be used for the same purpose as that proposed for the Grandview base. The Ottumwa base, constructed for the Navy during World War II, has an excellent landing field and brick administration and operations buildings.

Chairman CARL VINSON, of the House Armed Services Committee, said that the use of the Grandview base was "classified," meaning "secret," information; but he indicated it would be headquarters for the Central Air Defense Force of the Continental Air Command. Thus the requirements cannot be ascertained, but it is likely that facilities at Ottumwa or the former B-29 base at Sioux City and other bases constructed during World War II could be used.

Military planners apparently have no thought, during a time of military expansion, of adapting existing facilities. Or, if the military planners have any such thought, their plans are soon revised by Congressmen who want lush construction plums for their home communities. The scale of defense activity today is less than it was during World War II, yet enormous new construction projects are being authorized.

These go through Congress, moreover, with only nominal examination. Gross pointed out that, when his amendment to strike out the Grandview base was defeated, "less than 75 Congressmen" were present to vote on a bill to spend nearly \$6,000,000,000. While at least some consideration is given to the possibilities of economy on nondefense appropriations, military proposals go through with less than one-fifth of the representatives present to vote. In times like the present, military men get exactly what they want and anyone who criticizes their demands or suggests economies is accused of hampering the defense effort.

A \$19,000,000 air base for the President's home county is the kind of thing that is hidden in these defense appropriation bills if anyone takes the trouble to examine them. Congressmen who go home for the week end and allow \$6,000,000,000 defense bills to pass with only a handful of Representatives present are not fulfilling their duty. The voters should require them to pay more attention to business.

[From the Cedar Rapids (Iowa) Gazette]
HOORAY FOR MR. GROSS

With a Democratic administration in the saddle and with little help from some of his pussy-footing Republican colleagues it was too much to expect that Congressman GROSS, of Iowa, would get far in his attempt to remove some of the pork from the \$5,767,000,000 military construction bill.

But he gave it one whale of a try and, in so doing, brought the attention of the Nation to the fact that more careful scrutiny on the part of Congress would result in considerable economy in defense expenditures.

What specifically aroused the ire of Mr. Gross was the little matter of a \$19,000,000 appropriation to construct a "super-airport" at—of all places—Grandview, Mo., where the President lands when he goes home to Independence.

Mr. Gross had good reason for his position. He maintained that an airport at Grandview would duplicate a \$22,000,000 airport at nearby Sedalia. He said, further, that the former Army air base at Sioux City and the former Navy base at Ottumwa would be ideally suited for the same purpose as that for which the Grandview airport is proposed. These could be renovated and ready for use in a few weeks time and at little expense in comparison with the proposed expenditure at Grandview.

We have a hunch that what is true in Iowa is pretty generally true throughout the United States; that by using former military installations the Government could save billions of dollars for the taxpayers. But not until other Congressmen rise above sectional interests will the poor taxpayer ever have his day in court. Don't hold your breath until that happens.

[From the Indianapolis (Ind.) Star]
"MISSOURI-ISM" ON THE POTOMAC

A Republican Congressman, Representative H. R. Gross, of Iowa, blocked action Friday on the \$5,767,000,000 House military construction bill when he sought to knock out an item providing for a new \$19,000,000 Air Force installation in President Truman's home bailiwick of Jackson County, Mo. As a result the House delayed further consideration of the measure until today.

We don't know whether Congressman Gross is right in his argument that the expenditure of millions to expand a tiny airport at Grandview, Mo., would be a "glorified WPA project." Nor do we know that there is any lack of merit in reported plans to move headquarters of the Continental Air Command from Mitchel Field, Long Island, to Grandview.

But we do understand the suspicions which must grip Mr. Gross and many other lawmakers as a consequence of the excessive "Missouri-ism" practiced in Washington by the Trumanites. Is it any wonder that plans and appointments which may be wholly good in themselves are sometimes subjected to question when Mr. Truman's home State is involved?

Not since the days of Warren G. Harding and the "Ohio gang" has a President indulged in narrow regionalism to the extent that Mr. Truman has. It has been Missouri, Missouri, Missouri ever since he entered the White House.

The President has surrounded himself with a band of Missouri cronies who exercise vast powers in American Government. A disproportionate number of his key appointments has gone to Missourians. True, a few of them have been excellent ones. (We're thinking right now of Stuart Symington.) But does the Show-Me State have a corner on administrative ability?

Mr. Truman has not been one to disguise his extreme partiality for all things Missourian. Indeed, Missouri is a great State and a reasonable loyalty to one's origin is a

fine thing. But Mr. Truman has been an extremist in the matter. He seems to have overlooked the fact that he also is the President of 47 other sovereign States.

Maybe Congressman Gross is off base on that airport issue. But we well understand what has prompted him to sniff suspiciously.

[From the Mitchell County (Iowa) Press]
CONGRESSMAN GROSS OPPOSES WASTEFUL AIR SPENDING

Iowa's third district Congressman, H. R. GROSS, of Waterloo, is to be commended for his courageous opposition to some of the waste and extravagance involved in the Federal Government's proposed multi-billion-dollar expansion program for the Air Force. The Press-News is ready and willing to lead a loud cheer for Gross' efforts to point out examples of waste, even in matters of national security.

Some of the new air-base installations proposed in the expansion program are virtual duplications of existing facilities which have been abandoned by the Army and Navy since World War II. These old bases could be reactivated at a fraction of the cost of building new bases.

Gross has particularly leveled a barrage of opposition to construction of a \$19,000,000 military air base in President Truman's home county near Kansas City, Mo. There are two abandoned air bases in Iowa which could be utilized at much lower cost, the Congressman points out.

Perhaps the largest air base ever constructed in Iowa is at Sioux City. The Sioux City base is one of the finest equipped in the entire Northwest. The Army spent over \$7,000,000 on it and it served as a bomber instruction school during the war. The field is capable of handling the huge B-29 bombers with three runways well over a mile in length.

There are 204 buildings on the huge Sioux City field, which now serves as a municipal airport. All of these facilities have been abandoned by the Army, which now seeks to build a similar base near Truman's home at a cost of \$19,000,000.

Surely, from a standpoint of defense, the Sioux City location would be just as valuable as the Missouri location for an air base. The flying time between the two can be measured in minutes.

It doesn't take a mathematical genius to see that reactivation of the Sioux City base could be accomplished at a fraction of the cost of building the new base at Grandview, Mo. Congressman Gross is on the right track when he takes a stand against such waste and extravagance. It's about time that our Congress quit throwing money away under the excuse that it is for defense.

[From the Sioux City (Iowa) Journal]
AN IOWAN'S PROTEST

Representative H. R. GROSS, of the Third Iowa District, is to be commended for his attack upon a proposed Air Force installation in President Truman's home county in Missouri. For Mr. Gross has put his finger on one of the many ways the administration is wasting the taxpayers' money under the guise of defense spending.

Here is the situation Congressman Gross finds objectionable: The administration seeks \$19,019,000 to expand the Grandview, Mo., airport in Jackson County, near the Truman family home at Independence. This project would permit the transfer of the Continental Air Command from Mitchel Field, Long Island, to Grandview.

The Iowa Congressman does not object to transferring the Continental Air Command to central United States. Instead, he contends, and wisely so, that the proposed expansion at Grandview needlessly duplicates

facilities at a nearby Air Force base at Sedalia, Mo., which is due for a \$22,000,000 expansion.

After bitter debate, the Gross proposal was defeated by voice vote, whereupon the Iowan demanded a roll-call vote where Members are recorded on the issue. This was put over until Tuesday. Indications are that his new motion, to send the bill back to the House Armed Services Committee with instructions that it eliminate the Grandview item, will be defeated and President Truman will get millions for both Sedalia and Grandview.

Iowa, it is recalled, is one of four States receiving no military construction under the \$5,768,000,000 bill containing the Grandview and Sedalia projects. It is not pure chance which finds Missouri receiving a lion's share of the funds. More than that, Harry Truman's own balliwick, Grandview, is in on the Federal gravy to the tune of more than \$19,000,000 which might as well have been spent at Sedalia, thus saving about \$22,000,000 of the Treasury's funds.

President Truman's administration is seeing to it that Missouri is being taken care of when the money is distributed from Washington. But at least Congressman Gross brought the issue of Presidential favoritism to public attention.

[From the Chicago Tribune]

TRUMAN'S "AIRPORT"

Tucked away in an appropriation bill calling for \$5,750,000,000 in military construction is an item of \$19,000,000 to expand the airport at Grandview, in Jackson County, Mo. Grandview was the home of Mr. Truman's mother; Jackson County is his balliwick, and the small field at the town is used principally to receive the Presidential airplane on flying visits to the old stamping ground.

Grandview has not the slightest strategic importance, but the continental air command, which has the Air National Guard under its direction, has announced plans to remove its headquarters from Mitchel Field, Long Island, to this community. If Grandview weren't associated with Truman, nobody would ever have heard of the place or considered it.

If a hayseed Congressman succeeded in dragging down \$19,000,000 for the old home town, he would feel justified in taking a few bows around the cracker barrel. But, somehow, dulled as the sensitivity of the American people may be to spoils politics, they don't quite expect this sort of thing from a President. They ought to know their man better. Truman's favorite dish is pork.

[From the Des Moines (Iowa) Register]

MUCH FUROR BUT NO ANSWER TO MR. GROSS

It strikes us that Representative KILDAY, of Texas, as a spokesman for the administration, was a little too indignant about the revelation by Iowa Representative H. R. Gross that a \$19,000,000 air base is proposed for President Truman's home county in Missouri. Was the publicity which Mr. Gross gave this matter a trifle embarrassing?

The Iowa Congressman was arguing that probably it was unnecessarily wasteful to build a spanking new air base at Grandview, Mo., when not far away the wartime Navy base at Ottumwa, Iowa, was lying idle, and still other bases nearby at Sioux City and Sedalia were available for reactivation.

Mr. KILDAY arose on his haunches to express horror that Representative Gross would reveal this classified (or secret) information about the Grandview proposal. But the fact is that Chairman Vinson, of the House Armed Services Committee had already described the Grandview base's purpose in general terms, and Congressman Gross had merely asked whether it was, then, to be a fighter base.

The location of air bases is no secret to anybody. Even the general purposes to which they are put is no secret. Any 8-year-old youngster these days knows jets when he sees them, and knows the difference between bombers and fighters.

In any case, Congressman Gross revealed nothing at all, and Representative KILDAY's indignation appears to have been aimed mostly at discouraging further comment about why we need a new base at Grandview, Mo., which is precisely what Mr. Gross was trying to find out.

The answer, we note, remains unclear, even though the House approved the bill enthusiastically.

[From the Creston (Iowa) News-Advertiser]

GROSS CALLS THE SPENDERS' HAND

Quite a little stir is being aroused over the building of airports. Congressman H. R. Gross, of Iowa, has raised a pretty sharp point on the matter. Wonders why spend a lot of money for a new airport near Kansas City while a very good airport at Sioux City and another at Ottumwa lies idle.

There is additional interest hereabouts in the matter since Mr. Gross, who now lives at Waterloo, is a native of these parts. He was born and reared at Arispe. Has folks living in Creston.

Naturally a layman is not familiar with all the why's and wherefore's of airport planning. But we think Mr. Gross has made a very excellent point in asking for a review of the situation. It seems silly to build a big expensive new port at Kansas City when one is already available at Sioux City, also at Ottumwa. The variance in distance is very little, where airplanes are involved.

And if Sioux City seems too far north, then Ottumwa is closer. So there you are, idle ports all around and the Army and Government wanting to build another—at the additional cost of millions of dollars. More power to Congressman Gross.

[From the Northwood (Iowa) Anchor]

GROSS ON THE BALL

We're glad to see our Representative, H. R. Gross, "right on the ball" in questioning the Air Force appropriation bill.

Mr. Gross doesn't see why a big air base should be built down in western Missouri when there are a couple of unused similar bases, at Ottumwa and Sioux City, already built and available. And most folks will agree with him.

The defense program is costing enough without wasting facilities we already have just to hand out a few more millions to some contractor and to give some Missouri town a new free airport.

Investigation of the Reconstruction Finance Corporation

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "They Mustn't Be Silenced," published in the August 16, 1951, edition of the Journal-Every Evening, of Wilmington, Del.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THEY MUSTN'T BE SILENCED

In refusing to let the Republican minority make a report to the Senate, the Democratic majority of the RFC investigating committee is guilty of a high-handed piece of business. It is a performance which at least smacks of totalitarianistic practices and as such has no place in a country where freedom of expression is still supposed to be the rule.

No less than the majority, the minority members have a right to state their opinion of the testimony which both sides heard during hearings which dragged through 18 months. It is likewise their privilege to draw their own interpretations of the evidence which was presented and which, as everybody knows, revealed some exceedingly shady goings-on in the Federal lending agency.

Fortunately the Republicans on the committee cannot be silenced. Even though the majority can keep their report from going directly to the Senate they can still use newspaper and radio channels to make it public. So the Senators will be able to read it anyway—at least the parts of it which the administration would like to suppress.

The Intermountain Indian School at Brigham City, Utah

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. WATKINS. Mr. President, today the Senate approved the conference report on the annual appropriation bill for the Interior Department. This bill, H. R. 3790, contains an item for Indian education which includes a sum sufficient to operate to full capacity, of 2,150 students, the Intermountain Indian School at Brigham City, Utah.

I offered an amendment to the bill to increase the item for Indian education to such an amount as to make possible the full use of the capacity of the Indian school. The amendment was adopted and the conference report retained the amendment.

Mr. President, I am glad to note that preparations are under way for the school's opening this September with 2,150 students in attendance.

The story is told in a recent issue of the Box Elder News Journal. I ask unanimous consent to have printed in the Appendix of the RECORD this news story under date of August 15, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FULL QUOTA OF 2,150 NAVAJOS TO ARRIVE AT INTERMOUNTAIN—WILL COME IN GROUPS OF 500 STARTING TUESDAY—STAFF JUMPS TO 400 TO OPERATE SCHOOL

With the principle of off-reservation boarding schools on which the Intermountain Indian School, Brigham City, was founded now a proven success, the institution will reach its maximum enrollment of

The President's Indignation at Character Assassins and Scandal mongers

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial entitled "Where There's Fire There's Fire," published in the Washington Times-Herald of August 19, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE THERE'S FIRE THERE'S FIRE

Mr. Truman mustered a quantity of phony indignation to denounce what he chose to term "character assassins" and "scandal-mongers" who not so oddly, are concerned about the character of his administration and the scandals associated with it. He said they had "rotten motives"—namely, to divide and confuse. He said they sought to create an atmosphere of intimidation, so that no one would have the courage to talk back, for fear of being made one of their victims.

It takes no great perspicacity to discover that the methods and techniques he attributes to others are the very ones which Mr. Truman employs. He bawls like a fishwife in the hope that he can scare into silence those who honestly and soberly appraise the character of himself and his associates. He pretends to talk about name callers, but calls names himself with a violence and vindictiveness which none of his critics thinks necessary to invoke.

There is a saying that where there's smoke there's fire. The corruption and Communist inclinations of those sheltered by Truman are not clouded by smoke. They are as plain to see as a fire burning brightly. It is not for nothing that, for the first time in the history of the Republic, the proposal is made to establish a Commission on Ethics in Government, in the hope of restoring respect for common honesty and loyalty to country—qualities now lost in the general degradation.

The critics of the Truman administration are able to catalog and document the offenses for which this cynically immoral outfit stands convicted. They do not have to emulate Truman and tear a passion to a tatters.

They can begin with Truman himself, the creature of the Pendergast gang of Kansas City, the peddler of fraudulent oil stock in a nonexistent refinery at Rollin, Kans., the man

who first went to the Senate on the strength of 116,000 votes stolen for him by the Kansas City mob, the man who left the White House to fly to old Tom Pendergast's funeral when his boss had done a stretch in the penitentiary as No. 55,295. In his apprenticeship under Old Tom, Truman did some funny things with road contracts and school board money. When he became President it was not surprising that those around him expected a tolerant attitude when it came to doing funny things.

Thus we had the incident of General Vaughan and the gift of home freezers, one of which wound up in the Truman home in Independence, Mo. We had the circle of 5-percenters that assembled around General Vaughan, the case of Johnny Maragon, the one-time Kansas City bootblack who had entree to the White House, and who wound up in the penitentiary. We had the fixing activities of Truman's old acquaintance, Merl Young, who rose from the post of messenger, in which he made barely more than \$1,000 a year, until he was a big shot in Truman's Washington. We had the celebrated incident of the mink coat that draped Mrs. Young's shoulders when she reported at the White House to do her typing.

We had the RFC loan of more than half a million dollars that was conferred on a St. Louis firm after William J. Boyle, shortly to become Democratic national chairman through Truman's agency, had gone on its payroll at a fat monthly retainer for doing nothing. It was also undoubtedly coincidental that Truman's St. Louis collector of internal revenue was on the firm's payroll while still supposedly serving the public.

Again, there was the murder of two Kansas City mobsters, Binaggio and Gargotta, bosses of the river wards, who were bumped off under a more-than-life-sized portrait of Truman. On the floor of the House it was charged that they stood in the way of Truman's candidate for Senator.

There was also the theft of the Democratic nomination for Congressman in 1946 when Truman had flown to Kansas City to insure the defeat of Representative Roger Laughter. A grand jury said the election was stolen and indicted 71 of the Truman-Pendergast crooks. Before they could be brought to trial the fraudulent ballots representing the evidence against them were stolen one night when the courthouse safe was blown. Truman was sleeping that night a few blocks away in the Muehlebach Hotel in Kansas City.

There was the nolsome parole of the four Capone extortionists, Ricca, Campagna, Gloe, and D'Andrea, after a Dallas attorney, Maury Hughes, crony of Truman's attorney general, Tom Clark, who now adorns the Supreme Court, had handled a lot of mob money, and after Truman's former St. Louis campaign manager, Paul Dillon, had called at the White

House. Clark conveniently dismissed another pending charge that would have blocked the paroles.

This is only a sketchy outline. Truman also, by implication, contends that there are no Communists or Soviet sympathizers anywhere around the administration, no matter what Senator McCARTHY, Senator McCARRAN, or the House Committee on Un-American Activities may produce for the record. The case of the traitor, Alger Hiss, is, it seems, still the "red herring" Truman originally termed it, although Hiss, strangely, is doing 5 years. We are to forget William Remington, cleared by Truman's "loyalty" board, but also somehow convicted for denying he was a Communist. We can forget Harry Dexter White, Owen Lattimore, Lauchlin Currie, Lee Pressman, Judith Coplon, and dozens more. Moscow sympathizers. Slander, Harry tells us.

The record of treachery, graft, conniving, and corruption is unending. It is sickening. It revolts the moral sense. How can a country not lost to all honor tolerate this man, his associates, and their works?

McCarthy Has the Answer

EXTENSION OF REMARKS

OF

HON. HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. WELKER. Mr. President, I send to the desk an editorial entitled "McCarthy Has the Answer," which appeared on August 16, 1951, in Idaho's oldest and largest newspaper, the Idaho Daily Statesman. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

McCarthy HAS THE ANSWER

President Truman Tuesday said "irresponsible slander-mongers—including some in Congress itself—are engaged in a campaign of character assassination that has curbed free speech and is threatening all our other freedoms." The President, one of his aides admitted, was referring to Senator JOSEPH R. McCARTHY, the man who has done more than any individual in the Nation to expose Communists in Government.

Mr. Truman would be on firm ground were it not for two indisputable circumstances:

1. He defended Alger Hiss, who was proven a Communist.

2. Mr. Truman warns, with all his vigor, that the Communists are a threat to a free world and that we must spend to arm for the power to defeat them.

Why, then, does the President protest the efforts to expose Communists in Washington?

Perhaps Senator McCARTHY (who is to speak in Boise August 29) has the answer in an article in the current issue of National Republic magazine:

Says the Senator:

"As a matter of fact, I do not think we need fear too much the prospect of the Communists dropping atomic bombs on Washington. They would kill too many of their friends."

In the meantime, the President should stop the double talk. Assuming he is sincere in his belief that we must oppose communism all over the world, he then must start opposing communism here at home.

Much More Than Cribbing in Mess at West Point

EXTENSION OF REMARKS OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. ANGELL. Mr. Speaker, pursuant to leave granted, I include as part of these remarks a pertinent editorial from the August 10, 1951, issue of the Portland Oregonian entitled "Much More Than Cribbing in Mess at West Point." The editorial follows:

MUCH MORE THAN CRIBBING IN MESS AT WEST POINT

The disgraceful affair at West Point grows worse with each day's disclosure. It was shocking that 90 cadets should be involved in violation of the military academy's academic code of honor. But the implications of some statements made in their defense are even more to be abhorred. Coach Earl H. Blaik has conceded that West Point regularly recruits its football players, who, with their tutors, apparently make up the bulk of the cadet cheaters. The father of one athlete in last year's "recruit" crop told newsmen his boy also had been proselyted by the United States naval academy at Annapolis. Thus, it seems clear that appointments to both of the Nation's top service schools have been bartered for brawn.

Such revelation, of course involves Congressmen as well as Pentagon brass and the administrations of the military and naval academies. Red Blaik told newsmen 24 boys attended this year's recruiting session at West Point. He called it a "cram course" to assist in preparation for stiff West Point examinations. But one of the participants interpreted it as a "6-weeks expense-paid vacation." Each of the 24, Blaik said, already had received or had been assured of the required congressional appointment. That testifies to a rank breach of trust by a good number of Congressmen and also to dereliction on the part of West Point officials who must have been well aware of the whole system. It is little in mitigation to explain that expenses of the recruiting were met by interested civilian alumni. The central and damning fact is that the men were recruited as football players, not as potential Army officers.

If 25 of the Academy's 2,500 vacancies were for sale to football stars, how many more

must be involved in recruiting for West Point's very respectable contenders in other intercollegiate sports?

There would be some excuse for such a system if it could be shown that excellence at football is tantamount to top performance on the battlefield. There can be no such assurance. Quite the contrary, cadets whose main interest has been football may have little relish for the soldier's job. Glenn Davis, probably the greatest of West Point grid-ders, performed his pigskin duties during the war years and hence escaped the shooting Army. Immediately upon his graduation in 1947, he sought release from his 8-years' service pledge to capitalize on his football talents with a professional eleven. He first met rebuff but kept trying, and finally, in 1950, the Army accepted his resignation. Now he plays for the Los Angeles Rams at a figure that would make a second lieutenant's salary look pretty sick. Hindsight argues that the Nation would have been better served if the place he occupied at West Point could have gone to an applicant with more sincere intentions if less speed.

There is a revealing sentence in Blaik's statement. "In order for high-school boys such as Duncan (one of this year's recruits) to have a fair chance of passing the Academy's stiff entrance examination," he explained, "it is necessary for them to take at least a short cram course prior to the date of examination." And Harold J. Loehlein, one of the honor-code violators and captain-elect of the Army football team, said something we thought was clear to almost everybody: "Studies and exams are easier for some fellows than for others." Both Blaik and Loehlein apparently meant to convey that the football recruits were not in the highest intelligence categories. We think most American soldiers would rather have their officers brainy than brawny. And, until a few days ago, that is the theory we had felt prevailed at West Point and Annapolis.

The exposé that began with the announcement of the cheating at West Point involves much more than the reputations of the cribbing cadets. There should be a full and searching investigation of the extent to which the overemphasis of athletics has undermined the selection and training of American military leaders.

Housewarming

EXTENSION OF REMARKS OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial entitled "Housewarming," which appeared in the Washington Daily News for August 14, 1951:

HOUSEWARMING

At 6 o'clock, President Truman will dedicate the American Legion's handsome new 7-story limestone building at Sixteenth and K Streets.

It's a sign of the times.

For years, John Thomas Taylor, the old brigadier himself, effectively bullied and threatened the entire American Congress without benefit of limestone facades enclosing trained economists, statisticians, and mimeograph machines.

His own bemustacheed facade, sometimes stately, sometimes threatening, but always noble and soldierly, was sufficient for

the Legion's Washington sector. The books and files stayed at headquarters in Indianapolis.

But it's a poor lobby indeed that runs that way nowadays. And the American Legion is not a poor lobby. There are about 4,000,000 American men and women signed up.

Headquarters are still Indianapolis, but it is a tribute to Brigadier Taylor's extraordinary elocutionary and forensic powers that it now takes a seven-story, air-conditioned building to fill the breach he blasted, over the years, in the lobby front.

We haven't always agreed with the Legion's policies. Sometimes it has seemed to us its enormous potential influence has gotten bogged down in power politics played for the sake of the players, rather than for the sake of the Legion's membership or for the country's broader good. We think, for instance, that it has meddled, to an outrageous degree at certain times in the past, in the management of the Veterans' Administration.

But this is a good day to recall, as the Legion's announcement of today's dedication ceremony does, that the Legion was trying to get universal military training in 1919. Certainly, on that issue, the Legion was a lot more farsighted than the politicians from that day on. Also, the Legion fought against cutting the country's military appropriations when the dictators were on the march in the early '30's. It warned, and cried for preparedness. It fought for a two-ocean Navy, and the air forces. Yet it has been a powerful influence for the security of the country and for the welfare of those who have fought for their country.

The new building will house 89 persons who will continue to try to make the Legion's position felt in a whole gamut of legislation from national defense, rehabilitation of veterans, Americanism, anti-Communist activities, all the way to programs for needy children and junior baseball.

As long as the Legion faithfully and democratically represents the patriotic convictions of 4,000,000 Americans who have proved their devotion by serving in its uniform, it cannot fail to be an effective force for good, not only here in Washington, but throughout the land.

Rebuilding in Korea

EXTENSION OF REMARKS OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Times of Friday, August 10, 1951, concerning the problem of Korean relief. Provision for this vastly important work is included in the mutual security bill. The actual operation will be conducted by the U. N. Korean Reconstruction Agency, which is headed by a distinguished American, J. Donald Kingsley, who had a notable career in the United States Government before taking his assignment for the United Nations.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REBUILDING IN KOREA

One of the reasons why the United Nations has been eager to find a formula for stopping

warfare in Korea is the realization of the magnitude of the task of rebuilding. The sooner we can get on with this tremendous job the better. It is unlikely that under present or probable conditions the United Nations will be permitted to give help to those in Northern Korea. The United Nations, however, is already going forward with its plans for the rehabilitation of those parts of the peninsula to which it can have access.

As a matter of fact, some of the help to Koreans from the north will be given in the south. As J. Donald Kingsley, the agent general of the United Nations Reconstruction Agency, has just reported to the United Nations, approximately half of the pre-war population of Northern Korea is now in the south. The population was estimated at about 9,000,000. Of these 1,000,000 are presumed to be dead, while the prisoners and refugees account for something between 3,500,000 and 4,500,000.

This increase in a homeless population is naturally a much larger burden than the Republic of Korea can possibly bear. Outside aid on a large scale is imperative. The Republic, moreover, is itself in desperate straits because of war's devastation. In Seoul, for example, Mr. Kingsley estimated that 85 percent of the industrial facilities had been destroyed. The Republic has its own refugees and homeless who have been obliged to flee from the battlefields.

So far as promises go, there has been a generous response to this need in many member states of the United Nations. It is disconcerting, however, to learn that collections have not been as prompt and easy as the obtaining of pledges. Thus far something like \$230,000,000 has been subscribed for the rehabilitation work in Korea, but the agency has only about \$7,000,000 on hand, chiefly the contribution of Canada. The United States House of Representatives, meanwhile, has voted to reduce the American contribution from \$162,000,000 to \$62,000,000. This hardly seems consistent with a recognition of the gravity of the Korean plight.

The latest exchange of notes on the matter of conditions for negotiations offers little to encourage a belief in a quick settlement of outstanding issues. There is certainly no meeting of minds and no atmosphere of mutual trust. It is obvious that the Communists are trying to make propaganda capital out of each United Nations position or action. This is doubtless the proper explanation of the truculent tone of the Communist reply to General Ridgway. There seems no real Communist desire to end the negotiation and the talks will go forward, but in the meantime we shall continue to be subjected to a campaign of distortion that will try our patience to the utmost.

This should not cause us to lose sight of one of the really central problems involved. That problem is the fate and the welfare of the Koreans. We have taken a firm position on the issue of the thirty-eighth parallel precisely because we were aware of the disaster to the Koreans of anything that could be construed as a quasi-legal recognition of the permanent partition of their country. We have helped to defend them against enslavement by an invader bent on destroying their liberties. We shall continue by every means in our power to try to set up the bulwarks of those liberties.

This cause, we believe, has the support of the vast majority of the peoples represented in the United Nations. It has, we believe, the warm support of the vast majority of the people of the United States. But with that group of praiseworthy objectives there must go the realization that the needs of the Korean people are immediate and

urgent. They must be helped in the struggle against hunger and cold. They must have shelter and occupation. We are faced with the necessity of helping to save their lives as well as their liberties.

So, while we follow the vicissitudes of negotiation with grave and continuing concern, we cannot be unaware of the human side of the picture. The plans for rebuilding must be accelerated, and we must do our share to put them into action on a broader scale without further delay.

First Lt. Herbert Lee Jordan

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. NIXON. Mr. President, First Lt. Herbert Lee Jordan, United States Army, was killed in action on September 18, 1950, in Korea. His brother, Harvey D. Jordan, who is also serving in the Army, shortly thereafter wrote a poem in his honor. Because this poem so eloquently expresses the sentiments of thousands of families who have lost loved ones in the Korean conflict, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

What manner is the dead—
These whose still faces and closed eyes
Shield memories and springtime,
And childlike cries,
And tomorrows they could not know?
How oft' have I gazed and said
That these once lived as a boy,
Felt sorrow and joy, heard music from within
Swelling 'ever outward
In gay rhythmic flow.

What words and phrases dwell
In our hearts to measure the features
Of these, these so eternally silent,
Far over the seas,
In the haze of a slow fading day?
I somehow know each one so well,
So worn now and weary;
Each one I know with my loneliness,
As he was a part of me,
Though I did not know until he ebbed away.

What but silence could mean
What my words could never mean—
All the things I have not said,
But oh so much would wish to have said,
Yet never will?
Here is a heart still green
With youth, still to taste living
And feel the crisp morning air,
Still to smell the fragrance of tomorrow's
Flowers and harvest hay—still.

What manner is the dead—
The newly fallen battle-dead
Who knew not why, they among the living
Were called upon to die,
And leave to life a simple cross instead?
Oh hearts, still hearts of this September,
That fell 'neath the blanket of autumn's
First falling leaves, forgive me when I stand,
Solemn and still, wondering and wordless,
And moved—to remember.

England Not a Nation of "Conquest"

EXTENSION OF REMARKS

OF

HON. J. HARRY MCGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. MCGREGOR. Mr. Speaker, under leave to extend my remarks, I am enclosing an article from the Cleveland (Ohio) Plain Dealer, by Harry S. Lybarger, entitled "England Not a Nation of 'Conquest.'" Mr. Lybarger is a personal friend of mine.

An instructor in the high school at Coshocton, Ohio, Mr. Lybarger is a noted student and teacher of world history and I submit his article to you because I feel the thoughts set forth merit our serious consideration:

ENGLAND NOT A NATION OF "CONQUEST"

(By Harry S. Lybarger)

On August 10 there appeared in the Plain Dealer the last installment of a series entitled: "Eisenhower—The Man and His Destiny," by Roy Rutherford. In my opinion, it was a correct appraisal of the character of our great soldier-organizer, and a fine contribution to our national appreciation of his abilities. Mr. Rutherford deals with one of the major troubles the general must face in forming an effective, cohesive military force in Western Europe out of the French, Germans, and Italians. But, in my opinion, he ruined the whole effect by the last part of one most unfortunate sentence. Referring to the British, he states:

"They make good allies, but have never been able, on their own, to do any conquering, except in such cases as the horrible Opium War in China, the conquest of semi-civilized India, and after a long while, the defeat of a handful of Boers in South Africa."

DENIAL

It is not my purpose to debate the controversial questions of national political morals of the British in these three minor conflicts. I would attack the statement as ridiculously false and therefore to attack the false propaganda it engenders by such words and phrases as horrible, on their own, conquering.

England has been spoken of as "In Europe but not of it." So close is she to the shores of the continent, that since the political emergence of Europe out of the feudal anarchy of the Middle Ages into large national states ruled by despotic monarchs, she has had to keep watch and ward constantly for her own safety. Her geographical isolation, the character of her people, and other elements, caused her love of liberty to grow apace. One method of protecting it has been to keep intact on the continent the "balance of power." Her diplomatic technique was perfected through four centuries of turmoil. Her sagacious statesmen recognized that her size and position made her a purely defensive power. In no time, since the growth of the great national despotisms, has she waged any way for conquest in Europe.

However, as all European nations joined in a mad scramble for colonies, England seized the opportunity to increase trade and keep abreast of her contemporaries. "Conquests" implies offensive war. England's conquests were limited to colonial wars.

FOR FREEDOM

But, what is of supreme importance, is that five times England has played not only a major but a necessary role in the saving of that part of western civilization devoted

to freedom. In each instance the crux of the whole action became to save her own little island from invasion and conquest by megalomaniac despots. Mr. Rutherford's statement insidiously implies that England has been a military failure in all but the three minor colonial wars he mentions.

In all five cases the outcome was in large measure determined at sea; in three of them, England was largely "on her own." For her own security, it is true she formed alliances and coalitions wherever possible.

But most of the time her allies became broken reeds, and she was compelled to stand "on her own." When she caused the destruction of Phillip's invincible armada; when she checked Louis the Fourteenth at La Hogue; Napoleon at Trafalgar; the Kaiser at Jutland; and the "blitz" of Hitler, her conquest was the shattering of those forces of evil, which threatened to destroy forever those basic concepts of freedom contained in the Magna Carta, the Bill of Rights, Responsible Parliaments, habeas corpus, freedom of speech, the Monroe Doctrine. It would be difficult to prove indeed that in any one of the five cases England was not absolutely necessary to win those victories, all of which were her tremendous and purely defensive conquests. The word "horrible" would have more proper significance had Mr. Rutherford applied the word to conditions which would have followed a Hitlerian victory, rather than to the fiasco of that century-old opium war.

TURNING THE TABLES

What a storm would be raised were someone to write: "The Americans make good allies, but have never been able on their own to do any conquering, except in such cases as the horrible Mexican War, the conquest of semicivilized Indian tribes, and after a long while the defeat of a handful of Filipinos."

This, like Mr. Rutherford's fallacious sentence would be eminently unfair, because it would ignore the fact that our help from 1917 to 1918 and from 1941 to 1945 was essential to victory. No one would like to think of our facing the Kaiser or Hitler or Stalin "on our own." We are not ashamed to build alliances just as England did for four centuries and for the same reasons. Neither her efforts nor ours should be ignored or sneered at, directly or by implication.

Let us look away beyond one little phrase, which is false, and which packs a wallop only because its author has bound together in a small package some words which could carry delight and comfort to ignorant enemies of freedom, be they here or elsewhere. Rather, let us look back, over the last four centuries, and view with respect the long list of English contributions to the cause of freedom, the finest heritage of our race. Let us pause at June of that long dreary year of 1940 when really England was "on her own," and repeat Churchill's inspired, immortal phrase: "It was England's finest hour," and then let us look forward in the hope that England, as well as ourselves, may live to enjoy the fruition of that hope for freedom, which we both have cherished.

International Policy of the United States

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. CHAVEZ. Mr. President, an outstanding citizen of Clovis, N. Mex., in my

State, Mr. Cash Ramey, through the medium of the press, has asked certain questions pertaining to our international policy.

Believing in the right of petition and expression, without in any way passing on the merits of Mr. Ramey's questions, but for the benefit of those who read the CONGRESSIONAL RECORD, I ask unanimous consent that the entire question propounded by Mr. Ramey be inserted in the Appendix of the RECORD.

There being no objection, the questions were ordered to be printed in the RECORD, as follows:

WHEN DOES A DEMOCRACY CEASE TO BE A DEMOCRACY? WHEN FREEDOM LEAVES A DEMOCRACY, WHAT BECOMES OF A GOVERNMENT CALLED A DEMOCRACY?

DENNIS CHAVEZ,

United States Senator,

Care of Senate, Washington, D. C.

CLINTON P. ANDERSON,

Care of Senate, Washington, D. C.

A. M. FERNANDEZ,

Care of House of Representatives,

Washington, D. C.

JOHN J. DEMPSEY,

Care of House of Representatives,

Washington, D. C.

When a house and lot, owned by an individual, is taken over by the Government, and a Government official says what rent he will allow the owners to charge for his property—then whose property is it? Does it still belong to the person who paid for it, and pays taxes on it? Or does the property become that of the Government?

When a democracy joins with 57 other nations, and supplies the cash to carry on a war, is that Government still a democracy? Or has it become a nation ruled by a group of Senators and Congressmen who voted that democracy into a United Nations—without the consent of the people who own, and pay taxes on that democracy.

These self-same Senators and Congressmen say, almost daily, to the owners of this democracy (as the United States is called): "You, and each of you, must pay—and pay not millions, but billions of taxes—and you must furnish men by the thousands."

Thousands of men, for what? To keep a war going on in Europe and Asia.

Would it be too much for the taxpayers, and the owners, of the United States to ask our high-and-mighty Senators and Congressmen to please call an election, and let the persons who pay the bills, and who furnish the men and women to carry on this war in Europe and Asia, say whether or not they wish to continue this war?

It will be remembered that in 1945 the Congress of the United States voted our people into the United Nations, and that all but two United States Senators voted for our democracy to join the U. N. After six long years of war, strife, and turbulence, is it not time for our people—before they are taxed out of their very existence—to ask for an election, and let the people say whether or not our Government shall continue this state of war that threatens the very existence of our people and loss of our people's tax money?

If a man living under a real democracy owned, for instance, some furniture, it was his merchandise; he could sell to whom he wanted. But now, under this same democracy, the Government says: "This merchandise shall be sold for not less than 15-percent-cash down payment."

Since when did any man living in and under a democracy have this freedom taken from him?

When does a democracy cease to be a democracy?

The billions that our United States now owes will be a burden for years to come.

Yet, day after day, Congress—both Republicans and Democrats—says that we must have another seven or eight billions.

Money has always been the backbone, shield, and protector of the United States, and a man's property has always been his to do with as he wished. But now you hear: "Government controls this and Government controls that."

Working people pay from 10 to 40 percent of their earnings in taxes, and much of this money goes to further the United Nations war.

What do the other 57 nations in the war with us do and say? Well, some of them sell supplies to Communist China, our opponent, some send a few token troops to aid us, and nearly all say: "Send us money, a lot of it, and send it now."

What do you think, folks?

Would a Republican President and a Republican Congress serve us better? What shall we do to be saved? Shall we continue to pour billions into foreign nations, until our poor tax-paying people have their United States dollar reduced to the value of a dime? Or shall we pull out of the United Nations—come home to our own United States and tend to our own business?

Or shall we continue in the United Nations and fight every other country's war—pour our money and arms over there, which, in the event they broke relations with us, would be used by them to make war against us?

This line of reasoning does not suit a great many of our prominent office-holders (both Republicans and Democrats). I know this, because I have talked with them on the subject.

Some people say: "Well, to be frank about the matter, it is either the United States or Russia that will rule the world."

Here and now, let me state my opinion, for what it may be worth. Neither the United States nor Russia will rule the whole world.

If the United States were out of the Asiatic war today, within 2 years China and Russia would be fighting each other.

Mind you, now, readers, I do not say that when we get out of the United Nations, we should give up one single foot of territory we have occupied. We should keep Japan and all of the islands that we now have, and protect them to the limit. We need no 57 nations hanging on to the United States, to be fed, armed, and fattened.

We are well able to tend to our own business.

Our people should certainly have the full right to vote, and say by their own voices and votes, whether or not we should remain allied with a group of nations who are bleeding us white.

And suppose, folks, that we did win the war? What on earth would we do with China? Simply tell them that we don't want them to be communistic? No, sir. We would want controls—and the Chinese would have to be controlled and cannot be Communists. The United States does not need China, and does not want control of any other foreign country.

So, then, why should we change democracy as a freedom government? Why should we take the lead, and furnish the money and men to continue this conflict, until our dollar is not worth the paper it is printed on? Just why? Where is the sense in it?

Suppose Communist China surrendered today, and said that they surrendered all. What would we do? We don't want their country. We don't want to rule them. Or do we?

Who is behind this war, and why?

If communism is like we, of the United Nations, say, then as communistic nations, will they exist for long? Are we, the United States, the keepers of 57 other nations?

Should we, the people, elect an Army man for President, and give him a concurring

Congress? And if we did elect an Army man, and he, or the United Nations (it would be the U. N., if we won) defeated everyone in Europe and Asia, (of course, if we lost, it would be only the United States) then, after the United States was victorious over all countries and owed another four or five hundred billion dollars, where would we be? We, who furnished the men and money.

No nation, or set of nations, in the world can defeat the United States, unless we let the powers that are in control continue to lead the people further into the quagmire of utter destruction.

In the August 3, 1951, issue of the *Amarillo (Tex.) News*, it states that Mr. RALPH GWINN, Congressman from New York, says that every fourth person in the United States during 1950 was wholly, or partially, dependent upon the American taxpayer.

He states in this article that 34,653,328 checks were issued to Government employees, pensioners, war veterans, unemployed workers, farmers, and many other persons. One item, he says, was unemployment insurance paid to 7,364,000 people in 1950, all amounting to over \$30,000,000,000.

We know that no nation can survive for long on these billions of expenditures, year in, and year out.

This spending has been going on for years—no longer do our Senators and Congressmen speak of retrenchment—no longer do they say that spending must cease.

The Senators and Congressmen talk election in 1952; they talk controls.

Their ideas of controls with Wilson and DiSalle have now been released, and higher prices are now being requested (or permitted) by the Government. All of this control matter is only to misguide and befuddle the people.

Dissipation of our economy is the rule; why, no one seems to know.

It is not a pleasure to write this article about our own Government, but unless someone in the very near future starts some action to save this democracy, it is doomed to complete frustration.

If, after you have read this article, you desire, you may sign the space below; stating your name and address, and mail it to either or all of our governmental representatives.

Will you, Mr. Senator—Mr. Congressman, of the State of New Mexico, try to get a bill passed by the Congress asking that we, the people, have a right to vote on this matter, within 6 months from the date of September 1, 1951?

The subject to be voted on: Shall we, the people, of the United States, remain in the United Nations?

CASH RAMEY.

I ask unanimous consent that the editorial be printed in the Appendix to the *RECORD*.

There being no objection, the editorial was ordered to be printed in the *RECORD*, as follows:

Colossal fraud is about the kindest way to describe the Stalin brand of communism—and the black-and-white proof is in the much-vaunted Soviet constitution of 1936.

In a sort of preamble this constitution states:

"The principle applied in the U. S. S. R. is that of socialism: 'From each according to his ability; to each according to his work.'"

Now, the doctrine preached by Karl Marx—which is supposed to be so revolutionary—substitutes the word "need" for the word "work," and there is a great deal of difference.

As a matter of fact, the principal of "to each according to his work" has long been a guiding principle of the so-called capitalistic nations. It is generally agreed that under the free-enterprise system those who work hard and use just ordinary prudence will enjoy a good standard of living.

This principle was modified long ago to take care of hardship cases by pensions to the blind and aged, aid to dependents, unemployment insurance, as well as numerous private and collective charities. Inheritance and graduated income taxes are taken "from each according to his ability."

Undoubtedly Lenin was a true revolutionist, subscribing to the Marxian doctrine. There is every evidence to believe that Trotsky was the true disciple of Lenin and that his split with Stalin was over Marxism.

"Good old Joe" solved that argument by having Trotsky murdered.

Many of us have always maintained that Stalin's communism was nothing more than another breed of Hitler's nazism. Both are based on state socialism and backed by police force.

The similarity grows with the parades of German Communist youth—this time in blue shirts instead of brown. Even the persecution of Jews is being practiced by the Stalinists.

Of course, the final and conclusive proof that the communism practiced in Russia is a complete failure is the iron curtain itself.

After more than 30 years under this supposedly wonderful and revolutionary system, the U. S. S. R. should need only to open wide the door and let the world see for itself the joy of living under communism as practiced in Stalin's Russia.

When it came to preaching the doctrine of universal military training to the boys of this country, he had no superior because of the story that is told in an editorial published in the *Lexington (Ky.) Herald*, which I ask unanimous consent to have printed in the Appendix of the *RECORD*.

There being no objection, the editorial was ordered to be printed in the *RECORD*, as follows:

SGT. SAMUEL WOODFILL

Sgt. Samuel Woodfill was one of the great heroes of the United States. Although he was retired as a major after World War I, he was always known as Sergeant Woodfill. That was the title he liked and it was the name by which he was called by many of the soldiers. He was, to borrow the term so frequently used for General Bradley, "a soldier's soldier."

General Pershing gave him the name of "the greatest hero of World War I" and selected him as a pallbearer at the funeral of the Unknown Soldier. Later when General Pershing died and his body was laid to rest under a marker similar to those of the enlisted men but set apart upon a hillside at Arlington, the general had chosen his old Kentucky friend, Sam Woodfill, as a pallbearer.

Sergeant Woodfill won the Medal of Honor and 10 other decorations from various allied governments for heroism on the battlefield near Cunel, France, where singlehanded he shot three Germans who were manning a machinegun nest and killed an officer with his fist in a hand-to-hand encounter. Woodfill then killed 15 other machine gunners who were holding up the American advance and when his pistol jammed killed three of the enemy with a pickax.

A native of Belleville, Ind., Woodfill came to Louisville and enlisted in the Regular Army in 1901. He was a sergeant at the outbreak of World War I, was commissioned a first lieutenant and sent to France. He was retired in 1923 as a sergeant major. When World War II started, Woodfill was commissioned a major and assigned to training duty. From 1929 to 1937, he was stationed in Louisville as assistant executive secretary for the Kentucky Disabled Ex-Servicemen's Board.

Woodfill was one of the greatest advocates of a preparedness program and was a modest, true, and patriotic American who braved death, but survived two world wars in which he defended his country well.

Mr. UNDERWOOD. Mr. President, much of the information in this editorial was obtained from C. N. Florence, former executive secretary of the Kentucky Disabled Ex-Servicemen's Board, and now assistant chief of claims for the American Legion in the Washington, D. C., office.

The Stalin Brand of Communism

EXTENSION OF REMARKS OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. CAIN. Mr. President, the *Bellevue American*, of Bellevue, Wash., is a friendly, constructive newspaper which is dedicated to the development of the fertile and promising area which lies to the east of Seattle. Its publisher, Mr. A. J. Whitney, is an able and patriotic American. I was impressed by his front-page editorial of August 16. It covers a subject which is of continuing concern and interest to every one of us.

Sgt. Samuel Woodfill, Hero of World War I

EXTENSION OF REMARKS OF

HON. THOMAS R. UNDERWOOD

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. UNDERWOOD. Mr. President, Sgt. Samuel Woodfill, a Kentuckian by adoption, though born in Indiana, was called by General Pershing "the greatest hero of World War I." Sergeant Woodfill's recent death distressed many of those who had served with him in either World War I or World War II, or had known him in carrying forward the preparedness program of the American Legion.

Treaty of Peace With Japan

EXTENSION OF REMARKS OF

HON. JOHN E. LYLE, JR.

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. LYLE. Mr. Speaker, Mrs. A. N. Dahl, of Pettus, Tex., has written me about the National Seminar of Methodist Women, held recently in Nashville, Tenn.

I quote a portion of her letter as introduction to a resolution adopted by the group:

I have just returned home from attending a national seminar of Methodist women from across the Nation, held at Nashville, Tenn.

The theme for the seminar was Christian Foundations for World Order and we studied many of the issues for world peace. Among these was land reform as it has been worked out in Japan under the occupation forces. We believe this is a very good thing for the people of Japan, but we found that no provision has been made in the present peace treaty to protect this. Knowing the background of the Japanese people as we do we fear if some provision is not made in the treaty to safeguard this that in a few years all the land will be back in the hands of a few landlords.

It was voted at the seminar that I ask you to have accompanying resolution inserted in the CONGRESSIONAL RECORD. We will appreciate this very much as we feel it might help to focus the attention of other key people in this issue.

RESOLUTION

The National Seminar of Methodist Women in session at Nashville, Tenn., July 31 to August 9, 1951, have had their attention focused on land reform as one of the major issues of peace in the world today.

One illustration of this is the current program in Japan whereby 78 percent of the soil is owned by those who till it. It is our belief that this achievement is in accord with Christian and democratic principles, and that its value must be preserved for the welfare of the people. We would, therefore, urge our Representatives to safeguard this land reform in the final draft of the treaty for Japan.

Boston Herald Says Central Arizona Project Is Planned Extravagance

EXTENSION OF REMARKS OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. POULSON. Mr. Speaker, opposition to the proposed central Arizona project has become Nation-wide. In every section of this country, newspapers and organizations of all types have raised their voices against this extravagant, fantastic, and infeasible project.

I have placed many of these protests in the CONGRESSIONAL RECORD, so that Congress may be informed of the attitude of the people about this proposed wastefulness.

One of the best editorials on the subject which has come to my attention was printed July 12, 1951, in the eminent Boston Herald.

The editorial follows:

PLANNED EXTRAVAGANCE

Economy in Government is a matter of careful planning. So, it seems, is extravagance. Witness the central Arizona project.

This is a scheme to pump water out of the Colorado River to irrigate 152,500 acres of Arizona farmland now running dry, plus 73,500 acres not now being farmed. A dam would also supply power.

It sounds good, this great plan to bring the blessings of adequate water to 226,000 acres, with a little incidental cheap power,

until the other side of the ledger is examined.

The cost of the whole project was last estimated at \$788,000,000. Of this, \$450,000,000 is for irrigation. This figures to about \$2,000 per acre for construction cost alone. The average market value of that land today is less than \$300 an acre.

Last December the Water Resources Commission reported that the cost per acre of reclamation projects has been tending upward, those now under construction averaging just under \$350 an acre, and those planned averaging \$450 an acre.

But the Arizona irrigation would jump suddenly to \$2,000 an acre.

The taxpayers stand to pay all this cost but a mere \$1,700,000 that the landowners would pay over 75 years. But this is by no means all the taxpayers would be stuck for.

The interest for 75 years on construction costs comes to \$2,075,729,000, which will come out of all the people. It happens also that dams will silt up unless reservoirs and other works are constructed upstream, which will add to the cost. It also happens that every reclamation project so far has cost substantially more than the Department of Interior estimated.

It is entirely conservative to assume that the taxpayers will eventually have to foot a bill of \$3,000,000,000. Three billions to help the farmers on 226,000 acres in Arizona. Even figured at \$2,075,729,000, Secretary Chapman's estimate, Massachusetts taxpayers would be assessed \$70,575,000.

Yet President Truman has energetically pressed for the project, and the Senate passed it (with Senators LODGE and SALTONSTALL voting against it).

This is a measure of how much economy means to Mr. Truman.

To oppose the central Arizona project is not to oppose all reclamation and power projects. It is only to demand a sound regard for prudence. Hoover Dam is required by law to pay, and is paying, 3 percent interest to the Treasury every year for its repayment period. It has not cost and will not cost the taxpayers a cent.

But we are now on a water development spree which refuses to calculate costs against benefits. We are trying planned extravagance.

The New Controls Act

EXTENSION OF REMARKS OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. BUTLER of Nebraska. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article from Newsweek of August 13, 1951, entitled, "Why the New Controls Act is Bad," by Henry Hazlitt. This article emphasizes very strongly that it is useless to talk about price controls unless we are willing to deal with the basic cause of inflation, which is the increase in the volume of money and credit and the increased spending of the Federal Government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY THE NEW CONTROLS ACT IS BAD

(By Henry Hazlitt)

After his outburst at Detroit, denouncing all criticisms of his policies as smears, slan-

der, and lies from doubters and defeatists, neither the tone nor content of Mr. Truman's statement on signing the new economic controls legislation came as any surprise. It was a purely political document designed to throw the entire blame for any further inflation onto the Republicans in Congress.

Take, for example, his comment on the Capehart amendment. "This complicated amendment will force price ceilings up on thousands of commodities clear across the board. It is like a bulldozer, crashing aimlessly through existing pricing formulas, leaving havoc in its wake." This violent simile was apparently considered a complete substitute for bothering to tell the American people what the Capehart amendment actually provides. It is simply intended to prevent the OPS from fixing price ceilings that would deprive retailers and wholesalers of at least their customary percentage margin of profit in the month before the Korean war.

If we accept the premises of price control, it might be argued that this amendment is inflationary in the sense that it permits a customary percentage mark-up rather than merely a customary dollars-and-cents mark-up. But this argument is not consistently open to those who, like the President, have supported the cost-of-living escalator clauses in wage contracts.

The new Defense Production Act is really a very bad law, as Mr. Truman insists. But it is bad, in the main, for precisely the opposite reasons from the ones he gives. It is bad not because it has failed to impose price and wage controls that are sufficiently "strong" or "tough," but because it continues the flagrant fraud of price and wage control. It cannot be repeated too often that price control is not a cure for inflation. It regiments the economy and ties it in red tape. It inevitably has consequences which provoke demands for more and more controls and lead toward economic totalitarianism. It actually prolongs and intensifies inflation because it unbalances production and causes shortages—and above all because it diverts public attention away from the only real cause of inflation, which is the increase of money and credit.

In the whole course of the debate on the new law the only genuine anti-inflation amendment that got to a vote, was that offered by Representative JESSE P. WILCOTT, of Michigan. This declared: "It is the further intention of the Congress that none of the powers contained in this act . . . with respect to the stabilization of prices and wages, shall be used unless other indirect means of effectuating such controls and stabilization presently provided in other acts for use by the Secretary of Treasury and the Federal Reserve Board have been utilized. This merely expressed the intention of Congress that in addition to using the fraudulent anti-inflation measure of price control, government agencies should also use the genuine anti-inflation measures involved in raising discount rates, tightening bank reserves, and in ceasing to monetize the Government debt.

But this amendment, the only test of sincere and intelligent anti-inflation sentiment in Congress, was turned down, on almost straight party lines, by a vote of 169 to 149.

And yet there is not an economist worthy of the name who does not know that the basic cause of inflation always and everywhere is an increase in the volume of money and credit. Every Congressman, not to speak of Messrs. Truman, DiSalle, and Johnston, would do well to read the Federal Reserve Bulletin for July. "Monetary expansion," it begins, "which had been at a very rapid rate in the last half of 1950, was interrupted in the first half of 1951." It is this change, and not any miracle of price control, which slowed down the previous violent rise of wholesale prices. Where these had gone from

an index number of 157.3 in June of 1950 to 180.1 in January of this year, they had actually dropped back to 177.9 by the week ended July 31 last.

**Statement by David Sarnoff on His Return
From a Visit to Europe**

EXTENSION OF REMARKS

OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. McFARLAND. Mr. President, last week I read with a great deal of interest a statement made by Brig. Gen. David Sarnoff, chairman of the board of the Radio Corporation of America, upon his return from an extended visit in Europe. This distinguished American businessman has a wide acquaintance in Europe; he visited with leading statesmen and businessmen; in my judgment, his views and reactions to what is going on in Europe are sound, and provide food for thought. I think Members of the Senate will find General Sarnoff's estimate of the European economic and political situation of particular interest as we begin consideration of both the Defense Department appropriation bill and the ECA authorization bill. I ask unanimous consent, therefore, Mr. President, that General Sarnoff's statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mrs. Sarnoff and I were abroad 2 months and visited England, France, Italy, and Switzerland.

While there, I met and discussed current problems with Mr. Winston Churchill, General Eisenhower, and with leaders in government, finance, and industry as well as with wage earners, farmers, housewives, shopkeepers, and others.

In general, my impressions are that, with the help of the Marshall plan, the free countries of Europe have made much progress with their problems of rehabilitation. But they have not yet achieved political, financial, economic, and social stability.

When I visited Mr. Winston Churchill at his home in London, I found him quite well and at work, writing the fifth volume of his great history of World War II. This, in addition to his activities as leader of the opposition. No one abroad has a greater understanding and appreciation than Mr. Churchill has of the meaning and extent of our aid to Europe and of America's constructive position in world affairs.

I had several long and frank discussions with General Eisenhower, whom I visited at his new SHAPE headquarters near Paris. He looked fit physically, alert mentally, and, as always, hopeful and inspiring. General Eisenhower is doing a superb job under the most difficult conditions. In some respects, his present task is a harder one than he had during the late war. It is one thing to obtain unity during war; it is another thing to achieve it when guns are silent and bombs are not falling.

But under General Eisenhower's wise, persuasive and able leadership, visible progress is being made in strengthening the

military defenses of Western Europe against further possible aggressions by Communist Russia.

While there is an awareness in Europe of the Russian menace, nevertheless there is an apparent lethargy about rearmament and a good deal of fatalistic thinking about the future.

In some countries, the domestic problems of higher costs of living, low wages, inadequate housing and the poor living standards of the masses combine to distract the attention of the people from the greater danger of losing their freedom and their future, through Communist aggression from the outside or its infiltration from the inside.

America can help, but it cannot solve the major domestic problems of the European countries. This is a long-term job they must do for themselves. But we must continue our substantial aid in men, money, and materials—at least during the next two critical years—while the rearmament program is under way. To attain our objective, this program must be made effective in Europe as well as at home.

If we leave the Western European countries to their own initiative and resources only, I believe that their defense and rearmament efforts would not be enough to deter Russia from attacking and overrunning them. And this would be fatal for Europe and disastrous for America.

On the other hand, I believe that with the progress being made at home on our program of armament production and military preparedness, and with American aid supplied to our allies in the Atlantic Pact, such aggression and domination by Russia can be successfully prevented. Such tangible evidence of our determination to preserve peace will greatly increase the confidence of our European allies in their own ability to deter Communist aggression and to resist it effectively, if it comes.

In other words, I do not believe that a third world war is inevitable, if all of us do what we are able to do to prevent it. This must be our immediate objective.

Beyond this, there must be a long-term objective of a free, strong, and self-sustaining Europe. In my view, this objective will be achieved only through a federated or united states of Europe. Thus far, traditions, habits, fears, and prejudices have prevented realization of this ideal. But where logic and reason fail, events and realities often impose solutions. For example, today, the project for a European army to serve the common defense is nearing achievement. Only a few years ago, this would have seemed impossible.

I am aware of what adequate aid to our European friends—even during the next 2 years—involves in the way of sacrifices for all of us in America. But I see no practical alternative, if we are determined, as I am certain we are determined, to preserve our own freedom, strengthen our own security, and protect our own way of life.

**Air Force Flyer in Japan Reports Air
Force Ground Support Planes Are
Inferior to Those of Navy and Marines**

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include portions

of a letter recently received from a friend in the Air Force in Japan. What he reports about some of our aircraft is disturbing and I call it to the attention of the appropriate officials:

DEAR DR. JUDD: I have been in Japan for the past several months flying interception-patrol missions.

If the people in the United States would realize what an excellent job General MacArthur has done here in Japan they would fully appreciate him as not only one of the few military geniuses our country has produced, but also as one of the political geniuses in our country. From what I have observed, the Japanese people have no bitter feelings against the occupation forces; and being an industrious lot, they have gone ahead to rebuild their country. I think we have no fear of granting them a just peace with the gamble that communism might take control.

As yet have not been to Korea, but the men in my squadron are predominantly combat returnees. I have discussed this matter with hundreds of pilots and I want to set down their first-hand opinions. Perhaps you are fully aware of the situation. The general consensus of opinion is that we do not have a good ground-support aircraft. If anything, the F-51 is far superior to the F-80 and F-84 because it carries more of a load, can stay over the target longer, has greater range, can bomb and strafe more accurately—and yet something as simple as one 30 caliber bullet can knock down an F-51 if that bullet puts a hole in the large underslung radiator and drains the coolant. It seems that the Navy and Marine pilots, by virtue of the fact that their Corsairs and AD's are excellent ground-support aircraft have far outshone the Air Force. Being ex-Navy, I would grant the Navy no compliments unless they deserved them, and this time they do. Please don't misunderstand me though as I believe the quality of pilots in all branches of the service are superior type to the enemy, it's just that the Air Force doesn't have as good an aircraft as the Navy to do the job.

I keep hoping that more F-86's would be sent here for our interceptor squadrons, yet we still fly the obsolete F-80. I keep hoping that maybe the F-90 or F-91 would be mass produced, yet Lockheed is still turning out obsolete F-94's—an all-weather type F-80. I know that because the B-36 program was top priority, we had to skimp on fighter research, but we're getting behind in jets and I hope the wheels in Washington are doing something about it.

With best wishes,

First Lieutenant, Air Force.

**Statement by O. Roy Chalk at Reception
in Honor of Korean Ambassador**

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by O. Roy Chalk, delivered at the reception to honor the Korean Ambassador and the Korean airlift at the Carlton Hotel, Washington, D. C., on August 9, 1951.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY O. ROY CHALK DELIVERED AT THE RECEPTION TO HONOR THE KOREAN AMBASSADOR AND THE KOREAN AIRLIFT, CARLTON HOTEL, WASHINGTON, D. C., AUGUST 9, 1951

Thank you, Dr. Yang. I am sure that all of us, particularly Maj. Gen. William Tunner, chief in charge of the Korean airlift of the Military Air Transport Service, and the representatives of the commercial airlines, who are with us today, are most appreciative of your tribute.

I am especially stimulated by your thought that the airlift might be converted to the peaceful mission of transporting the relief supplies that are so desperately needed by your ravished peoples.

I cannot, of course, speak for the entire aviation industry, but I can make recommendations to the airlines that are members of the Independent Military Air Transport Association. I would like our group to fulfill your hopes.

I shall therefore urge each of our individual members to offer to carry gratis, bona fide Korean relief cargo on a space-available basis in all planes as our contribution to peace. Although it would be impractical to fly low-cost cargo to Korea, it would be feasible to fly gifts of the people of America to ships awaiting at west coast ports.

In the past year the Korean airlift has been flying war supplies to Korea. Let us pray for a speedy and honorable truce, consistent with the tenets of the United Nations—so that instead of war supply planes, we can send over peace relief planes.

I would like to suggest, in this connection, that an airlift program be instituted which would highlight the urgent need for speedy transportation of drugs, food, clothing and supplies to the unfortunates of Korea. Thousands of airports throughout our great country could be collection depots for medicines, food and other non-bulk items. Relief supplies of this character could be picked up by our airplanes and those who would join us.

I am sure that for such a worthy cause most of the airlines of our Nation would be happy to take part in Operation Peace Planes.

To start the ball rolling, Mr. Ambassador, I shall recommend to the Independent Military Air Transport Association that we file a special tariff with the Civil Aeronautics Board wherein we ask permission to transport on a space-available basis all such supplies without charge.

And now, I propose that we all drink a toast to peace in Korea, to Dr. and Madame Yang, to Maj. Gen. William Tunner, to the members of the Korean airlift and to speedy relief for Korea.

TEXT OF A STATEMENT DELIVERED AT THE RECEPTION IN HONOR OF THE KOREAN AIRLIFT AND THE KOREAN AMBASSADOR, BY THE INDEPENDENT MILITARY AIR TRANSPORT ASSOCIATION, CARLTON HOTEL, WASHINGTON, D. C., AUGUST 9, 1951

Mr. Chalk, I want to express my deep appreciation to you and to the Independent Military Air Transport Association for honoring me by asking me to share the spotlight with the Korean airlift. I am grateful for having the opportunity to publicly express my appreciation for the magnificent work done by every member of the Korean airlift.

I salute the traffic arm of the Department of Defense, the Military Air Transport Service, and I likewise salute the traffic arm of private industry, the commercial airlines of the United Nations. If it were not for your speedy response and gallant efforts, just a year ago, I shudder to think of what the consequences would have been.

Hundreds of your planes, manned by thousands of your men, have been ferrying

personnel and equipment to the west coast and across the vast Pacific to us every day. Our need has been great, and our plight desperate. You answered the call. I cannot give the exact figures, but thousands of tons have been carried to us each week on your bridge of planes. Freedom flew on your wings from the broad stretches of America to us in the Pacific.

You literally gave us life, hope, and strength.

The Military Air Transport Service is known throughout the world for its illustrious leadership and for its great spirit of service. It has a record for which it can well be proud. The job it has been doing in Korea is but another pearl in the strand of its achievements.

We will never forget the valiant response of the Military Air Transport Service and of such commercial airlines as the Flying Tigers, the Trans Ocean, the Seaboard and Western, the Overseas National—airlines that carried the largest part of the load during those terrible first 90 days.

During this last year, when we suffered so greatly, the United States and the United Nations proved they were our friends. The Korean airlift proved it was our friend indeed.

Today, we are all praying for a new kind of era, and for a new kind of airlift. We desperately need food, clothing, medical supplies, and equipment to help us rebuild our war torn people and our war torn land.

In Korea, truce will mean the end of a terrible experience, and the beginning of a new period, one that will call for the most careful planning, great ingenuity, and coordination.

We cannot correct the devastation by ourselves. We will need help from you who have helped us in the past. We want our people to take their place as useful citizens in the world, but they need the most fundamental of necessities. Many have no homes and are clothed in rags. Many don't know where the next meal is coming from.

We are looking to you for help, and I have confidence that in the difficult days ahead, we can count on the United States, the United Nations, and the Korean airlift for the much needed relief to Korea.

United States and Mexico Work To Dam Rio Grande

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix to the RECORD, I wish to submit an article from the New York Times of Sunday, August 19, 1951, in connection with the building of a dam on the United States-Mexico border, which information should be of interest to the Members of Congress and the Nation as well.

The article follows:

UNITED STATES AND MEXICO WORK TO DAM RIO GRANDE—5-MILE BARRIER HALF COMPLETE IN LONG-RANGE POWER AND IRRIGATION PROJECT

FALCON, TEX., August 18.—The United States and Mexico are working together to control the waters of the Rio Grande.

The first big project in a long-range program is the Falcon Dam, 75 miles downstream from Laredo and 110 from the Gulf of Mexico. This \$48,000,000 barrier is now

half complete. Other dams, backing up huge reservoirs behind them, will be built upstream.

The 5-mile-long Falcon Dam will be among the longest dams in the United States.

The division of costs was determined on the basis of what percentages of Rio Grande flow came from tributaries on each side of the border. The United States is paying 58.6 percent of the cost. Mexico is paying 41.4 percent.

Irrigation water, essential to the citrus orchards and year-round vegetable fields of the lower Rio Grande Valley, will be measured out on the same percentage basis. There will be a power plant on each side of the Falcon Dam. One will serve the United States, the other will serve Mexico.

AN 80,000-ACRE LAKE

The dam will irrigate almost a million acres in an area where irrigation already has created a wealthy orange, grapefruit, cotton, and table-vegetable industry. Holding 3,300,000 acre-feet of water, it will control flood waters that periodically have destroyed river-bottom farmlands. These floods often are reflected in a few days in rising prices for groceries.

It will create an 80,000-acre lake, 50 miles long—a hunter's and angler's mecca.

An Iowa firm, C. F. Lytle & Co. of Sioux City, has the multi-million-dollar contract. Falcon is scheduled for completion in 1953. Already men and machines, ahead of schedule, have:

1. Completed 2 miles of earthen dam on the United States side.

2. Passed the halfway mark toward completing the 3-mile earthen fill for the Mexican side. (Three miles of the dam face will be in Mexico, two in the United States. The dam is unusually long because hills against which it must be buttressed are a long way from the river bed.)

3. Built a huge concrete plant to mix the materials for the spillway and for the structures to house two giant generators.

4. Warned thousands of residents on both sides of the river that they must leave their homes. The 80,000-acre reservoir will put countless farms, and a least 4 towns, under water.

Some of those who must move are pioneer families whose ancestors settled there, 3, 4, and 5 generations ago—8 or 9 generations on the Mexican side.

AMONG LONGEST RIVERS

Much of the time hardly bigger than a good-sized creek, the Rio Grande is nevertheless one of the longest rivers in the world—1,800 miles long. Almost from its origin in Colorado, its waters are used over and over again for irrigation.

But there is a disheartening fluctuation. During periods of heavy irrigation upstream and little rainfall, lower-valley irrigators find the stream almost dry. Then come heavy rains, more than the stream or its smaller present reservoirs can handle. Thousands of acre-feet of water then flow unused into the Gulf or smash across farmlands.

The Falcon is one of three dams on the Rio Grande planned in the 1945 water treaty between the United States and Mexico.

Puerto Rico's Position

EXTENSION OF REMARKS OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. BOW. Mr. Speaker, I think it is generally known that I have a very high

regard for the people of Puerto Rico. They have done an excellent job of becoming fine American citizens. Their present government is a credit to our Nation.

Dr. A. FERNÓS-ISERN, the Resident Commissioner of Puerto Rico, is constantly vigilant on behalf of the people he represents. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD a copy of the letter which he wrote to the editor of the Washington Evening Star and which appeared in that paper on Sunday, August 19, 1951:

PUERTO RICO'S POSITION

Edward Tomlinson seems to misinterpret Puerto Rico's political picture in his article, Puerto Rico on the Threshold, in the Sunday Star of August 5.

Under Public Law 600, Eighty-first Congress, accepted by the people of Puerto Rico in a popular referendum in June, Puerto Rico is organizing a constitutional government. But also, within Public Law 600, the Puerto Rico Statute of Federal Relations, a compact between the island's people and the United States, continues in effect.

United States citizenship as extended to Puerto Ricans in 1917 and Puerto Rican citizenship as extended to United States citizens with 1 year's residence in the island continues. The privileges and immunities clause of the Constitution extends to Puerto Rico. Except for internal revenue laws, Federal laws extend automatically to Puerto Rico unless locally inapplicable. Foreign imports are subject to the same tariff rates as in the continent. The authority of the Puerto Rican Legislature is limited to purely local matters. The Government of Puerto Rico is locally financed. A Federal District Court sits in Puerto Rico as in any State. Federal immigration laws apply to Puerto Rico. Some joint Federal and insular programs, where expenses are shared by both governments, operate in Puerto Rico (grant-in-aid laws).

Accordingly, Mr. Tomlinson is in error when he says that: (1) The island is not self-supporting, (2) political ties with the mainland are hardly perceptible, (3) the island makes its own laws (the island does not participate in Federal legislation which applies to Puerto Rico); (4) every official is elected (Federal officials are appointed—insular officials are elected); (5) appeals from Puerto Rico's supreme court are seldom taken. (The situation is no different than appeals from a State supreme court, except that in the latter case appeals go directly to the Federal Supreme Court, whereas in the former appeals go to the First Circuit Court.)

With its new constitutional government, Puerto Rico will occupy a position similar to that of a State, except.

1 A statute of Federal relations, bilaterally adopted, will join the island to the United States instead of that union being effected by the Federal Constitution. This union with the Federal Government will be parallel to that of a State.

2 Although Federal laws apply generally to Puerto Rico as to a State, Puerto Rico will have no voice in the election of Federal lawmakers or the Chief Executive, and

3 Thus Puerto Rico will not be subject to Federal internal revenue taxes, except on Federal salaries and income derived from sources outside the island.

The ties between Puerto Rico and the United States are no more tenuous than the ties among the States are tenuous. If anything, Public Law 600 strengthens Puerto Rico's union with the United States while granting full self-government along State lines to a people capable of handling the trust.

English is compulsory in Puerto Rico from the first grade. At university level classes are in English or Spanish, depending upon

the professor's choice. College students are bilingual upon entering the university.

Ended now in Puerto Rico is Federal interference in purely local matters. Congress has discarded this suggestion of colonialism.

Full democracy is offered to Puerto Rico. Whenever it is thus offered it strengthens the union of free peoples owing allegiance to the same flag. Union based on equality is tenfold stronger than union based on subordination.

A FERNÓS-ISERN,
Resident Commissioner of Puerto Rico.

A Jewish Historian's Tribute to America

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. HELLER. Mr. Speaker, one of the most beautiful odes and tributes to America recently came to my attention. It is written by the noted Jewish historian Mrs. Anita Libman Lebeson, who is the author of several important works dealing with the history of the Jews in the United States.

Mrs. Lebeson's brief article, America to Me, is written very interestingly and in poetic language. It depicts her feelings and her great love for our country, for its way of life and the freedom of its people. It is a song of joy and great pride in the role played by American Jewry since the very beginnings of civilization on this continent and the vast contributions which Jews have made toward making this country the greatest and most flourishing center of modern civilization in our day.

Very few people are able to put down their thoughts and express their views in the patriotic manner in which Mrs. Lebeson does. She is not only a great scholar, but an artist in her chosen field. The huge and overwhelming majority of Jews in this country feel as Mrs. Lebeson does toward this great land, they appreciate its kindness and its freedom, its sense of justice and opportunities—but they cannot state it as well as she has done.

Mr. Speaker, I urge all my colleagues to read this brief but beautiful article by Mrs. Lebeson which appeared in Congress Weekly, published by the American Jewish Congress, in the issue of May 28, 1951:

AMERICA TO ME

(By Anita Libman Lebeson)

Long before America was discovered and located on a map it was a place etched on the hearts of Jewish wanderers. For every Jew knew the boundaries of Utopia—a place where men could live in dignity and security. It was a sanctuary of refuge and safety, a land no one had yet found, whose existence few doubted. So early map makers drew maps, and philosophers speculated, and astrologers predicted, and mothers described it in their lullabies.

America began as a dream and ended as a reality. Breathlessly the news was spread through the underground of that day. Discovery displaced fantasy surpassing imagination.

The two vast continents linked by a thin thread of land were green and beautiful to

behold. The green forests were dense with ancient trees waiting to be felled and made into dwellings. Swift were the waters that traversed the land. Green pastures beckoned them. Green mansions sheltered them. Who could list its treasures? Who could describe the prodigal land? Who could foretell the sweet future? Hope stirred in the hearts of the oppressed, the unwanted, and the persecuted of all faiths.

So they took to their boats. Sails puffed and swelled in the wind. The endless rhythm of the Atlantic beat a sturdy march. Winds hissed and storms broke over their heads and the pilgrims turned their thoughts to God. And the prayers that arose overcame the storms of nature. So they landed and gave thanks.

In 1500, secret Jews led by Fernando de Loronha headed for the New World. Of the five barcos owned by him, one was named the Judea and of the new settlements established in 1501 by these early settlers, one was called Cananea.

Trackless forests were traversed. Rivers were forded and mountains were climbed. Sugar mills were established, fields were planted, parrots and other exotic creatures were caught for export. Best of all, the painful and humiliating disguises which had been forced upon the Jews were thrown off.

America was a place where men could be free.

America is people.

America is composed of strong men and weak, of bold visionaries and frightened immigrants. Of men who till fields and those who work in factories. Of peddlers hawking their wares and merchant princes in sound-proof buildings. Pilgrims—pioneers—patriots. Of scholars like Rabbi del Prado who helped build the synagogue in Surinam in 1685. Of soldiers like Samuel Nassy who distinguished himself in the defense of Surinam. Of a battling butcher named Asser Levy who fought for the right to do guard duty along with other early settlers of New Amsterdam. Of men like Mordecai Campanal who was one of the first settlers of Newport and who brought with two other Jews the secrets of the Masonic Order to the new land. Of women who, like Mrs. Lunah Burgos of Barbados, sent money to build a fence around the first synagogue in New York. Of scholars like Isaac Pinto who in 1765 translated the Sephardic Prayer Book into English. Of benefactors to higher education like Israel Joseph, Michael Lazarus, and Moses Lindo, who were among the earliest supporters of Brown University. Of shipowners like Aaron Lopez whose ships transported commodities to and from the colonies and whose support of the cause of the American Revolution was incalculable. Of Indian traders like Joseph Simon who dared traverse the wilderness establishing commerce with the Indians and opening vast stretches of land through trade and purchase to countless other settlers. Of householders like the Harts of Easton, Pa., who were among the first 10 settlers of that city and who entertained George Washington in their home.

Of le Juif Elias Stultheus who headed a vast colonization project in Louisiana while it was still under the French flag. Of the Gratz brothers whose vast trading interests opened up the Illinois country and of the Sheftalls who pioneered in Georgia and fought in the War of Independence. And of Francis Salvador of Charlestown, S. C., who when he heard the British were coming, mounted a horse and rode through the countryside alerting the settlers—only to die at the hands of the Indians—thus becoming the first Jew to die for his country—a free America. Of men like Benjamin Levy who could boast of his home that "George Washington slept here." Of men like Hayin Salomon who helped finance the Revolution, and men like Reuben Etting who fell in its defense.

There were people who demanded their rights and wrote letters to editors insisting that they gloried in their heritage. Such a letter was written by a soldier of the Revolution in 1800. It was addressed to the Printer of the Gazette of the United States and reads: "I am accused of being a Jew, of being a Republican and of being poor. . . . I am a Jew. I glory in belonging to that persuasion . . . I am a Republican. Thank God . . . I have fought as an American throughout the whole of the revolutionary war."

America is the sage of noble women. Rebecca Gratz—beautiful, gentle, compassionate, rejecting marriage to cling to her faith. Emma Lazarus at the docks of New York harbor staring with tear-welled eyes at the depressed and dejected immigrants who had fled the terror of pogrom and persecution. Lillian Wald climbing tenement stairs, imperiling her life to nurse the sick and aged through raging epidemics. Henrietta Szold, gentle scholar leading a new crusade to the Promised Land. Louise Wise, the essence of compassion and humility, boldly championing the cause of democratic equality for all people. Tamar Pool, bag in hand, flying to Cyprus to spend Passover with refugees confined in barbed-wire cages like animals in a zoo. An immigrant woman Anna Rosenberg, rising through sheer ability and indomitable loyalty, to be Assistant Secretary for Defense.

America is people—with hearts and minds and vision mobilized for America and for humanity.

It is a vast area peopled first by Asiatic migrants now known to us as American Indians, and next by displaced persons from Europe like the Puritans who went from England to Holland to the New World seeking a place where their Mosaic Christianity might be practiced in peace. Peopled also by Negroes from Africa stolen from their native homes and shipped like cattle into slavery, and freed in a struggle in which Lincoln was sacrificed and was mourned by the Jews of America as a father is mourned.

America is a holy experiment of many peoples who came from many places all working out their plural cultural destinies, all ready to die for the land they love and for its free institutions.

America is a state of mind. It is democracy in action. It is a spiritual adventure. It is the affirmation of the brotherhood of man. America is a place where labor is dignified and self-respecting. Led by a Talmudic scholar like Gompers into strong, cohesive unions. Headed by Torah-nourished men like Sidney Hillman and David Dubinsky, who translated the ideals of Amos into the everyday vocabulary of the workman of every faith and every color so that the worker of America is the envy and model of workers in all other lands.

America is a state of mind—of growth and idealism and of renaissance, of hope and altruism and brotherhood, of dreams of human dignity and of peace and of security and moral grandeur. It is a well of life-giving waters from which all may drink and be renewed. A land of faith, of vision, a becoming.

Europe's Lack of Unity More Serious Than Lack of Dollars

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following article by William Henry Chamberlin, from Human Events:

FROM MARSHALL PLAN TO MARTIAL PLAN (By William Henry Chamberlin)

The Marshall plan is becoming a martial plan. This is one of the strongest impressions which one brings back from a trip in Western Europe at the present time. It is symbolized by the administration proposal to Congress to appropriate over \$6,000,000,000 in arms aid and over \$2,000,000,000 for economic aid to foreign countries during the next fiscal year.

Whether or not this will be the amount, it seems likely that a 3-to-1 proportion in favor of military aid, as distinguished from civilian, will be maintained. In the American Embassies and ECA missions in West European capitals, the emphasis today is on the strategic importance of future aid projects. (ECA missions have become almost second embassies in power and influence.)

In the main European headquarters of the ECA, on the rue St. Florentin, in Paris, there is a tendency among officials to speak of the nonmilitary side of their work as finished. This seems a little overoptimistic. While Britain, its dollar reserves temporarily swelled by large receipts from the rubber, tin, wool and other primary products of the Commonwealth area, recently felt able to dispense with what Winston Churchill once bluntly called the American dole, most of the continental European countries are still running dollar deficits. There has, however, been improvement in this field. The "dollar gap," the spread between what European countries considered their minimum needs from the dollar area and what they could pay, was at the fantastic figure of \$7,500,000,000 in 1947. It is now about \$1,500,000,000.

Apart from special weak spots, such as Greece and Austria, Europe might have stood entirely on its own feet economically within another year or two—provided its governments had practiced self-denial and sound fiscal policies and cut out some of the extravagances of the welfare state. Now the picture has changed and it is more difficult to set a time limit for the subsidization of Europe's armies than it was to set a term for financial aid to the European national economies.

During the first 3 years of its existence the ECA pumped about \$11,000,000,000 of American assistance into the anemic postwar European economic structure. The principal recipients were Great Britain, \$2,706,000,000, France \$2,278,000,000; Italy, \$1,228,000,000, West Germany, \$1,192,000,000; the Netherlands, \$958,000,000.

II

ECA aid has been a two-way help to European countries. It has paid many of their bills for raw materials and, to a smaller extent, for foodstuffs. It has contributed a good deal the reequipment for their industries. At the same time it has provided an additional source of revenue in the form of what are called counterpart funds.

While much the greatest part of the ECA shipments has been in the form of free grants to governments, the users of these shipments have been required to pay in their national currencies. Proceeds of these sales are counterpart funds and have been used for various purposes approved by the ECA missions, to help stabilize currencies, finance housing and public improvements, etc.

Whether one trusts the evidence of one's senses as a traveler or delves into volumes of statistics, the evidence seems overwhelming that the economic health of Western Europe is much better today than it was in 1947 or 1948. People are better fed and better dressed; goods move more freely across frontiers; one begins to notice now, even in Germany, not only how much has been destroyed but how much has been built.

Part of the credit for this improvement belongs to the ECA, part to the return to sounder methods of finance and economics, part to the irrepressible impulse of human beings to rebuild, to start up farms and factories and stores again. Two things, however, the ECA failed to accomplish. It alleviated, but did not and could not cure the consequences of some of the worst social and economic dislocations of the war. And it did not create in Europe a more perfect economic union.

One of the reasons why the Netherlands, one of the most prosperous countries in Europe before the war, has felt obliged to draw so heavily on American aid, and is constantly in the red in its account with its neighbor, Belgium, is the loss of the rich Dutch empire in Indonesia. An important cause of France's inability to achieve budgetary stability is the endless, no-decision war in Indochina. Germany's economic recovery, really brilliant in many ways, is clouded by the perpetual problem of how to absorb 9,000,000 expellees, driven destitute from their homes in East Germany, Poland, the Sudetenland, and the Balkans. And ECA has furnished no solution for Italy's chronic overpopulation.

Progress toward closer economic unit has been slow and halting. The EPU, or European Payments Union, a scheme sponsored and financed by the ECA, has smoothed the way for a resumption of multilateral trading. This has eased the pressure on European countries to conclude the constricting barter deals which were a feature of inter-European trade immediately after the war. But, despite much exhortation and some pressure from the American side, Europe has hardly achieved the goal of the free movement of men, goods, and capital. The consequences were vividly described in General Eisenhower's recent speech in London:

"Progress has been and is hobbled by a web of customs barriers interlaced with bilateral agreements, multilateral cartels, local shortages, and economic monstrosities . . . Europe . . . is divided by patchwork territorial fences. They pyramid every cost, with middlemen, tariffs, taxes, and overheads. Barred, absolutely, are the efficient division of labor and resources and the easy flow of trade."

III

In the present shift from Marshall plan to martial plan the emphasis changes; but some of the old problems remain. One hears less complaint about dollar shortages in European countries now, but more about the inflationary pressures of the Korean war and the European rearmament program, which threaten the relative currency stability that has been achieved during recent years.

During the first phase of the European recovery program, ECA representatives were constantly trying to strike a balance between what the European governments were inclined to ask and what Congress might be expected to approve. This same tug of war goes on, under different circumstances. The main issue is the division of the rearmament bill between the United States and its associates in the North Atlantic Pact.

Soon after I arrived in Rome an Italian Cabinet Minister was explaining to me that Italy was in full sympathy with the rearmament program—but on condition that the United States would supply not only the raw materials necessary for munitions, but also consumption goods, so that the workers would have something to buy with their earnings.

An official of the Bank of France suggested to me that the Communist threat was social and economic, rather than military. He then developed the argument that it would be a good idea if the United States would go on subsidizing the French economy full blast and forget about this awkward

and burdensome business of French rearmament. And on my first day in Bonn a German official developed the thesis that Germany's high rate of compulsory social expenditures on behalf of refugees and war victims should count as a contribution to European defense.

The resignation of Aneurin Bevan and Harold Wilson from the British Cabinet was based on the contention that Britain was being pressed by America to rearm beyond its economic strength. There will be some open and more secret pulling and hauling on this matter of paying the bills for the European armament effort, unless all signs fall.

IV

It is hard to see any realistic alternative to the United States policy of promoting the build-up of a unified European defense force. But the many nationalist and ideological divisions among the countries outside the Iron curtain are a formidable obstacle to the effective realization of this project.

From a talk with the French War Minister, Jules Moch, one gets the impression that he regards Germany much more as an enemy than as a prospective ally. For personal reasons (Moch's son was killed by the Gestapo) Moch is probably more intransigent than the average non-Communist Frenchman. But, at a time when the Adenauer government needs all the foreign encouragement it can get to overcome the internal German resistance to rearmament, it has not, as yet, received much help from Paris.

A high point of unreality is touched by the vocal British and French protests against such a common-sense arrangement as an American military agreement with Spain. Taken in connection with the absence of protests against military aid to Tito's Yugoslavia, this development shows that fellow-traveler prejudices are by no means dead in London and Paris.

Two of the qualitatively best European armies, the Swiss and the Swedish, are outside the European defense scheme because of the neutrality traditions of these countries. (The Swiss Army, incidentally, is larger than the number of troops France possesses in Europe.) Two of the largest European military forces, the Spanish and the Yugoslav, are excluded for other reasons.

The Marshall plan failed of complete success because it did not become the basis of a true European economic union. The fate of the martial plan hangs in the balance for the same reason. Since American lives are at stake in the latter case, as against dollars in the former, it would seem that there is a challenge to American leadership to press strongly and consistently for such elementary necessities as the speediest possible rearming of Germany, the establishment of air and naval bases in Spain, and, in general, the subordination of left-wing crochets and prejudices to national security needs.

Contracted Mexican Agricultural Workers

EXTENSION OF REMARKS OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. CONNALLY. Mr. President, there has been considerable misunderstanding of the charge of \$15 a worker for the contracted Mexican agricultural workers brought into this country under the terms of the international agreement with Mexico pursuant to the recent act

of Congress pertaining to the immigration of Mexican agricultural workers. Specific complaint has been made at the requirement of this charge each time the worker is recontracted.

The Secretary of Labor has furnished me a letter explaining this charge. I believe the information contained therein will be of interest and help to a great many citizens who are participating in this program. Accordingly, I ask unanimous consent that the letter be reprinted in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF LABOR,
Washington, August 17, 1951
The Honorable TOM CONNALLY,
United States Senate,
Washington, D. C.

DEAR SENATOR CONNALLY: At your request I have prepared a brief explanation of the charge of \$15 a worker for the contracted Mexican agricultural workers brought into this country under the terms of the international agreement with Mexico.

In the international agreement, migration or recruiting centers will be set up in the interior of Mexico at Guadalajara, Aguas Calientes, Irapuato, Chihuahua, and Monterrey. The workers will be recruited at these points and transported to reception or contracting centers in the United States at Harlingen, Laredo, and El Paso, in Texas; Nogales, Ariz., and Calexico, Calif. This expense will be borne by the United States Government and recovered from the employer contracting for the workers at an amount not to exceed \$15 a worker, as provided for in Public Law 78.

The budget for the Farm Placement Service was set up on the basis of a revolving fund to cover this operation. It is the plan to make this revolving fund break even at the end of the year, by collecting from the employer all money spent by us for the transportation and subsistence of these workers in Mexico. This fund is to be reimbursed by the employers for transportation and subsistence expenses incurred by the United States in obtaining Mexican workers.

Our best estimates on the cost of this program indicate that \$15 a worker will not cover the cost of transportation and subsistence when the worker is contracted only once. This means that the United States Government would have to subsidize the farmer for costs over \$15 per worker. This subsidy was not provided for in our budget, nor in our interpretation of Public Law 78. The debate on the bill in Congress shows clearly that it was not the intent of Congress to subsidize the farmer through this program.

Because the \$15 charge per worker will not be sufficient to meet the cost of transportation and subsistence of all of the Mexican workers obtained under the program when Mexican workers are transferred to succeeding employers, we are requiring the succeeding employer to comply with the provision of Public Law 78 which requires all employers to sign an indemnity agreement and an agreement to reimburse the United States for transportation and subsistence costs not to exceed \$15 per worker.

This \$15 figure is an average figure based on the operation of the entire program, and not just one segment such as the Monterrey portion. It is contemplated that this amount will cover only the bare cost of transportation and subsistence.

Those employers who have been contracting at Monterrey for the past few days will be charged the \$15, less the cost of transportation and subsistence to the border. This has been estimated to be \$3.50 per worker.

We plan to keep adequate records, which will be made available to you, to show ex-

actly how many workers are recruited, the average cost per worker for transportation and subsistence, and the amount received from the farmers. None of the funds collected for transportation and subsistence will be used for administrative expenses. It is not our desire to collect from the farmer more than the actual average cost of transportation and subsistence.

Yours very truly,

MAURICE J. TOBIN,
Secretary of Labor.

What Nebraska's Leading Papers Think About Colossal Military Spending

EXTENSION OF REMARKS OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am including editorial passages from two Nebraska newspapers.

The first excerpt is from the Omaha World-Herald of August 11. The World-Herald, Nebraska's largest paper, is politically independent.

MR. BUFFETT STICKS BY HIS GUNS

This week the House passed the \$56,000,000 military appropriations measure with only two votes cast against it. One of them was by Omaha's stoutly honest and individualistic Congressman, HOWARD BUFFETT.

Voting against a military appropriation is one of the things a politically minded Congressman doesn't do. But Mr. BUFFETT doesn't give a hoot for the politically correct thing. He votes 'em the way he sees 'em, and he sees this monstrous spending measure as an inflationary move that will guarantee ultimate victory for communism in America.

It does not promise genuine national defense, and is leading the United States toward national socialism and suicide, says Mr. BUFFETT. He says the most imminent threat to the national security is from within, and he warns that excessive military spending operates to provide full-scale war and ends in catastrophe.

TAKE YOUR CHOICE

Whether they agree with HOWARD BUFFETT or disagree, fair-minded Americans will note that he makes a cogent case for his point of view—and that it is in total opposition to the Truman philosophy and Acheson logic.

Mr. BUFFETT says excessive spending does not create security, but will destroy the economic and social system. The administration says that money will buy a stable world, and it has spent more than one hundred billions in this endeavor.

Look about you and decide who is right.

The second excerpt is from the August 14 Lincoln Star, Nebraska's leading Democratic daily.

The pertinent passages are as follows:

Representative HOWARD BUFFETT, an unconstructed Republican conservative of the old school, was one of two Members of the lower House to cast a vote against this \$56,000,000,000 appropriation for military purposes.

HOWARD BUFFETT lacks a lot in what a great many Nebraskans might desire in a Congressman. Much of the time he eats and sleeps in a world that was 50 years ago. But damned if he wasn't somewhat magnificent

late last week when he got to his feet to cast a vote to tell his colleagues how he felt and where he stood. In part, he said this:

"The military spending plans which H. R. 5054 embraces do not constitute genuine national defense. Instead, they take us toward national socialism and suicide." After launching into an attack on the Truman administration, Mr. BUFFETT concluded with these words: "Of course, military appropriations that have for their sole purposes the defense of our country alone will have my support. But I will not vote for global military spending that seems to guarantee ultimate victory for communism in America by inflation. We have been on that road too long already. Moreover, all history records that such gigantic peacetime military spending does not create security. Instead, it operates to provoke full-scale war and ends in catastrophe."

Representative BUFFETT may be wrong, as wrong as any man can be, but at least he has the intestinal fortitude to lay it down on the line as he sees it and to cast a vote that squares 100 percent with what must be deeply rooted convictions of his own. * * *

The Second District of Nebraska Representative only nibbled on the fringes of a question that can turn out to be the biggest challenge of our times. We are committing ourselves to a long-range spirited armament race which will tax the resources and the spirit of the American people brutally. Whether we can offset Russia's advantages of slave labor, cheap materials, and low living standards by a superior industrial plant and American competence with the machine is anybody's guess. But we, the American people, before too many years will have to decide how much of each day's dollar is to be poured out for arms, whether those arms actually safeguard American security, or whether inevitably they pave the road for a third global conflict of catastrophic proportions. * * *

Representative BUFFETT, however, offered a real challenge to sober thought on the part of his colleagues and 150,000,000 Americans

Spanish-speaking Texans and the 4,500,000 who speak English.

Their ultimate goal is to get the "No Mexicans Allowed" signs down from the restaurants in Texas and, even more important, from the mental thinking of the Anglo citizens.

The groups are the Texas Good Neighbor Commission, a State agency financed by State funds, and the Council on Human Relations, which is appointed by the Governor but which operates on private donations.

A number of other groups have been born in this reform movement: The American GI Forum, composed of Latin veterans; the Lulacs (League of United Latin-American Citizens), and the newly formed National Association of Spanish-Speaking People.

The original barrier breaker was King Cotton. During World War II, when cotton pickers were scarce, migratory Mexican laborers had the opportunity to be choosy. They didn't want to pick cotton in towns where they were thrown out of restaurants. The loss of the labor was costly. It didn't take long for the farmers to realize it was cheaper to be nice to the migrants and see that their towns were nice, too.

Another big barrier breaker is the vote. Texas' Latin citizens are coming of age politically. In many Texas counties support by the Mexican bloc is the decisive factor at the polls.

Still another factor in Texas' awakening toward good neighborliness is the coming of age of Texas millionaires. Some of them desire to use their new wealth for some good purpose.

"I'm in the human-relations business for keeps," is the way R. E. Smith, of Houston, one of the State's wealthiest oil operators, puts it.

Smith, who is chairman of the Council of Human Relations, digs deep into his own pocket to help finance that group. A former baseball player, a dynamic Methodist layman, he tackles the problem of human relations with unrelenting energy.

It is Smith's belief that the best way to settle discriminatory problems is on the local level. The year-old Council on Human Relations has already given birth to 31 local councils, loosely organized as luncheon groups, which try to settle differences between the Anglo and Latin townspeople on an amicable basis.

To guide the local leaders, the council has just put out a handbook which sets forth in ABC language why successful human relations are necessary to the community. It draws a moral between two Texas towns called X-ville and Y-ville.

"X-ville is full of good folks. But somehow it has fallen into an attitude of separation and standoffishness toward Spanish-speaking people. Its business houses display a good sprinkling of 'No Mexicans Allowed' signs. In civic affairs it draws a line—and spends a great deal of time and sweat keeping people on the 'proper' side of that line.

"Y-ville, just across the river, is practically identical except that its people simply don't go to a lot of trouble drawing and redrawing that line. When a man comes in and says he wants to buy a hat, the Y-ville merchant sells him a hat; and when a man comes in and says he wants to buy a sombrero, the Y-ville merchant goes right ahead and sells him a hat. The only difference is maybe the instant it takes him to do a double-take over the Spanish word.

"And the civic result? Come cotton-picking time, when hands are scarce, the Mexican migrant pickers go first where it is easiest to get along, naturally—to the Y-ville side of the river. If there are enough to pick X-ville side cotton, too, they charge 50 cents to \$1 a hundred more to pick it—enough to pay their way back to Y-ville every night or on the week end so they can spend their money without fighting about it.

"The result is that Y-ville, for being willing to sell a man a hat, or whatever he needs, even if he asks for it in Spanish, is richer by about \$100,000 a year."

The council is working to get the Mexican Government's approval of Texas areas which do not discriminate, and to limit its blacklisting to the counties which do. In this way, the pressure is on the areas where there is a labor shortage to take down their unfriendly signs.

Today, only 52 of the 254 Texas counties are blacklisted for Mexican labor by that Government.

Tom Sutherland, executive secretary of the council, who heads its office at the University of Texas in Austin, reports that several blacklisted counties have appealed to the council for advice on how to get off the list. They are told to organize a local council on human relations and begin a local good-neighbor program.

The virtues of good neighborliness are being translated to Texans in terms of dollars and sense, as the council puts it. It is the hope of the council that Texas will take care of its minority problems in such a way that it will never be necessary for the Federal Government to step in.

"In treating human relations in Texas, we don't claim to be skilled physicians yet," Sutherland says. "But we have learned to be pretty good nurses. What we are most suspicious of is diagnosis by telephone."

A Tourist's Viewpoint of Europe and the Result of ECA

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. POULSON. Mr. Speaker, I am inserting that portion of a personal letter from a successful builder in Los Angeles, Ivan Wells, giving his reaction to the result of ECA spending. This is one of many similar letters I have received and stories given to me personally by others who have visited Europe in the past year:

AMSTERDAM, July 31, 1951.

DEAR NORRIS AND ERNA: Needless to say, we have been having a very enjoyable and interesting trip. We have taken about 300 colored picture slides, many of them showing the results of our Marshall plan and ECA spending. We have built new railway stations and hotels of the very finest construction all the way up through central Italy where war damage had been done. Rome boasts of the finest in the world, even the ceilings of all the enormous waiting rooms and stores inside the stations, and extending out under all the train sheds, are tiled solid with 3/4-inch square glazed tile. This same tile is also used in many other city stations. This labor costs twice as much as the same tile used in the walls. Plaster walls and ceilings like used at home where private capital pays the bill is plenty good enough. If they have lost their shirt it isn't necessary to replace it with a silk one. We had lunch in a Milan hotel completely veneered with the finest of white marble outside and the finest polished marble walls and floors inside, mirrored walls and plate-glass fronts of the finest modern architecture possible. This is only one of many in Italy that have been given the finest ECA and Marshall plan treatment. One educated

Texas Is Solving Its Own Minority Problem

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, August 20, 1951

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article entitled "Texas Is Solving Its Own Minority Problem," written by Mrs. Elizabeth Carpenter, a distinguished newspaper correspondent who serves in the Senate and House Press Galleries.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS IS SOLVING ITS OWN MINORITY PROBLEM
(By Elizabeth Carpenter)

The fashionable Yankee sociologists' attitude that the South never does anything about its minority problems, is being disproved by the Lone Star State.

Two groups of Texas citizens are operating—with no help from the Federal Government—to foster friendly relations, not only between Texas and its border neighbor, Mexico, but principally between the 1,500,000

Italian said the American man is just "A big little boy, and doesn't know how to take care of his money, while the Englishman hangs on to his money and doesn't give it away." Mr Mackay's and my observations are these—we have given enough aid to these countries, they are on their feet, they have a full crop everywhere, the people are well fed and clothed, there are almost no beggars at all. There is plenty of merchandise in the stores. We were told they fear we are ruining our economy the same as England has ruined hers.

As for Germany—they have a bumper crop, everyone is working hard and they are coming back fast. The people are well fed and having carnivals everywhere, they like us, they don't want our soldiers to go home as they fear Russia, there are very few Communists and they want nothing to do with East Russian Germany, as one man said "they are a different people." They think of themselves as western people. Mr. Mackay and I think we should arm them to gradually help them to police or protect themselves from Russia and take the load off of us. In other words, we believe we should stop all spending except what is necessary to supply our Armed Forces. We found out that the German people pay 4 percent sales tax and income taxes of 15 percent minimum to 40 percent maximum. From these taxes 30 percent of their budget goes to the support of the army of occupation. And as winners of the war we are privileged to pay about the same in sales tax with a 25 to 80 percent income tax. If our Congressmen and Senators (and advisers) could talk to the common man as we have done, in the place of the politicians that meet them at the boat, and cry on their shoulders, our nonmilitary spending would have stopped before this. They don't have a chance to get a true picture of conditions. Europe is full of history of wars and recovery from wars for 2,000 years. We had better stay home and look after our own economy. I was surprised to find almost all of Europe has double track fully electrified railroads extending from Paris, the full length of Italy, and all of Switzerland and part of Germany. We can't boast of that at home. Germany has many 150-foot passenger ships going up and down the Rhine for 250 miles. It is a beautiful trip. We came down the river from Wiesbaden to Cologne, a 10-hour ride, last Sunday. On account of it being a holiday, we had difficulty even getting a seat. It was full to standing room (and folding seats everywhere) of people out for a holiday. That doesn't show hardship among the people.

Best wishes,

IVAN AND NOLA.

Twelve Charges Are Rebutted by Acheson

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. DOYLE. Mr. Speaker, under unanimous consent heretofore granted me so to do, I am submitting the contents of a newspaper report appearing in the Washington Post, August 20, 1951.

It specifically relates to certain charges made by Lt. Gov. Goodwin J. Knight, of my native State of California, together with an important communication to the Secretary of State by a distinguished

citizen of Los Angeles County, Calif., to wit: Mr. John B. Elliott. As the subject matter of this newspaper comment is frequently discussed hereabouts, I believe this report will be of interest to all persons.

It follows:

TWELVE CHARGES ARE REBUTTED BY ACHESON

Secretary of State Acheson has denounced as "either entirely incorrect or distortions of the truth" 12 accusations made against him by Lt. Gov. Goodwin J. Knight, of California.

The criticisms range from his handling of Formosa policy through State Department security questions to the Alger Hiss case.

They were formulated by Knight, a Republican, after he had been challenged by John B. Elliott, Los Angeles civic leader and a Democrat, to back up criticisms of Acheson in a speech Knight made on April 17.

Knight's complaints were sent to the State Department by Elliott with a request that they be answered in detail. Acheson forwarded replies from his staff.

At one point in the exchange the State Department said approximately \$90,000,000 in arms and ordnance had been given Chiang Kai-shek's Nationalist Chinese forces on Formosa, and \$300,000,000 more was scheduled for this year.

In addition, the Department mentioned a 600-man United States military mission on Formosa assisting in the reorganization of Chiang's forces.

On June 24, Maj. Gen. William C. Chase, head of the mission, said in Formosa the United States group had 1,250 members.

Last night, in answer to a request for clarification, the Defense Department said it has announced that 500 to 600 men may be sent to Formosa—but only half that number, 250 to 300 men are there now. There was no explanation of the variations.

Here is a summary of the charges and replies as released by Elliott:

1 Charge: "On December 23 Acheson sent out instructions to diplomatic and consular personnel in Asia that Formosa was doomed and expendable."

The reply is that what the Department sent out was a propaganda directive designed to minimize the unfavorable reaction in case Formosa should fall.

ABOUT LOAN TO POLAND

Knight also charged that Acheson had written President Truman that no amount of aid could have saved Chiang, but Acheson said what he wrote was that only full-scale intervention by the United States might have produced a different result in China and such action would have been in support of a government repudiated by its own people.

2. Charge: Acheson approved a \$90,000,000 loan to Communist Poland in 1946 against the advice of United States Ambassador Arthur Bliss Lane. Counsel in the deal was Donald Hiss, a brother of Alger Hiss and a member of Acheson's law firm, and the firm got a \$50,000 fee.

The State Department said the inferences of this charge were false and based upon a distortion of the public record.

Acheson, the State Department said, severed all connections with his law firm in 1941. The Polish loan negotiations began in 1945 and no member of the firm approached Secretary Acheson in any way while the loan was under study. As acting Secretary of State, on instructions of Secretary Byrnes, Acheson approved the loan after it had been favorably considered by responsible State Department officials. The loan finally was cut off in 1948 after Poland failed to produce the coal for Western Europe which was one of the goals of the deal, and after the Communists' grip on the country tightened.

3. Charge: Acheson said July 20 there were no Communists in the State Department, and

"this statement has since proved to be completely false and untrue."

The State Department replied Acheson said only that he "knew of no Communists" in the State Department. Furthermore, the Department said a security-investigation staff of 100 persons, which has operated with the FBI, also does not know of any Reds in the Department.

4. Charge: Acheson "has never repudiated his support of Alger Hiss."

The State Department said Acheson's answers to questions about Hiss, now in prison on a perjury conviction, had been "widely misinterpreted."

"He has never in any way condoned the offense of which Alger Hiss has been found guilty. As far as he is concerned, the decision of the (Supreme) Court disposes of the matter."

5. Charge: Acheson "recommended the abandonment of Formosa" after the Chinese Nationalist government had fled there.

The State Department said that charge "is entirely false."

6. Charge: Acheson joined with friends, "including Owen Lattimore," to encourage a Communist rebellion in China and they referred to the Communists as "agrarian reformers."

The State Department reviewed American aid to Chiang Kai-shek from the end of World War II. It said Acheson has testified he does not remember even ever meeting Owen Lattimore; also that a check of his speeches shows he does not refer to the Chinese Reds as agrarian reformers.

7. Charge: Acheson acted as counsel to Lauchlin Currie when Currie appeared before a congressional committee looking into Communist espionage charges.

The State Department said Acheson was retained by Currie in connection with a volunteer appearance Currie made before the House Committee on Un-American Activities in August 1948 to discuss statements made about him by Elizabeth Bentley. The Department added: "The committee unanimously observed that no charge of Communist Party affiliation was made against Mr. Currie. * * * It is a fact that since Mr. Currie's testimony * * * no further action has been taken" on the Bentley charges.

8. Charge: Acheson told a Senate committee before he was confirmed as Under Secretary of State that Russia should share in the administration of Japan.

The State Department answered that the records showed no such statement by Acheson. It said he had testified in September 1945 that the United States was trying to "go forward with the job" in Japan and had "no disposition * * * to exclude anybody."

The Department added that the fact is the machinery for administration of Japan "completely recognized the major role of the United States."

9. Charge: Acheson insisted on a veto in UNRRA organization to please Russia and supported all Soviet demands "thus leaving the United States impotent to control UNRRA although the United States put up all the money."

The State Department replied that "this allegation is false." They said there was no veto in UNRRA decision-making except for a few specific matters such as amending the charter and nominating a director general.

10. Charge: Acheson obtained appointment of Alger Hiss "to Dumbarton Oaks and Yalta."

Asserting that Acheson never recommended Hiss for either of these missions to international conferences, the Department said "this statement is false."

11. Charge: On December 16, 1945, Acheson "received Juan Negrin, head of the

Spanish Communists, while he refused at the same time to meet Fernando de Los Rios, head of the anti-Communist group in Spain."

The State Department said Acheson did receive De Los Rios on December 21, and both the opposing Spanish leaders talked to him "in a private capacity."

12. Charge: Acheson gave an interview to "Milton Wolff, commander of subversive Abraham Lincoln Brigade and pro-Communist Vito Marcantonio, promising them to intervene with Franco on behalf of two condemned Communists in Spain."

To this the State Department said that Acheson had received a delegation of three House Members—Healy, of California; Savage, of Washington; and Marcantonio, of New York—and five other persons including Wolff but that he "made no special promises of intervention to the group."

The State Department said Acheson explained that the two men were Argentine and Cuban nationals and any action by the State Department would have to be limited "to expressions of interest on humanitarian grounds."

Sugarcane Bagasse Used to Make Newsprint

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. LARCADE. Mr. Speaker, under authority to extend my remarks in the Appendix to the Record, I wish to submit an article from the Washington Post of August 18, 1951, in regard to an important discovery in connection with the utilization of sugarcane bagasse in making newsprint, as follows:

CANE BAGASSE USED TO MAKE NEWSPRINT

MADISON, Wis., August 17—Tests at the United States Forest Products Laboratory this week showed that newsprint stronger and whiter than the ordinary variety can be made from sugarcane waste, a laboratory official said last night.

G. H. Chidester, Chief of the Pulp and Paper Division, said newsprint made in the tests "had physical properties approaching closely those of standard newsprint made from wood."

The newsprint was made from sugarcane bagasse, a fibrous material left after juice is extracted from cane stalks. Sugar mills in the United States, Cuba, and other countries produce millions of tons of bagasse each year.

Chidester said that while the bagasse newsprint is considerably stronger and much whiter than the wood variety, it let a little more light through. He said that could be corrected by minor adjustments in the processing.

Joaquin de la Roza, New York discoverer of the bagasse process, said he plans to build a \$15,000,000 plant at Clewiston, Fla., to make newsprint. The laboratory tests here were made to get data for his request for a Government certificate of necessity to build the plant.

De la Roza said it would produce 45,000 tons of newsprint annually, and the paper would cost no more than newsprint made from wood.

De la Roza, a graduate engineer from Cornell University, has been working on the idea of making paper from bagasse for nearly 25 years.

Russia at the Peace Parley

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. SHEEHAN. Mr. Speaker, it sometimes happens in the case of both politics and one's own domestic life that the advice or suggestions from people who are located not too close to the scene of action is many times more efficacious than the advice of the people who are closest to the problem.

From the enclosed editorial of the Chicago Sunday Tribune of August 19, 1951, some midwestern ideas on dealing with the Russians at the peace table would certainly be welcomed by the entire Nation. These suggestions from the Chicago Sunday Tribune editorial are as follows:

RUSSIA AT THE PEACE PARLEY

Russia's acceptance of an invitation to attend the San Francisco conference at which a peace treaty is to be signed with Japan next month is interpreted as a move to make propaganda capital. No one expects Russia to sign the treaty drafted by the State Department. Everyone expects Russia to use the occasion to denounce American imperialist aims and to exploit the grievances of other countries which have already expressed dissatisfaction with the draft treaty.

The State Department is undoubtedly quite as much aware of Soviet intentions as anyone else. What does it propose to do to turn the tables on Andrei Gromyko, the churlish orator of the Moscow Foreign Commissariat?

In anticipation of the San Francisco assault, we are offering a few suggestions, free of charge, to the State Department.

After Gromyko sits down, following the customary 2-hour tirade, Secretary of State Acheson may arise in rebuttal. Mr. Acheson might accept as a point of departure the treaty of April 13, 1941, by which Russia and Japan pledged themselves for a 5-year period to neutrality in any war involving the other. Mr. Stalin had been most anxious to get this undertaking for, when he signed it, he knew that a German attack on Russia would not be long in coming.

Mr. Acheson might then recount that, at the Moscow conference of foreign ministers in October 1943, Mr. Stalin assured the Secretary of State, Cordell Hull, that he intended to disregard his sworn commitment to Japan at an appropriate time and to join in the war against Nippon. Mr. Acheson might stress this as an instance of Soviet bad faith.

Mr. Acheson's argument might be weakened if objection were made that Mr. Roosevelt himself had abetted these treaty-breaking intentions by encouraging Comrade Stalin to contemplate military action against Japan at the Yalta Conference of February 1945. At that meeting, sad to relate, Mr. Roosevelt made territorial and strategic concessions at the expense of his ally, Nationalist China, in order to show Mr. Stalin that there would be tangible benefits in breaking Stalin's treaty with Japan. China was not represented at Yalta and knew nothing about this deal at the time.

Mr. Acheson would be under the further difficulty of explaining why Mr. Roosevelt also offered, as an inducement to Stalin, possession of the south, or Japanese, half of

Sakhalin Island and the entire Kurile Islands chain, also a Japanese territory. The proposed peace treaty requires Japan to assent to the relinquishment of these former possessions, which are now firmly in Russian hands.

Some Republican Members of the Senate, who will be called upon to ratify any peace treaty with Japan, have taken the position that to ratify the Japanese surrender of Sakhalin and the Kuriles would not constitute an endorsement of all of Mr. Roosevelt's acts at Yalta. The Yalta deal was never approved by the Senate in the form of a treaty and is therefore without any standing in law.

Mr. Acheson might spurn the timid approach of these Republican Senators and come out with the forthright declaration that the United States Government regards the Yalta agreements as entirely lacking in any binding effect. Mr. Acheson would follow up by saying that they were clearly illegal, that they were immoral, and that there is a reasonable doubt concerning Mr. Roosevelt's mental competence at the time of making them.

Mr. Acheson would then advert to the fact that, on the strength of these inducements, in defiance of its pledged word, Russia declared war against Japan on August 8, 1945, while the Russo-Japanese neutrality treaty had still a year and a half to run. Mr. Acheson would round out his brief by saying that Russia, obviously, does not come to the peace conference with clean hands, that the Soviet Government is a treaty breaker which, far from having any right to sit in judgment upon Japan, is properly answerable to Japan's charges of bad faith and aggression, and that, in consequence, it has no standing at the conference, no right even to discuss the peace, and no valid claim upon Sakhalin and the Kurile Islands.

Mr. Acheson's admirers never tire of proclaiming he is a truthful and courageous fellow who always lets the wrongdoer have it straight from the shoulder. If this were a correct appraisal of the man, he would make the speech we have outlined, and, of course, he will not do anything of the sort.

Studies for a Code of Ethics

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Milwaukee Journal which, in my humble opinion, contains a feasible approach to a bothersome and serious problem:

A BASIC STUDY OF CORRUPTION

Why is corruption so widespread in this country? What can be done to root it out? Here are two of the most pressing questions before the American people today.

It should not be necessary to document the statement that corruption has seldom before eaten so deeply into the national fabric. The evidence has appeared daily in the newspapers. The Kefauver committee has unraveled the tangled skein of crime and politics. The Fulbright committee has spotlighted the business practice of buying political influence to obtain governmental aids. New revelations of bribe giving and bribe taking in Washington cause hardly a ripple.

On top of the string of sordid basketball scandals, involving colleges and their athletes, has piled the disquieting story of the West Point cadets who violated their code of honor by cheating in examinations. The state of political morality is attested to by the part which "fear, ignorance, bigotry, and smear"—termed "the four horsemen of calumny" by Senator MARGARET CHASE SMITH—have come to play in political campaigning.

In a recent article in the Nation magazine, Prof. H. H. Wilson of Princeton university says that emotional fervor and moral uplift will not remedy this demoralizing situation. He makes the challenging statement "that graft, crime, corruption, the 'fix' are embedded in the very fabric of our highly competitive society." Involved, he says, are such things as social disorganization, the disintegration of a traditional culture, the absence of common individual or social ends and a widespread cynicism that enables the "best people" to stoop to corruption to gain their ends.

Professor Wilson believes that what is most needed today is a searching study of American social morale—of "the basic premises, institutions and sacred idols" of our culture. He proposes that one of the foundations—Ford, Rockefeller, or Carnegie—might best do the job.

Both Senators KEFAUVER and FULBRIGHT—in letters to the Nation—have approved Professor Wilson's suggestion. Mr. FULBRIGHT supported his proposal that a commission of eminent private citizens do the study. Mr. KEFAUVER said that he favored an inquiry conducted by either the foundations or by one or more of the universities.

To the suggestion that Congress do this job, Professor Wilson answered that it might be too big or too delicate a task for Congress. Senator KEFAUVER said frankly that he didn't think Congress had any place in the picture. Both men seem right. In this proposed inquiry, Congress needs investigation as much as any other group in our society. It has often been said that Congress largely sets the tone of American political morality—a truth evident these last months. There would be no gain in having Congress investigating Congress—history has repeatedly shown that this just doesn't work.

It is doubtful whether the universities are equipped to take on a job of this size or whether they are prepared, as Professor Wilson says, to do it without stepping on the toes of the righteous and the wielders of power. The same objection applies to a committee of citizens.

For the kind of thorough, impartial job that needs doing, the foundations seem the best choice. We hope they will consider the idea. Is there any way they could better serve their country?

People Praying for Economy in Federal Expenditures

EXTENSION OF REMARKS OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. SCHWABE. Mr. Speaker, I have a letter dated July 30, 1951, from one of our leading citizens in Oklahoma City, Okla., who says that the people are praying for economy in Federal expenditures.

Without further comment, I am glad to insert the entire message of the letter from this worthy citizen of our State:

There seems to be no limit on spending, starting with our cities, schools, counties,

State, and the Federal Government. There is a big demand for more, and more, and more money, to be spent for countless purposes—some good and some unnecessary. Our Federal Government is a very big spender, and it seems that once money is appropriated it must be spent, regardless of the need. There is only one source for public revenue, and that is taxation. Maybe there is no limit to taxation, but I think there is, and I think we have already exceeded that limit for a normal, healthy condition in our Nation.

With the Federal Government assuming the power to control prices and to levy taxes, totalitarianism is surely taking over. Incentive is being stifled. Inflation is growing by leaps and bounds, although price controls are supposed to control that wild maniac—inflation.

Higher normal tax, higher excess profits tax, higher estate tax, higher gift tax, etc., certainly are discouraging to young business as well as old business; young men as well as old men. There is only one control and one stopping barrier, both controlled by the Federal Government. If wasteful spending were to stop, the need for increased taxes would not exist. There must be a housecleaning, and the sooner the better, for it is apparent that there will be no reduction in Government agencies and bureaus, and no curb on spending until the people rise up and overthrow the socialistic state that has moved in on them unawares.

We have a few Representatives in Congress from the various States throughout the Nation who are making a very drastic effort to stop this runaway team before it destroys themselves and its cargo. They have our prayer for divine guidance and assistance.

Discovery of New Drugs for Cure of Malaria and Hog Cholera

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to submit an article from the Washington Star of Sunday, August 19, 1951, in connection with the discovery of a new drug for the cure of malaria, and also an article from the Washington Star in regard to the discovery of a new drug for the cure and prevention of hog cholera, as follows:

ARMY IS TESTING NEW DRUG BELIEVED BEST YET FOR MALARIA

The Army announced yesterday it is conducting tests with a new drug which may be far more effective treatment for malaria than any now being used. It is called primaquine.

Maj. Gen. George E. Armstrong, Army Surgeon General, emphasized that further research is necessary to determine whether primaquine would be effective against the strain of malaria found in Korea as it has against experimental strains.

Malaria is a disease caused by minute parasites which destroy human blood cells. Korea is a highly malarious country.

The work of combating the Anopheles mosquito in Korea has been complicated both by the innumerable breeding grounds provided in rice paddies and by the frequently harassing tactical situation, the Army said. However, it added that, with the use of chloroquine, which became available throughout the combat area late in the summer of 1950,

the incidence of malaria there has been kept low compared with World War II rates.

"If field tests of the drug prove satisfactory, its use should greatly accelerate the recovery of military personnel returning from Korea who have contacted malaria in that country," General Armstrong said.

However, the successful standardization of primaquine will have no effect on the importance of chloroquine as malaria suppressant. Chloroquine will continue to be given the troops in Korea until they are transferred to some nonmalarious area.

If primaquine proves successful it will be administered routinely to all persons returning from malarious regions.

General Armstrong said several hundred men returning from Korea with no previous history of malaria attacks would be given primaquine next week.

"If this trial is successful, it may be possible to cure malaria, which has been suppressed by chloroquine, without the individual concerned being aware that he had contracted the disease," he said.

Initial tests were conducted with prisoner volunteers at Statesville Penitentiary, Joliet, Ill., in cooperation with the University of Chicago.

END OF HOG CHOLERA HELD POSSIBLE WITH TWO NEW VACCINES

PHILADELPHIA, August 18.—Two new vaccines against hog cholera may mark the beginning of the end of that serious disease in the United States, the magazine Farm Journal said today.

One was developed by the Fort Dodge Laboratories, Inc., Fort Dodge, Iowa, and now is being made available to veterinarians.

It uses a live cholera virus, weakened by passing it through rabbits. The virus still is strong enough to develop immunity in the hogs, but the vaccine doesn't cause active disease, as can happen with a present form of virus treatment.

The vaccine is used with hog-cholera serum, which gives immediate protection until the vaccine takes effect. How long the immunity lasts is not yet known, but it may be for a lifetime, the Journal said.

The second rabbit-produced vaccine will be marketed soon by Lederle Laboratories, Pearl River, N. Y. It is a one-shot treatment, not used with serum, the Journal said. Lederle reports it gives rapid, lasting immunity, based on tests with 10,000 hogs.

The new vaccines are perhaps the biggest news about hog cholera in 43 years, the magazine said.

The new rabbit-produced vaccine development could be the beginning of the end for hog cholera in this country, if the vaccines give lifelong immunity. Areas might be vaccinated with these safe vaccines, and hog cholera eliminated area by area, and State by State, until we back it off the United States.

A Good Christian Is a Good Citizen

EXTENSION OF REMARKS OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. SCHWABE. Mr. Speaker, in the international Sunday school lesson for August 19, 1951, which was entitled by many commentators as "The Christian's Respect for Law," there is a great lesson to be learned by the Members of Congress and by our citizens as a whole. The golden text of the lesson appearing in the Gospel according to St. Luke, in

chapter 20 at verse 29, familiar to us all, reads:

Render therefore unto Caesar the things which be Caesar's and unto God the things that be God's.

One of the great citizens of this country, a faithful and efficient public servant, has contributed his views on this important subject. I have reference to Mr. John Edgar Hoover, Director, Federal Bureau of Investigation, United States Department of Justice. The article is entitled "A Good Christian is a Good Citizen," and it appears in the August 12, 1951, issue of the *Lookout*.

In the concluding paragraph of the article, Mr. Hoover says:

The teachings of God, if followed, will prevent criminality. The stabilizing force of religion is needed today more than ever before. A child who has been taught to respect the laws of God will have little difficulty respecting the laws of man.

I am happy to quote the entire article by Mr. Hoover, which I believe should be read by everyone who has an opportunity to read it:

A GOOD CHRISTIAN IS A GOOD CITIZEN

Our American system is based on the premise that each citizen has certain rights and liberties—such as the right to assemble in public gatherings, to speak his mind, to publish the truth, and to worship God in his own personal way. We call these our inherent rights; privileges which were envisioned by the founding fathers of this Nation and fused into the very fabric of our democracy. They have been preserved through the years and handed down to us by preceding generations.

As society by its very nature is complex, it was necessary to establish certain laws to assure that these and our other rights would not be jeopardized, that part of our people would not be disenfranchised, and that the welfare of one individual would not be endangered by the actions of others. This is the reason we have laws. They are the rules by which we govern ourselves. Respect for law is a fundamental requirement for democratic citizenship.

Government and society are closely allied. Actually, government is a product of society, and the type of government we have depends in a large measure on the type of society we have.

While the United States is fundamentally a Christian nation, we have other religious groups which compose important segments of society. Under the American concept of democracy, all races, creeds, and religions are accepted on an equal basis. Every man is afforded the right to worship God according to the dictates of his own convictions.

Democracy takes cognizance of the worth and dignity of man and the desire to eliminate evil from the social order and to replace it with goodness and justice. These concepts have their roots in the same fundamentals as do the teachings of Christianity. The essential elements of democracy are very vividly summed up for us in the Ten Commandments. Thus, we return to the premise that Christianity and democracy have many things in common. A good Christian is a good citizen.

Equality under the law is a principle of American democracy. The various faiths represented in our society find this same equality before God and the law. Since each person has been created with personal and immortal destinies, all can accept democracy, as Christians accept it, and find that it does not violate any of their fundamental religious beliefs.

Lawlessness and political corruption in our Government and society do not prove that the system itself is wrong. They are the fruits of our failure to make democracy work.

It is within the power of the citizens to purge these corrosive influences from the daily routine of our national life. They represent the same type of evils against which Christ so often spoke and against which He warned His followers. They are arrayed against the progress of our society and the advancement of Christianity.

As Christians, we have a double duty to perform. We have a duty as good citizens to support and preserve our form of government against the forces which would destroy and weaken it. We have the duty as Christians to serve God and work for the righteousness of ourselves and our fellow man.

I am convinced that these two duties are not contrary courses because the progress we make in one will contribute to the advancement of the other.

MR. HOOVER HAS SAID

(EDITOR'S NOTE.—In addition to the foregoing, we have Mr. Hoover's permission to quote the following from his statement, *Crime and Delinquency*, dated April 19, 1951.)

The problem of crime and the struggle between law observance and antisocial behavior are as old as man. Our Nation has suffered from criminal activity, and we are constantly faced with the challenge of seeking an answer to the problem of crime.

Criminal activity may involve the child, the adolescent, or the adult. Crime involves human beings possessed of a free will and living in a society which is becoming increasingly complex. Any success in the war against crime depends to a large degree upon an intelligent approach to this problem by all of our citizens.

It is generally accepted that criminal behavior cannot be explained by any one element. The make-up of man is so complicated, the changes of environment so intricate, that it is impossible to focus the spotlight of understanding on any one factor as the cause of crime.

A study of crime causation necessarily must involve the development of a nation and the economic, social, and political factors which go hand in hand with its advancement. Our young people are being brought up in the midst of new notions of happiness and new ideas of values. Too many children and adolescents have absorbed false attitudes and notions of law and order. The important periods of childhood and adolescence have suffered greatly from the lack of sufficient character training and parental leadership, guidance, and example.

Through indifference and neglect we are paving the way for an increase of adult criminals in the future. This is the challenge which must be met by every American—the challenge which must be faced by every village, town, and city throughout the Nation, if we are to insure the continuance of peace and security in our country.

There was an estimated total of 1,790,030 major crimes in this country in 1950. Crime was up 1.5 percent across the Nation during 1950 compared with the previous year, with all offenses on the rise except robbery, where a 10 percent decline was shown. The increase was 0.4 percent in the urban communities, and 4.4 percent in the rural districts.

The rise in crime during 1950 revealed that we are still faced with an abnormally high rate of juvenile misbehavior. During 1950 males and females under 21 years of age arrested and fingerprinted numbered 118,428, constituting 14.9 percent of the total arrests.

The stresses and strains which influence a youngster during the period of his growth

are important considerations which must be analyzed on a purely individual basis. Those who have had the opportunity of studying delinquency among youngsters invariably agree that the home is a major factor in this regard.

The family is the first great training school in behavior or misbehavior. Children develop a sense of right and wrong. The home becomes for them their first classroom and the parents serve as the first teachers.

Although the home is recognized as the most effective bulwark against delinquency, it must be closely supported by the church, the school, the neighborhood, law-enforcement agencies, and recreational groups.

Seldom, if ever, is a youngster inspired to waywardness by any one factor. In almost every case the delinquency is a result of a combination of forces. Neither can it be said that any one of the causes of crime will inevitably produce crime. During the course of investigation of delinquencies committed by youngsters it has been found that a number of causes appear with regularity.

One of these is:

Lack of religion. The teachings of God, if followed, will prevent criminality. The stabilizing force of religion is needed today more than ever before. A child who has been taught to respect the laws of God will have little difficulty respecting the laws of man.

Shasta Project Now Serving California

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

MR. LARCADE. Mr. Speaker, under my unanimous-consent request to extend my remarks in the Appendix of the *RECORD*, I wish to submit an interesting article from the *Washington Post* of August 19, 1951, entitled "Shasta Project Now Serving California," as follows:

SHASTA PROJECT NOW SERVING CALIFORNIA

WASHINGTON.—The new California Central Valley reclamation project has gone into full-scale operation, with 10 days of civic celebrations in California.

The Central Valley project is one of the greatest engineering enterprises ever undertaken by the United States Government. It will move large quantities of irrigation water virtually the 500-mile length of the Central Valley, the longest distance man has ever attempted. Immense hydroelectric power will be developed.

Engineers told the United Press that the Central Valley project will have an economic significance at least four times greater than the Tennessee Valley development, which amazed the world by its demonstration of the multipurpose utilization of a complete river system.

UNIQUE PROJECT

It is unique among reclamation systems in the fact that it combines the Sacramento and San Joaquin watersheds into a single system, with the surplus water from the south-flowing Sacramento River made available to the insufficiently supplied north-flowing San Joaquin. Eventually, all of the important tributary streams will be harnessed for irrigation water and electrical power.

Because California climate and crops are substantially similar to those of the Mediterranean area, the Central Valley already has

attracted many settlers from southern European countries. The migration is likely to continue. The agricultural program is expected also to create a large additional demand for Mexican farm workers.

The Central Valley is about 500 miles long, 50 miles wide, covers 18 counties with 83 cities, and now supports 1,500,000 people. Its ranches, orchards, vineyards, and dairies already turn out products worth about \$640,000,000 annually.

BOOM EXPECTED

The program now being developed ultimately will provide water for 3,040,000 acres of land not now irrigated, and will produce 8,000,000 kilowatt hours of power a year. Low-cost power is expected to lead to an industrial boom in the valley, which economically complements the San Francisco Bay cities.

The key engineering structure in the vast project is the giant Shasta Dam across the Sacramento River. The dam was rushed to virtual completion during World War II to serve the abnormal demand for hydroelectric power in that region.

Shasta Dam, second highest in the world, is 602 feet high. It is topped only by the Hoover Dam, 726 feet. Shasta has a crest two-thirds of a mile long and contains 6,000,000 cubic yards of concrete.

Before the Central Valley program was started, a large part of the area was menaced by water famine, as the underground water table was steadily sinking. Some ranches had drilled wells as deep as 2,000 feet, at an almost prohibitive cost. A menaced area of 800,000 acres will be saved by the new irrigation facilities.

How the American Legion Feels About the St. Lawrence Waterway

EXTENSION OF REMARKS OF

HON. THADDEUS M. MACHROWICZ
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a resolution adopted by the American Legion, Department of Michigan, at its thirty-third annual department convention held in Detroit, August 2-5, 1951:

Whereas due to the excessive demands of industry and national defense in the areas producing high-grade iron ore, such as the Mesabi Range in Minnesota, this country's known source of high-grade iron ore is quickly being depleted, and

Whereas in view of the above known fact, high-grade iron ore in the amount of forty to fifty million tons per year will have to be imported if we, as a Nation, are going to continue as leaders in the field as producers of iron and steel, and

Whereas alternate sources of open-pit high-grade iron ore must be developed which are easily accessible to our steel industry in the Great Lakes area, if our steel industry is to be permitted to carry out our long-range mobilization program economically; and

Whereas over 70 percent of the steel-producing capacity of the United States is located within the Great Lakes area, with an investment of many millions of dollars; and

Whereas the new known sources of high-grade iron ore are located in Venezuela and Labrador; and

Whereas Labrador has the added advantage economically, because that source is located within the continental limits of North America, which may be transported by inland water routes without exposing a vital supply line to submarine warfare; and

Whereas the continuance of vital steel production in the areas in which they are located are dependent on high-grade iron ore, and the approval of the construction of the St. Lawrence waterway, which in addition to its undoubted general contribution to our transportation system, is essential to steel production, and our entire mobilization effort; and

Whereas unless our steel-producing capacity is augmented, we as a nation will become more and more vulnerable, and will decrease our capabilities for mutual defense between Canada and the United States; and

Whereas the St. Lawrence waterway, once constructed, will have the added attractive feature as a producer of added revenues to the United States in connection with power and navigation investments which will be returned with interest to the Treasury; Therefore be it

Resolved, That the American Legion, Department of Michigan, in convention assembled in Detroit, Mich., this 5th day of August 1951, go on record as approving the authorization and appropriations for the construction of the St. Lawrence waterway as being vital to the national security and economic stability of the United States; and be it further

Resolved, That copy of this resolution be forwarded to the national convention for final action

Whereas the national security is largely dependent upon the manpower, industrial, and agricultural production of the Midwest; and be it further

Resolved, That a copy of this resolution be sent to our Representatives in Washington and to such other officials as are responsible for the good and welfare of our Nation.

General Ridgway Now Following Procedures for Which MacArthur Was Fired

EXTENSION OF REMARKS

OF
HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Washington Evening Star:

TRUTH BREAKS THROUGH DOUBLE TALK—GENERAL RIDGWAY HAS CLEARED UP THE U. N. POSITION IN KOREA WITH A FATEFUL WARNING TO THE COMMUNISTS

(By David Lawrence)

Candor and a wholesome respect for truth somehow have a way of breaking through the artifices of political double talk and the ambiguity of so-called diplomacy.

For General Ridgway's Supreme Allied Headquarters has finally cleared up in dramatic and unequivocal words the American as well as the U. N. position in Korea with a fateful warning to the Communists as follows.

"If the Communists again raise the standards of war, their soldiers will be met by the fury of the weapons of the United Nations forces. * * *

"The U. N. command, if necessary, will continue to execute its mission of destroying or driving out of Korea those forces which now

seek to deny the Korean people their right of self-determination."

Here is an admission at last of something the Senate Armed Services Committee was unable to elicit from the top military staff here or from the Secretary of State, Dean Acheson—namely, just what the U. N. forces in Korea had and still have as their mission in Korea. It now is stated to be a "mission of destroying or driving out of Korea those forces which now seek to deny the Korean people their right of self-determination."

Here is a statement to the whole world that the U. N., including the American Government, means to continue to use military force to achieve its objectives in securing peace for all Korea.

Here is a declaration which supersedes what was said last June by the Secretary of State and by U. N. spokesmen, namely, that the U. N. never intended to seek the liberation of all Korea by military means and sought only to repeal aggression somewhere around the thirty-eighth parallel.

Here is a warning—or some may call it a threat—directed to the Communists telling them what is in store for them if they don't agree to a cease-fire now.

Obviously, General Ridgway's headquarters spoke with the knowledge and concurrence of the authorities in Washington.

Just 5 months ago—March 24 to be exact—the same kind of statement was issued by General MacArthur urging a cease-fire agreement by military commanders in the field. He, too, used a threat. He said if the enemy didn't agree to a cease-fire, the United Nations might have to depart from its tolerant effort to contain the war to the area of Korea through expansion of our military operations to his coastal areas and interior bases.

The MacArthur message was broadcast in the Voice of the U. N. Command radio program at that time, just as was General Ridgway's in the last 48 hours. General MacArthur based his action on two previous authorizations from Washington to arrange an armistice.

The purpose was then and is now to threaten the Communists with a hotter war if they do not agree to a cease-fire.

General Ridgway does not explicitly define what area he might fight in if the cease-fire fails, but he pointedly mentions the fury of the weapons of the U. N. command, which could mean the use of anything from conventional bombs to new types of atom bombs and artillery shells.

For threatening the enemy with military punishment, and for endeavoring to arrange a cease fire in the field instead of through diplomatic channels, General MacArthur is alleged to have been dismissed—at least, that was one of the reasons stated after the inquiry was begun.

But what has just happened shows that it could not have been any such reason. This is because what the U. N. command in Korea is doing today is along the same lines as General MacArthur pursued. Hence the record of the U. N. command as such is fortunately shown to be consistent throughout, and the Washington administration is to be congratulated for having endorsed 5 months late what it seemed to be repudiating last June.

The most significant revelation, however, is not just the use of a military threat against the Communists but the open avowal of the U. N. command's mission—that it is the liberation by military means of all Korea, and that, if the cease-fire parleys fail, the mission will continue as before.

This undoubtedly means that, even after a cease fire, there will be insistence on a liberation of all Korea or fighting will be resumed by the U. N. Such a result may not materialize soon, as negotiations could go on for a long, long time, but the record, in effect, establishes now the proposition that the armistice will not be accepted as a final

settlement and that threats of a continuance of hostilities will be the U. N. position right along hereafter unless and until Korea, is freed of hostile military forces and peace is established for the people of all Korea. It is a great step forward.

Gill Robb Wilson, Noted War Correspondent, Aviation Authority, Consultant to the Congressional Aviation Policy Board, Declares That "Continuous Research in Air Is Way To Overhaul Reds"

EXTENSION OF REMARKS
OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. MARTIN of Iowa. Mr. Speaker, there are few writers or columnists whose work and writings have intrigued me more than do those of Gill Robb Wilson. Several days each week, Mr. Wilson contributes a column to the New York Herald Tribune—and, to my mind, there are few men who bring to the subject of aviation more than does he.

Mr. Wilson was himself an airplane pilot back in the days of the old pusher planes when our fighting pilots fought enemy pilots with revolvers and rifles and threw hand bombs, rocks, and even beer bottles out of their planes down on the Germany Army troops in order to afford greater tactical support to the ground forces of our own armies.

The works and the writings of this noted war correspondent, lecturer, and author, are well known to a vast number of the men here on Capitol Hill. Many got to know him well when he served as a consultant on the Congressional Aviation Policy Board—to which he brought not alone the wisdom that comes with maturity of years, but specific knowledge of military aviation almost from the time that we thought an airplane was armored if there was a bit of steel under the seat upon which the pilot sat and a few more pieces of thin steel screwed on the side of the ship beside his seat.

It is only because in part of the foregoing that I read and reread the article recently published in the New York Herald Tribune of July 17, in which article Mr. Wilson declared:

Superior American airmanship has been the chief factor in carrying the day against the flashy Soviet MIG-15 in air-to-air combat over Korea. * * *

The Red MIG has outperformed all antagonists in certain important respects, notably speed and climb due to higher engine output. * * * American aviation was not technically ready for World War I—our pilots carried the burden of air victory flying inferior equipment. We were not ready for World War II. Again, our pilots went out with obsolescent equipment to meet the enemy. * * *

It is certainly not the intention of the American people continuously to throw their sons up against such conditions. Yet this has been done successively and the responsibility rests squarely at the door of the fickleness

of public opinion. Each time the tiger steps behind a bush, the American people throw down their guns.

The main reason for this is official failure to explain to the people that national defense, especially air defense, has become a continuous scientific and industrial process. When a gap in that process is created by cut-back of research, development, and procurement of aircraft, the lost ground cannot be regained by any sudden spurt to meet a crisis.

Mr. Speaker, that is exactly what we have done in the past—once victory was achieved, we in Congress, or the President, reduced appropriations for advanced scientific research and development—and each time have been compelled to pay many times what it would have cost us to have continued the work.

It becomes more evident every day—that without a steady flow of new scientific information resulting from original exploratory research studies, aircraft designers would absolutely be working in the dark—and no progress whatever would be made in military aviation except by the old method of trial and error.

If we are to keep abreast of the great scientific development now taking place behind the iron curtain at the point of a gun by the enslaved German scientists held in bondage in Russia, we must have a constant flow of new ideas which can only be advanced as part of a research program.

I have heard it asserted scores of times on many occasions by Members of this body that the one thing that has thus far contained the Russians and prevented all-out global warfare has been the might and power of the United States Air Force, and of the strategic command of that service, in particular.

We would have no such defense of our Nation today if it had not been for the splendid work that was done by an institution, very seldom ever spoken of, and the work of which is little understood by most Members of this House. I refer to the National Advisory Committee for Aeronautics.

I need not tell you that the National Advisory Committee for Aeronautics is not a new, high-flown, fandangled, bureaucratic committee, currently set up to hold meetings and hearings and print reports, and then disappear tomorrow. The fact of the matter is there is no agency of Government which did more to win both World Wars I and II than did this very committee.

Established during the administration of Woodrow Wilson, 36 years ago, it was ardently supported by this Congress through the Harding, the Coolidge, and the Hoover, as well as the Roosevelt and the Truman administrations. Continuously associated with it, certainly, have been and are the greatest authorities and the most disinterested men, skilled in aviation, that we have in these United States. It was set up and still remains an independent agency of this Government, charged with the supervision and the direction of the basic scientific study in problems pertaining to aeronautics. This committee has done more for military and civil aeronautics than will ever be told.

There has never been any political or partisan patronage policies made applicable to NACA. I doubt if they have such a thing as a public relations division—or even a public information officer.

The Board that runs the NACA prefers to let the work that is done by our advisory committee speak for itself—and it certainly has spoken volumes in behalf of the peace, the security, and the welfare of this country in these last 36 years.

I do not purport to have any particular aeronautical engineering knowledge. Like most of my colleagues in this House, I still wonder what it is that enables the aviation industry to take a pile of metals—steel, iron, brass, copper, zinc, tin, lead, aluminum, magnesium, canvas, and a hundred or more other organic or inorganic products—and fabricate them into a shape which, when loaded, weighs as much as 300,000 pounds—and then give power to that shape, causing it to rise off the ground and fly through space at a speed of hundreds of miles an hour—above any speed that was ever reached by man in his travels on the surface of the earth.

The technical and scientific information of flying will be a mystery to me until my dying day, and so it will be with many others. I am happy to realize, however, that it is not necessary that we understand the know-how of flying as long as we have in our country men who have the skill, the knowledge, the abilities, the material, and the will to make the United States Air Force the greatest military air force on the face of the earth.

I once heard it stated that every military airplane in the United States Air Force, every naval plane, every United States Army airplane, every airplane in the Marine and the Coast Guard Air Forces, as well as the thousands of airplanes engaged in private and civilian and other miscellaneous uses—evolve, in a large measure, from the splendid research work that has been done in the laboratory studies and developments made by the National Advisory Committee for Aeronautics.

Of course, as a layman, I find it difficult to take one of their technical reports and understand the scientific language in which the work of NACA is told. However, no one could fail to have confidence in the great work that they have accomplished through the long, long years that they have pioneered in the research work necessary to develop the aviation industry.

Our Nation is extremely fortunate in having on this committee a group of men whose sole aim in life is to plunge deeper and deeper into the unsolved mysteries of the natural laws that seemingly place a limitation upon flight. Such men are few in our country and one could not fail to have other than the highest respect for them, even though we have little comprehension of other than the end product of their work.

This House has learned that for 36 long years past the limited sums which we have appropriated for the work done

by the NACA have always been earnestly and ably spent—producing results that have placed the United States in the front line of aeronautic developments.

We hear from time to time of airplanes that raise themselves to unprecedented altitudes—that fly at unprecedented speeds—of some new gadget which will render it more safe to ascend—or to fly or land—in either civilian aeronautics or in our Armed Forces. Maybe we wonder at the accomplishments of our aircraft engineers and plane manufacturers who brought about the improvement in safety, efficiency, and economy in the performance of our aircraft.

I do not need to point out to this House that airplanes do not just get that way because some manufacturer thought up a good idea. It seems needless to say that no one particular business house is going to risk the expenditure of thousands upon thousands of its own dollars by taking a chance that an airplane of this shape, or with that kind of a wing or this kind of a tail, is going to gain a contract with some one of the armed service forces which acquire planes.

My personal observations indicate that it is safe to say that somewhere back along the line the credit goes to the research agency of the National Advisory Committee for Aeronautics. When a problem presents itself, they either have the answer ready from their previous studies or they set about to get it. From that angle the airplane manufacturers themselves keenly appreciate this service so essential to the design of the modern aircraft.

Soon after the opening of hostilities in Korea, America's greatest living fighter ace—with thirty-seven and a half "plane knock-downs" to his record in World War II—led his unit to the Far East. That splendid young man and officer has already knocked two Russian MIG-15's out of the air over Korea.

Nothing could indicate the greater need of research in aerial dynamics and at the same time disclose the wonderful work that has been done in airplane development to date—more than the statement made by Col. Johnny Meyer when presented to the American people by Dr. John R. Steelman on that great NBC teledocumentary, *Battle Report*, Washington, seen every Friday night over the National Broadcasting Co.'s television network and its coaxials.

When questioned with respect to the value of the Russian MIG-15 as compared to our own Sabre jets—Colonel Meyer, then commander of the Fourth Fighter Interceptor Group which he took to Korea and led against the enemy in its first combat mission, declared:

The Sabre jets of the Fourth Fighter Group were primarily engaged in holding Communist jets at bay in "MIG Alley," a narrow corridor running 30 to 40 miles south along the Korean border in order to keep them off the backs of our tactical fighters operating along the battle front in close support to our ground forces. During this period we had about 1,000 individual encounters with the Russian-built 15's. Like our own F-86 Sabre, it is a high-speed swept-wing jet fighter.

From these dog fights 9 miles high over "MIG Alley" we learned some important

technical and tactical facts about modern aerial warfare. These lessons are:

1. All air-to-air combat is taking place near or at the speed of sound.

2. The Russian-built MIG-15 is at least as good, performancewise, as our own F-86 Sabre jet.

3. The jet airplane is a tough airplane to shoot down.

To go back, the combat maneuvers of aircraft at and close to the speed of sound places challenging requirements on the aviation industry and the Air Force to engineer, develop, and produce aircraft of continually improving aerodynamic design.

That the Russians already recognize this fact is brought out by the performance of their MIG-15 in combat against our F-86. These Russian-built aircraft were tough. They were tough to fight, tough to lick, and tough to destroy. Someone may ask why, if these, the enemy airplanes were so good, were we able during the period of our encounters, to destroy 31 Russian MIG's while losing only 1 F-86? This is explained by an understanding of what I call the fighter aircraft complex; that is, the airplane itself, and its performance, the armament and firing control system, which is the mechanical feature of the shooting performance in which the MIG holds its own with the F-86. In comparing the whole weapon, that is, the MIG and its guns and its pilot, the whole American weapon whipped the whole Communist weapon. Most significantly the pilots of the Fourth Fighter Group are the most experienced air fighters in the world.

The toughness of the MIG is not purely an attribute of that airplane, but rather a general characteristic of all jets. This is being borne out by the fact that our conventional fighters in the tactical support phase of the Korean war alone are suffering losses considerably higher than that of our jets so engaged. If we should become engaged in a global conflict where enemy air power would be encountered in large force, it is my opinion that other than jet fighters used for close support of our ground forces would not survive.

I believe that the most important single lesson to all Americans from this action of ours in Korea is that the Russian world power can produce an airplane equal in performance to America's best. Any nation which can do this has the potential for a first-rate air power qualitatively as well as quantitatively.

Therefore, we must in all fields of research and development in fact, in our total national effort, continuously work toward insuring our security against any rising international gangster.

Mr. Speaker, as I have heretofore stated, it was the clear, concise, factual manner in which the article on aviation research was written by the noted authority, Gill Robb Wilson, that caused me to read it.

The article, *Continuous Research in Air Called Way To Overhaul Reds*, contains so much information of deep and vital interest to the Members of this House concerned with the economic, efficient, and ever-improved development of our military as well as civilian aircraft, that I am appending to this talk that article by Mr. Gill Robb Wilson:

THE AIR WORLD—CONTINUOUS RESEARCH IN AIR CALLED WAY TO OVERHAUL REDS

(By Gill Robb Wilson)

Superior American airmanship has been the chief factor in carrying the day against the flashy Soviet MIG-15 in air-to-air combat over Korea.

Other contributing factors to the score against the MIG have been an exceptionally fine gunsight, excellent armament and the designed ability of American jets to absorb combat damage. Nevertheless, the Red MIG has outperformed all antagonists in certain important respects, notably speed and climb due to higher engine output. Red pilots have been able to break off combat at will or to force combat under conditions of their own choosing.

This is the third time in American aviation history that the airmen of the United States have had to enter a war with victory depending upon the human factor. American aviation was not technically ready for World War I. The pilots carried the burden of air victory flying inferior equipment. We were not ready for World War II. Again the pilots went out with obsolescent equipment to meet the enemy. And now in the Korean war, Gen. Hoyt Vandenberg, Chief of the Air Staff, points out that the MIG-15 tops the performance of the best we have thrown against them.

FICKLENESS BLAMED

It is certainly not the intention of the American people continuously to throw their sons up against such conditions. Yet this has been done successively and the responsibility rests squarely at the door of the fickleness of public opinion. Each time the tiger steps behind a bush, the American people throw down their guns.

The main reason for this is official failure to explain to the people that national defense, especially air defense, has become a continuous scientific and industrial process. When a gap in that process is created by cut-back of research, development, and procurement of aircraft, the lost ground cannot be regained by any sudden spurt to meet a crisis.

Three results always accrue. One of these results is that American technical power loses its deterrent force in preventing war. The second result is that America pays high in loss of life and early defeats until she can spur her scientific and industrial process. The third result is that rearmament is always achieved at the highest possible cost and at the greatest waste of natural resources.

The superiority of the MIG-15 over our fighters in Korea is due to the cut-back of Air Force procurement and development between 1946 and 1949. In those years American air power lost a minimum of three experimental models, each model representing a vital step in aircraft performance. The aircraft industry possessed the technical knowledge to make those advances which have to be made step by step, but it had no market for its knowledge in procurement orders.

Therefore, American pilots entered the Korean war with obsolescent planes and had to produce superior personal qualifications to make up for the difference against the MIG-15, which was a product of Russia's continuous and undiminished research and industrial program.

In view of the rearmament program, the American processes again have been set in motion and within several years American pilots will have something better than obsolescent airplanes, unless armistice in Korea again creates an emotional situation and stops the process.

In the field of atomic energy the authority of the Atomic Energy Commission is accepted and the process of research, development, and production is undiminished. In some manner our people must be made to understand that this same sort of philosophy is essential to the creation of air power, and those responsible for it must concentrate on explaining the how and why of its character to our people.

Tourist in Spain**EXTENSION OF REMARKS**

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following column by Danton Walker from the New York Daily News. Mr. Walker offers an interesting panorama of Spanish life in this article.

THE SPANISH STORY
BROADWAY

(By Danton Walker)

VACATION NOTEBOOK: THE SPANISH STORY

MADRID, SPAIN—Spain, or España, as they call it here, is hotter than a pistol just now. Not because of the weather, but because of that sixty-two millions that Uncle Sam is handing over to his new Mediterranean ally. If signs and symbols mean anything, Spain's stars are on the ascendant. Right after the news that Tio Samuel had given the back of his hand to France and Britain and decided to be practical, rain fell on Iberia for the first time in 7 years. And if there is anything that Spain needs worse than Yankee dollars, it is water. If some of that folding money could be spared for hydroelectric plants to bring aqua from the snow-capped mountains to the sun-baked plains, it would be the greatest boon since Isabella hocked her jewels to back Columbus. A more immediate need, to the Yankee tourist at any rate, is interpreters who can both speak and understand English—not necessarily the same thing—to bridge the awful gap between those who speak no Spanish at all, like us, and those who speak and understand nothing else. "It will take us 3 years to get ready for the American tourists," one harassed hotel proprietor observed, "and by that time they will have decided to go somewhere else." The managements of the Ritz and Palace, two of Europe's finest hotels, have already started daily classes in foreign languages for employees.

Madrid is the place where ladies wave fans instead of cigarettes in public, where everything stops cold at 1 o'clock and does not resume until 4 p. m. (another custom that the Americans cannot understand), where the cocktail hour is around 9 and you do not get around to dining until an hour before midnight, and even the kids are still playing in the streets around 1 a. m.; where Americans squeal at the first sight of blood in the bull ring, but remain to shout "ole" at the toreros, who combine the grace of a ballet dancer with the skill of a surgeon in dispatching the bull—a noble animal which, being Spanish, would probably prefer thus dying in a blaze of glory to being bumped on the head ignominiously by a butcher; where the Spanish not only have their bulls but eat them, too, in a soup that includes everything from head to tail, but there are also to be had hamburguesas con tostado (y con mucho garllico).

If the Americans continue to pile up, they'll soon be calling the country Occupied Spain. From San Sebastian to Gibraltar, you'll find 'em. Judging by the movies currently on display, it may be well for Hollywood that Spain has been isolated these many years—Little Lord Fauntleroy (whatever it is in Spanish) with Freddy Bartholomew and Mickey Rooney; Les Hermanos Marx (Groucho, Chico, Harpo) in something starring Wendy Barrie (1). This "tipico" Spanish cafes—El Chicote's cellar museum with

its \$250,000 collection of liquors of all nations; La Taberna Gitana, with a floor show suggesting El Chico in Greenwich Village. The flamenco songs which come straight down from the Moors and the native dances—jotas, malagueñas, sevillanas, alegrías, bulerías, etc.—with their never-varying routines, of which the Spanish never tire. The gorgeous Gloria Romero, "maxima estrella de la canción andaluz" at the Teatro Zarzuela, a natural for any Spanish floor show in New York and Spain's No. 1 movie star, a blonde named Mery (not Mary) Martin.

Barcelona's Paralelo, where the sounds of gypsy music and the click of the castanets go on all through the night from the sidewalk cafes. Madrid's pride, the Prado Museum, with its priceless collection of Spanish art, including Goya's famous striptease—Maja Dressed and Maja Undressed—for which a duchess posed, and Goya's etchings depicting the horrors of war dating from the time of Napoleon (wonder how many people who have lived in Pensacola, Fla., know that its main street was named for Don Jose Palafox, defender of Zaragoza, in those same Napoleonic wars—so named by the British as a propaganda gesture to keep the Spanish on their side), the little government-sponsored "albergues" scattered throughout the countryside—immaculately clean and more comfortable than our own motels. Toledo, center of Spain's military life, and the Alcazar, the Spanish West Point, bombed to rubble during the civil war, which will be maintained in ruin as a memorial to those who died there.

Sights of interest include the northern province of Galicia, where the majority of the inhabitants are blonde, blue-eyed Spaniards who play bagpipes and dance jigs. The German volkswagen has made its appearance on the Iberian peninsula and made a big hit. It's a small, low-price car that utilizes very little gas. Ford is partly responsible, having invested in the enterprise. And all the other sights and sounds and wonders make Spain and Portugal a new vacation paradise for the American tourist.

The Narcotics Menace**EXTENSION OF REMARKS**

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

WASHINGTON, D. C., August 20, 1951.

Hon. GORDON CANFIELD,

House Office Building.

The American Legion is dedicated to the preservation, the welfare, the integrity, and the safekeeping of the way of life that is the United States and for which we, as veterans, served and fought. The narcotics menace threatens the families of this country. There are 27,000,000 children in this Nation who are the sons and daughters of veterans, and they represent more than half of the teen-age population. We spearheaded a narcotics-problem conference in New York City last June which was held to devise ways and means to combat this deplorable menace and its threat to our children. We are, therefore, amazed to learn that the proposed \$400,000 supplemental budget for the Bureau of Narcotics has been cut in committee by 40 percent. In view of the findings of the Senate Crime Committee it is inconceivable that such cut is

in the best interest of national welfare or in accord with public opinion. The full appropriation would provide a narcotics police force only slightly larger than that obtaining in 1930. We strongly urge you and your colleagues to restore the full fund which has been recommended by the Bureau of the Budget. Even that may be insufficient.

ERLE COCKE, JR.,
National Commander.

**A Citizen Nails Some Lies About the State
Department**

EXTENSION OF REMARKS

OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. YORTY. Mr. Speaker, the affable and personable Lieutenant Governor of California, the Honorable Goodwin J. Knight, is one of the most indefatigable and entertaining public speakers in California. On April 18, he made one of his typical speeches, reiterating some charges against the Secretary of State which were not unusual except for the fact that Mr. John B. Elliott, of Los Angeles, challenged him to prove them. His attempts to do so are set forth in some correspondence between Mr. Elliott and Mr. Knight and Mr. Elliott and Mr. Acheson, which correspondence I should like to insert in our RECORD. The correspondence plainly shows the predicament in which some of the more partisan critics of the administration would find themselves if called upon to prove the serious charges which they casually make before audiences denied the opportunity to hear both sides and to analyze such charges in the light of the facts. Mr. John B. Elliott is one of the leading citizens of California. He has spared neither time nor expense in proving how irresponsible some partisan attacks can be, while at the same time serving notice on partisan orators that they cannot always escape the duty and obligation of proving their assertions. The full text of this most singular and interesting material, as released to the press, follows:

Editors:

The following material is for release in full or in part. The correspondence contained herein comprises an official answer to miscellaneous charges made from many investigated sources against United States Secretary of State Dean Acheson.

The correspondence here is either addressed to or signed by Mr. John B. Elliott, Los Angeles civic leader, who acted in establishing the facts concerned in certain typical charges made by Lt. Gov. Goodwin Knight of California, and the answers made by Secretary of State Acheson.

All letters and correspondence reproduced herein are full quotations with no additions or deletions from originals.

For purposes of clarity, Lieutenant Governor Knight's charges and Secretary of State Acheson's replies appear together in numerical order, separate from the correspondence.

LOS ANGELES, August 20.—Secretary of State Dean Acheson has specifically refuted 12 charges made publicly against him by

Lt. Gov Goodwin J. Knight, of California, in an exchange of correspondence released today.

Mr. John B. Elliott, Los Angeles civic leader, in making public the documentary story of the Acheson "smear," said, "These vicious charges to which Lieutenant Governor Knight has lent his name are but a repetition, in part, of irresponsible accusations that have frequently been made by various partisan political sources against an admittedly able and conscientious public official."

"They have no foundation in fact," Elliott said, "but are made with intent to destroy the good name and public reputation of Secretary Acheson."

In his statement, Secretary Acheson specifically answered all of Knight's charges, citing documentary evidence.

Elliott pointed out that quotations attributed to Acheson were never made by him, and some detractors have repeatedly confused the record in attempting to identify Acheson with others who were charged with Communist affiliation.

Searching the record for alleged statements of Acheson pertaining to Japan, Formosa, Chiang Kai-shek, the Chinese Nationalist Government, and Russian participation in Japanese administration, State Department officials found that quotations used by Knight in his 12 charges were neither accurate, nor in many cases in existence in any records, interviews, or correspondence.

In attempting to identify Secretary Acheson with Alger Hiss and the conferences at Dumbarton Oaks and Yalta, Knight charged the Secretary of State with having appointed Hiss to the American delegation.

"This statement is false, and Secretary Acheson has so testified under oath, before the Joint Armed Services and Foreign Relations Committee, the State Department official record showed.

"In response to a direct question from Senator KNOWLAND, he (Acheson) stated that he made no recommendations of any kind that Hiss be sent on either of these missions."

Elliott cited the 12 charges and 12 complete answers as evidence that smear tactics can be countered by revelations of the true record.

"Every American who has witnessed the most reckless campaign of vilification against a public official ever seen in this country should read the complete text of Secretary Acheson's answers to the charges.

"Attempts to tie Acheson to Communists, fellow travelers, and traitors have failed because the record reveals nothing of the kind, and on the contrary, Secretary of State Acheson is proved to be a great and patriotic public servant.

"Attempts to damage the national administration by attacking Secretary Acheson have resulted in injuring the United States in the eyes of the world and have demonstrated the weakness of opponents of the administration in having nothing to offer except untrue, unjust, vicious criticisms."

The text of the correspondence follows:

STATEMENT OF JOHN B. ELLIOTT IN RELEASING ACHESON-KNIGHT CORRESPONDENCE

Herewith is made public the original correspondence regarding the activities of the United States State Department, between Secretary of State Dean Acheson, Lt. Gov. Goodwin J. Knight of California and myself.

This correspondence followed a public address by Lieutenant Governor Knight at Chico, Calif., April 17th last, in which Mr. Knight charged Secretary Acheson with being "an American Neville Chamberlain," who is "more distrusted and despised than any man in modern American history"; who had "no friends and no defenders," and demanded that "Acheson should get out." I challenged the integrity of Mr. Knight's charges, and asked Mr. Knight for details. Mr. Knight

replied by making twelve specific charges against Secretary Acheson, to which Mr. Acheson duly replied. Secretary Acheson denounced Governor Knight's charges, one by one, as either completely "false" or "misleading."

These vicious charges to which Governor Knight has lent his name, are but a repetition, in part, of irresponsible accusations that have frequently been made by various partisan political sources against an admittedly able and conscientious public official. They have no foundation, in fact, but are made with intent to destroy the good name and public reputation of Secretary Acheson. This campaign of vilification has been carried on for 2 years. It follows, the Nazi technique of the "The Big Lie," originated by Goebbels, of Hitler's propaganda ministry. The theory of the success of "The Big Lie" is, if the lie is big enough, and repeated frequently enough, people finally will believe it.

These accusations against Secretary Acheson have been repeated in various forms, by various people, throughout the country, from time to time, along the line of "The Big Lie." So far, they have not succeeded in their object, but their vicious propaganda continues. I am glad to be able to assist in bringing to the light of day some phases of this venal conspiracy.

Governor Knight has, I am sure, been misled into giving currency to these malicious inventions. Those who are really back of these calculated slanders have been intent upon destroying the good name and official reputation of the American Secretary of State, regardless of the disastrous effect upon our country's vital interests throughout the world. Thus, communism is served as well as Stalin himself could do it.

J. B. ELLIOTT.

[Associated Press Story published in the Los Angeles Times, of Wednesday, April 18, 1951]

ACHESON BLAMED FOR FIRING BY LIEUTENANT GOVERNOR KNIGHT

CHICO, April 17—Lieutenant Governor Knight tonight blamed Dean Acheson for the firing of General MacArthur and said "no man in modern American history has been so distrusted and despised" as the Secretary of State.

Said Knight, a Republican, in an address before the Chico Kiwanis Club

"The discharge of Gen Douglas MacArthur was not any sudden explosive act of the President. It had been planned and hoped for over a period of many months. The architect of the blueprint of 'exit MacArthur' was Dean Acheson."

"NO FRIENDS"

Knight declared Acheson has "no friends and no defenders. He stays only because of the stubborn will of the President."

He accused Acheson of fashioning a Far East policy of "dumping Chiang Kai-shek and destroying the democratic Republic of China."

Knight asserted "the danger of Acheson is now so real that we must view him as the American Neville Chamberlain." Stalin, he said, would be encouraged by "the Acheson-British Socialist Lowtowing to communism," just as Hitler was made strong by appeasement.

"Acheson should get out and America should get tough," Knight said.

LETTER FROM JOHN B. ELLIOTT TO LT. GOV. GOODWIN J. KNIGHT REQUESTING SPECIFIC DETAILS IN LIEUTENANT GOVERNOR KNIGHT'S CHARGES AGAINST SECRETARY ACHESON, APRIL 20, 1951

APRIL 20, 1951.

Hon. GOODWIN J. KNIGHT,
Los Angeles, Calif.

DEAR FRIEND GOODIE: As a personal friend and a long-time admirer of yours, I am aston-

ished at the intemperate attack on Secretary of State Dean Acheson, recently accredited to you in the daily press from Chico. You are generally regarded as impartial and judicial. I have seen, as has nearly everybody else, over past months, the vicious and unrestrained attacks upon Secretary Acheson steadily increasing in violence and tempo. Very recently these attacks have about ceased, due, probably, to the physical and factual exhaustion of the assailants.

Your reported statements, however, seem to revive the most extreme and venomous assertions of these lately abandoned scurrilous attacks. These expressions will, I am sure, have no good effect. They likely will serve only further to help divide America into discordant camps, violently denouncing each other, and giving aid and comfort to our Communist enemies.

This campaign of unprecedented personal attacks on Secretary Acheson have actually contained scarcely a vestige of truth, and no real aim, excepting, perhaps, a vain hope of gaining some unworthy political advantage.

Secretary of State Dean Acheson is not what has been so intemperately charged. On the exact contrary, he is, without doubt, one of the ablest, most honorable, most persuasive secretaries of state that the United States has had in its entire history. He is so regarded among the nations of the democratic world, and would, I am sure, be so held in his own country were it not for the prejudice kindled by the torrent of slander and vilification that has been poured upon him.

Of course, Secretary of State Acheson has made mistakes. Who has not? Have not we all? We should not forget, either that he holds probably the most difficult public office in the world today, with the United States in the very forefront of international storms that are violent, complex and dangerous beyond anything the world has known before. In almost every corner of the globe, there are situations so desperate and of many and varied kinds, demanding immediate solution, and they are practically all up to the United States of America—up to Dean Acheson, United States Secretary of State, Washington, D. C.

Surely, we should all at least try to have the maximum degree of calmness, compassion, patience, and whatever personal humility may be attained.

Sincerely yours,

JOHN B. ELLIOTT

P. S.—The New York Herald Tribune, one of the leading Republican newspapers of this country said editorially yesterday:

"There are no real issues of underlying policy or patriotism; in this debate there are no traitors or devils, but only sincere men who may have different views as to method but are at one in their loyalty to the great ideal of freedom."

J. B. E.

LETTER FROM LT. GOV. GOODWIN J. KNIGHT TO JOHN B. ELLIOTT MAKING SPECIFIC CHARGES AGAINST SECRETARY ACHESON, APRIL 24, 1951

SACRAMENTO, CALIF.,

April 24, 1951.

Mr. JOHN B. ELLIOTT,

Los Angeles, Calif.

DEAR JOHN: This is in reply to your letter of April 20. I assure you that I was sorry to say anything in the public press that would distress or annoy you. I hasten to reassure you that my statements concerning Dean Acheson were not because he is a Democrat nor because I feel that an attack upon him will help the Republicans. As a matter of fact, that is a very doubtful premise.

You state that the Secretary has made mistakes and who hasn't? Of course, we all have, but, John, this subject is one which is very close to my heart and has nothing

to do with politics. As a veteran of the First World War, I have always been interested in military matters. My nephew was shot down five times over Europe as a pilot in the Second World War. He is now a captain in a B-29. His mother is a widow and has no other children and so I look at Dean Acheson out of different eyes than many other people and what do I see? I do not just see mistakes of judgment or of timing. I see alliances which are violently unpatriotic and I protest against such connections in the high office you describe. We do not differ with Dean Acheson on a matter of policy or judgment. We differ with him on strict grounds of patriotism and honor and now I stop expressing opinions and go to facts.

If you will examine the first four paragraphs of your letter you will see there is not one fact stated. They are all opinions. Your fifth paragraph is about Acheson's responsibilities and mistakes. Your sixth paragraph is one of appeal for confidence, good will, and so forth. I mention this to you so that there can be no doubt about my reply. Should my reply be a defense setting up my opinions against yours it would not justify my position and would not be of any value. Because a man's opinion on any subject is no better than the information which supports it, I now proceed to give you information and facts. These facts are documented and can be supported by the record.

It is natural for you, John, to read the good things your political party says about Dean Acheson, but you will be interested to know that you are the first Democrat who has risen in his defense. No single Democrat in Sacramento has a kind word to say for him. Every veterans group in the United States has condemned him and demanded his impeachment. I don't believe that you have one who is near and dear to your blood risking his life on the decisions made by Mr. Acheson and his staff. If you have, you have more faith in partisan politics than I have.

I have long admired your strenuous efforts in behalf of good government and on many issues I have stood shoulder to shoulder with you but on this one I must differ, based on the foregoing facts. If you have any defense for Dean Acheson on these facts, I eagerly await your factual presentation. If they are but denials they must be accompanied by proof by Mr. Acheson to you and to me.

I join with you that this is a period of patience, humility, and good judgment but patience can become a fault in the face of a record like this and it must be remembered that this is but a partial record of Dean Acheson's faults and failings.

In conclusion, let me say, John, if these were the mistakes of a stupid but sincere man they might be overlooked but here is a brilliantly educated man in nefarious and secret collusion with violent enemies of my country. Place him alongside of George Washington, Alexander Hamilton, U. S. Grant, Robert E. Lee and the act answers the question.

I shall be interested in your reactions to these facts. Please accept my remarks as a devoted American and not an ardent Republican.

Cordially yours,

GOODWIN KNIGHT,
Lieutenant Governor.

LETTER FROM JOHN B. ELLIOTT TO SECRETARY OF STATE DEAN ACHESON, REQUESTING ANSWER TO LT. GOV. GOODWIN J. KNIGHT'S ACCUSATIONS, APRIL 26, 1951

APRIL 26, 1951.

HON. DEAN ACHESON,
Secretary of State,
Washington, D. C.

MY DEAR MR. SECRETARY: I hope you may be able to note the enclosed correspondence and newspaper clipping which I have had,

concerning you as Secretary of State, with my personal friend, Hon. Goodwin J. Knight, Lieutenant Governor of the State of California. You will see from Governor Knight's letter that he makes some 12 specific charges against you. On account of the Governor's prominence in the State of California, I would like to have the correct answers to the charges he makes.

Could you pass this correspondence along to one of your assistants who would give me the information I wish in replying to Governor Knight's accusations?

I hope you do not mind my being a self-appointed, and doubtless altogether inadequate, defender of yours.

Very truly yours,

JOHN B. ELLIOTT

LETTER FROM JOHN B. ELLIOTT REPLYING TO LT. GOV. GOODWIN J. KNIGHT'S LETTER AND INFORMING MR. KNIGHT THAT HE HAS FORMALLY REQUESTED ANSWER FROM SECRETARY ACHESON

MAY 1, 1951.

HON. GOODWIN J. KNIGHT,
Los Angeles, Calif.

DEAR FRIEND GOODWIN: I have been pleased to receive your letter of April 24 in reply to my letter of April 20, regarding Hon. Dean Acheson, United States Secretary of State, and would have replied sooner, but for being confined to my home for the past few days with a slight illness.

I will write you further, in detail, when I have had time to secure necessary information, regarding the specific charges you make against the American Secretary of State. Incidentally, would you care to give me your sources of information on which your 12 charges against Secretary Acheson are based? That would help me more quickly to check the facts in the matter.

Like yourself, I have no interest in the political partisanship phase of the subject, but I am deeply interested in what I consider a dastardly political plot to destroy an honest and able public official, such as I have never seen before in my many years of experience in public affairs. Of course, I acquit you of any part in this plot.

Secretary Acheson will not destroy America. But such wild, unrestrained cabals and "smears," as we see using every agency, no matter how vicious or unfair, to harm a man in public esteem, can destroy America.

You point out that my letter to you was one largely of personal opinion. I intended it to be so. I was merely writing you, regarding your own opinions, as expressed in the daily press, which I submit, contained strong language and few facts. Quoting a few samples of "opinion" from your speech at Chico, as published:

"No man in modern American history has been so distrusted and despised as the Secretary of State . . . The architect of the blueprint of 'exit MacArthur' was Dean Acheson . . . Acheson has no friends and no defenders . . . the danger of Acheson is now so real that we must view him as the American Neville Chamberlain . . . Stalin, he said, would be encouraged by 'the Acheson-British Socialist kowtowing to communism'."

Also, in your letter to me, next to the closing paragraph, regarding Secretary Acheson, you say:

"Here is a brilliantly educated man in nefarious and secret collusion with the enemies of my country."

Of course, if that single statement of yours were, in any sense, true, Dean Acheson would be guilty of treason, and would be put on trial on that charge, the penalty for which, on conviction, could be death. It is such extreme and violent statements that I denounce. The only effect of such statements is to do harm to the United States of America. Such charges, which I believe

utterly baseless, serve to supply ammunition to those you call the enemies of my country, rather than does any supposed secret collusion by a Federal official.

If you really believe such statement as this one you make about Secretary Acheson, I venture the suggestion that you should have put in your full time, when you were recently at the National Capital, in bringing quickly such a terrible traitor as you describe, promptly to the bar of justice. Did you do anything like that? As the patriotic American you assert (and I believe you are, but misguided) I believe you should not rest one moment until every real traitor, such as you allege, is behind bars. One should act, in such circumstances, and not continue hurling wild and scurrilous accusations.

I think too, no one can successfully assert his superiority over others in patriotic endeavor. Members of my family, my only son, and many dear friends, were in the late war, Atlantic and Pacific, and some of them never returned. But my concern for all of those whose lives are endangered in the defense of our country is not at all lessened because they happen not to be blood relatives of mine, and may be, to me, unknown. I have the same feeling for the safety of all. It should not be difficult to encompass the thought that human sympathy and compassion can pass beyond the bounds of blood relatives and personal attachments, and include all who are risking their lives in our defense. Doubtless, the lives of those who do not happen to be relatives of ours, are, to them, equally precious.

It is such thoughts, my dear Goodwin, that give me much apprehension when I see men of intelligence and high position, like yourself, give utterance to reckless calumny against those occupying positions of authority and great responsibility in our Government in times of national emergency, the result of which is certain adversely to affect the welfare and safety of the very ones about whom a real concern is professed. Rash charges and intemperate language give aid and comfort to our Communist enemies, and serve only to increase the danger to all, including those already in imminent peril in our defense.

I think your statement that the local sentiment at Sacramento is unanimously adverse to Secretary Acheson, is not impressive. The American public has had little or no opportunity to read, for months past, anything regarding Secretary Acheson except the reckless and violent outbursts of those behind the partisan plot to "get Acheson," regardless.

It might help if you would suggest to those whom you contact at Sacramento that they read the 40-odd pages in Robert S. Allen's "The Truman Merry-Go-Round" (Vanguard, 1950) devoted to Secretary Acheson and the United States State Department, in which Mr. Allen concluded with this sentence:

"Dean Acheson is the greatest Secretary of State since Henry L. Stimson."

Mr. Robert Allen, the author of that book, is a very able, experienced and concededly reliable Washington correspondent, and certainly one not prejudiced in favor of the present national administration. Incidentally, Mr. Allen is, with you, a fellow United States veteran of the World War, having been wounded, and lost an arm in the service.

Also your acquaintances, who are so opposed to the Secretary, might read Mr. Elmer Davis' article in Harpers Magazine for March, 1951, entitled: "The Crusade Against Acheson." Elmer Davis is one of the best known and most reliable journalists in Washington, D. C., 10 years on the staff of the New York Times, a national newscaster, and during World War II, head of the Office of War Information, and so forth.

To save you the trouble of looking up Elmer Davis' able article, herewith are a few quotations of fact and opinion from it:

"For months past Republican orators had been denouncing him (Acheson) with a virulence seldom equaled, and a shameless mendacity quite unequaled in my recollection."

"There has been nothing quite like that in American history. Not merely because they were denouncing as a Communist (or a protector of Communists; they could never quite agree on their story) the man who had done more to check the advance of Russian aggression than any other public official we have ever had."

"The demand for Acheson's removal was overwhelmingly supported in the House caucus; but only 23 of the 42 Republican Senators voted for it. Five voted against it—AIKEN, LANGER, MORSE, and the two SMITHS; 14 others had at least the courage not to vote at all."

"But why this vicious and sustained attack on a man of whom the President said, correctly, that 'no official in our Government has been more alive to communism's threat to freedom, or more forceful in resisting it.'"

"The first of his great achievements, the North Atlantic Treaty, had been largely prepared by Marshall and Lovett, but Acheson finished the work of concluding it, and led the way in the more difficult task of persuading the Senate to approve it."

"The result was the greatest of Acheson's achievements—the persuading of the United Nations Assembly to declare its own competence to act when the Security Council is paralyzed by the veto. As Vishinsky correctly (and furiously) declared, this was a complete change in the character of the United Nations. For the first time it became an organization which could really do something, even if a great power wanted it to do nothing. This was the most brilliant American diplomatic victory of many decades, and the best kind of diplomatic victory, won not by pressure but by persuasion, by convincing other nations that their interest was identical with ours."

"Sometimes it seems that some of the performances of this past year have divulged the secret of the Republic—that while you may not be able to fool all of the people all of the time, you can fool enough of them enough of the time to gain your end."

I will write you further in relation to your charges against Secretary Acheson as soon as I am in possession of the full facts in relation thereto

Very sincerely yours,

JOHN B. ELLIOTT.

REPLY OF SECRETARY OF STATE DEAN ACHESON TO JOHN B. ELLIOTT, PROMISING SPECIFIC AND DOCUMENTED REPLIES TO CHARGES, MAY 14, 1951

MAY 14, 1951.

JOHN B. ELLIOTT,
Los Angeles, Calif.

DEAR MR. ELLIOTT: Thank you very much for your letters of April 26 and May 7 and your telegram of May 1 concerning the criticism of me by Lieutenant Governor Knight. The statements which Mr. Knight made are either entirely incorrect or distortions of the true situation, and I have asked that you be sent a careful, factual reply to these assertions. I hope to make this information available to you in the near future.

I very much appreciate your writing me in the spirit that you did, and I am deeply grateful for your support.

Sincerely yours,

DEAN ACHESON

During the interim, awaiting the reply to Lt. Gov. Goodwin J. Knight's specific charges, Secretary Acheson and the United States State Department were concerned with affairs of the greatest international importance.

Following will be found the 12 charges made by Lieutenant Governor Knight in

numerical order, followed by the specific answers by Secretary Acheson.

JOHN B. ELLIOTT.

TO JOHN B. ELLIOTT, TO WHICH STATE DEPARTMENT OFFICIAL REPLIES WERE APPENDED, JUNE 28, 1951

THE SECRETARY OF STATE,
Washington, June 28, 1951.

JOHN B. ELLIOTT,
Los Angeles, Calif.

DEAR MR. ELLIOTT: As I wrote you in May, I asked my staff to prepare a factual reply to the assertions made by Lieutenant Governor Knight concerning my role in the conduct of our foreign policy. Shortly after that all of us were swamped with the work involved in preparing for the hearings of the Joint Senate Committee on United States Policy in the Far East. Only within the last few days have we been able again to turn our attention to certain of the questions which were pending before these hearings began. I greatly regret the resulting delay in answering your letter, but I am sure that you understand the position in which I found myself.

I am glad to repeat the statement I made in my previous letter to you that the assertions contained in Mr. Knight's letter are either entirely incorrect or distortions of the truth. In order to assist you in answering these assertions, I am enclosing a memorandum which deals with them point by point.

I am grateful for this opportunity to set the record straight.

Sincerely yours,

DEAN ACHESON

OFFICIAL ANSWERS BY SECRETARY DEAN ACHESON

Charge 1 (a) "On December 23, 1949, Mr. Acheson sent out instructions to diplomatic and consular personnel in Asia that Formosa was doomed and expendable."

Answer. The communication of December 23, 1949, on Formosa referred to was in no sense an instruction. It was a guide in the psychological warfare being waged against the Communists in the Far East. Common-sense tactics in psychological warfare call for maximizing gains and minimizing losses. At this time, the intelligence branches of the various agencies of the Government agreed that the Nationalist garrison on Formosa was incapable of holding the island against a determined Communist assault which was then being readied. They further stated that the only way the island could be held was by reinforcing its defenses with American troops.

While acknowledging the strategic importance of Formosa, the Joint Chiefs of Staff had advised the Government that it was not sufficiently important to warrant sending enough ground elements of an American army that was already spread dangerously thin to insure a successful defense of the island.

In the light of these facts, Gen. Albert Wedemeyer sent a memorandum on the matter to George V. Allen, then Assistant Secretary of State for Public Affairs. It is quoted here as read by General Wedemeyer when he was a witness at the MacArthur hearings.

"In a memorandum for the executive secretary of the National Security Council, the Secretary of State . . . stated that under present circumstances the passage of Formosa under Communist control by external or internal action appears probable . . . since there appears no certain assurance that Formosa can be denied to Communist control by political and economic measures alone.

"Further, the Joint Chiefs of Staff at their meeting of August 16 reaffirmed their previous view that overt United States military

action to deny Communist domination of Formosa would not be justified. However, I also note that the Joint Chiefs of Staff believe that the probabilities of the Formosa situation make it more than ever necessary that every effort be made to forestall any weakening of the over-all United States position with respect to the Philippines, the Ryukyus, and Japan. In Department of the Army consideration of this matter, it appears to be particularly desirable that, should Formosa be lost, this event should have a minimum of ill effects of the governments and peoples of western-oriented nations and particularly those of the Far East. Accordingly, it occurs to me that, if not already instituted, you may desire to consider information measures designed to accomplish this end."

Consequently, the directive was sent to personnel in United States missions to try to minimize the damage to American prestige in the Far East if Formosa should fall. The directive advised the people of the Foreign Service of the details of the situation and urged that in their daily contacts they play down rather than emphasize the strategic importance of Formosa in case the island fell to the Chinese Reds.

The directive related solely to psychological warfare and in no way related to administration policy or intentions toward the island.

The policy of the American Government has unwaveringly maintained that the United States must do everything within its capacities to prevent seizure of Formosa by a hostile force. A variant on the same theme is the allegation which is numbered (5) in Lieutenant Governor Knight's letter of April 24, 1951 "Dean Acheson recommended the abandonment of Formosa after the legitimate Government of China had been forced to flee to the island." In this form the allegation appears to be a distorted construction of the speech made by the Secretary of State at the National Press Club in February 1950. In the Press Club talk, the Secretary referred to the American line that was vitally strategic to our Pacific position—which ran (and runs) from Japan through the Ryukyus to the Philippines. The defense of these positions he presented as basically an American responsibility. They must be held at all costs. Inferentially, an attack on them would be regarded as an overt act of war.

It is noteworthy that the full text of this section of the speech is rarely quoted by those making the above allegation, because the Secretary goes on to say that Formosa is important to the security of the United States and that we must use every means at our disposal to deny it to a hostile force.

For a time the means at our disposal were confined to political and economic. Now, with an increase of our military forces and in our production of weapons and equipment, we are able to provide the Nationalist garrison on Formosa with material assistance and needed training. Approximately \$90,000,000 worth of arms and ordnance has been given the Nationalists and another \$300,000,000 is scheduled for this year. In addition, a 600-man military mission is on the island assisting in the reorganization of Chiang's forces.

Charge 1 (b) "On June 19, 1947, before the House Foreign Affairs Committee, Mr. Acheson testified there was no danger of a Communist defeat of Chiang Kai-shek."

Answer. The record has been checked, and Mr. Acheson did not testify before the House Foreign Affairs Committee on June 19, 1947, on China or on any other matters. This allegation would appear to be a distorted version of testimony which Mr. Acheson gave to the same House committee a year earlier. Mr. Acheson's 1946 testimony was in support of a bill, endorsed also by General Marshall, Secretary of War Patterson, and Admiral Ramsey, of the Navy Department, to provide military advice and assistance to the Republic of China.

A careful examination of the record of the 1946 hearings discloses no indication of any testimony to the effect of the above-quoted allegation.

Charge: 1. (c) "On July 30, 1949, he wrote a letter to the President of the United States stating that no amount of aid could have saved Chiang."

Answer: In the letter of July 30, 1949, which transmitted the State Department's compilation on United States relations with China to the President, there is no such statement as that attributed to him, namely, "no amount of aid could have saved Chiang." The full text of the letter has, of course, been a matter of record for some time. This assertion is apparently a twisted construction of the paragraph appearing on the page numbered XV in the volume United States Relations With China. This reads:

"A realistic appraisal of conditions in China past and present, leads to the conclusion that the only alternative open to the United States was full-scale intervention in behalf of a government which had lost the confidence of its own troops and its own people. Such intervention would have required the expenditure of even greater sums than had been fruitlessly spent thus far, the command of national armies by American officers, and the probable participation of American Armed Forces—land, sea and air—in the resulting war. Intervention of such a scope and magnitude would have been resented by the mass of the Chinese people, would have diametrically reversed our historic policy, and would have been condemned by the American people

"* * * Nothing that this country did, or could have done within the reasonable limits of its capabilities, could have changed that result; nothing that was left undone by this country has contributed to it"

Charge: 2 "In 1946 against the advice of United States Ambassador Arthur Bliss Lane, Mr. Acheson approved a loan of \$90,000,000 to Communist Poland. The counsel in this transaction was Donald Hiss, brother of Alger Hiss, and for this loan Dean Acheson's law firm, of which Donald Hiss is a member, received a \$50,000 fee"

Answer: The inferences of this charge are false and are based upon a distortion of the public record. The Polish loan and Mr. Acheson's connection therewith was thoroughly explored by the Senate Committee on Foreign Relations on January 13, 1949, when Mr. Acheson was up for confirmation as Secretary of State. When Mr. Acheson became Assistant Secretary of State on February 1, 1941, he severed all connections with the law firm of which he had been a partner. The interest which Mr. Acheson had in the firm was computed and paid to him before he entered the Department of State. The loan negotiations with Poland did not begin until more than 4 years later and were completed in 1946.

The firm functioned purely in a legal capacity and handled the contracts and the drawing of the instruments necessary to apply for a loan and to operations under the loan. No member of the firm approached Secretary Acheson in any way during the period that the loan was under consideration.

As Acting Secretary of State and on the instructions of Secretary Byrnes, Mr. Acheson approved the loan after it had been favorably considered by the responsible officers of the Department who were interested in it. These included the responsible officers in the economic offices under Mr. Clayton and in the political offices under Mr. Dunn. The late Senator Vandenberg was informed of the proposed credit and his suggestion was followed that full publicity be given to the commitments made by the Polish provisional government of national unity in connection with the loan. Secretary Acheson subsequently suspended the loan because these commitments were not being met. The loan

was reinstated when these objections were satisfied. Subsequently, when the Communist grip on Poland tightened, the unused part of the credit was cut off effective January 31, 1948.

As you know, at the time the loan was made, the Polish Government still included democratic elements, and it was hoped that the loan would assist these elements in fending off full Soviet control. A strong appeal for United States credits to Poland was made by Mr. Mikolajczyk, Vice Premier of the Polish Government and leader of the anti-Communists forces in Poland, when he called on Mr. Truman on December 5, 1945.

Another important reason for making the loan then was the fact that the democratic countries of Western Europe were suffering a severe coal shortage, while Poland had a large surplus of coal which could not be moved for lack of transportation at the Polish mines. The major portion of the loan was intended for the purchase of transportation equipment. Equipment purchased under the loan was subsequently used by the Poles in making heavy shipments of coal to western European countries. This was a substantial factor in the revival of the economies of Western Europe.

Charge: 3 "On July 20, 1949, Mr. Acheson stated that there were no Communists in the State Department. This statement has since proved to be completely false and untrue."

Answer: Mr. Acheson stated at that time that he knew of no Communists in the State Department. This statement has never been proved false. He can reiterate now that he knows of no Communists, Communist sympathizers, or security risks in the Department of State. Moreover, an experienced, capable, and vigilant Security Division of more than 100 trained investigators, whose job is everlastingly to check and recheck the loyalty and dependability of the staff of the Department, doesn't know of any. We have had the benefit of operating with the FBI and either the FBI or the Department has run full field investigations on all our people in sensitive jobs. It can be guaranteed further that if the security and loyalty machinery does turn up a Communist, a sympathizer, or a security risk, or a person of whose loyalty and dependability there is a reasonable doubt, their connection with the Department will be brought to an abrupt end.

Charge: 4. "Dean Acheson has never repudiated his support of Alger Hiss. Previous to this time Dean Acheson sponsored the Hiss brothers to Assistant Secretary of State Adolf Berle, although Whittaker Chambers had denounced them as Soviet agents. Alger Hiss, of course, is in the penitentiary as a perjurer and traitor."

Answer: The several statements about Alger Hill that Secretary Acheson has made in response to questions have been widely misinterpreted.

He has never in any way condoned the offense of which Alger Hiss has been found guilty. The Supreme Court is the highest court of justice in the Nation. It has acted. As far as he is concerned, the decision of the court disposes of the matter.

The allegation with respect to sponsoring the Hiss brothers apparently is an interpretation of Mr. Berle's testimony before the House Un-American Activities Committee when he declared:

"I checked on the two Hiss boys. Specifically, I checked with Dean Acheson, and later I checked when Acheson became Assistant Secretary of State and Alger Hiss became his executive assistant. * * *

"Acheson said that he had known the family and these two boys from childhood and he could vouch for them absolutely."

Mr. Berle's memory is faulty. Mr. Acheson saw Mr. Berle on this matter only once, in March 1941, 2 years after Mr. Berle says Chambers came to see him.

The facts are that Alger Hiss was never Mr. Acheson's assistant nor employed in his office in any capacity whatever, except when Mr. Acheson became Acting Secretary or Under Secretary of State when it could be said that everyone in the Department was under his direction.

When Mr. Acheson became Assistant Secretary of State in 1941, he needed an assistant and arranged for the transfer of Donald Hiss to that position. At the time, Donald Hiss was working for Mr. Blackwell Smith in the Office of Production Management. In March of 1941, Mr. Berle came to Mr. Acheson and said that he had information about one of the Hiss brothers which would make his presence embarrassing to Mr. Acheson and to the Department. Mr. Acheson asked him which brother it was and Mr. Berle replied that he could not tell him.

Mr. Acheson thereupon checked with Donald Hiss and satisfied himself that there was no reason why Donald Hiss was not completely fit to act as his assistant. That is still the Secretary's opinion.

When Mr. Berle states that Mr. Acheson told him he had known these boys from childhood and could vouch for them absolutely, his memory plays him false. The Secretary told him that his former senior partner, Judge Covington, had known them since childhood, and that Mr. Acheson had seen Donald and his wife at social gatherings and respected and liked them both.

The foregoing information was provided under oath in his testimony on the hearings on his nomination as Secretary of State before the Senate Committee on Foreign Relations, the first session of the Eighty-first Congress, on January 13, 1949. The page numbers are 6, 7, and 8.

Charge: 5. "Dean Acheson recommended the abandonment of Formosa after the legitimate government of China had been forced to flee to the island."

Answer: The position of Mr. Acheson and the policy of our Government toward Formosa had been stated in reply to assertion No. 1. This statement shows that the above charge is entirely false.

Charge: 6. "Dean Acheson and his friends, including Owen Lattimore, encouraged a Communist rebellion in China, and they referred in public addresses to the Communists as 'agrarian reformers.' These agrarian reformers are now murdering and torturing American boys in Korea."

Answer. This statement is false—keel to keelson.

United States policy as executed by Secretary Acheson and his predecessors gave Chiang generous and consistent backing—military, monetary, and political. At VJ-day a United States program to organize and equip 39 Chinese Nationalist divisions was half completed and a similar program to provide Chiang with 8½ air groups, somewhat less. Both these programs were completed in the postwar period.

Fifty thousand United States marines were moved into North China to insure a smooth Nationalist take-over. An American sea and airlift shifted nearly a half million Nationalist troops into sensitive areas of North China to enable the Nationalists to take control of the area. These moves made it possible for China's forces to accept the surrender of hundreds of thousands of troops of the Japanese Army which would otherwise have been completely impossible and thereby came into possession of huge quantities of Japanese arms. Moreover, China alone, of all the nations of the globe, continued to receive military lend-lease after VJ-day.

After the foregoing, the United States continued to help Chiang in his struggle with the Communists with grants of economic and military assistance and maintained a military mission with the Nationalist regime to provide military advice. The flow of this aid was interrupted only by the

Marshall mission and for good reason. As early as 1937, Chiang is on record as believing that the differences between the Kuomintang and the Chinese Reds could not be settled by military means—but only by political means. He initiated negotiations with the Communists—with Ambassador Hurley as mediator. General Marshall went to China to replace Hurley at Chiang's invitation to assist in the effort to unite China politically (under Chiang's control) and to demobilize all but 10 divisions of the Red army—ending its existence as a separate military force. The 10 divisions were to become a part of a 60-division Republic of China Army—with the remaining 50 divisions Nationalist troops.

General Marshall strove to arrange a truce—believing that negotiations and civil war could not be conducted simultaneously. He temporarily shut off arms aid because truce efforts had no chance of success if the Nation he represented continued to supply munitions to one of the parties to the truce. When General Marshall gave up his attempt to reconcile the contending parties, the supply of aid to Chiang was resumed. A complete breakdown of that aid appears in the appendix of the MacArthur hearings. Since 1941, the United States has provided the Nationalists with \$1,800,000,000 worth of military assistance and \$1,700,000,000 worth of economic aid.

Secretary Acheson has declared on several occasions that he does not remember ever having met Owen Lattimore—which hardly qualifies the latter as a friend. Four Secretaries of State, including Mr. Acheson, have stated in writing for the official record that Mr. Lattimore exerted no influence on the United States policy—a fact completely obvious to anyone who takes the trouble to compare United States action in the Far East with Lattimore's recommendations. Lattimore was on the rolls of the Department of State for 4 months as a consultant on the Pauley mission on Japanese reparations. He is not in the employ of the Department. He is neither an adviser nor a consultant.

The phrase "agrarian reformer" was not originated by the Secretary of State and as comprehensive a check as was possible of his talks shows that he does not so refer to the Chinese Communists. The record does show that former Ambassador Patrick Hurley in a speech before the National Press Club on November 27, 1945, described the Chinese Reds as reformers. He also declared that "the only difference between Chinese Communists and Oklahoma Republicans is that the Oklahoma Republicans are not armed."

The phrase "agrarian reformer" was also used in 1939 and 1940 by Freda Utey, a reformed Communist writer (she declares she recanted in 1931) allegedly an expert on the Far East. Miss Utey's most recent book *The China Story* has been employed as a source by Senator BREWSTER and Senator MCCARTHY.

Charge 7 "Dean Acheson acted as counsel to Lauchlin Currie when Currie appeared before a committee of Congress to defend himself against proven charges of aiding the Communists in the espionage network."

Answer Mr. Acheson was retained by Lauchlin Currie in connection with his appearance before the House Committee on Un-American Activities on the 15th of August 1948. Mr. Currie appeared before the committee at his own request to testify concerning statements made about him by Miss Elizabeth Bentley. The committee unanimously observed that no charge of Communist Party affiliation was made against Mr. Currie. In contrast to the "proven charges" referred to in the allegation, it is a fact that since Mr. Currie's testimony regarding them no further action has ever been taken.

As for the committee's reaction to Mr. Currie's appearance and as to the Secretary's professional function as a legal adviser, your

attention is directed to a statement by Representative MUNDT, which appears on page 875 of the hearings of the committee of the Eightieth Congress, second session. Representative MUNDT stated: "I think that is all, Mr. Chairman, although I would like to have the record show that Mr. Currie, in addition to having answered questions in a forthright manner, came here without benefit of counsel to whisper in his ear the answer he should give to the committee. I think that is very commendable."

Charge 8. "Dean Acheson stated under oath before a Senate committee before his confirmation as Under Secretary of State that Russia should share in the administration of Japan. It is no defense to now say that that was a long time ago and Russia was our ally. Even the man on the street knew at that time that Russia had been in the war only a few days and had already proven herself a doubtful and dangerous ally."

Answer: At the request of the Department, the staff of the Senate Foreign Relations Committee has searched the committee's records for the period immediately prior to and following the confirmation of Mr. Acheson as Under Secretary of State August-September 1945, and has been unable to find any statement such as the one referred to. A similar search of the records of the Department shows that on September 26, 1945, Acting Secretary Acheson was asked at press conference:

"Can you tell us when and where the Russians accepted the thesis that the United States would be the deciding voice in Japanese policy? Was that at Potsdam or Crimea?"

Answer. I don't think I can comment about that. Of course, as you know, all the allies have accepted the Supreme Allied Commander who is General MacArthur. He must go forward and do things. It is inherent in that decision. Of course, there is no disposition whatever on the part of the American Government to exclude anybody. What we are trying to do is to go forward with the job and work out the best methods of solution that we can.

The foregoing is the only segment that could be found in a voluminous record which could possibly, by any stretch or twist, be construed as placing Secretary Acheson in the position of advocating a Soviet part in the administration of Japan. The extent to which this allegation is an outright misrepresentation is shown by the facts.

The facts are that the machinery for the administration of Japan completely recognized the major role of the United States in the defeat of that country and the dominant United States interest therein, while at the same time recognizing the interests of other countries who shared in the burdens of the war and obtaining their cooperation and support in the administration.

At the time of the surrender, the agreement of the United Kingdom, China, and the Soviet Union was obtained to the appointment by the United States of the Supreme Commander for the Allied Powers who had sole executive responsibility for the conduct of the occupation. This was confirmed by the Moscow Agreement of December 1945, which also established the Far Eastern Commission, consisting of the 11 nations who had participated in the war against Japan, and the Allied Council for Japan, consisting of the United States, British Commonwealth, the Soviet Union, and China. While the FEC was given the task of formulating policy for the occupation, the position of the United States was fully protected by provisions for the use of the veto and the issuance by the United States of interim directives where the agreement of the Commission could not be obtained. The Allied Council for Japan had an advisory capacity only.

During the period that the basic policies for the occupation were being formulated, a

remarkable degree of unanimity and support for the United States policy toward Japan was achieved in the Far Eastern Commission, virtually all of the major decisions being approved by all of the other countries included on the Commission, including the Soviet Union.

Thus, without in any way impinging upon United States responsibilities for Japan, a wide and important degree of international support was obtained for our policies toward that country. The record of the Far Eastern Commission is a bright and all-too-little noticed chapter in post-war cooperation and one in which we and the other participating countries can rightfully take pride.

Charge 9. "Mr. Acheson while heading the American delegation in the formation of UNRRA insisted on the veto to please the Soviet Union and supported all Soviet demands, thus leaving the United States impotent to control UNRRA although the United States put up all the money."

Answer. This allegation is false. Mr. Acheson did not support all Soviet demands and did not insist on the veto to please the Soviet Union or leave the United States impotent to control UNRRA. It is a fact that the Soviet Union on drafting the UNRRA agreement sought to require four-power unity of all matters in the central committee of UNRRA. As Assistant Secretary of State and responsible for the Department's work on this agreement, with the firm help of British and Chinese representatives, he was successful in resisting this Soviet move. The UNRRA agreement which was signed November 9, 1943, is a matter of record. It does not require unanimity of great powers generally on substantive matters either in its policy-determining council, on which all members were represented, or in any of its committees. Save for a few exceptions, such as amendment, nomination of the Director General, UNRRA was governed by majority decisions in fields related to its major function.

This has long been a matter of public knowledge. It can be verified in the testimony before the House Committee on Foreign Affairs, December 7, 1943.

Charge 10. "Secretary Acheson secured the appointment of Alger Hiss to Dumbarton Oaks and Yalta."

Answer. This statement is false and Secretary Acheson has so testified, under oath, before the Joint Armed Services and Foreign Relations Committee.

In response to a direct question from Senator KNOWLAND, he stated that he made no recommendations of any kind to anyone that Hiss be sent on either of these missions. As a routine official duty, Mr. Acheson signed the travel orders for the State Department personnel assigned to go to the Yalta conference just as he would sign routine orders for any delegation. Mr. Hiss was among the group and received his validation for travel in the same manner as the other members.

Charge 11. "On December 16, 1945, Under Secretary Dean Acheson received Juan Negrin, head of the Spanish Communists while he refused at the same time to meet Fernando de los Rios, head of the anti-Communist group in Spain."

Answer: Secretary Acheson did receive de los Rios who called at the Department, December 21, 1945, on what amounted to an invitation resulting from the answer to a question in a press conference. A newsman asked the Secretary whether or not he would receive de los Rios and the Secretary said he "would be glad to receive him." Both Negrin and de los Rios called in a private capacity. De los Rios saw Secretary Acheson after he had already had a lengthy talk with the Chief of the Bureau of Western European Affairs the previous September.

Charge 12. "On December 20, 1945, Dean Acheson granted an interview to Milton Wolff, commander of subversive Abraham Lincoln Brigade, and pro-Communist Vito

Marcantonio, promising them to intervene with Franco on behalf of two condemned Communists in Spain."

Answer: The records of the Department establish that the then Acting Secretary Acheson received a delegation of three Members of the House of Representatives, Ned Healy, of California, Charles R. Savage, of Washington; and Vito Marcantonio, of New York; and five others, including Mr. Wolff. He made no special promises of intervention to the group. The alleged "condemned Communists," Santiago Alvarez and Sebastian Zaparain, had been seized by the Franco military police and were being held on charges for trial. Secretary Acheson explained that the two men were Argentine and Cuban nationals and that any action to be taken by the Department would necessarily be limited to expressions of interest on humanitarian grounds. During this period, Members of the Congress and many private individuals had written the Department to appeal for action. The Secretary's explanation described the carefully worked out official position taken by the Department with respect to all such appeals.

Incidentally, this assertion not only indicates the way in which information becomes distorted and, in effect, false, but also bears close resemblance to other similar assertions which admit their source of information is the Daily Worker.

TELEGRAM FROM JOHN B. ELLIOTT TO SECRETARY OF STATE ACHESON REQUESTING PERMISSION TO MAKE PUBLIC THIS CORRESPONDENCE, JULY 9, 1951

HON. DEAN ACHESON,

Secretary of State, Washington, D. C.

Thank you for your letter of June 28 enclosing your replies to charges of Lieutenant Governor Knight of California. I would greatly appreciate permission to make public this correspondence.

Sincerely,

JOHN B. ELLIOTT.

LETTER FROM JOHN B. ELLIOTT TO LT. GOV. GOODWIN J. KNIGHT TRANSMITTING REPLIES OF SECRETARY OF STATE ACHESON TO MR. KNIGHT'S CHARGES, JULY 12, 1951

JULY 12, 1951.

HON. GOODWIN J. KNIGHT,

Los Angeles, Calif.

DEAR GOODWIN: I am in receipt of a lengthy letter from Hon. Dean Acheson, Secretary of State, replying in detail to the 12 specific charges you make against him in your letter to me of April 24. I enclose herewith copy of Secretary Acheson's letter. You will note that the Secretary, who must be one of the very busiest men in the entire world, is gracious and considerate enough to answer, fully and explicitly, each of the charges contained in your letter. Many of these charges he describes as wholly or partly false. His reply to the others, which he characterizes as distortions, is open and straightforward.

I must now conclude, friend Goodwin, knowing you as I do, that you have been imposed upon by your source or sources of alleged information. Like many others, it would seem you have been "taken in" by this giant, vicious hoax, unscrupulously invented, and intended to destroy the public reputation of the American Secretary of State. All this in the midst of a great world crisis, of unprecedented portent, with complete disregard to the resultant damage to vital interests of the Republic. I asked you, in my letter of May 1, if you cared to give me the sources of the information contained in your charges against Mr. Acheson. To this you did not reply.

You will note that Secretary Acheson accounts for the delay in answering your accusations, by referring to his present extraordinarily heavy public duties. Everyone must

recognize that, I am sure, as reasonably within the facts.

Sincerely yours,

JOHN B. ELLIOTT.

P. S.—I also enclose your copy of Secretary Acheson's letter to me of May 14, which I find I had not hitherto sent you.

J. B. E.

TELEGRAM FROM SECRETARY OF STATE DEAN ACHESON TO JOHN B. ELLIOTT AUTHORIZING PUBLICATION OF CORRESPONDENCE

From Dean Acheson, Secretary of State, Washington, D. C.

To John B. Elliott, Los Angeles, Calif.:

Appreciate your message. No objection to making the correspondence public.

JULY 12, 1951.

HON. DEAN ACHESON,

Secretary of State, Washington, D. C.

DEAR MR. SECRETARY: Herewith is copy of my letter to Lieutenant Governor Knight, of date of July 12, enclosing copy of your detailed answer to his charges.

I am in receipt of your permission to make public this correspondence. Thank you.

Very truly yours,

JOHN B. ELLIOTT.

The St. Lawrence Story—VIII

EXTENSION OF REMARKS OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the eighth of a series of articles entitled "The St. Lawrence Story" which appeared in the August 15 edition of the Minneapolis Star. This article deals with widespread public support for the St. Lawrence seaway and power project found throughout Canada today.

THE ST. LAWRENCE STORY—CANADA ANXIOUS TO BUILD SEAWAY AS UNITED STATES DELAYS ACTION

(By Leo Sonderegger)

(Eighth in a series)

The Canadians have a blind spot. They can't see why the United States balks at going ahead with the St. Lawrence seaway project that the executive branch of our Government endorsed 20 years ago.

"They can't understand," a man in our State Department said, "how two or three interests can hold up the thing."

The Canadian viewpoint is summed up in two deceptively mild statements made to this reporter:

"We have entered into an agreement and want to fulfill that agreement."

"It's very appealing to us to go ahead alone."

A free-hand translation of the first of these diplomatic remarks would go about like this: "We're ready to keep our part of the bargain; how about you?"

The second statement may be translated thus:

"If you don't do something about it pretty soon, we'll finish the job on our own."

The Canadians have been polite for a long time; now they are becoming firm.

Top officials have publicly edged very close to saying: "If you don't, we will." Influential newspapers have asserted more or less bluntly that it's about time this country

makes up its mind. Some of them have predicted that if this session of Congress drops the ball again Canada will run it alone.

Our neighbor to the north has several excellent reasons for doing just that. She also has a number of good reasons for continuing to hold off. There is evidence that the first set of reasons is beginning to outweigh the second.

SEAWAY OUTLET NEEDED

Canada needs the seaway. She needs an outlet for her midcontinent grain and oil. She needs power to turn her industrial wheels. She needs these things more urgently than the United States needs them.

The Great Plains area that will be served by the seaway does not end with the northern border of the United States. It is a geographical region extending over thousands of square miles of Canada, also.

The Dominion share of this region is more rigidly landlocked than our share. We have the Mississippi and its tributaries linking the Midwest with the busy Gulf ports. In Canada the land mass is not split by any comparable river system for cheap transportation.

Excepting the rail lines that stretch across thinly populated areas from mid-Canada to the east and west coasts, the St. Lawrence seaway is the only outlet for the produce of a broad and fruitful region.

Those are wheatlands up there—Alberta, Saskatchewan, Manitoba. Even now, much of the harvest moves down the lakes and the river to Montreal. It is carried along the system of 14-foot canals that Canada built 50 years ago for that purpose.

A substantial tonnage also moves west by rail to coast ports. From there a lot of it goes down the west coast, through the Panama Canal and on across to Europe. The deep seaway channel would absorb that tonnage, cut the sailing distance by half, get the wheat to England many days sooner, many dollars cheaper.

Oil from the newly exploited fields of Alberta is another reason the Canadians yearn for the seaway. They foresee the time when a heavy flow of it will go by pipeline to Superior, Wis., and thence by tanker as far down the channel as it is needed. The tankers are stymied now by the shallow canals.

The Canadians also would use the seaway for shipment of manufactured goods from the heavily industrialized Toronto area.

More than all these things, Canada wants the St. Lawrence power that now pours uselessly into the sea. For Ontario, this is the last undeveloped source of power available.

PROVINCE WANTS MORE ELECTRICITY

The province is desperately in need of it. In Ottawa the electricity is sometimes turned off a few hours a day to conserve the supply. The demands of industry are rising sharply.

The power development, of course, is one phase of the project that Canada could not complete alone. To harness a river, you have to dam it; you can't stop at a boundary line in the middle.

Ontario has already entered into an agreement with the State of New York, and they would be constructing the Barnhart Island powerhouse now if this country's Federal Power Commission had not turned down the application.

If nothing is done by Congress, the application almost certainly will be renewed.

It is often said that Canada will not go ahead with the seaway on her own because it would cost too much. On paper, putting channels in on the northern side of the St. Lawrence would cost some \$30,000,000 more than present estimates.

CANADA COULD DO IT CHEAPER

The truth is, however, that Canadian engineers figure they could really do the job for considerably less than the total arrived at jointly.

We would do it a little more economically than the United States, a spokesman said.

He summed it up this way. Canada figures the seaway could be done for something like \$400,000,000. Over a 5-year period that would be about \$80,000,000 annually, a relatively small amount against the present capital investment of about \$3,400,000,000 a year.

Thirty-five years ago, the Canadians say, the idea of spending \$80,000,000 a year on a project would have been startling. Now, it is said, the seaway would be "just another project, a big project, true, but not beyond reason."

There would be a material and manpower problem if Canada decided to proceed. The several thousand men who would be required on the scene are also needed elsewhere. Probably our own supplies of steel and other materials would be tapped.

If Canada did it alone, would she levy tolls to pay the bill? Probably not. The Canadian Government traditionally has regarded transportation as a necessary economic lubricant. And by treaty, Canada cannot impose discriminatory tolls on United States shipping.

The Canadians have another particular interest in the seaway—Labrador ore. They look at it from two angles, as pointed up in this remark:

"We have a direct and dependent interest in your steel production. It is not just a matter of selling the ore; we want to be able to buy the steel."

SEAWAY CALLED MUTUAL BOND

The Canadians rightly consider the seaway a natural international development. It seems a little silly to them that there should have been so much talk, over so many years, about a project that would benefit both countries so markedly. There has been close cooperation in the past; they can't see why it should stop now.

One aspect of this close cooperation is trade. Secretary of State Acheson underlined this in his testimony before the House Public Works Committee.

"Each country," he said, "exported to the other more than \$2,000,000,000 worth of goods in 1950, the largest commercial interchange that has ever occurred between two nations."

The friendly relations coin, unfortunately, has a reverse side. People in our State Department consider the seaway impasse the most serious irritant in our present direct relations with Canada. The Canadians have a vital interest in the project, but no way of getting their case across to Congress.

The jackpot question, naturally, is whether, with all these considerations in mind, Canada will in fact go ahead with the seaway on her own.

This is the informed, if somewhat hesitant, guess of an observer in our Government.

"Barring all-out war, the Canadians will go ahead and build it within 4 years."

Lionel Chevrier, Canadian Minister of Transport, is high among those who think Canada ought to go ahead on her own.

The best evidence nevertheless indicates that Ottawa has made no firm decision as to whether to proceed if Congress fails to act. The Canadian Government is watching us. When it sees what we do—or, more likely, what we don't do—it will make up its mind.

Meanwhile the Canadians may be forgiven if they remind us of what Maj. Gen. Lewis A. Pick, Chief of United States Army engineers, said in a talk at Duluth last June:

"We've got to pick out the things that will help to make this Nation great. We've got to stop this dilatory stuff. If we stop building the United States, in 10 years we'll start becoming a decadent Nation. Let's build."

Am I My Brother's Keeper?

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. SCHWABE. Mr. Speaker, this is the subject of a very timely editorial which recently appeared in the *Tulsa Daily World*, published at Tulsa, Okla.

This worthy article speaks for itself and should challenge the attention of all who cherish the desire to preserve our great country and its institutions.

AM I MY BROTHER'S KEEPER?

Can the United States support the rest of the world?

Is this Nation bankrupting itself with an astronomical foreign-aid program?

Will our official munificence bring us the ultimate hatred of the beneficiaries of this largess?

These questions are pertinent and with substance since Senator TOM CONNALLY, Democrat and Chairman of the Senate Foreign Relations Committee, charges the Truman administration with attempting to cover the globe with its program of economic, military, and political aid.

"The United States cannot subsist itself, cannot preserve its own economy and its own freedoms, if we have got to take care of the whole world," the Senator said in probing the administration's request for an \$8,500,000,000 foreign-aid program for the current fiscal year. Although a strong partisan in politics, Senator CONNALLY's remarks regarding this internationalized WPA carries impact because heretofore the Truman administration has been virtually immune from criticism and control within party ranks.

Hopes that the United States might soon be able to taper off its foreign-aid program, repeatedly disappointed since the end of World War II, vanished when the Korean aggression produced a new and long-lasting emergency. The effect of this emergency has been to shift the emphasis in foreign aid from economic to military assistance. The European recovery program, which has absorbed the major portion of aid funds in the postwar world, is now becoming a defense-support program, and the mutual defense assistance program is rapidly moving into top place.

That the administration program betrays a great want of prudence and discernment is obvious. Currently there are 23 Federal agencies conducting some sort of foreign economic operations. The combined dictates of reason and experience call for a slow-down in foreign aid. The United States Department of Commerce reveals that the United States of America spent \$81,905,000,000 in foreign aid throughout the world from July 1, 1940, to March 31 of this year. Here is the breakdown:

Lend-lease	\$49,092,000,000
European recovery	9,585,000,000
Civilian supplies	5,623,000,000
UNRRA and interim aid	3,526,000,000
Philippine rehabilitation	623,000,000
Korean and far-eastern aid	290,000,000
Mutual-defense assistance	837,000,000
Greek-Turkish aid	654,000,000
China stabilization, military aid	625,000,000
Inter-American aid	196,000,000
Special British loan	3,750,000,000
Export-Import Bank	3,141,000,000
Direct loans	2,883,000,000
Loans through agent banks	258,000,000

Credit agreement offsets to

grant	\$1,256,000,000
Surplus property	1,334,000,000
Other	1,374,000,000

This \$81,000,000,000 does not include any direct cost of World War II or the Korean police action—all paid for by the United States.

Further analysis shows the United States of America generosity was all-inclusive. Great Britain received \$35,857,000,000 and, believe it or not, Russia got \$11,241,000,000. France came next with \$6,847,000,000 and China follows with more than \$3,000,000,000. Also given aid were Austria, Belgium, Luxembourg, Denmark, Germany, Greece, Ireland, Italy, Netherlands, Norway, Sweden, Trieste, Turkey, Czechoslovakia, Finland, Poland, Yugoslavia, American Republics, Israel, Australia, Canada, India, Indonesia, Japan and Ryukyu Islands, Korea, New Zealand, Philippines, Saudi Arabia, and Union of South Africa. In addition were anonymous others receiving a total of \$16,400,000,000.

As a people we have an intense sensitivity to injustice and other countries are well aware of it. Our helping hand stretched out after World War I, and it has now atrophied in that position. With the exception of little Finland the countries we then aided have cynically repudiated their obligations. Following World War II the pleas for aid multiplied and magnified. None of these nations have our immense capacity for ceaseless progress—that's admitted. And they have obstacles that are difficult—but not insuperable.

No matter whether this foreign aid is labeled grants, loans, or what have you, there is small likelihood of repayment to American taxpayers. In the foreign press we daily see the taint of fretful ingratitude. With strength and constancy we have aided the world. We are confident to await the sentence of impartial posterity and gain the applause of future ages.

In the meantime—how long will this go on?

Is Korea in Vain?

EXTENSION OF REMARKS

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from *Life* magazine, containing an eloquent letter from a housewife, sizing up the situation in Korea in a most logical way:

SO MUCH GOOD, NOBLY SPENT

President Truman and Secretary of State Dean Acheson have every reason to believe that their efforts to end the Korean war suits most Americans. General Ridgway, taking the firmest position possible in the circumstances, is entitled to the same belief. But the men who make and carry out United States and U. N. policy in Korea ought to be aware that the support for their course is neither unanimous nor wholehearted. Make no mistake—many Americans are troubled by this business of compromise without victory.

Below is the story of a troubled American who is also a remarkable young woman. She is Mrs. Katharine Tabor, 27, of Dallas. The interesting story tells how Katharine Tabor came to be a serious student of United States

foreign policy. It is enough to say here that she is the widow of one of the first American casualties in Korea—Lt. Stanley E. Tabor, of the Army, who vanished at Taejon in July 1950 and was officially reported dead last May. Mrs. Tabor did not like a recent Life editorial "What's the Use of Korea?" (Aug. 6) and has written a letter telling us so. In the editorial we said, among other things, that the Korean war was part of the price paid for the education of President Truman and Secretary Acheson. Arguing that the war can be made worth while if our leaders do their duty, we also said that the least result to be expected is firm notice to the Communist alliance that any further armed aggression in Asia will be met and defeated without compromise. Mrs. Tabor's letter of dissent is so eloquent and so much to the point that we share it with our readers in the remainder of this space:

DALLAS, TEX., August 2, 1951.

SIRS: To a war widow, you seem unduly complacent.

Our men did not die in order to educate Truman and Acheson. Such education should have been unnecessary, and any price paid in blood for it is too high. And anyway, we still have no assurance that they now fully understand the nature and purposes of the Communists, are determined to defeat them, and are sufficiently and effectively mobilizing us—that they are really buying time.

If the war has proved to the Communists that we are capable of fighting them, it has also demonstrated that we lack determination to win, that we are willing to compromise and appease. Our men did not die to show they were capable of fighting the Chinese Communist to a stalemate.

And if the fact that our forces won the battle has any meaning, then why can we not at least regain the territory in North Korea that was ours until the Chinese captured it and pushed us back and held us there? Why can we not at least liberate all Korea? Our battle successes and the war training that those who lived have received do not justify our casualties.

Nor is the least that you ask for enough to right the injustice and make it worth the fighting. They did not die in order that we should still have to give notice to the Chinese Communists that further aggression would mean war. Such notice should not at the conclusion of the war be necessary. They died, indeed, to make it unnecessary, to destroy the enemy's will to fight, to effect by their actions what you would have us do by words. They died believing their actions to be a contribution to the bold uncompromising stand that would destroy the Communists' will to fight and thereby prevent a world war, or at least by strengthening the free world's courage and determination insure ultimate victory. They died believing that those who lived after them would fight on till the enemy was defeated. We have broken faith with those men. We have not made such a stand. That alone would justify their dying. Our forces have not won what they were fighting for, and that is what matters.

The display of moral weakness which we have made in Korea can only encourage the Communists to try again, can only assure them that they have nothing to lose and everything to gain by aggression, that next time they may hope for at least a similar compromise. Even if such words as you call for were spoken, what reason is there to expect the enemy to be warned that any future aggression will be punished and defeated when we do not punish or defeat the present aggression? No words that we now speak can erase the effect of our actions.

We have prevented them from taking South Korea, but the Koreans themselves have paid too high a price for such freedom

and security as we can now guarantee them. We have not prevented the Communists from doing what all they set out to do—from retaining power in North Korea, from demonstrating our weakness and their strength, from humiliating us, demoralizing the anti-Communists, and enhancing their own prestige throughout Asia. In fighting such a power as the United States to a stalemate, the Chinese Communists have won a moral victory that will make further conquests that much easier, that much more difficult to prevent.

Considering the plus factors which you enumerate, it is true that we are not very much worse off than when we started. That is small comfort. It does not allay the feeling of horror, the tragic qualm that the compromise raises in us. So much good has been nobly spent to expulse the evil, and still the evil is not expulsed but remains prosperous. They had no right to send men to die without intending to win. If they had wanted to, they could have defeated the Chinese Communists. They have not used every means available to do so. It is not right. It is intolerably unjust.

Sincerely yours,

KATHERINE C TABOR
(Mrs Stanley E Tabor).

THE EDUCATION OF AN AMERICAN

Like so many others of their generation, Katharine and Stanley Tabor thought of themselves as liberals when they got married in Dallas in January 1950. They were Republicans, but not so you'd notice it. "We both had sort of liberal ideas," Mrs. Tabor has since said, "and for a long time we believed the anti-Chiang line." She had studied at Stephens College and Syracuse University, and her husband had taken an engineering degree at Texas A. & M. after he came home from World War II. Before they married he went back into the Army, with a regular commission as first lieutenant. He was ordered to Japan, and Mrs. Tabor was all set to follow him when the Korean war started and Lt. Stanley Tabor was lost at Taejon.

When that happened Katherine Tabor determined to find out what led to Korea. At her parents' home in Dallas, she began to read all she could get her hands on about United States foreign policy. She also read Marx's Communist Manifesto, and she studied up on the differences between socialism and capitalism. By last November, when Mrs. Tabor first told us about her self-education, she had made up her own mind on a fundamental point. She had concluded that the makers of United States foreign policy since World War II had never been determined to defeat world communism—their purpose, as it seemed to her, was always something else.

Get Bill Oatis Out

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. HARVEY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an editorial from the Muncie (Ind.) Star of August 16, 1951:

GET BILL OATIS OUT

At long last the House of Representatives has passed Representative BEAMER'S resolu-

tion demanding an immediate rupture of trade relations with Czechoslovakia. Its purpose is to force the Czech Communist Government to release Bill Oatis, who was railroaded into a Communist jail on false charges of espionage.

It has taken the House long enough to act to protect the rights of an American citizen abroad. It has taken the Senate even longer. But the worst aspect of this whole case is the fact that congressional action should have to be taken at all.

The State Department had full authority to act forcefully and quickly to secure Oatis' release. It has done virtually nothing but protest, send polite notes, and plead inability to do anything else.

The overwhelming vote in the House for action against the Czechs reflects the anger, humiliation, concern, and resentment of the American people over the way in which an American citizen has been mistreated by a foreign government. The obvious purpose of the Czech Communist action is to discredit the United States in the eyes of the world. Because our State Department has resorted to hand-wringing and innocuous protest, that is exactly what has happened. The tough action demanded by the House, if put into practice by our ill-handled State Department might, however, reverse that impression.

When the Senate concurs in the House resolution, as is certain, all trade should be suspended immediately without any legal quibbling. The past acts of the Czech Government restricting freedom, ignoring treaties, and violating agreements should be laid before the world. At the same time the border of Czechoslovakia in Western Germany should be closed tight by United States troops to prevent any movement of trade to and from that country through that area. All nondiplomatic Czechs in business or other professions in the United States should be sent home.

Until Bill Oatis is set free the United States should consider the Czech Communist Government an outlaw to be shunned by all free societies. The most valuable possession in the world is American citizenship. Nothing should be left undone by our Government to protect the rights of all Americans everywhere in the world.

A Decalog for Members of Congress

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 21, 1951

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article by the junior Senator from Connecticut [Mr. BENTON] which appeared in the August 12, 1951, issue of the New York Times Magazine under the title "A Decalogue for Members of Congress."

This challenging statement of principles should stimulate us all to a more thoughtful consideration of the obligations and opportunities of a Member of Congress, and will, I hope, be helpful in encouraging the self-analysis which must be at the root of all efforts to lift the standards of conduct of public officials.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

**A DECALOGUE FOR MEMBERS OF CONGRESS—
SENATOR BENTON OFFERS TEN PRINCIPLES
OF CONDUCT TO COUNTER THE "MORAL CRISIS"
IN OUR POLITICAL LIFE**

(By United States Senator WILLIAM BENTON)

Congress needs a code of ethics. It needs a code of conduct to parallel its powers, its rules, and its customs. Good government—a fundamental social expression of a civilized society—can exist only where men formulate standards of decent behavior and attempt conscientiously to abide by them. These standards should be based not upon "I want" or "I fear" but upon "I ought."

Professor Toynbee has traced the decline and fall of many ancient civilizations to the undermining of their moral fiber. The more successful they became, the more certain that their power and wealth would corrupt and thus destroy. Constitutional democracy, on the other hand, has steadily progressed through the ages. In constitutional democracy moral restraints have tempered political power.

Today the challenge to good government blankets the world. In the current battle for the minds and hearts and loyalties of peoples everywhere, our greatest weapons are moral ideas. Modern Communist leaders reserve their bitterest scorn for what they call "bourgeois morality." They know that the real chasm which separates us from them is not our stockpile of atom bombs or our industrial genius, but our reverence for a few great ideas—ideas which reach back more than three thousand years.

Every public-office holder, in every level of government, shares this heritage. But since it is the legislative process which is the heartbeat of democracy, it is the Congress which largely sets the tone of American political morality.

We in the Senate and the House need a constant reminder that, as Senator Fulbright recently said, "legal behavior is not necessarily ethical behavior." I have made an attempt—a quick, rough attempt—at drafting an ethical code, a kind of Congressional Ten Commandments or Decalogue. I presented this code to Senator Douglass' subcommittee, which has been holding hearings on the Fulbright resolution to establish a Federal Commission on Ethics. I presented it as a basis for discussion in and out of the Congress. My hope is that my background in business, education, and the executive branch of the Government, coupled with relative newness in the Senate, may give me fresh perspective on this old problem.

I welcome any additions or qualifications. My goal is the adoption of a code as a part of the swearing-in procedure in the Congress. Ethical codes, like conscience, do not make men perfect, but, at least, in the word of an old New Englander, they make us "durn uncomfortable when we're being bad."

Here is my suggested Decalogue:

As a Member of the Congress of the United States, I do solemnly subscribe to the following code and do pledge my strength and honor to its fulfillment:

I

In the same sense in which a judge debars himself from decisions in which he has a direct personal financial stake, so I shall debar myself from legislative decisions, or, if I take action or choose to vote, I shall fully disclose the nature of my interest.

This First Commandment is, in essence, a basic ethical principle which runs through our entire legal system. A few years ago a Representative used his tremendous power as chairman of a House committee to arrange

for war contracts which would bring large profits to a company in which he had a financial interest. He was convicted and imprisoned. This was right and just.

Unfortunately, the proper formulation of an ethical standard in this area is not easy. Carried to its logical absurdity, this Commandment would make it impossible for any legislator to vote on a tax bill. Furthermore, most Members of Congress have financial interests which are directly or indirectly affected by much general legislation. The dividing line cannot be exactly defined, but it can and should be sought—and sensed.

For example, I publish the Encyclopedia Britannica. I wouldn't hesitate to vote for measures to increase world trade, but my ethical indicator should certainly register "danger" on a bill to subsidize the export of reference works.

II

I shall never use my office to exert extra-legal pressures over the decisions of executive or administrative agencies.

Some Members of Congress who would not dream of advancing an issue in which they have a private stake will not hesitate to bring pressure on executive officials in behalf of an important constituent or campaign contributor. Commandment II is aimed at just this type of persistent and improper congressional behavior. There are few more demoralizing experiences for a conscientious Federal official than to be subjected to such nagging.

The staff of every congressional office understands that it has an obligation to facilitate communication between constituents and Government offices. But each should be made to understand that it does not have the right to demand favors that might be termed extra-legal. Nothing else in our political system wreaks more moral havoc than the assumption that the best way to get what one wants is by political "pull."

III

I shall treat witnesses who testify before committees on which I sit with courtesy and fairness, following self-imposed limitations which for centuries have been the hallmark of the judicial process.

Personal abuse has more than once been a feature of congressional hearings. Congressional hearings are, as we all recognize, one of the most important parts of the legislative process. Fortunately the overwhelming majority of Members of Congress do treat witnesses with fairness and courtesy. But when witnesses are beaten with a psychological rubber hose, when conscientious public servants and distinguished private citizens are made to serve as targets for irresponsible publicity seekers, the result becomes a travesty of the democratic system.

When I served as Assistant Secretary of State there was one occasion, in my attempts to preserve the Voice of America program before the Appropriations Committee, when I wished that the honorable conventions of dueling had not become outmoded. I know businessmen who have left Government service because of their fear of possible indignities in congressional cross-examinations.

IV

I shall not abuse my privilege of congressional immunity; I shall not say things on the floor of Congress that I am not prepared to say outside, nor shall I betray the official confidence of the Congress or of any committee thereof.

Congressional immunity exonerates Members on the floor from the ordinary laws of libel and slander. There are good reasons for such immunity, but its abuse has been monstrous in recent years. A way must be found to encourage the most careful restraint. In my opinion, Senator McCarthy

has lowered the respect of decent people for representative government by his attacks upon the character of respectable citizens from the sanctuary of the Senate floor.

Almost as reprehensible is the "leaking" of specific confidential information by legislators, sometimes to gain the support of powerful commentators or favored reporters. The Congressman who leaked to the press the number of B-36's in our Air Force is hardly in position to hurl accusations about security risks among civil servants.

The problem, however, is far larger than military secrets. The convention of having certain kinds of remarks made off the record is partly designed to protect the reputation of individuals before all the facts are known and sorted and weighed. If allegations are leaked to the press, an innocent man may find his reputation destroyed.

V

I shall not indulge in personal vilification of any kind, but I shall not hesitate to criticize public figures and public policies with determination and courage whenever facts of a public nature justify such criticism.

Commandments III, IV, and V of my decalogue all revolve mainly around abuse of the congressional privilege to talk—in committee and on the floor.

At the same time it must be emphasized that the investigative and deliberative functions of the legislator require him to speak out courageously, to root out crime or correct error.

VI

I shall not vote on any issue without an attempt to consider the voiceless interest of the unorganized in our society.

No one who sat, as I did in May and June, through six weeks of hearings before the Senate Banking and Currency Committee on the question of extending and strengthening the Defense Production Act, can ever again doubt the effectiveness of organized pressure groups in getting the votes they want—or the importance of the ethical issues involved in the crude favoritism shown to such groups. The committee heard from scores of witnesses—from meat producers, wool growers, real-estate operators, small business and big business, small agriculture and big agriculture, the NAM, the AFL, and the CIO. Most witnesses wanted controls for the other fellow first, or wanted no controls at all.

What about, one wonders, the little fellow who wasn't there? The annuitant, the pensioner, the housewife—the unorganized millions of consumers? Inflation may annoy the strong, but it destroys the defenseless. The general welfare is far more than the sum of the demand of particular interest groups.

Commandment VI pledges each member of Congress to heed that voiceless interest, the general welfare. In all committee hearings one empty chair should be set aside for Banquo's ghost—for the welfare of the tens of millions of unorganized. Special-interest groups are a natural part of democracy, but their demands must be measured in terms of a public interest which transcends the conflicting goals of organized lobbies.

VII

I shall strive constantly to interpret the interests of my constituents in the perspective of the total national interest.

This Commandment is directed to the most difficult special-interest group with which any Congressman must deal: the voters who elected him. The members of his district or State roughly correspond to stockholders in a corporation. The voters feel he is their man, that he works for them. His dilemma is to win their understanding when he puts the national interest, often a long-range interest, above their local, and often short-range, benefits.

Representative government sees to it that the various local and group interests are considered in the making of national policy. Representative government does not, however, necessarily insure that the national interest shall be considered. Witness, for example, the depredations of the silver bloc and the beef lobby.

The guiding principle to be established for every Member of the Congress should be—to paraphrase an old business slogan—that “what is good for America is good for my Congressional district.” This requires a high degree of statesmanship. Many profess it. Few attain it.

Let us take one phase of the record on the Defense Production Act as an example. The Nation owes a debt of gratitude to Senators MORSE and ANDERSON, who courageously opposed the beef interests in their own States. Charles Wilson and Eric Johnston merit public acclaim and support for their moral courage in putting national interest above the pressure of the big business lobbies which some mistaken people thought they represented.

VIII

I shall try to be loyal to the promises of my political party, and thus strengthen party teamwork and party responsibility in the Congress.

In my opinion the examples of statesmanship just cited can be sustained and extended by strengthening party teamwork on the floor. Hence Commandment VIII.

The Lone Ranger is an attractive figure on the mesa, but in politics and in football he makes less sense. The quarterback who plays to the grandstand is rarely as useful as the quarterback who works with the team. The two major parties in America formulate platforms every four years and party policy at intermediate intervals. The American people have a right to expect that party steering committees can rise above the indictment that they seldom meet and never steer.

Furthermore, the strengthening of party teamwork in the legislative process can mean progress toward correcting the vast diffusion of effort which constitutes perhaps the most serious practical problem facing Congress today. The atomization of power in the Congress leads to irresponsible action and to a dispersal of energies which America can no longer afford. Teamwork does not mean blind obedience; it merely means the cooperative relationship of courageous individuals.

IX

I shall not waste my own or my colleagues' time with irrelevant and inconsequential talk in committee or on the floor.

During the days of gas rationing in World War II, patriotic signs went up everywhere: “Is this trip really necessary?” A few signs should be hung around Capitol Hill asking, “Is this talk really necessary?”

The word “bunk” comes from the long-winded oration of a Congressman from Buncombe County, N. C., back in 1820; when his colleagues complained, he admitted he was just “speaking for Buncombe.” Buncombe became bunkum and finally bunk. The accumulation of Congressional irrelevances, or bunk, occupies hundreds of pages in the CONGRESSIONAL RECORD, and adds up to months of time of the Senate and House.

It is true that what is irrelevant to one legislator may have top priority to another, but Senate procedure can become a shambles when debate on one measure may be interrupted for days or weeks by talk on other subjects. At the least, the Senate should adopt and enforce a rule requiring debate to be germane to the pending business, a rule which has operated effectively in the House and in most parliaments of the free world.

X

Whether as a member of the majority or the minority, I shall attempt in all my actions and words to educate and clarify, never to obscure or confuse.

The target of this last commandment is the public. In doing his full part, each individual Congressman has a duty to educate and clarify public opinion, in the Nation's interest. President Roosevelt once said that the statesman's first job is to educate. Modern legislation is so complex in much of its substance that citizens (and legislators) suffer from an almost perpetual intellectual frustration. Most of us in Congress are not experts, and it would be a national calamity if we became experts. Our job is to interpret the talk of the experts so that complex issues are reduced to understandable terms.

When legislators fail to do this, or when they deliberately obfuscate, they are contributing to the downfall of constitutional democracy.

By presenting my Decalogue at this time I do not remotely imply any special reflection on the membership of the present Congress. Most of the problems I am discussing are as old as organized government. Few recall today some of the gross abuses on behalf of personal and group interests in the first Congress under our first President.

While I condemn those ethical transgressions which have occurred in recent years, such misdeeds should not be allowed to obscure the many good things in the current record of public administration. To cite one of many examples, billions in postwar foreign aid have been administered by ECA without a breath of scandal. To cite another, billions were dispersed under two great public servants, Secretary of Commerce Jesse Jones and Assistant Secretary Will Clayton, and two thousand plants were built during the war, and no charge of wrongdoing has yet developed from any source. Tens of thousands of people participated in this operation. I shall go further and attest to the fact that I have seen more moral courage displayed on many issues by many on Capitol Hill than I have seen in thirty years of experience in and around the business community.

Nevertheless, the combination of money, influence, and power will always tempt the weak and the guileless in public office. Our salvation is that human behavior is, in part, socially conditioned. The code I have suggested would go a long way toward helping to create an atmosphere at the Capitol in which ethical standards and moral courage would flourish.

Secretary Chapman Calls for Mobilization of Nation's Mineral Resources

EXTENSION OF REMARKS

OF

HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. D'EWART. The United States Bureau of Mines issued a press release last Sunday, August 19, entitled “Chapman Urges Mobilization of Mineral Resources.” The Secretary of the Interior calls for “intensified exploration of mineral deposits and expanded mining of known reserves as the answer to an alarming decline in this Nation's level of self-sufficiency in many strategic and

critical minerals and metals.” Secretary Chapman also stated that “This country's trend toward greater dependence on foreign sources for some of our most essential metals and nonmetallics must be reversed.” The release also called attention to the fact that “in the 6 years since the end of World War II, the ratio of domestic mine production to consumption of primary material in 38 important industrial minerals has been decreasing.”

I heartily endorse Secretary Chapman's statements as to the need for the mobilization of our Nation's mineral resources. No phase of the national security has been more neglected. However, I wish to bring attention to the fact that the Congress, in passing the Defense Production Act of 1950, authorized the President, through delegated agencies, to expand the domestic production of essential minerals and metals by assisting in the exploration, development, and mining of domestic mineral deposits by private enterprise by means of Government loans, advances against production, Government participation in the cost of exploration and development, contracts and guaranties, incentive payments or overmarket prices for marginal production, and other forms of assistance.

I also wish to call attention to the fact that although responsibility for the mobilization of domestic mineral resources under the Defense Production Act has resided in the Secretary for the past 10 or 11 months he has neither taken nor proposed specific programs which would accomplish the end result he now calls for—apparently from the new Defense Materials Procurement Agency being created by the President, to which he expects to nominate Jess Larson as Administrator.

The record of the Secretary's Defense Minerals Administration stands in evidence of his utter failure to mobilize this Nation's mineral resources during the period he was charged with such responsibility. However, I urge that the Secretary and his Department extend all possible assistance and cooperation to the Defense Materials Procurement Agency and its Administrator; they will need such help if they are to mobilize the Nation's mineral resources as now called for by the Secretary of the Interior and which our national security demands.

The Bureau of Mines press release follows:

CHAPMAN URGES MOBILIZATION OF MINERAL RESOURCES

Secretary of the Interior Oscar L. Chapman today called for intensified exploration of mineral deposits and expanded mining of known reserves as the answer to an alarming decline in this Nation's level of self-sufficiency in many strategic and critical minerals and metals.

This country's trend toward greater dependence on foreign sources for some of our most essential metals and nonmetallics must be reversed, said Secretary Chapman.

While he pointed out that the domestic minerals industries have been doing a good job to supply the ever-increasing demands of the civilian and military economy, further expansion of sound projects is possible under the Government-assistance programs

authorized by the amended Defense Production Act.

Secretary Chapman said he was convinced that, within this framework, the American minerals industry can meet demand with respect to several important raw materials. He said, however, the industry must plan not only for the present defense emergencies, but also for the long pull in the years to come when domestic supplies of certain minerals may become more scarce.

Accelerated exploration and development of additional ore reserves, improvement in present mining and metallurgical practices, utilization of marginal deposits, elimination of all possible waste, and the development of alternate materials, particularly those from more abundant sources, are some of the remedies proposed by the Secretary.

A chart prepared by the Bureau of Mines reveals that in the 6 years since the end of World War II, the ratio of domestic mine production to consumption of primary material in 38 important industrial minerals has been decreasing. Estimates for 1951, compared with figures for the 1940-44 period, show that the United States has a lowered self-sufficiency in 25 commodities, including such metals as copper, lead, zinc, and iron ore; an improved position in only 7; and an unchanged situation in 6.

Comparing 1951 estimates with the prewar period of 1935-39, the Bureau of Mines reports that there is a lowered self-sufficiency in 21 commodities, improving self-sufficiency in 12 commodities, and an unchanged situation in 5.

These estimates, the Bureau of Mines pointed out, illustrate that while there has been a general lowering of the self-sufficiency for a generation or more, the most noticeable drop occurred after World War II. This war itself exacted a tremendous toll in mineral resources, but the ever-expanding demands of the postwar years are claiming an even greater stock of our irreplaceable natural resources.

The chart entitled "United States Self-Sufficiency in Principal Industrial Minerals," which contains the data of the Bureau's survey, covers 38 minerals and mineral fuels. Three periods are shown—the prewar era of 1935-39, the World War II period of 1940-44, and current 1951. Self-sufficiency is shown as a percentage, representing the ratio of domestic mine production to United States consumption of primary materials. For instance, in 1951 the Bureau estimates that United States mines will produce 65 percent of the country's requirements of primary copper and import most of the remaining 35 percent. Thus the copper self-sufficiency is described as 65 percent. Similar percentages are given for all of the 38 commodities.

Bureau estimates for 1951 reveal that there are only nine commodities which the United States will produce this year in sufficient quantities to meet or exceed consumption demands for primary materials. They are sulfur, molybdenum, anthracite, bituminous coal and lignite, phosphate rock, salt, natural gas, helium, and magnesium.

In the 90-100 percent self-sufficiency range this year are nitrates, iron ore, and petroleum. Ilmenite and potash are in the 80-90 percent bracket, while the self-sufficiency range is 60-80 percent for copper, zinc, rutile, and fluorspar.

There are seven strategic commodities for which this Nation is virtually dependent upon foreign sources this year. They are industrial diamonds, quartz crystals, tin, chromite, nickel, strategic mica, and long-fiber asbestos. The United States will produce a minute percentage of its tantalum requirements this year, 8 percent of the manganese needed in making steel; 9 percent of its mercury; 10 percent of its cobalt; 20 percent of flake graphite, 38 percent of baux-

ite; 55 percent of lead; and 26 percent of its antimony needs. The difference in this mine production and consumption of primary materials has to be filled in from other sources, largely by imports and some by the recovery of scrap materials.

In evaluating the mineral position of 1951 with that of the World War II period, the Bureau's estimates reveal the following:

Declining self-sufficiency in 25 commodities: Nitrates, iron ore, petroleum, potash, zinc, copper, fluorspar, bismuth, lead, tungsten, cadmium, arsenic, bauxite, flake graphite, mercury, manganese, platinum metals, tantalum, long-fiber asbestos, strategic mica, chromite, molybdenum, phosphate rock, magnesium, and nickel.

Improved self-sufficiency: Sulfur, anthracite, bituminous coal and lignite, salt, ilmenite, rutile, and antimony.

Situation unchanged: Natural gas, helium, cobalt, tin, quartz crystals, and industrial diamonds. (Note that three of these, tin, quartz, and diamonds, represent a continued virtual dependence on foreign sources.)

Airborne Operations in National Defense

EXTENSION OF REMARKS

OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a resolution adopted at a recent convention of the Eighty-second Airborne Division Association in Chicago.

This resolution came to me from Father George B. Wood, rector of the Trinity Episcopal Church in Fort Wayne, Ind., the former division chaplain, who has been for 2 years president of the association. It reflects the concern of these veterans as to an important aspect of our defense program.

The resolution follows:

Whereas the veterans of the Eighty-second Airborne Division, world famous for its spectacular and successful operations in Sicily, Italy, Normandy, and Holland, have, for the fifth time, foregathered in annual convention to renew the esprit d'corps for which that group of 58,000 veterans is justly proud, to consider problems of national defense, and to join again in tribute to its honored dead, now numbering 3,228; and

Whereas it is the consensus of this convention that airborne operations provide one of the greatest military weapons of modern times, wherein speed, mobility, and freedom from cumbersome concentrations of troops and equipment is essential; and

Whereas it has come to the attention of this convention that airborne potentialities are not receiving the emphasis required for the maximum efficiency of our Military Establishment: Now, therefore, be it

Resolved by this convention, That the President and Congress of the United States and the proper military authorities are hereby urged, in the interest of national defense, to place greater emphasis on the value of airborne operations, to increase the number of such airborne troops, to provide in greater quantities the modern and effective troop-carrying planes which have been developed for such purpose and generally to maintain

airborne operations in the high position which, through repeated tests in major battles, they justly deserve; and further

Resolved, That in the interest of national defense and for the love of the country for which the veterans of the Eighty-second Airborne Division have bled and died, we, the surviving veterans of that division hereby pledge ourselves to work individually and jointly until the objectives of this resolution are fully attained.

Admission to Army and Naval Colleges

EXTENSION OF REMARKS

OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. RAMSAY. Mr. Speaker, on August 16, I introduced H. R. 5202, which provides that all cadets appointed to West Point and all midshipmen appointed to the Naval Academy would be selected from the enlisted ranks of the various services, provided that no man will be appointed until he has served a minimum of 1 year in the enlisted ranks and proves his qualification through a service-wide competitive examination.

I believe that the system set forth in this bill would serve a number of purposes, all aimed at attaining the highest standard of officer in the Armed Forces of the United States.

An officer who has served a term as an enlisted man in one of the Armed Forces would, because of that service, be better able to understand the duties expected of an officer, and, moreover, what an officer can expect from the personnel subordinated to him. This officer would be endowed by his enlisted service with a much wider scope of the working mechanism of the service.

The present system of congressional appointment, while taken as a serious and important matter by Congressmen and Senators, is faulty in itself. Various means are used by Members in selecting the young men to whom they give appointments. I, myself, use the system of a competitive civil-service examination. Others employ other ways of judging scholastic abilities.

These methods, however good for judging scholastic ability, do not supply an indication of the leadership qualities of the appointee. Leadership ability is the prime factor in a good officer, and the only way to discover and develop this factor is by observing the actions of prospective officers in working with other personnel. If an enlisted man in any of the services shows definite signs of being able to cooperate with and lead his fellow servicemen, it is a very good indication that he is good officer material.

The system which I propose in this bill would also, during peacetime, be an incentive for enlistments in the Armed Forces and in the various civilian components. In addition it would assure the

services of getting men who seriously intend to make a life work and a career of service to their country. No longer would young men seek appointments to the service Academies with the only purpose in mind being the attainment of an education and release from the service after serving the minimum time.

This system would relieve the very serious situation of high-powered pressure on athletes and on Members of Congress to appoint these athletes. It would not abolish football in the Academies, but it would place it in its proper perspective, in subordination to the more important job of training the highest caliber of officers for the Armed Forces of the United States.

In my estimation, this is the only completely democratic way in which these appointments can be made. Appointees to the Academies would be there by reason of their sole grace of ability and for no other reason. Those who were appointed would be so by their own merits alone and not because of family or background. And, more important, they would be there with one purpose in mind; to gain in wisdom and ability in order to better serve their country and the people who trust in them for defense against enemies of freedom.

Mr. Speaker, as a part of my remarks, I include the following editorial from the *Wheeling (W. Va.) Intelligencer* of Saturday, August 18, 1951:

RAMSAY BILL HAS MERIT

Congressman ROBERT L. RAMSAY has introduced a bill relating to appointments to the service academies which merits the serious consideration of every Member of the House of Representatives.

His bill, introduced in the House this past Thursday, provides that all appointments to the service academies shall be made from the enlisted ranks of the Army, Navy, Marine Corps and Air Force. Appointments to the various reserve officer college training programs would be made from enlisted ranks of civilian components of the different Armed Forces.

In support of his proposal, Mr. RAMSAY said:

"I have long felt that our system for selecting officers for our Armed Forces should be changed. I have felt that all officer candidates should have served in the ranks. I believe we will have better leaders.

"Cadets who have earned the right to seek commissions as officers, and who intend to make the military service a career, would more fully appreciate the obligations of a future officer and gentleman and would be less likely to violate any code.

"Finally, my proposal would, during peacetime, be an incentive for enlistments in the regular services and in their reserve components."

It has been our own observation in the past that military officers who had served in the ranks or who came up through the ranks made better-than-average leaders. Few officers can fully appreciate their duties and their position without having served in the ranks first.

Mr. RAMSAY's bill would not discourage young men who are sincerely interested in a military career. Too many of the young men now in West Point and Annapolis do not intend to become professional soldiers. These less serious officer candidates range all the way from professional football players to sons of people of influence. The former

play football and the latter play soldier, and after they complete their schooling they generally resign their commissions. Forever after they bask in the distinction of having been a West Point man.

Such a bill would surely encourage enlistments in peacetime. By restricting academy appointments to enlisted men the services could encourage every man to put forth his best efforts. Before any officer can become truly outstanding he must establish himself as a man's man and a soldier's soldier. There is no better place to establish such a reputation than in the enlisted ranks.

Ten Rules for Peace of Mind in Time of War

EXTENSION OF REMARKS

OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks, I wish to include the following, which appeared recently in the bulletin of the Trinity Methodist Church of Alexandria, Va., which my family and I attend. This very inspirational article is taken from the *Virginia Methodist Advocate* and will be helpful, I am sure, to all who have an opportunity to read it:

TEN RULES FOR PEACE OF MIND IN TIME OF WAR

1. Keep wholesomely busy. The idle mind may become the breeding mind. An empty head will not be empty long.

2. Live one day at a time. Our Creator has not endowed us with the ability to carry tomorrow's burdens today.

3. Hear what the centuries say to the hours. Take the long look. Along with the latest news flashes put the eternal messages of God. With the daily newspapers in one hand keep the New Testament in the other.

4. Do not worry about an atom bomb attack. People have survived even such an attack and methods of safeguard are being devised. An emotional explosion within your own life may do more harm.

5. Avoid focusing your mind on what is wrong with the world. You will live longer and happier if you will think of what is right with the world.

6. Express aggressive good will daily by acts of kindness and love. Ill will and hatred are poison to the human system. Deep satisfactions come in doing good to others.

7. Keep yourself mentally plastic, pliable, flexible. Be willing to face life's changing scenes. Don't be rigid, fixed, unbending. Be prepared to make adjustments.

8. Exercise faith in yourself, your daily comrades, and your Creator. Faith is healing and energizing. It can remove insurmountable barriers.

9. Avoid undue fatigue. When we work on our nerve we often lose what we cannot easily replace. Sometimes to rest, relax, be quiet is more important than to keep on going. Peace of mind is less likely when we are tired.

10. Walk daily with your God, hand in hand, as a child walks with his father. He will give light on your path, guard you from evil, relieve tensions, and speak peace to your soul.

Guilty Consciences About Yalta

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including an article by William Henry Chamberlin that appears in the *New Leader* for August 20, 1951.

Apologists for Yalta assert that it was a good contract except that Stalin failed to keep his part of it. It is a legal truism that any contract is only as good as the parties who enter into it. The United States was on notice that the Soviet never kept an agreement. The instances are too numerous to mention, except one and that was executed between Hitler-Stalin in 1939. To say now "that the real point about Yalta is that it was a pretty good deal, if the other parties to the bargain had only kept it," as the Alsops have written, is to be simple to the extreme. Apologists for Yalta should admit that it was a very bad agreement and the American people are paying a fancy price for the contractual blunders contained in it. It is the blackest day in American history.

The article follows:

GUILTY CONSCIENCES ABOUT YALTA

(By William Henry Chamberlin)

Conscience, according to Shakespeare, makes cowards of us all. However that may be, there is nothing like an international shady deal to produce a crop of apologists.

The Yalta agreement of February 1945 has been the subject of many labored apologies, from Roosevelt's speech in Congress after his return from signing it to Acheson's recent statement before the joint Senate committee on the MacArthur dismissal.

One champion of Yalta was the late Edward Stettinius, who hit on the quaint argument that it was a great victory to induce the Soviet leaders to sign certain pledges, regardless of whether they were carried out. This is like praising as a financial genius a man who accepted large sums in worthless checks.

Now the Alsop team of columnists has leaped into the Yalta breach. Writing in the *New York Herald Tribune* of July 22, they blithely assure their readers that "the real point about Yalta is that it was a pretty good deal, if the other parties to the bargain had only kept it."

Now this by no means original assertion leads logically and inescapably to certain other questions. Was it "a pretty good deal" to sanction the complete scrapping of the Atlantic Charter while hypocritically professing respect for its principles? The acceptance of the so-called Curzon line eastern frontier for Poland, the detachment of large unspecified chunks of ethnically German territory for cession to the Soviet Union and Poland were decisions in flagrant violation of the self-determination clauses of the Atlantic Charter.

Was it a "pretty good deal" to recognize the legitimacy of human slavery by authorizing the use of the labor of German war prisoners as "reparations"? This was another feature of the Yalta agreement which its apologists are fond of forgetting.

Was it a "pretty good deal" to make ourselves partners in an infamous fugitive-slave

contract, consenting to hand back to Soviet executioners all escaped Soviet citizens found in the western zones? There were scenes of indescribable human misery, including many suicides, when this feature of the pact was carried out. One can hardly imagine a greater handicap to the success of our present belated policy of seeking to organize a resistance movement among the peoples of the U. S. S. R.

Was it a "pretty good deal" to turn over to Stalin the economic control of Manchuria, strategic key to China? Here the Alsops, who, like most apologists for Yalta, simply pass over in silence many of its most objectionable features, counting on public ignorance and forgetfulness, become more articulate. They repeat the familiar argument that Roosevelt's military advisers wanted to buy Russian aid in the conquest of Japan, "which was officially estimated likely to cost 2 years and half a million American lives."

This is merely an indictment of the appallingly bad intelligence accepted by these military advisers. Japan's air and naval power had been knocked out by the time of Yalta. There had been a number of Japanese peace feelers. Had the United States had the wisdom to offer Japan in 1945 the reasonable, nonvindictive peace worked out in 1951, is it not almost certain that Japan would have concluded a quick peace and permitted American troops to replace Japanese in Manchuria? Then the Russian invasion would probably never have occurred.

And if the Chinese Communists had not received large quantities of Japanese arms from the Red army, at a time when General Marshall, pursuing the will-o'-the-wisp of a coalition government with the Communists, imposed a complete embargo on United States arms shipments to the Nationalists, there is a better than even chance that the Communists would never have conquered China. Was it a "pretty good deal" to have facilitated that?

The Alsops offer some extremely dubious speculations of Yugoslav Communists as evidence that Stalin tried to carry out the Yalta agreement regarding China and Yugoslavia, until our precipitate demobilization convinced him there was no power behind United States diplomacy. This demobilization was a great mistake.

But it is a matter of record that the ink on the Yalta agreement was hardly dry when the Soviet Union violated it by imposing a puppet government on Rumania and by carrying out a reign of terror in Poland, calculated to make the pledged "free and unfettered elections" impossible.

Is there any reason in logic or common sense why Stalin should have earnestly tried to fulfill in China and Yugoslavia an agreement which he treated as a scrap of paper in Poland and Rumania?

It is a great pity that the Yalta issue has never been thrashed out in some public forum. It is one of my own still-unrealized dreams to get some defender of Yalta into a debating ring where it would be possible to demand straightforward answers to questions which are customarily passed over in silence or glossed over in misrepresentation.

The Public Should Know

EXTENSION OF REMARKS OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my re-

marks in the Appendix, I include editorial comment by Mr. John S. Knight, editor-publisher, which appeared in the August 5, 1951, issue of the Detroit Free Press.

The bill H. R. 3341, introduced by me, is intended to restore to the States their discretion in the publication of details of public-assistance programs.

The Free Press editorial follows:

THE PUBLIC SHOULD KNOW

Federal Social Security Administrator Oscar R. Ewing has cut off the State of Indiana from Federal welfare aid because of a new Indiana law, opening the names on welfare rolls to public inspection.

The bill was aimed at discouraging welfare chiselers after a series of articles in the Chicago Daily News revealed shocking relief frauds in Indiana and other sections of the country.

Administrator Ewing points out that the Indiana statute is in conflict with a congressional requirement that States receiving Federal social-security aid must keep their relief rolls secret.

There can be no quarrel with Ewing's legal position, but he would be on better moral ground if he had argued congressional support of proposals removing the secrecy requirement.

The secrecy repealer has been passed by the Senate but is presently bottled up in a House committee.

The State of Indiana is to be congratulated for insisting that the public is entitled to know how and where its tax money is being spent.

A similar law was passed by the Illinois Legislature and signed by Gov. Adlai Stevenson, except that the Illinois action will not go into effect until Congress has repealed the secrecy section of the Social Security Act.

Alabama, Georgia, and Oklahoma are among other States backing the antisecrecy campaign.

WHAT THE FREE PRESS EXPOSED

Exponents of what the Detroit Free Press calls social workerism will go into a tearful tempest over this long overdue move to separate the cheaters from the needy.

But Free Press exposures of relief money being advanced to play the races and finance vacation trips to Florida should be enough to convince the taxpayer that he has been played for a sucker with Uncle Sam's help.

The United States House of Representatives should get in step with the Senate and lift social security's lace curtain.

There is no justification for concealment in the spending of public funds.

The General Trade Agreements Handcuffs; for Example, Czechoslovakia

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. STEED. Mr. Speaker, the following address by O. R. Strackbein, chairman of the National Labor-Management Council on Foreign Trade Policy, over radio station WOL on August 19 is especially timely in view of the pending outcry against the treatment received behind the iron curtain by William Oatis. This example well illustrates a point in which Congress ought to find a

keen interest in the hope these handicaps may be eliminated from our foreign trade agreements. The address follows:

Mr. William Oatis, Associated Press correspondent, is still in jail in Czechoslovakia. The recent announcement by the State Department that the United States has decided to abrogate our trade agreement with Czechoslovakia was gratifying news. This action, however, was already required under the Trade Agreements Extension Act, which became law in the middle of June or 2 months ago.

The announcement gave notice that this country was taking steps in accordance with the provisions of the General Agreement on Tariffs and Trade to abrogate our agreement with Czechoslovakia. The actual outcome therefore awaits the meeting in mid-September of all the countries, some 30 in number, that are members of the general agreement. The decision rests, not with us, but with the signatory countries. We could be outvoted but will probably be sustained. The delay involved in this procedure and the dependence of the outcome upon the vote by many nations throws a revealing light on the degree to which the general agreement has impaired our national sovereignty.

How many people know that we entered into an agreement of this character in Geneva, Switzerland, on October 30, 1947?

The General Agreement on Tariffs and Trade, or GATT, as that pact is more generally called, was not submitted to the Senate for ratification as a treaty, although its provisions in important respects conflict with some of our existing laws. Nor was it submitted to the two Houses of Congress for ratification by majority vote. It was put into force as an Executive agreement, provisionally. Under this general agreement two additional multilateral trade agreements have been made, one in 1949, known as the Annecy agreement, and the other in 1951, known as the Torquay agreement.

After more than 3½ years and two international conferences, i. e., Annecy and Torquay, just mentioned, the general agreement is still labeled "provisional."

Why?

Because Congress has not yet modified those of our existing laws that run counter to some of the provisions of the agreement, to bring them into conformity with it. Has Congress then overlooked the agreement?

Not exactly. When the trade-agreements law was extended for two more years last June special words of caution were written into it that enactment of the bill did not indicate approval or disapproval of GATT.

It may be recalled by those who keep abreast of international commercial and economic relations that beginning in 1945 the State Department proposed and promoted what was to be the International Trade Organization, between known by its initials, as ITO. After four or five international conferences, the charter for such an organization was signed in Havana, Cuba, March 24, 1948. Nearly all the general provisions of the General Agreement on Tariffs and Trade, already referred to, were contained in the charter for an International Trade Organization. The principal difference was that the ITO charter was even broader and more ambitious in its expressed purpose and its implications than the General Agreement on Tariffs and Trade. Another difference was that under the general agreement sweeping tariff reductions were made, whereas ITO only proposed the rules by which further reductions were to be made in the future.

Now, the Department of State did agree to submit the ITO charter to both Houses of Congress for ratification by majority vote, rather than submitting it to the Senate as

a treaty, under a constitutional provision that requires two-thirds vote for approval.

The House Committee on Foreign Affairs held public hearings on the charter in April and May, 1950. Heavy opposition developed and the committee pigeonholed the bill, i. e., did not report it to the House. In December 1950, or about 6 months later, the State Department gave up its campaign and the decision was reached to withdraw the ratification resolution from Congress entirely. In other words, the charter had not prospered in Congress and rather than face overt defeat in a vote, the State Department abandoned its painstakingly nurtured child.

Where did this retreat leave the General Agreement on Tariffs and Trade, which is sometimes referred to as the little ITO because of its similarity to its ill-fated forerunner?

The first question arises why, if the ITO charter was submitted to Congress for ratification, has the general agreement been withheld? Was it because the ITO, having been used as a stalking horse, was shot down and its was thought that the general agreement would meet the same fate?

The second question is, if the ITO charter could not become effective without congressional ratification, on what authority has the general agreement been carried into effect to the advanced degree that it has?

If you have followed this background sketch thus far you will perhaps be interested in knowing that the State Department is now seeking modification of our laws to conform them to the general agreement. How? Has the Department prepared a bill labeled so that it would be recognized as ratification of that agreement? Has it asked Congress outright for such a ratification?

No. The State Department has found what appears to be a convenient and suitable vehicle to gain its end without exposing the General Agreement on Tariffs and Trade to the fate of the ITO charter. It seeks to utilize a bill that recommends itself by its very title, namely, "The Customs Simplification Bill," hearings on which have been held before the House Ways and Means Committee during the past 2 weeks.

The customs simplifications bill is sponsored by the Treasury Department and is based principally upon recommendations made by an outside management engineering firm after a detailed study. Its purpose is to bring our customs administration up to date, to simplify it, and to reduce the time and cost of passing imports through our ports. These objectives are, of course, very laudable, and the bill provides an admirable vehicle for State Department purposes.

In 1950 the Treasury Department issued an analysis of the bill. In this analysis it is stated that "some of the provisions contained in this bill parallel certain customs administrative provisions of the International Trade Organization." That is the Organization, remember, that was not accepted by Congress.

The analysis adds that "In general, passage of these same amendments would enable this Government to make fully effective the administrative provisions of the general agreement on tariffs and trade, which is now being applied in the United States on a provisional basis."

In other words, (1) the frontal approach having failed when the ITO Charter was submitted to Congress; (2) the general Agreement on Tariffs and Trade remaining provisional in character until our own laws are amended to conform them to it; (3) the State Department being apprehensive of the fate of a bill designed and put forward frankly as a measure to modify our laws in order to conform them to the agreement; and (4) a handy vehicle with a popular inscription appearing on the legislative

scene in the name of the customs simplification bill, the State Department seeks thus indirectly to gain its end where it fears defeat in a frank and open approach, under a full display of its purpose.

The question now arises whether this is a matter of importance or wholly trivial in character. Is it wise for our State Department to seek its ends by offering legislation in a form that is not easily recognized for what it is when that Department fears defeat should it offer the same legislation without disguise? In other words, should the Department seek to gain legislative approval on a controversial issue when, so to speak, the people are not looking?

There is another question at issue. This is whether the executive branch of the Government should make international agreements in a field of delegated authority, some of the provisions of which conflict with existing laws, and then confront Congress with the choice of ratifying what the State Department wishes or placing itself in a position of running out on our international agreements. Should this procedure be countenanced the executive arm could soon coerce Congress into compliance even if Congress should disagree.

Are these matters important? Ask Mr. Oatis in his jail cell. Why and how have we lost freedom to act as a sovereign nation? Have the American people said that we should tie our hands as we have done in the General Agreement on Tariffs and Trade, or has the State Department, proceeding out of disregard of the legislative branch, placed us in this position without the knowledge and consent of the people?

A close reading of the State Department's maneuvers as reflected in its efforts to legitimize the General Agreement on Tariffs and Trade, as just described, will supply the answer. The action of the House of Representatives this week, when it passed a concurrent resolution by a vote of 363 to 1, declaring that the United States should break off all commercial relations with Czechoslovakia until Mr. Oatis is freed, clearly reveals how far the State Department has bypassed Congress in recent years.

If we value our freedom of action as a nation, not only here, but abroad, we will put the State Department back on its own track and in its proper perspective.

The St. Lawrence Story—IX

EXTENSION OF REMARKS OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the last of a series of articles entitled "The St. Lawrence Story" which appeared in the August 16 edition of the Minneapolis Star. This article summarizes the direct benefits that will accrue to the people of central United States, and the indirect benefits to the whole Nation, from the construction of the St. Lawrence seaway and power project:

THE ST. LAWRENCE STORY—BENEFITS FOR 50 MILLIONS SEEN IN SEAWAY

(By Leo Sonderegger)

(Last in a series)

The deep-throated bellow of the *Queen Mary* will never tremble the aspens on the

hills of Duluth. The *Ile de France* will never drop anchor in Superior bay.

This is a dismal thing to face, but there it is.

Even with the St. Lawrence seaway, the folks out on the prairie are going to have to content themselves with smaller ships when they head for a vacation in the old country.

But once the seaway is pushed through, they will be able to do that—board a good-sized blue-water vessel at Duluth or Milwaukee or Chicago and sail out through half this continent to the ocean and on to the ports of the world.

And the area's farmers will be able to send their dairy products and grain directly—without a long rail haul, without rehandling—to the east coast or ports overseas.

Manufacturers will be able, with one short rail haul to a lake port, to put their goods on ships that will take them straight through to destination.

And the 50,000,000 people who live in the Great Lakes area will reap benefits that always follow creation of a major new channel of contact with the world.

And as those 50,000,000 benefit, the entire Nation will be strengthened, because the United States is a network of peoples with a common fate.

MIDWEST CALLED SELFISH

So it seems to the men who champion the seaway. And so it seems to one who has examined, without bias, the arguments for and against completing it.

Carroll B. Huntress, chairman of the national St. Lawrence project conference, reacts sharply when his group is accused of being a spearhead of selfish interests that don't want the seaway.

"It's really ridiculous to think of selfish interests blocking this," he said when this view was mentioned. "They're no more selfish than the interests of Detroit or Minneapolis. That's just a catch phrase of the demagogues."

Huntress thought a moment and added, "The Middle West is brutally selfish in trying to take away from the East that which the East has built up over the years."

In a sense, Huntress is quite right. The land-locked Midwest does stand to benefit greatly by having a new inlet and outlet, and to that extent its interest is selfish.

The competitive advantage to the Midwest is something that seaway proponents dwell upon in language ranging from lofty idealism to the blunt terms of economic warfare.

A topflight mines geologist who declined use of his name summed up the matter:

"Anything that will cheapen the cost of transportation from the Atlantic seaboard into the heart of the continent is good."

Representative WIER of Minnesota's Third District regards the seaway in somewhat the same broad light. He calls it "a great natural resource that goes right into the middle of the continent in its crude state . . . an outlet and inlet to the great Middle West."

But WIER also sharpens his words to prod at the competitive situation. In his Washington office, he reminded his listener of the boxcar shortage that periodically harries the Midwest.

"The railroads now hold a club over us. They can keep cars out of our area if they want to. If we can't get boxcars let's get some boats. Let's not be hog-tied up in our country and take what we can get."

Senator THYE believes the seaway would help relieve the shortage of cars.

And he thinks the deep channel would ease the pressure on Midwest farmers and exporters in another way.

Rail-freight rates are steadily increasing, THYE points out, "and the cost is charged directly to the Midwest, both in finished goods coming to us and harvest products and products of dairy herds moving out."

LOWER SHIPPING RATES PREDICTED

Oceangoing vessels in head-of-the-Lakes ports would help to modify this trend, THYE believes. They would bring lower freight rates, and handling charges would be reduced.

Julius H. Barnes, of Duluth, who has grown white haired in the battle for the seaway, speaks most often of its benefits to midwestern farmers.

"I believe the value to American agriculture is the chief value of all," he said when asked to sum up his belief.

"Look at the global situation. India is begging millions of bushels of wheat. China, we know, is underfed.

"We can grow the food. The question is how to get it there so cheaply that it will enlarge the market of itself."

Precise figures on how cheaply grain will move via the seaway are not available. The Department of Commerce estimates, however, that savings over rail rates will range from 5 to 10 cents a bushel. The exact amount depends on a number of factors, including the grain's point of origin.

Hard information on package-freight savings is impossible to come by. The variables in that kind of trade are even greater. It is fair to point out, however, that for almost all commodities water is the cheapest form of transportation.

PRESENT FOREIGN SHIPPING CITED

Barnes, who has had a hand in shipping for most of his life, feels that the seaway would be a great stimulant to the Midwest in two ways—by reducing charges on standard articles of commerce and by providing cheap and ready access to both export and import contact with other nations.

Lewis G. Castle, a Duluth banker who has been associated with Barnes for several years in the seaway fight, points to the 74 foreign sailings from Chicago and Milwaukee last year.

These were little ships that clawed their way up the shallow canals and returned with Midwest produce in their holds. If shipping firms consider it worth while to send vessels of that size, Castle believes it follows that they will send big ships when the deep channel is cut through.

Seaway opponents warn that it would be a damaging blow to Minnesota's iron-ore industry. Their line of argument is beguiling but erroneous.

Anything that makes it easier to get high-quality ore from Labrador, they say, will hurt Minnesota. Then they throw in the clincher—easy access to Labrador reserves will slow taconite development to a walk, and Minnesota will never be able to catch up with other areas.

The fact is that, during the foreseeable future, every source of iron will have to be exploited. Taconite, underground expansion, foreign reserves—the rising capacity of American steel mills can absorb them all and demand more.

A high official of one of the companies developing taconite said his firm will not slow down its drive toward production in commercial quantity.

MIDWEST MAY LOSE STEEL PLANTS

Actually, failure to develop the seaway would strike a long-range but effective blow at Minnesota ore, including taconite.

As expensible reserves on the Iron Range dwindle, there will be an increasing demand for Labrador and Venezulean ore. Without the seaway, both areas would, of course, ship to Baltimore, Md., and Philadelphia, Pa.

It is not much of a trick to predict that, with a growing percentage of available ore on the coast, any new steel plants erected would go up there rather than 500 miles away in the Midwest. Inevitably, then, the center of the steel production would shift to the east

and Minnesota ores would have an increasing handicap.

This is important, the effect of the seaway on iron ore. But its biggest influence will nevertheless be felt by agriculture.

In the mind of Maj. Gen. Lewis A. Pick, Chief of Army Engineers, the project will be a magnet to stimulate new productivity in a spacious region, including the upper Midwest.

"If you open up the St. Lawrence waterway," he said last June in Duluth, "Minnesota becomes a seaport area. North Dakota and South Dakota will be within a few hundred miles of a seaport."

Pick and other men of like mind believe that grain from Minnesota and the Dakotas, perhaps from as far south as Kansas, will flow in a rising stream over the seaway route to the east coast and overseas ports.

"The best indication of what it will mean," he said, "was visible when we came down the hill into Duluth this evening and saw those tremendous grain elevators."

He was not talking about grain alone. The grain is a symbol. It is a symbol of the produce of a fruitful region gathered at the lake ports for shipment to the world.

Riddled With Corruption

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, it is an old adage that counsels people not to throw stones if they live in glass houses. One week ago the President, during the ceremonies dedicating the new American Legion building referred to certain people as slander-mongers. He should have been the last man to utter such a remark, when as Felix Morley says, "That this administration is demonstrably riddled with corruption."

Mr. Speaker, the remarks made by the President last Tuesday were obviously so intemperate that Erle Coker, national commander of the American Legion has publicly expressed disagreement with Mr. Truman.

As part of my remarks, I am including a feature article by Mr. Felix Morley, which appears in Barron's for August 20, 1951. I commend it to the attention of every Republican. It carries an important challenge:

THE SLANDERMONGERS—WILL THE GOP TAKE ISSUE WITH TRUMAN'S DEFENSE OF CORRUPTION?

(By Felix Morley)

President Truman's speech to the American Legion last week has come like a flash of lightning in the muggy, mid-August atmosphere of Washington. At least momentarily, it has thrown a lurid illumination on the political scene.

All the politicians of both parties, noted the way in which the President linked communism and corruption as issues on which he says his administration is being simultaneously condemned by "irresponsible slander-mongers." At the Republican National Committee this conjunction was immediately spotted as the heart of a speech

designed to set the stage for the 1952 campaign.

And, as so often happens, Mr. Truman caught the opposition off guard. Because of vacation absences, and the let-down of the dog days, no Republican leader was ready with an immediate answer to the President's undeniably shrewd attack. It is more than possible that Senator Taft will pick up the gauntlet when he makes his important speech to the Maine State Bar Association at Belgrade Lakes this Thursday. But that will be 9 days after Mr. Truman set off his mine in Washington.

There had been a good deal of speculation as to what the President would say when he came to dedicate the new million-dollar national headquarters of the American Legion, located only 3 blocks from the White House.

The political importance of the occasion was obvious, since the Legion is a strong and well-knit organization, which has now successfully merged veterans of both the older and younger generations. One could name at least half a dozen States in which it clearly holds the balance of political power.

Among the scribes and forecasters the consensus of opinion beforehand was that the President on this occasion would avoid the subject of Communist infiltration. The Legion has shown its anxiety about this matter in many ways. With Alger Hiss behind the bars, Mr. Truman would scarcely mention "red herrings" at this time and place.

Therefore the reporters anticipated either a conventional plea for preparedness against Soviet machinations, or a request for Legion backing of the NATO effort, or a charge that the GOP will be responsible if the cost of living mounts further. A majority privately predicted the latter line, for there is no doubt that the administration intends to place the blame for any further inflation on the refusal of Congress to let it regiment the economy completely.

But again, as in 1948, Mr. Truman proved himself a first-class politician. Courageous in attack, as well as unscrupulous, he told the Legionnaires that many who "claim to be against communism . . . are chipping away our basic freedoms just as insidiously and far more effectively than the Communists have ever been able to do."

And this appeal to the sense of "fair play," which seldom leaves an American audience unmoved, was immediately followed by the attack on "irresponsible accusations . . . that our Government is riddled with communism and corruption." That was a clever coupling.

It tucked blatant Senator McCarthy and chivalrous Senator Byrd under a single inviolable blanket. It also nurtured the curiously spreading belief that "our Government" is limited to officeholders under Mr. Truman. Indeed, by a general indictment of the Legislature, the Chief Executive further emphasized the totalitarian idea that elected spokesmen of the people are outside of the "Government."

"You have no way of telling," Mr. Truman said, "When some unfounded accusation may be hurled at you, perhaps straight from the halls of Congress." Among the Legionnaires present, that didn't go down so well. But there was a wider audience.

There is no question that by this speech last week Mr. Truman kicked out the ball for the 1952 campaign in which, also without a shadow of doubt, he hopes to repeat his triumph of 1948.

The attack on Communist infiltration may in some cases have been overdone. Some officials who were no more than stupid, misguided or incompetent have been pilloried as subversives when they could more accurately have been described as unwitting dupes. Mr. Truman does well to remind us that: "Real Americanism means . . ."

a man who is accused of a crime shall be considered innocent until he has been proved guilty."

By the same token, when an official is proved guilty of venality he must no longer be considered innocent. When the Comptroller General names a Federal bureau where "every single employee" accepted bribes, it has to be taken seriously. The same applies when it is demonstrated that "5-percenters" have access to the President's key advisers and when some of his personal appointees, not excluding our representatives abroad, are shown to have been the intimates of racketeers and gangsters.

In the light of exposures by the Kefauver crime committee, by the Fulbright RFC investigation, by the Douglas inquiry into "moral standards" in Government, it is all too apparent that this administration is demonstrably "riddled with corruption." And that situation is not remedied by denying that it is "riddled with communism."

Mr. Truman, perhaps a little too shrewdly, attempts to merge the two separate indictments. Because the charges of serving the Reds will not stick in some cases, he suggests that none of the evidence of moral decay in his entourage is convincing. During the coming campaign, it appears, he will build on this specious argument, saying that all who demand a cleaning of the Augean stables are guilty of "slander or character assassination."

In his notable biography of Hamilton Fish, telling the inside story of President Grant's unsavory administration, the historian, Allan Nevins, made an observation that is very timely today. "The American people," he said (p. 641), "always derives much of its tone from its President." Grant "was upright according to his lights. But the lights were murky, and the tone of his administration delighted knaves and discouraged honest men."

The lights of the Truman administration are also murky and pleasing to knaves. The disclosures of wholesale cheating at West Point, of athletic racketeering at many other once-respected schools, are only the latest specialized instances of a "creeping moral deterioration" that is actually defended and condoned by President Truman: "All my appointees are honorable men."

"To err is human; to forgive divine." But forgiveness must be contingent on repentance. The executive agreement at Yalta, in effect turning China over to Communist control, was a dreadful error. It passed beyond the realm of forgiveness when Secretary Acheson, during the Senate inquiry on General MacArthur, defended it as seeming to be clever at the time.

Now, Mr. Truman makes clear that defense and extenuation of administration corruption is also regarded as smart politics. That line will be a part of his campaign for reelection to the Presidency. The question is whether the GOP will, for its part, visualize this issue of integrity as fundamental, and take its stand thereon.

Weichel Holds Worker Dispersal Plan Is Not Dead

EXTENSION OF REMARKS OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. WEICHEL. Mr. Speaker, under leave granted to extend my remarks in

the RECORD, I include the following article from the Cleveland Plain Dealer:

WASHINGTON, July 21.—Administration proposals to disperse industry could, if successful, raise havoc with the lives of thousands of people in northern Ohio, Representative ALVIN F. WEICHEL, Republican, Sandusky, declared today.

Although President Truman's industry-dispersal plan was defeated when administration leaders sought to tie it in with the Defense Production Act, WEICHEL insisted that it is "not yet a dead issue."

He understood, he said, that administration leaders are intent on pressing the plan.

"It would open the door to move industry and workers of industry from the established present locations to those selected by bureaucrats in Washington appointed by the President," WEICHEL said.

The Congressman added that the President could stop the expansion of the steel and other industries in the Great Lakes area, forcing workers to move elsewhere, uprooting their homes and their families who have built and lived with these industries since the beginning.

"This grant of authority asked for by the President would jeopardize industry, the workers and the agricultural areas, especially of northern Ohio and become the back door to socializing men and industries in America," WEICHEL held.

Where Are We Going?

EXTENSION OF REMARKS OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, August 21, 1951

Mrs. SMITH of Maine. Mr. President, a young woman in my home State of Maine, Miss Shirley Putnam, of Thomaston, has written a very refreshing editorial entitled "Where Are We Going?" which I commend to the attention of the Senate.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE ARE WE GOING?

(By Shirley Putnam)

Teachers tell us that we study the history of the past so that we may better prepare ourselves for the future. If this is true it might be profitable to focus our attention on wars, since they are of concern to all world citizens of our age.

Wars are caused by disputes between nations, but they seem to be wanting as a permanent peace, since history reveals a rotating cycle of conflict, each of which is more deadly than the previous one.

Perhaps, there is another solution. If we are to profit by the lessons of history, it would be worth while to search for one.

Until we are ready to face the true causes of war, we shall not know how to weed out the germs which spread it. War doesn't begin when armies open fire on one another or end when the guns are silenced. It begins in the hearts and minds of men and women long before the bugles sound and the drums play. It continues long after the last of the heroic dead have been buried or returning armies have been demobilized.

In order to understand war between nations, we must understand what causes arguments among individuals. All the anger which the individual feels when he considers himself the victim of an injustice is multiplied many times in the anger of a nation composed of many people. When we engage in petty arguments with our schoolmates, we are engaging in an individual war. When we try to push ourselves ahead at the expense of others, we are guilty of causing an individual war. When we allow ourselves to support racial, religious, or social prejudice by one class of human society against another, we are engaging in war, and we plant a seed of bitterness and hate in the hearts of those who are victims of our prejudice.

As individuals, we can determine the causes of war between individuals. But most of us would find it unpleasant, inconvenient, and perhaps expensive in pride and money, if we were to admit our shortcomings, so, we loudly boast about the other fellow's being at fault.

The same things are true about nations. We know as much as we will ever know about the causes of war.

We will find the solution only when we, either as individuals, or as a nation, can admit our faults and do something to remedy them. It is not enough to believe in the expression "do unto others as you would have them do unto you"—you must practice it.

If we expect to knock at the door of the United Nations and enter into a realm of peace, each of us must pattern our daily lives after "The Golden Rule." We often boast of our representative form of government. It is up to us to lead the life that we hope to have represented.

Good Administration by the Economic Cooperation Administration

EXTENSION OF REMARKS OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, August 21, 1951

Mr. BENTON. Mr. President, there has recently come to my notice an example of good business practice and efficiency on the part of an agency of the United States Government.

Over the past 2 years some sections of the American press have been highly critical of the informational media guaranty program of the Economic Cooperation Administration. This program was approved by the Congress as a means for encouraging the circulation of American periodicals, books and motion pictures in those European countries where currencies could not be readily converted into dollars. The intent was that our American publications should be made as widely available as possible.

The plan was attacked in some quarters as a "give-away," as a subsidy to favorable publishers. The charge was even made that publishers who took the lead in extolling the benefits of the Marshall plan and used their magazines to propagandize for its adoption, were granted subsidies paid by the taxpayers. Some of these charges found

their way into the CONGRESSIONAL RECORD—see Appendix to the CONGRESSIONAL RECORD, volume 96, part 18, page 7204.

The truth is, of course, that many of the principal American publishers and motion-picture producers doing business overseas have made use of this ECA program. A list of users includes members of the Motion Picture Association, Curtis Publishing Co., Reader's Digest, Crowell-Collier Publishing Co., New York Herald Tribune, and so forth.

As a result of this program it is estimated by the ECA that an audience of some 30,000,000 European people is currently reading some of our best American periodicals; that some 2,000,000 tickets have been sold to Germans in order to see American films they would not otherwise see, and that some 2,250,000 copies of books, including thousands of technical and scientific volumes, have been read by those who, without this program, would not have been able to be exposed to them.

Motion pictures shown under this guaranty program have been screened by a citizens' committee appointed by ECA which have included, over the past 2 years, such eminent persons as Thomas K. Finletter, now Secretary of the Air Force; Dr. George N. Shuster, now United States commissioner to Bavaria; and Mrs. Louise Leonard Wright, director of the Chicago Council on Foreign Relations. The periodicals have been limited generally to the list approved by the American Library Association; the books have been carefully screened.

Mr. President, I judge this to have been a most successful dissemination of some of the best materials depicting our way of life to overseas people. The ECA is successfully achieving many of the goals for which I fought as Assistant Secretary of State.

And now comes a most interesting disclosure from ECA, that this program has not cost the American taxpayer one dollar. Indeed, it is actually showing a profit. This interesting fact is even conceded by the Chicago Daily Tribune, which has been one of the most severe critics of the program. In its issue of August 9, the Tribune reported that ECA had to date signed contracts for the conversion of \$10,700,000 worth of European currencies into dollars:

As a service charge the ECA required the publishers and the movie makers to pay in American cash 1 percent of the face value of any contract for each year of its existence. To date, ECA has collected \$140,000 in service fees.

Of course, what ECA does is to sell such francs, marks, lira, and other currencies collected by American publishers and motion-picture producers to other agencies of the United States Government requiring those currencies for operating purposes in the respective Marshall-plan countries. Thus, ECA points out, it has converted the currencies without loss and ECA has retained the aforementioned \$140,000—to defray the relatively small cost of administering the program.

At the present time this very useful and very constructive program is carried forward by only three professional employees and one clerical.

Here we have a heartening example of what the ingenuity and enterprise of my old friends, Paul Hoffman and William Foster, have been able to establish and carry forward in their ECA organization.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Chicago Daily Tribune which, in a fine manifestation of fairness, acknowledges this accomplishment.

Mr. President, just the other evening the Washington Evening Star reported how ECA had renovated formerly useless space in an old office building and by the use of paint and up-to-date designs had been able to greatly reduce its rental costs; also, the Star reported how, instead of buying new office equipment, ECA had painted and renovated old desks and exhibited wisdom and economy in making some formerly undesirable quarters a good place to work.

I also ask consent to have this informative and encouraging article from the Star printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Chicago Tribune of August 9, 1951]

PRESS SUBSIDY SHOWS PROFIT, ECA MAINTAINS—EXPLAINS HOW BRITISH UNDERSELL UNITED STATES

(By Philip Warden)

WASHINGTON, August 8—The Economic Cooperation Administration today reported a \$140,000 gross profit on its Marshall plan press subsidy operations in Europe.

Since late 1948, the ECA has been supplying Marshall plan dollars to American movie makers and book, magazine, and newspaper publishers in exchange for European currencies collected overseas.

The exchanges have been made under contracts between the publishers and the ECA. The European currencies were practically worthless except in the countries of their origin, and the movie magnates and publishers were unable to exchange them for dollars in the open market through regular channels.

WHY ECA MAKES EXCHANGE

ECA was willing to make this exchange to get the movies, books, magazines, and newspapers circulated in Europe "to spread the American way of life." Robert R. Mullen, ECA director of information, reported today.

"American books and publications cannot be sold in many areas of the world because of currency restrictions and because, so far as English texts are concerned, the British are able to undersell American publishers by as much as 50 percent. American scientific and cultural relationships have been severely damaged as a consequence.

"The situation has to some degree been relieved, however, by a provision of the economic cooperation act of 1948 which has permitted the United States Government to convert the currencies acquired by American publishers in certain Marshall plan countries.

"Netherlanders, Norwegians, Germans, Austrians, Frenchmen, and Swedes who take an active interest in American affairs are thus able to purchase American texts which with-

out the information media guaranties written by ECA would not be available to them."

ECA COLLECTS \$140,000

The ECA reported that to date it has signed contracts to convert up to \$10,700,000 in European currencies into dollars to facilitate the circulation of the American books and magazines overseas.

As a service charge, the ECA required the publishers and the movie makers to pay in American cash 1 percent of the face value of the contract for each year of its existence. To date, it has collected \$140,000 in service fees.

The ECA has paid out \$3,383,651 through July 1 in exchange for the foreign currencies. Mullen reported that every cent of these foreign currencies in turn had been exchanged by the ECA for dollars from the State and Defense Departments. The State and Defense Departments used the foreign currencies to pay operating expenses in Europe. Mullen said these agencies saved exchange fees by getting the funds from the ECA.

SAYS COSTS ARE SMALL

Mullen said the administrative costs of the operation have been small. Currently three professionals and one clerical assistant are handling the program.

Internationalist publications which have supported the multibillion dollar Marshall plan hold some of the largest ECA contracts. These include the publications of Henry Luce of Time, Inc., the Pocket Books of Marshall Field III, and the Paris edition of the New York Herald Tribune.

[From the Washington Evening Star of July 21, 1951]

UNITED STATES SCRAPES BARREL TO FIND OFFICE SPACE FOR 30,000 IN YEAR—\$29,000 SQUARE FEET CONVERTED FOR OFFICE USE WAREHOUSES, DORMITORIES BEING UTILIZED

(By Robert J. Lewis)

Since Korea, the Government had been scratching around the bottom of the barrel for office space. So far, it has come up with enough additional to house about 30,000 more workers, mostly in defense agencies.

But a great deal of the space is, as one Government spokesman phrased it, "a little lousier" than before. Beggars can't be choosers, and all that. When you don't have any choice, you have to be satisfied with what you can get.

"I wouldn't say that what we have acquired is office slums—but it can't be described as ideal, either," one official said. Some of it is in converted warehouses, run-down buildings, abandoned dormitories. Some of it is stifling in the summer, cold and drafty in the winter.

Notwithstanding a disinclination to be discouraged about the less-than-ideal office-space situation, Government officials admit that good working environment is often a big factor in personnel morale, turn-over, and efficiency.

One agency that has been concerned with the problem is the Economic Cooperation Administration. Some of its people are in modern offices—others are in older buildings converted to office use.

Workers in one outdated building, in particular, had to work with poor light, little or no ventilation, dark walls, plus mice and vermin.

So—as an experiment—the agency determined to do something about it. Today all you need to do is talk to the surprised people in the renovated offices to see what a change a few improvements have wrought in their working spirit.

Besides improvement in morale and a reduction in turn-over, ECA believes it has saved money not only by using the available

space more efficiently and intensively, but by capturing space which has never been used before and putting it to work.

For example, the old Rochambeau Apartment Building at 815 Connecticut Avenue NW.—scene of the experimental renovation—had a number of wide hallways containing much wasted space.

To take that space out of the "lost" column and put it in the "found" category, ECA tore out partitions and combined the wide hall with cubby-hole office space on either side of it—thus increasing the usable space considerably and getting a better deal for the rent paid.

Everett Bellows, special assistant to the ECA Administrator, obtained the advice of a management consultant, and under his direction the agency tore out a few light fixtures which cast a dim glow in the gloomy offices, and substituted fluorescent lighting designed to provide adequate diffused light throughout the rooms.

It painted the offices in light tones, re-covered the tops of the desks with a light, nonglare surface, placed rubber mats on the aisles and rearranged desks to conserve space. Important, also, was installation of window-type fans to pull out overheated, stagnant air.

Officials and workers, themselves, said the changes resulted in a big improvement in office conditions.

"A good working environment invites an employee to do good work, whereas bad working environment fosters a tired, don't care attitude," said A. H. Stricker, who handled the ECA office-improvement job.

"Even if an employee wants to do a good job under poor working conditions, he can't accomplish as much as if conditions were better. If lighting conditions are bad, for instance, the employee simply cannot avoid the bodily fatigue that eyestrain creates."

A key part of the limited experimental job at the Rochambeau was the attention given to preventing ocular fatigue, officials said.

To do this, an effort was made to avoid having extreme contrasts in lighting—a primary cause of eyestrain.

"In an office, the brightness ratio should be kept to about 1 to 5, certainly not more than 1 to 8," Mr. Stricker said. "In other words, papers (which usually are the lightest reflective item) should not be any more than about five times as light as anything else in the room," he said.

"Thus, a table top should be light, so that the eye is not forced to readjust itself in a wide range, from dark to light. Balanced lighting and balanced tones in office furniture and equipment pay off in less fatigue, less eyestrain, and in more work done more accurately."

Since the stepped-up defense began about a year ago, the Public Building Service of the General Services Administration has been obliged to reduce the amount of space per employee to an average of 100 square feet, in contrast to about 109 or 110 previously.

Of the approximately 3,128,000 square feet of office space added to the Government's supply in the last year, more than 1,120,000 has been obtained through "better utilization" of existing space—including reducing the amount of space per person.

A total of 629,000 square feet were obtained by conversion of existing Government-owned buildings, such as dormitories and storage buildings.

Potomac Park dormitories and the Langston residence halls near the District National Guard Armory provided a considerable amount of converted space. The Pentagon basement also yielded a good deal of additional offices.

Up to now, the new GAO Building has provided almost 700,000 square feet of mod-

ern office space, with about 300,000 square feet more to come in this building.

In addition to the 629,000 square feet converted in existing Government-owned buildings, PBS arranged for conversion of 200,000 square feet of the 676,000 square feet leased from private owners this year. The remainder was usable without conversion.

PBS said the cost of the conversion job was relatively low in this space, and that most money spent went to change and improve Government-owned buildings.

The conversion job cost about \$2,150,000, of which \$1,850,000 went into Government-owned buildings, and \$300,000 into leased buildings. Most went to tear out or build partitions, provide lighting, toilet rooms and exit facilities, to paint the offices and to improve the floors, a spokesman said.

Foundation Teaches Wise Use of Credit

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. PRIEST Mr. Speaker, Earl Godwin is one of our outstanding radio commentators. His fairness and accuracy are known to millions. He loves his country and he wants those who follow him to share in the good things produced by our business genius, our resourceful workers, and our mass-production methods. He knows that we have the highest standard of living in all history and he wants this protected.

Our secret weapon against the Russians is not the atomic bomb. Our secret weapon is our high standard of living. The Russians may have an answer to the atomic bomb. They have no answer to our standard of living and they never will have.

There have been abuses of installment credit and a group of public-spirited businessmen recognized this fact when they recently set up the National Foundation for Consumer Credit. This is a nonprofit research and education organization financed by private industry and headed by William J. Cheyney, a former college professor of economics. Through high school and college channels and through labor unions, civic clubs, and women's organizations, the foundation is educating the public in the wise use of consumer credit. In 400 high schools, they are teaching the youth of our Nation not to buy things they cannot afford.

This is the full text of Mr. Godwin's broadcast over an NBC network relating to installment credit:

I come around now to another phase of today's turbulent news when I take up the matter of buying the household appliances and the family car on the installment plan—that is credit; and the higher brackets of wisdom in the Government say that credit expands an already inflated situation, but to the average American this installment matter means getting something you need or not getting it. No matter what they call it, it's still the installment buying plan, budget plan, easy credit system, or any other sweet-

selling label—it means putting some money on the line and taking out a piece of your pay check at stated intervals and laying it on the line again. How many billions of dollars have been sent roaring into the vast river of American enterprise by this matter of credit to scores of millions of families. Listen, critic: If it had not been for the idea of a dollar down and a dollar a week, I doubt that there ever would have been a sewing-machine business; and in my youth one of my jobs was selling \$25 talking machines for \$5 down and a dollar a week, and in those days we never used the courts for collection agencies. If the guy didn't come across we grabbed the machine. So I have that much knowledge. Not recent, I admit, but a memory.

But they tell me that some of the extremists in economics or what have you around Washington are set on abolishing all installment buying by means of more and more drastic regulations. If that ever happens, the automobile business will shut up overnight, and so many other industries that it would be as destructive as if the whole industrial picture had been gassed overnight by an enemy. This method of buying and selling and financing is responsible for the success of mass production in the United States of America. There is a vast credit power involved in this method of doing business, and, like any other power in the hands of men, there is a good side and a bad side to it. That's the story of humanity from the time of Adam and Eve and their discovery that there was good and bad in the same world. It's not credit that started the flood of inflation, not the wise and well-advised and well-handled credit of the old-timers who know thrift and prudence, but it is the misuse of the credit power by the modern-day shaper. The slick city fellow who rams a carload of goods into the home of a man who couldn't pay for it under any circumstances, and who is jerked to the courts to be made to pay, who thereupon starves or steals—shucks, that is no part of American finance, that's crime, and should be so treated. Now the question arises what to do about this bit of dynamite, this vast power of credit that the Government uses to a fare-ve-well, never restrains any of its own outlets, and wants to put regulation W into a policeman's uniform to tell you what you can and cannot do when you buy your next car or vacuum cleaner.

If it were left to some of the bankers I know they would handle it just the way the bankers handled it in the days this country was growing up into strength. They didn't have to have and would not have tolerated an army of snoopers let loose on the community to find out about the household accounts. They managed credit; they knew who was worthy and who was not; and there never was any such a fuss and muss as there is today. The status quo is more like a basket of eels than anything else.

Now something is being done about this installment-buying matter and it is along the line of common sense. There has been established a National Foundation for Consumer Credit, Inc. Offices are in this city of Washington. It has a president whom you may not know but he is well known in his business line. Prof. William J. Cheyney, formerly of Rider College at Trenton, N. J., and I noted that the board of directors has bankers and big and medium and small business represented. The purpose is to take the hysteria out of the air, to educate one and all about the use of installment credit, and the importance of consumer credit to the Nation's economy. I hope to goodness they can do what they propose, because it is just as wrong to dot the landscape with governmental credit cops who add one more

irritation and payroll burden to an already overpoliced Nation of so-called free people as it is to stretch the credit structure until it weakens and tears.

I never in my life realized that the very sacrosanct and able Federal Reserve Board had been made into a minor gestapo until I heard the alarm sounded by Representative TACKETT, of Arkansas, in the debate on the so-called controls bill recently. He will probably be termed extreme, but in these days you cannot make a point without a steam shovel or a trip hammer. So it was that Brother TACKETT got me to thinking. He may go a little further than some others, but he certainly pinned the Federal Reserve Board's credit regulations to the barn door.

Here is what he said: "The Reserve Board is following a pattern outlined in Italy, Germany, Russia . . . where government, bit by bit, took away personal liberties on the pretext that certain economic reforms were necessary."

(You know, that reminds me of a man who takes away the small change his children earn selling papers or shoveling off the snow and tells them "papa knows best.")

"The technique is to scare the people into the belief that an emergency exists. People grab for the reforms forgetting the cost to their personal liberties.

"For example, under terms of regulation W, the customer must go to the retailer and sign a pauper's oath, in cases where he cannot meet the monthly payments agreed upon. The Federal Reserve Board demands these oaths as proof that the private citizen had no intention of violating the law.

"The statement must include purely personal information, such as the sickness of a child or the change of a job. Federal Reserve Board house dicks can read them any time. These records are public property. The penalty for white lies in these statements is 1 year in jail."

TACKETT said he had seen hundreds of such statements, and reminded one and all of the embarrassment such stuff could spread in a small town. For instance, where illness hits into a family and the wage earner has to go and spread his inside story on the record as to why he cannot meet his bills at the moment. He may have to reveal something that will work against him in his work or in his efforts to get another job.

Congress did not wipe out regulation W, but it did make itself into another regulatory body by liberalizing the rules—you have more time to pay for a car, you have less to pay down on household appliances and also more time to pay for them.

Congress realizes what too severe a credit restriction will do. Congressmen heard from home and that is another indication of why Congress votes as it does vote. It votes generally the way the grass roots whispers tells them to vote. Congress represents people, the House of Representatives is truly representative. You hear folks declaim that Congress is bought by the interests and such stuff as that. It frequently is bought by the doubtful coin of party politics, but never bought by so-called Wall Street, which has not a chance when it is up against the folks on Main Street. Right or wrong, the men and women on Main Street, who form the bulk of our citizenry, told their Congressmen they wanted lighter credit regulations. They got them—right or wrong—they got them. Now the question is, Shall we keep on being regulated in purely personal matters like buying a rug or a roadster? If we can manage our business, with the aid of wise counselors, this group of businessmen I spoke of, I believe we would be better off with the credit cops put back into mothballs.

Dispersal Should Be Combined With Barter

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. PHILLIPS. Mr. Speaker, the President issued a statement last week again urging dispersal. This time it was for new industries, a somewhat milder suggestion than the previous ones, which recommended dispersing Government bureaus and agencies.

This reminds me that I have been curious from the start about an inconsistency. The first time was about a year ago. It came to the attention of the appropriations subcommittee, on which I serve, when Jess Larson, the very able and often sorely tried head of the then new General Services Administration, was asked by the administration to bring down a request for \$139,800,000 to disperse some of the more important Washington agencies.

Overlooking the fact that the decision regarding relative importance was to be left to the White House, which, under present occupancy, has not established a very good record on such decisions—as, for example, on the importance of commanding generals—this idea seemed to me to be a bureaucratic natural.

You first build up at tremendous cost the necessary quarters for debatably necessary bureaus and agencies, and then you hatch out one of our recurring emergencies, which, somewhat like the sun in its passage around the Arctic Circle, rise and fall like the tide, but which since 1933 have never quite disappeared.

You then propose, on the basis of this latest emergency, to move certain self-selected agencies, departments, or bureaus to a periphery of perhaps 20 miles from the District of Columbia. This requires a lot of new buildings, the preparation of which offers jobs to numerous deserving members of one of the major political parties, and quite incident to it, and completely unexpected by the administration, it leaves in the District the equivalent space, to be filled by an equal number of men and women, who would also be members, undoubtedly, of one of the major political parties, and old enough to vote in 1952. It was, as I said, a natural, and only a man in the White House completely disinterested in politics, and in the results of the next election, could have thought that one up.

To my surprise, and satisfaction, the idea fell with a dull thud. It did not even bounce. The subcommittee, after one brief look, filed the request with business to be taken up on or about Thursday 1951. The reaction of the public was clear. It was opposed. Letters opposed the idea; news items treated it slightly, and editorials derided it. There was even some question, on the part of Government employees, in the

District of Columbia, concerning the criteria for the choice of agencies to be entitled to the little trip.

The idea was revived again in the present session. The results were the same. I again express surprise. Here was a marvelous opportunity to spend a lot of money. Why was it turned down? Being of an analytical frame of mind, I think I have discovered the answer:

First, we are not dispersing the bureaus and agencies far enough; second, we should combine the idea of barter with the proposal to disperse them.

Looking back over the history of this Nation, as of other peoples, you will realize that the practice of bartering usually preceded, but sometimes followed, the use of money. The farm woman who took the eggs to the Pennsylvania store, to trade for "boughten" goods, was a cousin, in economic history, to the tribesman who traded four cows to the chief for a particularly desirable wife. Barter was the ancestor of the cooperative movement. Money is a token, back of which there must be firm standards of value, established in local communities, in nations, or on the international level. It is historic that when money runs out, or begins to slip, in its buying power, the system of bartering automatically reasserts itself.

I do not need tell you that the American dollar has dropped severely, and dangerously, in buying power during the 18 years since Mr. Roosevelt first took office on a platform of economy, and a pledge to reduce Government spending 25 percent. Are we about to face the necessity of barter? Then why not combine the theory of barter with the administration's evident desire for dispersal?

Instead of moving the State Department to Olney, or Fairfax, or Frederick, why not move it to Russia? Some of its employees will be as much at home there as here. If that seems extreme, why not move it to London? More of its employees will be at home there, even to the accent. But here is the nice part of my proposal. Let us not do this for free. Let us barter with them. If we give them the State Department, it must be understood that this is in lieu of any more of the American taxpayers' hard-earned dollars, of which we have sent Russia and her satellites \$1,060,000,000 since the end of World War II, or about \$15,000,000,000, if wartime lend-lease is included; and England \$6,088,000,000.

We can offer to disperse the National Art Gallery to France. This is one of our greatest treasures. Tourists, who probably would not come the distance of Baltimore to Washington, while it remains here, will then flock by the boatloads to Paris. This will help pay off the French debt, and in turn the barter deal will be no more cash, in addition to the \$3,994,000,000 already spent there since 1945.

Mrs. Phillips and I have been driving around Washington, looking for ideas for barter deals like the ones just mentioned. I have been looking particularly for a statue with a plow. I want to offer that to India. I cannot find one, not even in the Department of Agricul-

ture. Maybe we could offer them the Great Seal of that Department. It shows a plow. India does not need money nearly as much as she needs to take a good look at a modern American plow, and then duplicate it. That will save us more money to apply on our deficits, and it will prevent famine in India. In addition to this constructive knowledge, India could not use the money from America to mobilize her army against Pakistan, another good friend of the United States.

How about bartering the new gold statues at the Memorial Bridge back to Italy? We have already paid for the gold and the bronze, and since I last wrote about them, I find that we also paid for the work of casting them. The "gift" on the part of our Italian friends, I discover, was the "unexcelled workmanship and know-how" in casting them. On that definition, the next time I pay my friend Mr. Battista, in the Hill Building, who has plenty of know-how, for a suit, I should put it on my accounts as a "gift." I still contend that the big, gold, muscle-bound men, and the Amazons who accompany them, are a bit out of place where they now stand, in the shadow of the unbelievable beauty and grandeur of the Lincoln Memorial. Gold yet!

It will be understood that if we give back the statues, then Italy will build her own reclamation projects, without the \$117,000,000 of American money, in the form of counterpart funds, now allocated to this purpose. We could use some of that money to complete reclamation projects in the western part of the United States including the Kansas area, where the farmers will be required, and would be willing, to pay back the money, with interest. Repayment would not be required of Italy. Under this deal, we might even get the Coachella laterals finished, which have already taken 5 years to build, and threaten a cost to the water users of \$16,100,000 as compared to the original estimate of 2 years, and about \$13,500,000.

Of course, we would not need to limit this dispersal and barter to foreign nations. In fiscal 1950 we subvented the New England States \$277,800,000. We will offer them the Smithsonian. That will supply the antique shops of New England for a generation, and we can apply the money saved on the national debt. We can offer the Pentagon Building to Chicago. My friend, and fellow subcommittee member, SYD YATES, has convinced me that there is a severe housing problem in that city. The Pentagon alone should solve it.

The Imperial Valley could put in a bid for the Department of Agriculture. Not only is the valley a wonderful farming area, but the Department now has 81,062 employees, as compared with 27,350 in 1932. We could put them out to harvest the crops, in substitution for the Mexican nationals, if the Secretary of Labor should again be asked to decide that a "labor dispute" is created by one or two men leaving a harvesting crew of a hundred or more.

In fact, the Government might get a flat bid from the State of California. In

fiscal 1950 we subvented the State \$376,150,531. Under this barter idea, we would apply that on the debt, and then we would "disperse" whatever the State would like to have in kind. I know the city of Banning would like to have the very fine statue of Bishop Francis Asbury to stand in front of the Community Methodist Church. My friend, Ben Reddick, of the Newport Balboa Press and News-Times, has already put in a request for the statue of Neptune, which now stands in front of the Library of Congress. He wants it to stand in front of the publishing house. Well, what have you to offer in exchange? Will Newport and Balboa and Balboa Island and Costa Mesa and Corona del Mar discontinue the un-Democratic idea of trying to combine the five or six post offices, now situated in a radius of about 5 miles, into one modern, effective, centrally located post office? We cannot let these ideas of economy and efficiency get started; there is no telling how far they might spread. They might even reach Washington. The Neptune statue could be a good, preventive barter. Besides, old Neptune would be more at home nearer the ocean; down here they do not even turn the water on him and his family all the time.

The State of Texas, which got \$338,714,187 back from the Federal Government in fiscal 1950, might be interested in some trades, and not only the tidelands. How about the statue to General Grant at the foot of the Capitol campus? Texas could rename it for Sam Houston, or SAM RAYBURN, and people would stand all day just looking at the marvelous sculpture of the galloping artillery horses. We could even have them painted to look like Palominos.

You can send in your suggestions and bids. There is one thing I want distinctly understood, however, there are limits to this dispersal-barter idea. I would not want the city of Riverside to try and trade us in return the statue of De Anza.

Small Corporations and Taxes

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. CURTIS of Missouri. Mr. Speaker, one of the most thoughtful letters on the subject of taxation which I have received comes from Clarence M. Barksdale, a distinguished member of the St. Louis bar for some 28 years.

So that all of the Members of Congress may have the benefit of Mr. Barksdale's views, I am including it in my remarks:

BARKSDALE, ABBOTT & THIES,
St. Louis, Mo., August 9, 1951.

Hon. THOMAS B. CURTIS,
House of Representatives Office Building,
Washington, D. C.

MY DEAR TOM: I have been following with interest, through the various tax services which I read, the proposed Revenue Act of

1951, H. R. 4473, and particularly section 123. You, undoubtedly, are familiar with this section and I have no doubt that you have received numerous other letters concerning it. I wanted to take this occasion to add my small voice to what should be a great chorus of outcries against the inclusion of that particular section in the proposed new tax bill. It is, in my opinion, a most flagrant illustration of duplicity and taxation not for revenue by a Government now noted as an expert in both fields.

The 1950 Revenue Act was heralded as a long-overdue measure for the relief of small corporations in its granting a surtax exemption of \$25,000 to each corporation. Following on the heels of that bill came the excess-profits tax law which only tended to magnify the importance of such relief to new small corporations. As a result of such exemptions, many new small companies legitimately were organized, which otherwise never would have come into being. Lawyers throughout the country advised their clients with respect to these advantages and, as a result, many new businesses were created and many companies expanded, all of which undoubtedly have contributed to our high production, high employment, and high tax revenues. Nevertheless, these small corporations, with slightly more than a year's experience, are now confronted with the Treasury Department asking Congress to take away all these exemptions if such companies have similar stockholders controlling other companies.

The estimated revenue which will be produced by such legislation, if passed, is insignificant in contrast to the total revenue sought by the bill, but the damage to small business, if such section is left in the bill, will be incalculable, and I imagine will result in a loss of revenue to the Treasury much greater than it proposes to obtain. On the other hand, the inclusion of such provision in the Revenue Act would have little, if any, effect on large corporations, who are able to do their financing and controlling of multiple corporations in a much more subtle fashion than small local companies. Thus, again, the Fair Deal government, which is supposed to be the Patron Saint of all things small, would be playing in the hands of big business, as it consistently has done for almost 20 years.

Moreover, it is high time that the lawyers in Congress are taking steps to prevent, wherever necessary, the contradictions and constant changes in the law which cause clients to lose confidence in their lawyers and lose faith in the laws. Of all places in this present maelstrom of Federal legislation, Congress should at long last have the intelligence to create a rather permanent framework for the revenue act. It is bad enough for the taxpayer and his lawyer to have the rates forever changing, but to have Congress constantly changing the substance of the law in order to do what the tax courts and the appellate courts have said the Commissioner cannot do, is making a mockery of our courts, a joke of lawyers, and many premature graves for members of our profession.

I may sound overexercised on this subject, but I assure you I am speaking from the heart. It so happens that I believe I know the subject about which I am concerned. It is only such instances as this that cause me to write my Congressman. I assure you it is far from being a habit. I only recall having written a Congressman about pending legislation on one other occasion in the 28 years I have been practicing. I sincerely hope that you are in sympathy with my views and that you will lend the full strength of your office to oppose and defeat the inclusion of section 123 in the proposed Revenue Act of 1951.

Sincerely,

CLARENCE M. BARKSDALE.

Government Planning Comes High**EXTENSION OF REMARKS
OF****HON. WILLIAM E. McVEY**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. McVEY. Mr. Speaker, much interest has been manifested in the Arizona irrigation project, and I should like to bring to the attention of the Congress a release from Dr. George S. Benson, president of Harding College, Searcy, Ark., dealing with this particular subject. The title of Dr. Benson's discussion is "Government Planning Comes High." It is believed that his comments should be helpful to those who may not be too well acquainted with the problems involved in the plan to spend a large sum of money on the Arizona irrigation project. The article of Dr. Benson follows:

GOVERNMENT PLANNING COMES HIGH

When the economic planners of England's Labor-Socialist Government blithely wasted \$100,000,000 of hard-pressed Britain's money on a scheme for growing peanuts in British East Africa, and were obliged last January to publicly admit utter failure, the limit seemed to have been reached on the high cost of bureaucratic bungling. But the facts regarding our own Interior Department's plan for irrigating a small section of Arizona desert land would suggest that the English Socialists are, after all, only small-time spenders.

The construction cost of our own economic planners' Arizona irrigation project, together with its so-called multipurpose trimmings, is to be \$708,780,000. But that's just the beginning of what the American taxpayers would have to pay. The Interior Department itself admits that actual cost to the taxpayers, counting interest on the borrowed money necessary to build it, would be \$2,784,509,000. That's almost 10 times the total value of all farm lands and buildings in the whole State of Arizona as recorded by the United States Census Bureau.

A FANTASTIC PROPOSAL

The astonishing facts about the Interior Department's Central Arizona projects are disclosed in an article by Towner Phelan, distinguished economist, in the July 16 issue of the Freeman magazine. "From the standpoint of costs in relation to expected benefits," he writes, "possibly nothing more fantastic than the central Arizona project has ever been proposed."

Mr. Phelan points out that the \$2,784,509,000 figure is the Economic Planners' own estimate of the ultimate cost, with interest, and that actually the cost probably would be two or three times this amount—or from \$6,000,000,000 to \$10,000,000,000. "History shows," he says, "that in most cases the initial cost estimate of a Government project is very low, later estimates much higher, and the final cost higher still. The Hoover Commission gives many examples such as the Hungry Horse project in Montana. It was originally estimated to cost \$6,500,000 but actually cost \$93,500,000."

PASSED SENATE

Since the bill to authorize the central Arizona irrigation project is now before Congress, and has passed the Senate, it is well that citizens know the facts. They constitute an example of what makes our taxes so high. The project affects every citizen's income, for it must be financed with funds borrowed by the Government on the strength

of the taxpayers' ability to pay. It provides direct benefits for 6,000 Arizona land owners, but only speculative or intangible benefits—if any—for the remainder of the Nation's 150,000,000 people.

According to Mr. Phelan's well-documented article, the object is this: Water is to be diverted from the Colorado River to provide irrigation for 152,500 acres of land now being irrigated by a dwindling supply of ground water pumped by private means, and an additional 73,500 acres of desert wasteland. To reach the land to be rescued, the Colorado's water must first be raised nearly 1,000 feet by pumping, and then transported some 300 miles by canals and pipelines.

HALF A TRILLION

More than half the land to be watered by the Government's engineering colossus is owned by 420 landowners with 500 acres or more—thus more than half the multi-billion-dollar cost would actually be expended for the direct benefit of only 420 farmers. Mr. Phelan estimates that the cost allocated solely to the irrigation phase of the multipurpose project calls for \$7,159 of taxpayers' money to be spent for each acre of land to be irrigated—on the basis of the Government's own estimates. On past performances, this figure likely would be closer to \$25,000 per acre.

The writer shows that on a pro rata basis the economic planners are proposing to bring water to the 420 larger farms at an average cost to the taxpayers, counting interest, of \$2,118,000 per farm. His article also states significantly that the central Arizona project is only one of a batch of such projects that have been officially planned by the planners at an estimated cost of \$57,506,200,000 and which would probably cost \$500,000,000,000—half a trillion dollars.

Yes, planning by Government economic planners comes high. It is bankrupting England and pulling the citizen down to socialized poverty. Must we too become its victims?

**New Orleans Port Remains Second
in Nation****EXTENSION OF REMARKS
OF****HON. F. EDWARD HÉBERT**

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. HÉBERT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to submit an article from the New Orleans Times-Picayune, of date August 19, 1951, entitled "New Orleans Port Remains Second in Nation," as follows:

**NEW ORLEANS PORT REMAINS SECOND IN
NATION—EXPORT CARLOADS FOR HALF OF 1951
REACH 41,418**

The port of New Orleans, during the first 6 months of 1951, maintained its position as the Nation's second busiest port in the number of export carloads, not including grain or coal.

Figures compiled by the American Association of Railroads show 41,418 carloads unloaded at the port during this period, an increase of 34 percent over the same period last year.

E. H. Lockenberg, general manager of the port, said this was more than a third of the New York total of 113,239 and about twice as much as the combined total of Houston (10,895) and Galveston (12,181).

In spite of an upsurge of 255 percent over last year at San Francisco's port due to the Korean war, New Orleans' export car unloadings are still 6,000 more than that port, according to the association's figures.

"It is interesting," said Lockenberg, "that New Orleans handled more than 10 percent of the national total of these export car unloadings."

He added:

"In spite of the hesitancy of some persons to claim the port of New Orleans as No. 2 port on the basis of dollar volume, it should be remembered that the best measure of a port's activity is in the number of car unloadings.

"This, combined with the dollar volume of its commerce, proves that New Orleans is indeed second only to New York."

Lockenberg said that plans are now under way for an expansion program which will double ability to unload bulk grain from storage by an extra marine leg to be included in proposed new additions to the elevator.

At the same time, figures submitted by C. J. Winters, superintendent of the Public Grain Elevator, showed that grain unloadings from barges for the first 7 months of 1951—16,147,951 bushels—compare to the highest postwar year of 15,543,095 bushels for the total year of 1948.

Winters pointed out that while this does not comprise by any means all of the grain receipts at the elevator it is a "good indication," not only of bulk grain unloadings but also of the increase in barge activity.

**Bureau of Reclamation Deceives Congress
More Than Army Engineers****EXTENSION OF REMARKS
OF****HON. NORRIS POULSON**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. POULSON. Mr. Speaker, I find it of great interest that the House Appropriations Committee has seen fit to issue an excoriating report on the deficiencies and deceptions of the Army engineers, with regard to project cost estimates.

The House Appropriations Committee recently passed out the Interior Department appropriations bill, which included the expenditures for the coming fiscal year of the Bureau of Reclamation.

The Army engineers have not deceived Congress any more, if as much, than the Bureau of Reclamation. Both these branches of the Federal Government are guilty of deceiving the Congress, when it comes to estimates for projects.

The discovery of the underestimates of the Army engineers is nothing new. Nor is the fact that the Bureau of Reclamation has been hoodwinking the Congress about appropriations in the years gone by a new revelation.

Perhaps, if the record were examined it would be seen that the Bureau of Reclamation has been a far greater deceiver than the Army engineers.

Comparisons in this case mean nothing, for if either one of these bodies are deceiving the Congress, they should be exposed and punished. But it is strange

that the Bureau of Reclamation was not exposed, and did not draw the wrath of the Congress long ago. For they are old offenders, and we members of the Interior and Insular Affairs Committee have long been faced with gross misrepresentation and deception on the part of Bureau of Reclamation witnesses, when it comes to the actual cost of a proposed project.

The Appropriation Committee rightly has exposed the deception of the Army engineers, but the underestimates of the engineers are insignificant compared to the underestimates and the deception which the Bureau of Reclamation has inflicted on the Congress.

Let us look at the Bureau of Reclamation record.

It will be found that the estimates for projects given Congress by the Bureau of Reclamation run from 100 to several hundred percent low.

Let me cite a few examples:

Project	Original estimate	Present estimate
Boulder Canyon.....	\$126,500,000	\$173,900,000
Davis Dam.....	41,200,000	114,438,000
Central Valley.....	170,000,000	581,886,000
Colorado-Thompson.....	44,000,000	150,503,000
Fort Peck.....	5,732,554	16,250,000
Hunley House.....	36,648,000	108,800,000
Columbia Basin.....	393,000,000	774,339,000
Kendrick.....	20,000,000	25,000,000
Riverton.....	9,500,000	21,813,404
Shoshone.....	8,851,360	16,851,705
Missouri River Basin.....	529,152,800	2,834,427,848

It will be seen that these examples include both small and large projects. Of course, numerous other examples could be cited. The Bureau of Reclamation has given consistently low estimates to Congress, with the result that the taxpayers of the Nation have suffered excessive burdens.

One of the most dishonest estimates given Congress recently by the Bureau of Reclamation has to do with the proposed central Arizona project.

The Bureau estimates the construction cost of this project roughly at \$788,000,000. But nowhere in the Bureau's report on this project are there estimates of the additional features that would have to be constructed to make the central Arizona project workable. I do not say feasible, but workable.

For instance, the main dam of the Arizona project would be filled with silt within 25 to 29 years without the building of other dams and reservoirs upstream. The Bureau does not include these additional works in its estimate, yet they would add at least half a billion dollars to the estimated cost of the project.

Now, I wish to inform the House Appropriation Committee, and the Senate, as well, that in the project bills as they are presented to the Congress, the Bureau of Reclamation has inserted a paragraph, or section, which is the most dangerous and iniquitous section that could be placed in any bill having to do with appropriations.

This section gives the Secretary of the Interior carte blanche when it comes to spending money on a project.

This section is in the central Arizona project bills—H. R. 1500 and S. 75.

During the recent hearings on S. 75 in the House Committee on Interior Affairs, I questioned at length Mr. E. G. Neilson, assistant regional director of the Bureau of Reclamation.

I shall not reprint here the entire testimony, but I shall refer my readers to pages 273 to 307 of the hearings on H. R. 1500, part 1, March 7, 1951, before the House Interior Committee.

Even a cursory examination of this testimony will reveal to the Congress the gross misrepresentations which the Bureau of Reclamation attempts to inflict upon the Members of Congress.

This testimony will show that such a bill has in it a section which makes the Secretary of the Interior a greater power than the Congress. I remarked to Mr. Neilson that H. R. 1500 was an open-end bill, and he replied:

Mr. NEILSON May I explain what I think those parts of the act are? I think, in almost each authorization that the Bureau or the Corps of Engineers or other agencies get, there is inserted in those bills a catch-all element of this kind so that the secretaries will not be bound by the specific element so that he may make changes in the interest of a more economical project.

Any one who is interested in revealing the deception of the Bureau of Reclamation can read this testimony, and if one will read it through, I am sure eyes will be opened.

There has been some talk about placing the civil functions of the Army engineers under the Department of Interior.

God, forbid.

When it comes to deceiving the Congress about project costs, the Bureau of Reclamation is by far the greater offender.

Is this exposure of the Army engineers the first step to take away their civil functions and give them to the Department of Interior?

If it is, the Congress should stop such a wicked move right now. The Bureau of Reclamation probably wastes more money than any other Bureau, and its propaganda machine is the greatest in the Federal Government. This is a socialistic bureau, if there is one in our Government.

For years, the Bureau of Reclamation has been absorbing more power over the economy of many States, and unless it is stopped, we are headed for bankruptcy or communism, and they are the same things in this case.

For years the Bureau of Reclamation has consistently deceived the Congress, both individual Members and the entire body, and if any of the members of the Appropriations Committees wish to take the time, they can issue a report that will greatly overshadow the deficiencies of the Army engineers.

Let us not excoriate the Army engineers alone. Let us look at the record of the Bureau of Reclamation, which is far more iniquitous. Let us expose and punish the Bureau of Reclamation, and not select one offender without regard for another.

The McCarran Internal Security Subcommittee

EXTENSION OF REMARKS OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, August 21, 1951

Mr. WATKINS. Mr. President, the Senate Internal Security Subcommittee has been conducting its investigation in accordance with the highest principles of American jurisprudence. This fact is daily becoming more and more apparent and the committee is now beginning to receive the public acclaim which it deserves.

Mr. President, I request permission to insert into the RECORD at this point an article written by Harold B. Hinton, which appeared in the New York Times of August 19, 1951. It accurately describes the methods and procedures being followed by the Internal Security Subcommittee, often referred to as the McCarran committee. I am proud to be a member of that committee.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

McCARRAN SHIES AWAY FROM MCCARTHY LABEL—HIS COMMITTEE OPERATES LIKE COURT, SHIELDS WITNESSES FROM PUBLICITY
(By Harold B. Hinton)

WASHINGTON, August 18.—The Senate Internal Security Subcommittee, after several months of preparatory work, is now embarked upon the public and open phase of its mission, which is "to make a complete and continuing study and investigation of the administration, operation, and enforcement of the Internal Security Act of 1950," as well as the operation of other laws against espionage and sabotage.

Since that particular law called for the exclusion or deportation of any alien whose entry or presence would endanger the public safety, many of the subcommittee's inquiries have had to do with Communists and their activities. Its members, however, decline to number themselves among the "scaremongers and hatemongers" whom President Truman castigated so roundly earlier in the week nor do they like to be told they are "carrying McCarthy's load."

The parent body of the Internal Security Subcommittee is the Judiciary Committee, and Senator PAT MCCARRAN, Democrat of Nevada, is chairman of both the full committee and the subcommittee. The other six members also are distinguished lawyers.

EMPHASIS ON FAR EAST

They are Senators JAMES O. EASTLAND, of Mississippi, HERBERT R. O'CONOR, of Maryland, and WILLIS SMITH, of North Carolina, Democrats; and HOMER FERGUSON, of Michigan, WILLIAM E. JENNER, of Indiana, and ARTHUR V. WATKINS, of Utah, Republicans.

At present, the subcommittee is looking into the extent, if any, to which subversive forces have influenced, or sought to influence, the far-eastern policy of the United States. In this inquiry, it is directing its attention to the membership and activities of the Institute of Pacific Relations.

Unlike many congressional public hearings, the atmosphere of the subcommittee's open sessions closely resembles that of a courtroom. Senator MCCARRAN insists that

evidence submitted by the subcommittee's own staff be fully identified for the record, and treats its counsel, Robert Morris, as formally as he would any strange lawyer who appeared before him

"The committee's staff was instructed to maintain, and the committee has sought to maintain, a high standard of evidence, and to proceed with a truly objective approach," Mr. McCARRAN said of its procedure.

NO RADIO OR VIDEO

Before it began its public hearings the subcommittee considered the advisability of permitting television and radio broadcasting of its open sessions.

"The ruling of the committee is that none of the proceedings of the committee will be televised, and that no direct radio coverage of the proceedings of the committee will be permitted," Mr. McCARRAN announced. "News pictures may be permitted before and after the actual hearing sessions of the committee, but the taking of news pictures during the actual conduct of the hearings will not be allowed."

"Neither will the committee permit the photographing of witnesses with members of the committee in the hearing room, nor the photographing of witnesses in the hearing room without the permission of the witnesses."

"The committee has made these decisions because we are seeking facts, not publicity. We want to make a record, not to make headlines. Furthermore we want to make it clear that no witness who is called here will be subjected to undue publicity against his will."

IF SHOE FITS

If the chairmen of other committees desire to interpret these rulings as an implied criticism of their own proceedings, they apparently are welcome to do so by Senator McCARRAN.

The Nevada Senator is in a good position not to care. He has been in the Senate since 1933, and has been almost continuously at odds with his party. He does not come up for election again until 1956.

An irascible, persistent debater and a hard worker, he has followed the path of rugged individualism in the Senate during his entire service. He opposed many of the New Deal measures President Roosevelt proposed to Congress, and has been equally independent of President Truman's recommendations.

The chairman declines to use the large, marble-walled caucus room where most of the public hearings of Senate committees are held when it is apparent that large audiences will be attracted. His hearings are held in the Judiciary Committee's own small, cluttered meeting room.

Despite Mr. McCARRAN's modest objectives, his subcommittee has been getting its share of headlines, dating from its exploit in raiding the files of the Institute of Pacific Relations in a Massachusetts barn.

RELEVANT QUESTIONS

Witnesses are directed to limit their replies to the things about which they are asked, and Mr. Morris is under strict orders to keep his questions pertinent to the matter in hand. Thus, during the recent parade of former Communists—including Dr. Karl A. Wittfogel, Mrs. Hede Massing, Alexander Gregory Barmine, Whittaker Chambers, and Miss Elizabeth Bentley—the witnesses were asked to testify only about individuals the committee believed to be connected with the Institute of Pacific Relations.

Inevitably, other names were brought into the record, but the committee gave the impression it was making every effort to avoid the "character assassination" about which President Truman has complained.

However, the subcommittee has been exposed to some criticism because of the incidental mention of other individuals, even though resulting from questions from mem-

bers other than the chairman, and the reiteration by some of the witnesses of hearsay charges they have previously made before other investigating bodies. There are those who contend it is merely extending the work of wholesale denunciations started by Senator McCARTHY on the Senate floor.

The subcommittee was established by direction of a Senate resolution adopted last December, and started to work soon after the first of the year. The Senate has thus far authorized it to spend up to \$175,000 for staff salaries and other expenses of investigation.

Its members are not yet certain what they will do in further discharge of their instructions to act as watchdogs over the execution of the laws guarding the internal security of the Nation against subversive activities. The group has already recommended legislation to bar from certification as a collective bargaining agent any organization found to be controlled by Communists and it has called on Attorney General J. Howard McGrath to deport all diplomatic and consular agents of foreign governments whose activities endanger the public safety.

CHECK ON UNION

The first recommendation followed an investigation of the American Communications Association of New York City, certified by the National Labor Relations Board as bargaining agent for employees of the Western Union Co. and those of other communications firms. It received testimony that a number of the union's officials were Communists.

The dig at foreign subversives masked under diplomatic or consular status was prompted by a series of hearings at which State Department spokesmen testified there were 85 current cases where aliens in a diplomatic or semidiplomatic status had been admitted to the United States before adverse security information against them had been received.

The current hearings on the Institute of Pacific Relations were doubtless prompted by the charges and countercharges that came out of the hearings over the dismissal of General of the Army Douglas MacArthur. Several of the figures in that controversy were persons who had been charged previously by Senator JOSEPH R. McCARTHY, Republican of Wisconsin, as being Communists or Communist sympathizers.

The Voice of America Program

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, August 21, 1951

Mr. BENTON. Mr. President, before I retired from the advertising business in 1935, I was a reader of the weekly *Advertising Age*. I admired it for its realism in the field in which I then worked. I assume it still adheres to its tradition of factual reporting. Thus I think those of us in the Congress who must soon pass upon the 1952 budget for the Voice of America will welcome a realistic appraisal of this program by the reporter for *Advertising Age*. I ask unanimous consent that the article, *How Good Is the Voice Program?* from the issue of August 13, be inserted in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW GOOD IS THE VOICE PROGRAM?—ADMEN COME IN, GIVING IT NEW LIFE—NO SALES CURVE EXISTS TO BOLSTER BUDGET PLEAS; RADIO FUNDS UNDER P. & G.'s

(By Stanley Cohen)

WASHINGTON, August 8.—How good is America's overseas information campaign?

Is it true that this sales-minded Nation falls flat on its face when it tries to put together a campaign explaining its motives and objectives to other nations?

Are talented individuals utilized? Or are they ignored, or buried under a heap of bureaucratic red tape?

Though it has handled the program for more than 5 years, the Department of State faces these questions each time it goes to Congress for appropriations.

Presumably, the questions persist because the Department has never been able to provide convincing answers.

Currently, the prevailing feeling among informed Members of Congress is that the information program is reasonably effective on the operating level—and that it is improving.

There is no sales curve to prove the point. But the Czech who slips across the border, or the Polish sailor who escapes to Sweden, demonstrates that something is getting through to remind the peoples of Eastern Europe of a better life on the other side of the iron curtain.

And there are ouches from the enemy camp which are far more tangible evidence. Experts estimate that Russia has more than 1,000 radio transmitters—a plant equal to nearly half this Nation's whole AM service—devoted exclusively to jamming Voice of America broadcasts.

Moreover, the very fact that Russia is busy blocking and denouncing the Voice is taken here as evidence that the Politburo believes there is danger that the American story is spreading—one way or another—among the captive peoples.

Despite this information, there is an uncomfortable feeling that the information program accomplishes less than it should, considering the amount of money available. Even the program's most loyal supporters on the Hill concede that IIEE (International Information and Education Exchange) is stifled by an unreasonable amount of administrative red tape.

The House Appropriations Committee, which keeps a sharp eye on IIEE, recently used experienced investigators from the FBI and Treasury Department to check the administrative efficiency of the program.

Like all such investigations, the results are contested. There were reassuring testimonials on the effectiveness of Voice broadcasts in France and Italy. But there were chilling illustrations of lost time and motion which convinced most Appropriations Committee members that a house cleaning was in order.

Happily this house cleaning is under way.

To put zip into IIEE operations, Assistant Secretary of State Ed Barrett recently brought in Thurman Barnard, vice president of Compton Advertising, as general manager of the information service.

With his arrival, the office of the general manager has begun tightening its supervision of the enterprise. One of the first steps was to set up a programming and evaluation unit in the general manager's office, under Orville C. Anderson, veteran IIEE executive and former adman and publisher. For chief of evaluation, Mr. Barnard brought in Ben Gedalecia, who has directed radio and TV research for American Broadcasting Co. for the past 5 years.

There have been structural changes, too. Formerly, all media, including the Voice of America, were clustered in the Office of In-

ternational Information, and all education programs in the Office of Educational Exchange.

To strengthen the Voice, which is the State Department's most important medium, Voice has been taken out of the Office of International Information. It has been given coequal status, reporting directly to Mr. Barnard.

Office of International Information, too, is getting fresh leadership. For this operation, which includes press, films, publications, and other media, State Department has brought in Robert C. LaBlonde, vice president for public relations of Foote, Cone & Belding International.

Representative JOHN J. ROONEY, Democrat, New York, chairman of the House Appropriations Subcommittee handling State Department funds, is hopeful that these new housekeepers will sweep away the red tape which has hampered operations.

In a floor fight over IIEE funds for 1952, he waged a determined fight against an organized Republican campaign to clip \$15,000,000 off the \$85,000,000 proposed by the Appropriations Committee. He pointed out there had been a \$30,000,000 cut in committee. "Any further cut," he warned, "would go below the fat into the meat."

It is nothing new for United States overseas information units to have congressional troubles. Throughout World War II Congress was constantly on the verge of putting the overseas branch of the Office of War Information out of business. Several times it was saved only by the magic name of General Eisenhower, and convincing endorsements from personalities who could not be taken lightly.

Frequently, OWI Chief Elmer Davis was on the Hill, explaining away one or another allegedly unpardonable sin.

From time to time there are crusades to "improve" the information service one way or another. Shortly after the war, Congress demanded that Voice programing be handled by private broadcasters under contract. The results pleased no one.

Currently there are plans for an "Independent" information organization, to gather overseas activities of ECA and other agencies under one roof, away from "old line" bureaucrats.

Probably, this consolidation would eliminate overlapping which is inevitable while ECA operates its own \$17,000,000 information program in 17 countries. Whether an independent IIEE would be any better than the old OWI is a matter of conjecture.

Men close to IIEE believe overseas information will always be in danger of bureaucracy's most serious ailment—procrastination. The development of information "lines" inevitably involves so many "clearances" that there are innumerable opportunities for a project to get completely enmeshed.

For example, the information service recently decided to make a two-reel film on Korea. Before the script for this film got a necessary O. K. from various policy making agencies, it was rewritten several times and bounced back and forth between New York and Washington for more than 6 months.

It is not always this bad, but IIEE gets into fields where there are many cooks.

During the postwar period, IIEE budgets went as low as \$21,000,000 (in 1948). At times the atmosphere was frigid. Big news services refused to sell their reports to the Voice. Voice reporters were—and are—excluded from the regular Press Galleries of Congress, though their iron-curtain competitors were—and are—accorded all the many privileges of honest newspapermen.

Since the arrival of Mr. Barrett from Newsweek about a year ago to take top policy responsibility for IIEE, there has been a noticeable improvement in the climate. Under Foy Kohler, a career expert on Russia

and former chargé d'affaires in Moscow, the Voice has gone on the offensive, raising embarrassing questions for the Politburo to answer to its own people.

Arrival of Mr. Barnard convinced more than one congressional skeptic that a heroic effort to get an effective overseas information program is in the cards.

On the journeyman level, State Department feels its IIEE personnel is a remarkably effective group. But it isn't easy to draw topnotchers for the executive slots.

In a situation short of war, the emotional appeal is lacking. And for topnotchers, the opportunities outside Government are unparalleled at this time.

"We could use more consultants," officials say, "but the problem of security clearance is tough."

"Start FBI clearance of an adman," Mr. Barnard points out, "and he has a headache. His client immediately suspects he is getting ready to go into Government service. Naturally, the client isn't happy about that."

Nevertheless, quite a number of well-known marketing and media experts are putting their shoulder to the wheel. Ed Mayer, president of James Gray, Inc., one of the Nation's top experts on direct mail, recently returned from an assignment in southeast Asia. As consultants, State Department uses men like Sigurd Larmont, James W. Young, William Paley and Ed Noble. Its public relations panel is headed by William G. Werner, public relations chief of Procter & Gamble Co. Its new press and publications advisory committee, under Ben Hibbs, editor of the Saturday Evening Post, includes Ted Repplier, president of the Advertising Council, Edwin S. Friendly, vice president of the New York World-Telegram and Sun; A. L. Cole, manager, Reader's Digest; Arthur H. Motley, publisher of Parade, and others.

Recently a task force from Young & Rubicam was called in to appraise a portion of the IIEE operation. Another task force, from McCann-Erickson, is in the process of drawing up a suggested advertising campaign, as part of IIEE's program for a particular friendly nation. The Advertising Council has a campaign to get IIEE messages into overseas programs of United States industry. The \$104,000,000 budget which IIEE had during the past year may give a false sense of proportion.

For radio, its most important medium, the State Department had roughly \$16,000,000 in dollars and foreign currency. That compares with \$18,357,000 which Procter & Gamble Co. spent for network radio alone in 1950.

Voice of America broadcasts 54 hours of programing daily in 37 languages, and is in the process of stepping up its schedule. For the current fiscal year, it is asking Congress for \$25,000,000.

IIEE's press service produces a 10,000-word report daily for foreign newspapers and radio. Together with publications, it has an annual budget of \$6,800,000. Other budget items: Motion pictures, \$11,800,000; libraries and institutions, \$3,600,000, exchange of persons, \$6,000,000. The bulk of the IIEE budget is capital-equipment construction of new radio stations, \$67,000,000.

I include the following news article written by a lovely West Virginian, Mary Eloise Turner:

MRS. KEE FIRST WEST VIRGINIA WOMAN REPRESENTATIVE—GRANDDAUGHTER SEES GRACIOUS LADY TAKE HER SEAT IN CONGRESS

(By Mary Eloise Turner)

WASHINGTON, July 28.—With a yellow-haired granddaughter watching from the gallery a gracious lady from West Virginia took her seat in the halls of Congress this week, thus becoming the State's first woman Representative. She is ELIZABETH KEE, of Bluefield, W. Va., who was elected July 17 in a special election to fill the unexpired term of her late husband, the beloved John Kee of the Fifth Congressional District.

The Congress was called to order by the Speaker, Mr. SAM RAYBURN, of Texas. The invocation was given by the Reverend William Eckman, of Christ Episcopal Church, of Philadelphia, who came down for the occasion. Mrs. KEE was accompanied to the rostrum to swear allegiance to her new job by Dr. T. H. HEDRICK, of the Sixth West Virginia District, who is the dean of the West Virginia representatives. Seated in the front to view the ceremony and to welcome their new colleague, were ROBERT L. RAMSAY, of the First District, HARLEY O. STAGGERS, of the Second District, CLEVELAND M. BAILEY, of the Third District; and M. G. BURNSIDE, of the Fourth District.

What kind of woman has had this signal honor? First, one would say that ELIZABETH KEE does not look like a politician. She is unhurried, calm, and soft-spoken, a rather large woman with a sweet smile and expressive eyes. She has a keen sense of humor and enjoys a joke on herself. She is no stranger to the job of the congressional office as she has been her husband's secretary for 16 years. As a freshman Congresswoman, however, she will take her place at the foot of the ladder with none of the prerogatives won by her husband in his long years in Washington. Mr. Kee was chairman of the powerful and important Foreign Affairs Committee which gave him and his wife a high place in the official and social life of Washington.

Mrs. KEE has worked hard as a congressional secretary but has kept a vital interest in other things as well. She has a large collection of miniature dogs. To this might be added Pepl, a Mexican chihuahua, a more animated but scarcely larger member who guards his mistress' apartment. Mrs. KEE loves music and flowers and is interested in flower arrangement. Chinese art is another of her varied interests. Her chief hobby, if one can be singled out, is the library at Woodrow Wilson Rehabilitation Center at Fishersville, Va. She has collected 10,000 volumes for this library and had many of them autographed by famous men of our time.

Mrs. KEE is the mother of two children, Frances and Jimmy. Her three granddaughters with the alliterative names of Kirsten, Kathleen, and Karen are the pride of their grandmother as her face shows when she speaks of them.

Mrs. Kee First West Virginia Woman Representative

EXTENSION OF REMARKS

OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. RAMSAY. Mr. Speaker, under leave to revise and extend my remarks,

Should the Government Pay?

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. CURTIS of Missouri. Mr. Speaker, the problems arising from the recent Kaw River flood are manifold. The St.

Louis Post-Dispatch on August 15, 1951, published the following editorial entitled "Should the Government Pay?" which asked a searching question:

SHOULD THE GOVERNMENT PAY?

Relief must unquestionably be provided for the flood sufferers in Missouri, Kansas, and Oklahoma. Financial aid must be given to those who cannot get back on their feet without it. Whether this should be done in the way Representative BOLLING, of Kansas City, and Senator THOMAS HENNING, of St. Louis, propose, however, is a question. They would have the United States Government pay for a substantial part of the losses of home owners and small-business men.

The Bolling-Henning proposal would set a precedent in American disaster relief and reconstruction, for hitherto the Red Cross has taken care of these tasks. Once the principle of Federal reimbursement for capital losses in natural disasters was established, how far would it go? Would it mean Federal contributions after every flood, tornado, or other disaster everywhere in the country? What would be the likely cost to the Treasury?

The Red Cross has indicated it expects to be able to cope with the Midwestern flood disaster as it has coped with other disasters in the past. Federal funds are available, as they should be, for emergency relief. For long-range rehabilitation, the Red Cross stands ready to help individuals who cannot help themselves, and the RFC is available for loans to business concerns that cannot get credit through ordinary commercial channels.

But Federal grants to make good losses to private property are essentially different from these forms of relief. While it is unquestionably a Federal responsibility to develop water resources so the floods are brought under control, is it a Federal responsibility to pay the losses resulting from its past neglect of flood control? Are there convincing reasons why means of relief and rehabilitation used in the past are no longer adequate? We raise these questions to indicate some of the considerations which facts and debate should be expected to settle before final action is taken in Congress.

Soldier—Statesman—Friend

MEMORIAL ADDRESS

OF

HON. F. ERTEL CARLYLE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1951

On the life, character, and public service of Hon. Alfred Lee Bulwinkle, late a Representative from the State of North Carolina.

Mr. CARLYLE. Mr. Speaker, for many centuries, thoughtful men have known that the guiding star of their lives must be seen in the early years of life. Hon. Alfred Lee Bulwinkle was a thoughtful man, and in his early years he firmly decided that the guiding star of his life would be determination and faithfulness. He pointed these splendid attributes in the right direction. This fact is ably stated in the following well-considered editorial which appeared in the Charlotte News, one of the leading newspapers of the Southern States, and published at Charlotte, N. C.:

THE MAJOR GOT THINGS DONE

When Maj. A. L. Bulwinkle's discharge papers passed through the office of the Ad-

jutant General of the Army after World War I they were endorsed: "He gets things done."

This endorsement aptly described the career of the veteran Congressman who had represented the Tenth and then the Eleventh North Carolina Districts for 28 years. Major Bulwinkle got things done.

He got things done as an officer of artillery on the battle fronts of France in World War I, and he got things done in his 28 years of service in the National House of Representatives. At the same time his manner was quiet and unobtrusive and his accomplishments were without fanfare and ballyhoo.

Although his chief accomplishments are recorded in national policy, he made many real contributions to Mecklenburg County and the city of Charlotte. He was instrumental in securing the present fine post-office building and gave material assistance in obtaining Federal aid in the construction of such worth-while projects as the American Legion Memorial Stadium, the Douglas Municipal Airport, and Memorial Hospital.

Major Bulwinkle devoted most of his life to public service, as a school teacher, Army officer and legislator. He ran for Congress fifteen times and was defeated only once, in 1928, when Democrats fell right and left in the Al Smith debacle.

Much of the established legislation relating to transportation (land and air) and public health was enacted under his guidance. He was a ranking member of the Interstate and Foreign Commerce Committee of the House and was particularly interested in matters pertaining to air transportation. He developed legislation providing for coordination of civil aeronautics and sponsored the National Airport Act which resulted in the establishment of a Nation-wide network of civilian airports.

He was instrumental in securing legislation establishing the National Cancer Institute, the wartime cadet nurses' program and tuberculosis control, as well as the national campaign against venereal disease. He served, too, as chairman of the Subcommittee on Pure Food and Drugs that drafted measures safeguarding food, drugs, and cosmetics.

One of the major's foremost personal and official interests was the welfare of the veterans. He was instrumental in the organization of the House Veterans' Affairs Committee and in addition to his official activities he was ready to help any veteran.

When Major Bulwinkle was elected to Congress in 1920 from the Tenth District, Mecklenburg was a part of the district. He served this county well until the redistricting after the 1940 census when North Carolina was given an additional district. Gaston County was in the Eleventh District and Major Bulwinkle had served that district since that time. Because of ill health he did not seek renomination this spring and had planned to retire at the end of his term.

A man of firm convictions and stout courage, the major represented North Carolina well in Congress and his illness and death have removed one of the State's conscientious and capable leaders.

Mr. Speaker, being a member of the House Committee on Interstate and Foreign Commerce, I have had many opportunities to observe the useful service which Congressman Bulwinkle rendered during the many years that he served as a ranking member of this committee, and important and far-reaching legislation which he sponsored clearly discloses that he was possessed of a clear and trained mind, high purposes, and the determination to render beneficial and permanent service to his State and country. No one has ever doubted his loyalty and sincerity of purpose because his outstanding record in Congress is one of action, achievement, and fidelity.

It was my pleasure to have known Congressman Bulwinkle for more than 25 years and I know he loved people and he loved life. He carefully studied and diligently worked with legislation that had for its purpose to protect life and to promote health and happiness for all mankind. In this particular field of legislation he was a recognized authority. His great mind followed in the vein of the poet:

The world is filled with flowers,
The flowers are filled with dew,
The dew is filled with heavenly love
That drips for me and you.

Of Congressman Bulwinkle it must be said that his life proves that he acted wisely when he selected as his guiding star the attributes of determination and faithfulness, because these splendid characteristics combined with his superb ability and innate honesty enabled him to serve well his constituents, his State, and humanity. His passing has occasioned great loss but he was extremely interested in being of service until the end. In fact, the Death Angel almost called him from his desk.

Being a brave soldier, true statesman, and devoted public servant, he will always be remembered as one of the great sons of North Carolina and one who fully understood and appreciated:

What builds the nation's pillars high
And its foundations strong,
What makes it mighty to defy
The foes that round it throng?
Not gold, but only men can make
A people great and strong;
Men who, for truth, and honor's sake,
Stand fast and suffer long.
Brave men who work while others sleep
Who dare while others fly—
They build a nation's pillars deep
And lift them to the sky.

Newburyport, Mass., Centennial

EXTENSION OF REMARKS

OF

HON. WILLIAM H. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. BATES. Mr. Speaker, the city of Newburyport, Mass., is this year observing in quiet fashion the one hundredth anniversary of its incorporation as a city, and I am proud to call the attention of the Nation to this important event.

Newburyport holds a prominent place historically, and its contributions to State and Nation have been outstanding. Its people have long cherished the meaning of our way of life and have demonstrated their high sense of patriotism at every call to serve the cause of freedom.

Newburyport has long boasted of its fine community spirit, and its churches, schools, hospitals, newspapers, as well as patriotic and fraternal organizations, bespeak of a people working and striving together in order to make their city a better place in which to live.

Steeped in rich traditions and proud of its past, Newburyport looks forward to greater progress.

Proposed Synthetic Oil Plant

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. HESELTON. Mr. Speaker, in connection with the executive session of the Interstate and Foreign Commerce Committee Wednesday afternoon at 2 o'clock on the subject of synthetic liquid fuels, there appeared recently in Platt's Oilgram News Service three articles with reference to the reported plan for the immediate construction of two commercial-size liquid fuel plants. I want to make these articles readily available to the members of the committee and to my other colleagues who may be interested in the subject. The articles follow:

[From Platt's Oilgram, Cleveland edition, of August 8, 1951]

CHAPMAN ASKS NEARLY HALF BILLION FOR SYNTHETICS, WANTS PLANTS STARTED NOW BEFORE OIL RUNS OUT

WASHINGTON—Authority to borrow \$455,000,000 from the Federal Treasury with the object of underwriting the immediate construction of two commercial-size synthetic liquid-fuel plants is being sought by Interior Secretary Chapman, it was learned today by Oilgram on the best of authority.

If permission is granted, Chapman intends to—

1 Use \$400,000,000 of the total to guarantee Government purchase of the output, and thus the profits, on the proposed investment by a private group in a 30,000 b/d hydrogenation plant, to be located probably in southern Illinois.

2 Underwrite in similar fashion the construction of a \$55,000,000 shale oil plant of a "few thousand" barrels daily capacity.

Chapman's request is pending before the Defense Production Administration and seeks to invoke authority for such deals set out in the recently amended Defense Production Act (Sections 302 and 303). That law, as amended, makes a total of \$2,100,000,000 available to Government departments and agencies to encourage expansion of productive capacity and supply.

The Secretary, in going to DPA, is believed to have acted without the advice or even the knowledge of the Petroleum Administration for Defense.

This would mean that he had ignored the fact his own order setting up PAD gives that agency responsibility for all liquid fuels, including any which might be produced synthetically.

Also, patently, he moved without waiting for National Petroleum Council to complete and file report he requested on cost estimates his own synthetic fuels chief, Dr. W. C. Schroeder, claims show synthetics now to be competitive with petroleum.

The Schroeder claim has been vigorously challenged by many in industry, but principal results of NPC's review of his cost figures won't be forthcoming probably until October. NPC study is to be most comprehensive ever made into subject of synthetic liquid fuels, involving work of dozens of industry experts and a cost of their companies well over \$500,000.

However, Chapman apparently decided to wait on nobody and so filed his formal application for borrowing authority with DPA on July 28.

He is understood to have sought to justify the request on grounds that the United

States must immediately take out "insurance" against the day when the petroleum industry can no longer keep pace with mounting demand. In this respect, he thus flew in the face of the short-term (5-year) availability report of NPC's McCollum committee, filed just 4 days previously, and also of PAD reports to him which have scouted the possibility of the United States running out of oil in the foreseeable future.

The "insurance" line is one, however, that the Secretary has been strongly plugging in recent speeches around the country. At Asheville, N. C., on May 19, for example, he said:

"The oil industry has done and is doing prodigious things to increase our supply, yet we must provide the best insurance we can against the possibility that the demand for liquid fuels may ultimately exceed our capacity to find and tap new reserves of oil. In other words, we must begin to provide ourselves with synthetic liquid fuels."

If he gets the requested borrowing authority—and provided nothing intervenes in the meantime to cause him to change his mind—Chapman and his top program planners, including Schroeder, intend entering immediately into active negotiations with a private group looking to construction of the 30,000 b/d coal hydrogenation plant.

Similar negotiations involving shale oil plant presumably would lag not far behind.

The one private group known to be interested in building a coal hydrogenation plant, provided Government guarantees against loss, is represented by Ferdinand Eberstadt, of New York. It has estimated \$400,000,000 as cost of a 30,000 b/d plant, including \$50,000,000 for necessary power-generating facilities.

A crude petroleum refinery of like capacity now costs approximately \$45,000,000, or about \$1,500 per b/d of crude input capacity.

In August 1949 the Bureau of Mines, in its Report of Investigations No. 4564, estimated that a 30,000 b/d hydrogenation plant using Illinois bituminous coal, which is what the Eberstadt group proposes, would require 175,148 tons of steel to build. That tonnage covers only the requirements for actual hydrogenation section, the gas-production section, and general and auxiliary plants facilities such as tankage, utilities, railroads, etc. It does not include indispensable accessory facilities, such as water supply, roads and railroad connections, opening of the mines, and housing accommodations.

The same steel requirements figure probably still holds good, at least, it is the one being used by NPC committee in its study. By way of comparison with 175,148 tons estimate, total third quarter allocation of steel to the refining branch of the oil industry is only 82,000 tons.

In dealing with the Eberstadt group Interior Department officials reportedly are insisting on a cancellation clause in the contract under which, if the deal doesn't work out too well, the Government may take over and operate the plant itself after payment of certain costs.

Any purchase arrangement entered into would have an automatic termination date of June 30, 1962, as provided in the amended Defense Production Act.

Word of the Chapman request to OPA also brought with it today further information as to the internal difficulties at the Interior Department which have been seen Dr. Schroeder taking over from James Boyd as head of the Defense Minerals Administration, with the latter being relegated to his old job of Director of the Bureau of Mines (see August 6 Oilgram).

Insiders said the DMA shake-up has been long in the works for a variety of reasons; also that it had been expected to lead to Boyd's prompt resignation from the Bureau, making it possible for Schroeder to take over as Director. It was said to be in anticipation of this that, at the same time he appointed

him acting DMA chief, Chapman also made Schroeder Assistant Director for programs in the Mines Bureau.

However, Boyd did not resign, so, rather than have Schroeder taking orders from Boyd, Chapman now has issued orders under which Schroeder is responsible only to the Secretary, Oilgram was told. This leaves Boyd in the untenable position of having an assistant over whom he has no control and could have the result of now actually forcing his resignation.

Boyd is understood to have incurred high disfavor of Chapman and those about him primarily because, doubting Schroeder's claims as to synthetic fuel production costs, he called in a private consultant to go over the latter's figures and had those doubts confirmed.

[From Platt's Oilgram, New York edition, of August 10, 1951]

PAD'S BROWN PICTURED AS STILL OPPOSED TO PLAN FOR COMMERCIAL-SCALE OUTPUT OF SYNTHETIC LIQUID FUELS

WASHINGTON—While he has refused to comment on Secretary Chapman's effort to underwrite a synthetic liquid fuels program (see Aug. 8 Oilgram), it is fair to assume, Oilgram was told today, that Deputy PAD Bruce K. Brown is as opposed now to building of commercial-size coal hydrogenation plants as he was when he so testified before a congressional committee in January 1948.

Brown informed House Armed Services (Short) Committee at that time that, in his opinion, it just didn't make sense to burn 4.5 tons of a solid fuel—coal—to make 3 tons of synthetic liquid fuel.

Meantime, it was positively established today that PAD was not consulted by Chapman in advance of his request to Defense Production Administration for authority to borrow \$455,000,000 from the Treasury to guarantee private promoters against loss in constructing and operating a hydrogenation plant and a smaller shale oil plant.

However, agency subsequently is understood to have communicated to Chapman in writing its view that encouragement of commercial size synthetic plants cannot be justified under present conditions. Presumably its argument followed much the same line as did Brown in his 1948 testimony.

In pushing for construction of plants, Chapman and other departmental officials have been seeking, in part, to economically justify coal hydrogenation process by crediting value of chemicals or aromatics yielded to production costs of liquid fuels output. On this score, PAD may have torn some of ground out from under them in a report sent this week to the Senate Preparedness Subcommittee, headed by Senator LYNDON JOHNSON, Democrat, Texas.

PAD reported to the subcommittee that approval of eight pending necessity certificate applications from industry will "place the oil industry in the position of exceeding by a slight margin" a National Production Authority program under which industry is called upon to produce 131,000,000 gallons of benzene annually.

Total potential benzene from already certified facilities amounts to 81,000,000 gallons per year, while applications pending provide for another 54,000,000 gallons—a total of 135,000,000.

Chapman's move to launch a synthetics program is beginning to get widespread notice.

The Christian Science Monitor reported today that the proposed hydrogenation plant in southern Illinois would be constructed and operated for the so-called Eberstadt group by the Koppers Co. The newspaper also said:

"One Government expert on mobilization contracts estimates that the project as endorsed by Secretary Chapman would insure

to the private promoters of the project profits up to 1,100 percent on the 250,000 shares of \$1 common stock in 12 years. Under the prospectus, this \$250,000 worth of voting stock would control the enterprise."

The Monitor said, too, that Dr. H. H. Storch, director of Bureau of Mines experiment station at Bruceton, Pa., had advised against the Eberstadt deal in a memorandum dated July 3—25 days before the Chapman request was forwarded to DPA. It quoted Dr. Storch as writing,

"It is apparent that even a 30,000-barrels-per-day plant is a 'poor risk' for private capital. It is, therefore, not surprising that the sponsors of this project plan to request guarantees from the Government for capital, interest, and product disposal at a satisfactory price. Because the sponsors refuse to take any risks whatever, it would seem undesirable for the Government to agree to their proposal."

[From Platt's Oilgram, New York edition, of August 13, 1951]

INTERIOR DENIES DISPUTE ON SYNTHETICS RESULTED IN BOYD OUSTER—SAYS NO "OUTSIDER" DID COST CHECKING

WASHINGTON.—An Interior Department spokesman today denied that a difference of opinion between Secretary Chapman and Bureau of Mines Director Boyd over synthetic fuels led to the latter's replacement as head of Defense Minerals Administration.

He referred to replacement of Boyd by Dr. W. C. Schroeder, Chief of Department's Office of Synthetic Liquid Fuels (see August 8 and 10 Oilgrams).

"Synthetic fuels had not the slightest thing to do with it," said this Department official, adding that Boyd's departure from DMA "probably was in the cards" when the President recently created a new separate agency to handle stockpiling of strategic minerals.

This new agency, it was said, will cut across the jurisdictional lines formerly held by DMA.

The Interior spokesman also took occasion to proclaim that Boyd did not have "an outsider" brought in to check cost figures compiled by Schroeder's office on creation of a commercial synthetic fuels industry. Such a check, however, he added, was made by Dr. H. H. Storch, director of the Bureau of Mines' experiment station at Bruceton, Pa.

"There has been an honest difference of opinion within the bureau on synthetics," the spokesman concluded.

Meantime, it was pointed out that Oilgram in its August 10 issue inadvertently quoted Deputy PAD Bruce K. Brown as testifying in 1948 before a House Armed Services (Short) Oil Subcommittee that it would take 45 tons of coal to make 3 tons of synthetic liquid fuel. The story should have said, as Brown testified at that time, that it would require 45 tons of coal to make 1 ton of synthetic liquid fuel.

cently written a very interesting article under the caption "Dangers in congressional immunity." The article was published in a recent issue of the New York Times Magazine, and because of its appropriateness at this time and the attention it has attracted, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DANGERS IN CONGRESSIONAL IMMUNITY—SENATOR HUNT, CITING ABUSES OF THE PRIVILEGE, PROPOSES THAT IT BE ABOLISHED OR CURTAILED

(By LESTER C. HUNT)

WASHINGTON.—If I declared falsely at a public meeting that some person I disliked was a Communist, I might be sued for slander and exposed to the penalties provided by law. But if I, addressing the Senate as a Member, should falsely charge that this person was a Communist, or guilty of any crime, even that of treason to the Nation, I could not be made to pay for the destruction of my enemy's character nor suffer any other penalty. This is a protection accorded Members of Congress by the Constitution of the United States.

The injustice of the effects of such a law, as exemplified by a number of recent cases, has awakened all fair-minded people to the need for subjecting this constitutional provision to the closest scrutiny. There is a growing feeling either that the courts should give the law a very limited construction or else that Congress should abolish the immunity it affords in situations in which it was not meant to be applied.

The latter remedy is the intent of a joint resolution which I have offered in the Congress for repeal of that part of section 6, article I, of the Constitution which grants the immunity privilege for all statements uttered in the conduct of congressional business and which reads: "... and for any speech or debate in either House they [the Members of Congress] shall not be questioned in any other place [e. g., the courts]."

This unusual prerogative of immunity, conferring protection against arrest or civil suit, is one of the most jealously guarded of Congress' rights and privileges. It was lifted from the English law and placed by the founding fathers in our Constitution with, apparently, little debate. Its purpose as conceived by them is plain. The members of the Constitutional Convention were only shortly removed from English rule and they were alert to the dangers which lay in control of legislative bodies by the executive. It was not entirely clear in their minds what form the executive of the United States would assume. Many thought that our President would function as a king and have the kingly prerogatives. So the immunity afforded Members of Congress was designed to allow criticism of the executive without fear of retaliation. It was plainly their intention that the Congress be protected not from its constituents but from the executive branch of the Government.

It was also part of the intention of the Constitutional Convention that the doctrine of privilege should be valid only within the halls of Congress. The framers of the Constitution would be surprised and appalled if they knew that, as construed today, it is applicable to speeches which are never made before Congress but which are written or adapted by Members as extensions of imaginary remarks and circulated throughout the country in the CONGRESSIONAL RECORD. They would also be shocked to learn that it has been extended to committee reports and to testimony in committee hearings.

Such broad interpretation of the term "immunity" has led to three flagrant and, in my view, intolerable abuses. The first of these is that, under the aegis of the immunity privilege, unscrupulous Congressmen can impute unworthy or unpatriotic motives to any department of Government or any member of an administration, by innuendo or as an outright accusation, without offering any evidence in support of such charges. An apparent error of judgment on the part of a public figure may be attributed to motives of treason. The accusation may be utterly without foundation and the accused's purposes may be of the highest, but the doubt which is cast on the Government departments concerned not only lowers public confidence in those departments but also in time undermines the people's faith in our form of government.

Still another abuse of the immunity principle is that practiced by the Congressman who uses it in building up his own political personality. When a Member of Congress, either with or without intent to injure, makes an accusation against another person, the tactic pays off in three ways. It makes of him, as a Member of Congress, a man to be feared. It disgraces his opponent. And it gives him publicity that he does not deserve but which is of paramount usefulness in furthering his personal ambition. This is done at the expense of a person who has no direct recourse against the defamer.

Thus we come to the third abuse of the immunity privilege, that involving a basic violation of the accused party's constitutional rights. This works in two ways, for not only is the ordinary citizen usually denied the right to defend himself against his more privileged accuser, but he is in fact placed in double jeopardy. He is tried in committee and subcommittee, in the newspapers and over the radio. Then, if an iota of evidence against him is found, he is again tried in a court of law, a manifest violation of the due-process clause of our Constitution.

"Trial by press," it should be noted, is by no means an idle or academic concept. During the days of the Constitutional Convention, the power of the press was feeble as compared with its power now, and other means of discrimination were nonexistent. Today, however, we have the world-wide circulation of daily papers and magazines and in addition, the radio and television. Accusations, whether true or false, are constantly battered into the minds of the people, particularly by the radio with its news reports and news analysis.

Take, for example, the recent hearings on the appointment of Mrs. Anna Rosenberg to the post of Assistant Secretary of Defense. Charges without a semblance of truth were made against Mrs. Rosenberg at a Senate committee hearing by persons claiming to be ex-Communists—charges that she was a party member or that her philosophy was Marxist. All these charges were repudiated by reliable witnesses. Nevertheless, the accusations were flaunted on the radio by certain unprincipled broadcasters, whereas the repudiations were lightly passed over—indeed in some cases skipped entirely.

This type of news coverage, spreading the effects of any misuse of the immunity privilege at congressional hearings, plays into the hands of the Communists because it builds distrust, prejudice, and fear.

In the specific case no harm was done to the Government or to the Department of Defense because thinking American people protested and let their anger be known to their Representatives by letter, telegram, and telephone. They refused to tolerate such persecution of a loyal citizen. But a different result might have been reached if

Dangers in Congressional Immunity

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, August 21, 1951

Mr. LEHMAN. Mr. President, our distinguished colleague the junior Senator from Wyoming [Mr. HUNT] has re-

Mrs. Rosenberg had not been a person of such high character and standing, and if so many persons had not sprung to her defense.

If situations confront the Congress in which it can no longer control its Members by the rules of society, justice, and fair play, then Congress has, I feel, a moral obligation to take drastic steps to remedy those situations. Nevertheless, there are plenty of Congressmen to be found who question the wisdom of lifting this congressional shield and of thereby making themselves responsible and liable for their words and actions.

Some of my colleagues base their opposition to repeal the immunity principle on the ground that immunity is central to Congress' authority to investigate individuals and departments and that such authority is not merely a privilege but a duty. With them I would agree—so long as the investigation remains within the bounds of good conscience. They argue further that, without regard for those who may be unjustly injured by it, the immunity principle must be maintained for the protection of the people at large. With that I cannot agree.

These members contend that to repeal the provision would place a Congressman in the position where he could not expose corruption and crime unless he had irrefutable evidence, thus hampering many commendable congressional inquiries. This may be true, but I am certain that if the privilege were removed every Member would look more closely at the facts before submitting evidence to a committee.

At the same time removal of the privilege would constitute a deterrent to publicity-seeking Members, while little affecting Members who conscientiously study and understand the facts before presenting them on the floor.

However, if the Members of Congress do not see the wisdom of removing this special privilege, another method may be devised to deal with the misuse of the privilege. I have introduced a bill to parallel the Government liability to suit in cases involving contracts and for torts. Originally the Government could not be sued upon any grounds without its consent, but it was recognized that this was unjust, and by an act of Congress the Government is now open to suits of these types.

The proposed remedy would be for Congress to pass an act permitting a person defamed by a Member of Congress to sue the Government for damages.

The great advantage of such an act would be the financial reparation made to the libeled individual. An unjust charge of communistic leanings, for example, or even one involving the more remote guilt-by-association theory, can cause a person great financial harm. It may mean loss of job and job opportunities. The extension of governmental liabilities to cover these losses is based upon the sound principle that where the conduct of a governmental business involves an unjust loss to a citizen, the citizen should have recompense.

A sum of money, of course, can never completely compensate a person for a lost reputation. But the very fact of winning a judgment would help to restore an injured person's reputation. Moreover, the embarrassment of being proved wrong might supply the restraint now lacking for those few Members of Congress who willfully promulgate libel.

The time to correct this unfair, unjust privilege given to Members of Congress is long past due. The suggestions I have made will never compensate for the injuries already suffered by many citizens, but they should help to prevent the recurrence of such unhappy, unnecessary, and cruel situations.

Congress Gets a Pat on the Back for a Change

EXTENSION OF REMARKS

OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. YORTY. Mr. Speaker, the following editorial appeared in the Fallbrook (Calif.) Enterprise on August 17. Our subcommittee referred to in the editorial found the people of Fallbrook to be a fine group of hospitable, hardworking citizens. The unjust attack on water rights made by the Federal Government should be stopped forthwith. The editorial follows:

IT WAS WONDERFUL

Something wonderful happened in Fallbrook this week.

Over one thousand citizens of the United States of America walked into the Fallbrook Union High School auditorium on Monday morning questioning in their minds the veracity, the morality, and possibly the sanity of the vested leaders of this Nation.

Reconvening the next day until 10 minutes to 1 Tuesday afternoon those people, after hours of listening, walked out of the Fallbrook Union High School auditorium thrilled to the depths of their souls. They were thrilled that in the Congress of the United States are sincere, human, down-to-earth individuals of the caliber of Representative CLAIR ENGLE, chairman of the House Irrigation and Reclamation Subcommittee, and his equally sincere, human and down-to-earth committee members, SAM YORTY, NORRIS FOULSON, JOHN SAYLOR and WALTER BARING.

Torn by confusion, resentment, expense, and summons-servers claiming rights for the United States that seemed based rather on disuniting them, the citizens of Fallbrook and other nearby communities involved in the abortion called No. 1247-civil entered the high school auditorium in quandary. Almost all had never attended a congressional hearing. Would this clarify . . . or mystify?

The congressional subcommittee had not cast their voices 5 minutes over the amplifiers before a sense of assurance permeated the auditorium, despite the visitation of two employees of the Department of Justice and the United States Navy in the auditorium. Eventually, listening to these Congressmen, vituperative as they were at times, even the presence of William H. Veeder and David Agnew could not submerge the inherent faith Americans have in America. Those two men were conceded not the whole of their Departments but the hole. That was the consensus of the audience as faith grew through the proceedings, and the Congressmen evidenced the George Washington spirit instead of the present Washington hocus apparent in the suit.

When these representatives of the people, the Congressmen of the United States unanimously and enthusiastically resolved to "implement into legislation the memorandum of agreement allotting Fallbrook 7,500 acre-feet a year from a dam to be built on the Santa Margarita River," a cheer flooded the high-school auditorium that was as significant as a resurrection. The ideal of government which has sustained democracy was suddenly a living entity, right here in the small confines of Fallbrook, Calif.

But that was not the only wonderful thing that happened Monday and Tuesday in this community's midst. Something else so in-

spiring it will etch its glory in the memory of all arose from the testimonies. Called on in rote from an agenda of Fallbrook's own citizens, the so-called little people of a country village impressed each other and the Congressmen of the United States that here were people so big their names will be legend wherever controversy and the triumph of "right" exists.

It was a proud 2 days for Fallbrook. Proud of its own ability to stand up and face an issue. Proud of its companions in Congress who were champions of a just cause. Proud of a nation that could hold a free hearing and arrive at a moral decision without fear, pressure, or dictation. It was wonderful.

Alaska's Untapped Resources

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial which appeared in the Belleville (Ill.) News-Democrat on August 18, 1951, entitled "Untapped Resources":

UNTAPPED RESOURCES

Alaska is in the same latitude as Norway and Sweden. If it had a population density equal to the average of those Scandinavian nations, its inhabitants would soar from about 100,000 to more than 12,000,000. Alaska's resources, a bulky report released by the Department of Interior indicates, could support a population up to 10,000,000.

Alaska's remoteness had caused many Americans—including Congressmen—to be apathetic regarding the vast region's development. And Alaska's far northern position has caused numerous misconceptions about its present and future value to the Nation.

Prepared for the information of Congress, the Interior report contains facts that deserve attention of the whole American public. Here are some things you may not know about our northern territory.

Alaska is one-fifth as large as the United States, and it extends one-sixth of the way around the world at that latitude. It has an estimated 180,000,000,000 feet of merchantable timber, in some of the finest forests in the world, yet a substantial part of its lumber is imported from the United States.

Alaska possesses undeveloped potential oil wells and yet it imports \$10,000,000 of petroleum each year. Freight rates of Alaska are so high they cause all commodity prices to skyrocket because manufacturing has not yet been developed in Alaska and many ships have to return empty.

Alaska is estimated to have 17,000,000 acres of land suitable for farm crops and grassland for livestock, and yet it imports much of its food. Alaska's vast river system, offering 3,000 miles of navigable channels, is capable of producing 50,000,000,000 kilowatt-hours of electric energy each year.

Alaska lies only 56 miles across Bering Strait from Soviet Russia's Siberia, and its 33,000 miles of fiord-notched coast line create a major problem of coastal defense.

Gold has always been the chief center of mining activity in Alaska, but numerous other metals and strategic minerals badly needed in today's defense efforts lie locked in numerous deposits awaiting the key of human ingenuity and enterprise. Alaska's

topsy-turvy economy is again illustrated by its coal. With resources believed to exceed 110,000,000,000 tons, Alaska in 1945 imported coal valued at \$464,000.

Long-range planners in Alaska look upon northwestern America as an economic unit, including Canada's northwest, particularly northern British Columbia and the Yukon, which border Alaska.

Canadian studies of future potentials of their part of this region indicate that natural resources there could support 6,000,000 persons. Combine this 6,000,000 with Alaska's potential 10,000,000 and you have a population 2,000,000 greater than Canada's present total population.

United States and Canadian cooperation in developing this northwest corner of the continent is highly important.

Mineral resources in Canada's northwest, compilers of the report suggest, might best be shipped to Alaskan tidewater plants for smelting, processing, manufacturing, and marketing Canada's northwest, furthermore, when populated, would be a nearby market for Alaskan products.

Some time when Moscow replaces the present Kremlin conspirators with statesmen desirous of cooperating to develop the world's potential for the good of mankind, it will be possible to establish a Bering Strait link between the highway and railway systems of the Americas with those of Asia, Europe, and Africa. This is a geographic and scientific possibility as soon as men decide to use their resources for constructive purposes instead of frittering them away in the waste of warfare.

Meanwhile, we need to face today's facts and strengthen Alaska's defenses to assure that Russia shall not make an invasion springboard of this sparse and undeveloped region which Congress has been too apathetic even to convert into a State.

A Good American

EXTENSION OF REMARKS OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. FURCOLO. Mr. Speaker, I wish to call the attention of the Members to the following editorial that appeared in the Springfield (Mass.) Sunday Republican. I think it tells the story that everyone in the country should know.

A GOOD AMERICAN

There is a good lesson for all Americans in the career of Mathew Matulevics of Chicopee Falls, a popular guard at the Fisk branch of the United States Rubber Corp., who soon will retire after 41 years of service with the company.

Mr. Matulevics came to this country from Lithuania as a youth and started work for the rubber concern soon afterward. Throughout his long service he has always been faithful to his duty and at the same time, through his ever-cheerful personality, has made thousands of friends among the personnel at the Chicopee plant.

He was married, soon after arrival in this country, to the former Monica Lakouskas, and they reared a family of four girls and two boys, both of the latter serving as officers in the United States Armed Forces during the war and one of them, John, losing his life in the Pacific area.

The significant point of Mr. Matulevics' career is that, while never attaining a lofty position in the business world, he has always done his work well and faithfully, has lived

a good and honest life and, in his own way, has served America as well as many who can trace their ancestry to the Mayflower.

Mr. Matulevics is typical of the millions of ordinary people who, in the aggregate, have been the main force in building up this Nation to its present position of world-wide leadership, and who also are its principal defense and support in the years ahead.

States Should Win Tidelands Oil Fight

EXTENSION OF REMARKS

OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. YORTY. Mr. Speaker, I should like to include in our RECORD the following editorial by the eminent editor and publisher of the Los Angeles Daily News, Mr. Manchester Boddy:

STATES SHOULD WIN TIDELANDS OIL FIGHT (By Manchester Boddy)

The United States—one of the world's greatest oil countries—has been forced to import more than 1,000,000 barrels of oil a day. Domestic production is about 6,000,000 barrels a day.

In event of a major war, according to a statement to Congress in January by Secretary of the Interior Oscar L. Chapman, this country could boost production by 700,000 barrels but would still be 500,000 short of wartime needs.

The Middle East, which supplies oil to the free world is now rocked by political and social turmoil. If Middle East wells should be cut off or diverted to iron-curtain countries, the rest of the free world would look to the Americas for oil.

Nevertheless and despite repeated warnings that the United States and the Western World face a critical oil shortage, Congress and the Truman administration are still deadlocked over control of the tidelands oil fields, and exploitation of fields in the oil-rich Gulf of Mexico is at a standstill. Almost every State has entered the fight.

DISPUTE HOLDS UP NEW LEASES

No new leases for oil hunting or drillings in the Gulf have been granted since 1948. No new leases are in prospect until Congress and the administration settle these questions:

Who shall control the offshore oil lands—the Federal Government or the coastal States? How shall royalty payments from the oil companies be divided?

The dispute has been thrown into the lap of Congress.

States' rights spokesmen from 38 States are backing bills to quitclaim all rights to the rich under-water oil fields which were awarded to the Federal Government in a series of controversial Supreme Court decisions.

But administration supporters are fighting to nail down Federal control over the lands. They warn that President Truman will veto any quitclaim bill and claim a veto cannot be overridden by Congress.

Both sides have offered compromises. The administration is willing to accept temporary control just to get the oil flowing and has offered to use the oil money for aid to the Nation's schools. The States say they, too, would accept temporary control pending a final solution.

STATES BASE CLAIMS ON HISTORY

The coastal States base their claims to the lands on history. They say that States have

owned the offshore areas since colonial times. The Federal Government claim hinges on the Supreme Court decisions, which in turn were based mainly on considerations of international law.

The States say there is ample evidence the original 13 colonies owned at least a 3-mile strip of water off their coasts, and no transfer of this area was made when the colonies voluntarily came together into a Federal union; nowhere in the Constitution does it specify the Federal Government owns the adjacent seas, and what isn't given the Federal Government by the Constitution automatically goes to the States.

The only way out of the costly stalemate, it seems to us, is for Congress to overrule the Supreme Court decisions. Administration bills, dealing with phases of the issue, have included specific disclaimers to inland waterways, to harbors, to piers and to other improvements built into the sea. One more step is in order: a disclaimer to the tidelands.

When the issue first came up, sponsors of Federal over State ownership attempted to rationalize their position with the argument that the Federal Government needed ownership of the oil lands in order to maintain adequate oil reserves for future use.

Experience through World War II and subsequent years has demonstrated that the major oil producers of the United States have cooperated with the Federal Government to the fullest possible extent and maintained a self-policing policy that went far beyond the system of controls imposed by government over many other major industries. The oil industry in the United States has long since come of age. It is no longer an irresponsible collection of freebooters out to pillage for today and to hell with tomorrow.

But Congress is not faced with a public against private ownership issue. It is at question of Federal against State Governments. Whichever side wins, private industry will produce the oil.

If State ownership prevails, as we think it should, the people of California will benefit from the production of California oil. If the Federal ownership side wins, you may be sure the politicians of 47 other States will have a grand time appropriating the take from California tidelands production.

Proposed Removal of VA Office from New York

EXTENSION OF REMARKS OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. HELLER. Mr. Speaker, shortly after Mr. Carl H. Gray, Administrator of Veterans' Affairs, announced the decision to transfer the VA district office from New York to Philadelphia, I introduced a bill in this House to provide that a VA district office shall be maintained in New York. In a statement explaining the purposes of my bill I pointed to the false economy contained in such a move, to the general confusion it will cause, to the dislocation it will bring about, and to the hardship that will result to the many employees and the hundreds of thousands of veterans and their dependents who use the facilities of this office in New York.

I am very much disturbed by the fact that removal of this office from New

York will result in tremendous dissatisfaction and lead to great difficulties for all those concerned. Already we find large segments of our population protesting this removal order, including all major veterans' organizations. In Kings County alone, which takes in the Borough of Brooklyn, we have 400,000 veterans. They require personal assistance and constant contact with the VA district office, and these services will be denied them if the office is moved out of New York.

Mr. Speaker, I am placing in the RECORD at this time the text of a resolution adopted by the Joint Council War Veterans Organization of Kings County, comprised of our largest veterans' groups, protesting the proposed removal of the VA office. I am also inserting into the RECORD an article from the New York Post, What the VA Firings Mean, indicating how this removal order is affecting the employees, many of whom are disabled veterans. The resolution and the article are as follows:

RESOLUTION OF THE JOINT COUNCIL WAR VETERANS ORGANIZATION OF KINGS COUNTY, COMPRISING THE UNITED SPANISH WAR VETERANS, VETERANS OF FOREIGN WARS OF THE UNITED STATES, AMERICAN LEGION, DISABLED AMERICAN VETERANS, JEWISH WAR VETERANS, CATHOLIC WAR VETERANS, ARMY AND NAVY UNION UNITED STATES OF AMERICA, AT ITS SPECIAL MEETING HELD IN BOROUGH HALL, BROOKLYN, N. Y., ON AUGUST 18, 1951

Whereas—

1 The Veterans' Administration district office at 346 Broadway, New York City, handles insurance and death claims for all of New York State and Puerto Rico, the veteran population of which is 1,750,000—400,000 in Kings County alone.

2 The Veterans' Administration intends to abolish the New York office and set up a central office in Philadelphia to handle the business now conducted by the (1) New York, (2) Boston (New England business), (3) Richmond, Va. (North Carolina, Virginia, West Virginia, Maryland, District of Columbia business), (4) Philadelphia (Pennsylvania, Delaware, New Jersey business).

3 The Veterans' Administration claims that the closing of New York office will result in a \$1,000,000 annual saving, \$478,000 in salaries, \$488,000 in rent, and the balance in communications, tabulating, and kindred activities.

4 The Veterans' Administration states "Those employed in the Boston, New York, and Richmond offices will be given an opportunity to move to Philadelphia to work in the new office."

5. Continuing the employment of all present employees will not affect any saving in salaries.

6 The Veterans' Administration claims that no hardship will result to veterans who will simply mail insurance premiums to Philadelphia instead of New York.

7. The rent at 346 Broadway, New York City (\$230,000 actually or the Veterans Administration's statement of \$488,000) can be saved by operating the district office in the Veterans' Administration's own building at 252 Seventh Avenue, New York City, where ample space is now available.

8. The Veterans' Administration was created to serve the veterans and their beneficiaries.

9. The district office also handles death and disability claims which are better serviced when decentralized at district level, and enables disabled veterans and beneficiaries of deceased veterans to receive personal face to face service with its concomitant expedition and understanding.

10 It clearly appears that the removal of the New York office (a) will not effect any money saving, and (b) it will deprive a veteran population of 1 1/4 million of a good decentralized service intended by Congress and a grateful nation.

We unanimously resolve that—

1 We are in accord with the announced purpose of the Veterans Administrator to save the Government's money and at the same time maintain service to veterans,

2 His plan defeats his purpose,

3. Our plan effectuates his purpose,

4. We, therefore, protest the proposal to abolish the New York district office because such action would not result in a money saving to the Government and because it would deprive many veterans and their beneficiaries of a valuable personal service now rendered by the New York office and which cannot be rendered them by a centralized Philadelphia office

5 We recommend that the New York City district office at 346 Broadway be consolidated with the regional office at 252 Seventh Avenue, New York City, which will result in (a) a saving of rental expenses and (b) maintenance of present service to veterans which is the announced purpose of the Veterans' Administrator.

[From the New York Post]

WHAT THE VA FIRINGS MEAN

(By Ted Poston)

Robert J. Esposito, 33, lives with his wife, Geraldine, and 2-year-old daughter, Carol, in a neat five-room brick house at 93 Wood Street, Lynbrook, L. I.

"It cost us \$11,500," Esposito said, "and I had to borrow and rake and scrape together every cent I could get to make the down payment. But it was worth it, or so I thought until this came along—"

The veteran of 4 years of Army service was discussing Veterans' Administrator Gray's economy order.

BENEFITS USED UP

"At least 300 other vets in the district office here are caught in the same jam as I am," said Esposito. "We used up our GI benefits to get a real start in life. We thought we had good permanent jobs here, so we tried to settle down and be good citizens."

"Now, with no warning and no assistance from the VA itself, we're ordered to uproot our lives, sell out at whatever price we can get and start all over again from scratch—in a strange city.

"But what can I do?" he asked. "I've got to go. At least 70 percent of us will have to move to Philly also. We have no choice. With another child coming in November, I can't afford to go out and look for another job right now.

WILL LOSE ON HOUSE

"I only have a \$4,000 mortgage on my house and my payments are down to \$58 a month, excluding heat. But the real estate people know my predicament, and I know I'll never be able to get out of a sale what I've put into this house.

"I can't even talk about it much to my wife, Geraldine, in her present condition. But how can I hope to find a set-up like this in Philadelphia? And I surely can't afford to live there myself and try to keep my family here."

The VA Employees Association, which has been fighting the proposed transfer, with the aid of Mayor Impellitteri, the city council and New York's congressional delegation, pointed out that nearly 400 other career VA employees here are in Esposito's position.

Most of them are committed to GI mortgage payments for 20 to 30 years. Others have bought into cooperative apartments at considerable expense. And still others have survived the veterans housing crisis of 1945-

47 to find fairly comfortable apartments in the metropolitan area.

In this group is Isidore Hechtman, 42, a 100 percent disabled veteran whose pension helps him live on his \$2,450 VA salary with his wife, Dorothy, and daughter, Barbara, 16.

Older than the average man who defended his country in World War II, Hechtman spent 26 months in the Army and three full years in a hospital after a mortar explosion nearly ripped him to pieces in the invasion of the Rhineland.

Because of his disability, he was able to get a neat, \$41-a-month apartment in the veterans project at 515 Jaffrey Court, Brooklyn.

"I can just keep my family together on what I get now," he said. "What will I do the months in Philadelphia while I'm looking for a place, feeding, and lodging myself there and hoping that we can finally be united again?"

MAY TAKE MONTHS

Hechtman, and others similarly situated, may find that it may be more than months before suitable accommodations are found in Philadelphia, for the VA—so far—has offered no relocation or house-hunting service to the affected workers.

A spokesman for the Philadelphia Housing Authority told the Post the vacancy rate for private apartments or homes in that area is almost nonexistent.

"There is supposed to be a 1 percent vacancy rate," he said, "but that is strictly fictional. And even that 1 percent is composed of single rented rooms in converted apartment units. There are few accommodations for family units at all and often the few available have restrictions against families with children."

But even were more apartments available, they would not be held for New Yorkers alone. The nine-hundred-odd New York VA families who are expected to make the Philadelphia move must also compete with an estimated eight-hundred-odd VA families from Boston and seven-hundred-odd from Richmond who have also been ordered to move to Philadelphia.

A survey conducted by the VA Employees Association here revealed at least 20 percent of the affected New Yorkers are purchasing their homes here on GI mortgages, and that the average family has three dependents outside the VA breadwinner.

They estimate that a move to Philadelphia will break up the family units of at least 25 percent of the 1,465 employees because some family members who have other jobs here will be unable to move.

The survey indicated that at least 35 percent of the affected persons are attending New York schools under the GI bill of rights and that their education will be interrupted, if not disrupted, by the change.

Most of the VA employees are proud of the war service which helped them hold their jobs in the VA here. But more than one echoed the question Hechtman, the disabled veteran, asked:

"How many times can a man be called on to sacrifice?"

Now the Water Grab Can Be Halted

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. POULSON. Mr. Speaker, this editorial tells an unbelievable story. I found these facts to exist as a member

of the committee investigating this case. The Los Angeles Times was the first to expose this attempted confiscation of personal property rights. It proves the need of a free press.

NOW THE WATER GRAB CAN BE HALTED

A sudden and devastating blow was dealt at Fallbrook this week to the Federal attempt to seize private water rights in California without compensation.

The congressional investigating committee, headed by Democratic Representative CLAIR ENGLE, acted to start an immediate and practical remedying of the situation created by the United States Attorney General's confiscation suit against some 14,000 farmers on the Santa Margarita River.

NATIONAL OVERTONES

This action represents much more than correction of a local injustice; it is of far-reaching national significance.

The five-man committee, on hearing the testimony and learning the truth, discerned at once that the suit was not, as the United States Attorney General had tried so hard to insist, merely a proper local action to quiet title to contested water rights. It immediately became aware that the suit in the guise of national defense, and under a doctrine of paramount and sovereign rights, is another in the growing chain of dangerous efforts toward Federal centralization and seizure of rights traditionally vested in the States.

Chairman ENGLE's denunciation of the Federal legal sadists who seek by extreme interpretation of obscure legalistic points to appropriate fundamental rights of the people and the States was an indictment well deserved.

This Fallbrook case is a warning signal for the Nation.

If its purpose of seizure of water rights here were to succeed, the same doctrine could be applied immediately to the coal of Pennsylvania, the ore of Michigan, the oil wells of Oklahoma, all in the name of national defense. Such seizures would be the certain symptoms of national socialism gripping the Nation.

ABSENCE OF POLITICS

It is particularly gratifying that no political element entered into the Fallbrook investigation. Three of the five members of the House Irrigation and Reclamation Subcommittee taking part in the inquiry are Democrats, the other two Republicans. All united without reference to party in the strongest condemnation of United States Attorney General J. Howard McGrath, Assistant United States Attorney General A. DeVitt Vanech, and Special Assistant William H. Veeder who have sought to carry through the water-rights seizure suit.

The Fallbrook hearing was a heartening example of simple truth from plain people coming into violent collision with a legal scheme of Federal bureaucratic lawyers—and the truth emerging triumphant.

The small farmers who testified, the small property owners, the retired teachers, the little merchants all united in trusting honest facts rather than tortured legal principles.

In essence the story was a simple one.

Here were men and women who with their forebears had enjoyed undisputed water rights on the Santa Margarita for up to 100 years, under every recognized principle of law, under every safeguard of the State. In conformity with these laws and as good patriotic Americans these people agreed to go in with the Marines at Camp Pendleton, who had bought part of a big ranch for their camp, to build a dam and share the water on a fair basis.

It was a square deal. The Navy and the Marines were satisfied. The farmers were satisfied.

GREATEST LAWSUIT

Then the United States Attorney General's men came in and blocked the arrangement and, in addition, started the greatest lawsuit in California history against every farmer in the entire watershed. And the lawsuit was no proper action in condemnation, as the Government always has proceeded before. Instead, it was on a new doctrine of "national defense" and "paramount rights," as in the tidelands seizure case. This means that the farmers would be deprived by seizure of their water rights without any payment whatever, in defiance of all past custom, law, and the Constitution.

It was this situation when brought out in irrefutable testimony that resulted in the committee's immediate move to forbid by congressional legislation the Attorney General to seize the water and to provide for future safeguards against such encroachments.

This program must be carried through, even though the time before adjournment of Congress is so short as to constitute a grave barrier.

No promises of the Attorney General must be allowed to divert Congress from making the safeguards airtight at this session.

TESTIMONY CHANGED

Once before in Washington on June 25 an aide of the Attorney General officially testified before a congressional committee that the little defendants would be taken out of this suit to do away with the hardships. Then, as was disclosed at this hearing, he changed his testimony in the record before it was printed and negated the promise.

The Fallbrook case, which had its inception in an exposure by the Times, has assumed tremendous national importance.

It is a symbol of every evil Federal encroachment.

Its specific injustices must be rectified as soon as possible by Congress.

And it must be kept constantly in mind to prevent future wrongful treatment of the people and the States by the Federal bureaucracy.

Russia's Handling of Minorities

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. MULTER. Mr. Speaker, from time to time I have directed attention to the Soviet technique of attracting minorities to its cause by pretending to aid them, only to swallow them up and suppress all individuality once they have allied themselves with the Communists' unholy cause.

Further proof thereof is offered by the following article, Russia's Handling of Minorities, by Morroe Berger, which appeared in the New York Herald Tribune of August 18, 1951, as follows:

RUSSIA'S HANDLING OF MINORITIES—RECORD OF EXPLOITATION AND SUPPRESSION GOES BACK TO EARLIEST DAYS OF RED REGIME

(By Morroe Berger)

Back in the days before World War II, when there were still plenty of liberal intellectuals who would rise to defend the progressive record of the Soviet Union, their chief stock in trade was the argument that, no matter what else the Russian Communists have done, at least they had eliminated discrimination against minority groups,

ended anti-Semitism and granted autonomy to the non-Russian national minorities.

During the last few years, however, evidence has accumulated indicating that even this last refuge of the Soviet apologist offers little protection against the hard facts of life in the U. S. S. R. and in its sphere of influence. In three respects—its treatment of the national minorities, anti-Semitism and relations with the European satellites—the Communist regime has shown little more tolerance than it grants to political opposition or to economic class enemies. This has been Soviet policy, in fact, for decades but it has become obvious only in recent years. The Soviets used to preach autonomy for national minorities within Russia, but today the Russians have gone so far as to control the satellites outside the U. S. S. R.'s borders in preparation for a possible war against the west.

To doctrinaire Socialists, especially the Leninist variety, minorities have posed a dilemma. On the one hand the Leninists preached national self-determination within the Russian empire, while on the other hand they always stood for a totalitarian centralization of power in the Communist Party. They believed minority differences to be merely the result of a divide-and-rule policy of the ruling class, and although they never really understood why minorities insisted upon retaining their own distinctive traits, the Bolsheviks did promise them cultural and political freedom.

Under Lenin and Stalin the Russian Communists have solved this problem in typical fashion. They are and have been in favor of self-determination for minorities under non-Communist regimes but they argue that under socialism and the dictatorship of the proletariat the right of self-determination becomes meaningless because harmony prevails. In non-Communist terms, this has meant that Communists try to use national or equalitarian aspirations of minority groups in capitalist countries but immediately suppress these same aspirations when they appear in Communist regimes or in the people's democracies under Communist control. They use the same technique, of course, with regard to other western institutions such as the free trade union movement and the free press. In capitalist countries the Communists defend these institutions but when they come to power they destroy them.

As the rulers of the Soviet Union early chipped away at the doctrine of political self-determination, they replaced it with a purely cultural form of autonomy in language, literature, and art, upon which they had previously frowned. It was during this period, up to the mid-1930's that the U. S. S. R. found many western admirers of its solution of the minority problem. Then came further consolidation of the dictatorship, suppression of differences and sources of potential separatism, and the extreme Russian nationalism, which are now such familiar features of Soviet policy.

In the course of this tightening up of the dictatorship (precisely at a time when the new Stalin constitution of 1936 proclaimed a liberalization of the regime) the previous cultural growth of the non-Russian minorities was halted and their leadership, because it believed in some degree of democracy and federalism, was purged in accordance with the Stalinist policy of eliminating persons identified with an outmoded line.

World War II exposed grave weaknesses in the allegiance of the national minority peoples to great Russia. The result was an intensification of Russian nationalism, further purges and, as Solomon M. Schwarz points out in *The Jews in the Soviet Union* (Syracuse University Press), the unexplained disappearance of several autonomous republics. All that is now left of the vaunted cultural autonomy, according to Schwarz, is the right to praise Stalin in any language.

This increasingly intolerant treatment of the national minorities has been accompanied by similar treatment of Jews. Anti-Jewish acts in the U. S. S. R. have become so widespread and so pervasive that only a few object Soviet propagandists are still able to point with pride to communism's solution of the Jewish problem. As Schwarz shows in his definitive critical study of Soviet policy toward the Jews and other minorities, over the decades the Bolsheviks destroyed Jewish religious and cultural institutions, harried and exiled individual Jews as cosmopolitans or lackeys of the West, and in general have apparently decided to put an end to everything that in any way could stimulate or keep alive the national consciousness of Soviet Jews, so that they might ultimately disappear as a separate national group.

With regard to relations with the people's democracies of Eastern Europe, the Soviet Union seems to be following the pattern of its treatment of the national minorities. The early relatively gentle methods of sovietization have yielded to more direct and brutal suppression of every possible source of resistance to Russian policy. As Soviet exploitation of the satellites' more advanced economies continued and as the East-West crisis became sharper, the Russians not only stepped up war preparations in Eastern Europe but also intensified their reign of terror over all elements of the population, the friendly local Communist leaders as well as the middle classes, the clergy and the political dissidents.

The turning point in Russian satellite policy was not the initial failure of the Communist invasion of South Korea last year but the defection of Tito in 1948. Up to that time the Russians obviously tried to win satellite acceptance of Soviet leadership by a judicious application of threats of force and some actual violence, together with unceasing propaganda. As the Yugoslav heresy hardened into permanence and took the form of closer relations with the West, the satellites, at the instigation of their Russian masters, speeded the movement toward socialism. In non-Communist terms this meant the more rapid liquidation of actual and potential opponents of the new regimes on the ground of either nationalism or hostility toward the new economic order. The elimination of nationalism was made the first order of business in all the satellites. The process was further accelerated when it became clear that the Communist invasion of South Korea would not succeed.

As might be expected, Russian control over the satellites has been most direct in military, economic, and internal-security affairs. For about 2 years sovietization of the satellite armies has progressed steadily. At first these armies were run by local Communists, but they were soon replaced by Russian officers. According to several reports that have recently reached the West, sovietization is furthest along in Poland and Bulgaria, nearly completed in Hungary, and less advanced in Czechoslovakia and Rumania.

In Poland, of course, Russian Marshal Rokossovsky holds several posts. He is Minister of National Defense, Marshal of Poland, and is a member of the Politburo of Polish Communist Party. Russian officers are in the high command of the Polish Army and, according to British sources, Polish soldiers wear Russian uniforms and insignia, and take an oath of allegiance to Russia. In Hungary the army likewise has Russian uniforms, as well as Russian procedures and military law. High command posts are held by Soviet-trained Hungarian officers.

While Russian uniforms and military law and regulations prevail in Czechoslovakia, the local high command has not yet been fully displaced by Russians. The Rumanian Army is still commanded by local Communists but Russian officers are gradually taking over. In Bulgaria, most sovietized of the satellites in this respect, former Rus-

sian officers head the military establishment, holding both army and civilian posts.

The Russian Communist record of exploitation and suppression of minorities, both within and outside the Russian Empire, goes back to the very earliest days of the regime and, doctrinally, was clear in the Bolshevik line even before the party seized power in 1917. It should stand as a warning to those countries which lie in the path of Soviet expansion, yet there are political leaders in Asia and the Arab world who make unsubtle threats to "seek friends elsewhere" when some western policy irks them. The violent history of Russian treatment of its minorities and its satellites makes it clear that these politicians would be among the first to feel the sharp edge of the Soviet ax.

Offices Move to Suburbs

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. GAMBLE. Mr. Speaker, under leave granted by the House, I present for insertion in the CONGRESSIONAL RECORD an article reprinted in the Westchester Realtor which originally appeared in the March 17, 1951, issue of Business Week, titled "Offices Move to Suburbs":

OFFICES MOVE TO SUBURBS

North of Manhattan, suburban Westchester County is bringing into sharp focus a new twist in business decentralization—garden-type office buildings.

Migration, it's the latest trend in Suburbia, United States of America. More and more companies are moving all or part of their white-collar workers out where there is plenty of room to expand. Desertion of central office districts has become common enough to worry downtown office building owners in many parts of the country.

A couple of months ago Time, Inc., and General Foods—two big companies headquartered in New York's jungle of skyscrapers—purchased large hunks of Westchester real estate. They plan to build garden-type office buildings to house major portions of their headquarters staff.

Time has set no date for its migration, but General Foods says it will wait at least 2 years before it makes its move.

More space. Both give the same reason for moving out country. Lack of space to expand where they want to in Manhattan. General Foods leases offices in the Postum Building on Park Avenue, but has had to move some of its staff into other buildings. Time occupies the Time-Life Building at 9 Rockefeller Plaza. It has already signed up for two more floors there. But president Roy Larsen told employees "When all of these two floors are in use, we are fairly certain we will not be able to get any more major space here."

Swelling the stream: Many companies in New York besides these two are interested in getting out of town. Some have already made the jump, a good many of them from the crowded insurance district of lower Manhattan. American Mutual Liability Insurance Co. of Boston has moved its New York City branch office to White Plains; Associated Reciprocal Exchanges, another insurance company, now has its headquarters at Port Chester; Improved Risk Mutuals is at nearby White Plains. Besides these, a small company, Christiana General Insurance Co., is committed to move to Tarrytown (also in Westchester County).

Insurance companies aren't the only ones with itching feet. Esso Standard Oil Co. is building two-story offices at Pelham, N. Y., to house its New York State sales division. Citizens Utilities Co. leased space at Greenwich, Conn., a couple of years ago. Now it plans to put up a one-story building near the Time site.

To this list you can add at least a dozen or more companies that are scouting around Westchester's woods for a likely spot to build. Among them is a big downtown insurance company. Its architects are already in the field.

Pioneer: Years ago Reader's Digest proved you could run a huge operation far off the beaten path. It was born and grew up in the Pleasantville area of Westchester County.

Now other companies just as big are studying the Reader's Digest operation to see how a business organization functions out in the woods.

Why move? In almost every case you run across these reasons for moving to the outskirts: (1) There's just not enough downtown space in the right places, and it doesn't look like there will be; (2) rents and real estate prices in good locations look prohibitive, especially to smaller companies; (3) the commutation problem is getting worse; (4) it's getting harder to hire first-class personnel to work in some of the more unsightly, congested New York areas; (5) management thinks workers will be happier looking at trees instead of grimy buildings and listening to birds instead of honking taxis.

For business, Westchester's big attractions are its nearness to New York, plenty of open country, and an unusually large number of people who commute to work outside the county. It should be easy for companies to lure them away from downtown offices into jobs nearer their homes.

Natives of Westchester are happy about the whole thing. If the trend continues, it will help solve a threatening problem that most of the county's towns now face. Large estates that used to pay the big tax bills are being split up into smaller residential sections. Residential areas don't pay their own way unless average valuations run high.

The answer is business property. But Westchester doesn't want a lot of little business districts or factories. Office buildings look like a heaven-sent answer. They carry a big share of the tax load, but don't clutter up the countryside. To make sure they don't Westchester sets minimum acreage, will allow buildings to cover only a minor part of it.

Some warnings: The Urban Land Institute, of Washington, D. C., calls this business exodus a challenge the central city must meet. And the magazine Buildings, published in Cedar Rapids, Iowa, not long ago put out a special brochure called Gullible's Travels. It paints a gloomy picture for companies with wanderlust, warning executives to shy away from the suburbs. A lot of workers will have longer trips to work, the brochure warns. Sales contacts will be lost; you'll probably need to issue maps so people can find your office, hotel accommodations most likely will be poor; the president will find it harder to attend important business meetings held downtown.

There are other problems, too. Feeding has to be at least partly subsidized, most likely in a company-run cafeteria—traditionally a money-loser. Upkeep is another headache that management buys when it takes over its own building. There's a way around that. You can form another company to operate the building, lease it back to yourself.

In addition, if a building is located away from a railroad station a company probably will have to provide partly subsidized transportation. Charges by a private bus operator have to be high to start a new route just to one out-of-the-way spot.

Outweighed; Lumped together, these disadvantages make a good argument for some companies to stay put. But in lots of cases the advantages of cheaper space, room for growth, and top-grade workers available will outweigh the drawbacks. That's especially true for companies that don't have to worry about close contact with buyers and sellers and have few purchasing problems.

Case in point: It applies, for instance, to a company like Associated Reciprocal Exchanges, a fire and casualty insurance group. Most of its staff are women—about 200—doing stenographic and clerical work. It has practically no salesmen. Last December it moved lock, stock, and president to a new three-story brick building it built at Port Chester, N. Y.

A couple of years ago Associated Reciprocal found it didn't have enough room in its Manhattan offices. It needed at least 25,000 square feet more. It also wanted to move into a swankier area because of a mounting employment problem. Top-notch stenographers and clerks were turning up their noses at the company because of its grubby location in New York.

If the move had been made inside the city, says President Ernest B. Brown, rent would have jumped to about \$4.50 per square foot. That's \$120,000 a year. Then, too, the expansion problem probably would have cropped up again in a few more years. Brown didn't want to tie his expanding company to long-term leases.

Settled: So Associated began looking around Westchester County. It finally bought 20 acres between Port Chester and White Plains, put up a building with 37,000 square feet, and left only a two-man office in New York City.

"It's working fine," says Brown. He estimates that the company will have lost only 15 percent of its staff due to the move. About 15 percent already lived in the area, 25 percent moved there, 25 percent plan to commute from the city, a few are still looking for places to live.

Money saver: In dollars and cents the company believes it will wind up ahead. That's despite skyrocketing building costs that threw original estimates way off. It also takes into account maintenance, cafeteria expenses, and a few dollars a week to help pay workers' bus fares from the Port Chester railroad station.

Hotel accommodations are no serious problem. Visitors either commute from New York or are put up in rooms at the Westchester County Country Club—which is glad to have the extra business in off seasons.

Adjustment: There is one problem that came up early: Women missed being able to go around the corner for a noonday shopping tour. "They get over it," Brown says. He adds: "We figure we were smart, especially since Time-Life will move next door. That ought to make our address, Port Chester, N. Y., pretty impressive."

Mr. K. A. Swanstrom Teams Up With RCA for National Defense

EXTENSION OF REMARKS
OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 21, 1951

Mr. SPARKMAN. Mr. President, a full-page advertisement appeared in the Washington Post today, issued by the Radio Corp. of America, to which I wish to call to the attention of Members of the

Senate very briefly. It appears under the heading, "Mr. K. A. Swanstrom, of Doylestown, Pa., teams up with RCA for national defense." The advertisement calls attention to a very important fact in the economy of this country; that is, that the very lives of so-called big businesses or big corporations depend upon hundreds and thousands, and in some instances, tens of thousands of small businesses. Mr. Frank Folsom, who is president of the Radio Corp. of America, served with distinction during World War II in field procurement for the Government, both for the Navy and for the War Production Board. As a result of his experiences there, he undoubtedly came to know the significance of the small-business structure of the United States, including his own business.

Mr. President, I simply wanted to call attention to the advertisement, and recommend its careful reading by Members of the Senate. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

MR. K. A. SWANSTROM, OF DOYLESTOWN, PA.,
TEAMS UP WITH RCA FOR NATIONAL DEFENSE

The job of providing our Armed Forces with all the things they need to keep this country strong and safe is a big one.

To do this job well, our country needs the scientific research, engineering know-how and mass production facilities of great companies like RCA.

But we also need the skilled performance of thousands of small companies, like that headed by Mr. Kenneth A. Swanstrom, of Doylestown, Pa.

Mr. Swanstrom could not be considered big business by any stretch of the imagination. The Penn Engineering and Manufacturing Co., which he heads, has exactly 26 employees. The leaders of our defense effort in Washington may never have heard of him.

But because American industry—big and little—is working as a team in our defense effort, Mr. Swanstrom and his 26 employees are able to make a real contribution to the production of an important military instrument—the new portable walkie-talkie.

TOGETHER WE MADE WALKIE-TALKIES

Back in 1949, the Army came to RCA and asked us to produce a walkie-talkie that would be smaller, more compact, more efficient, and would have only half the weight of the walkie-talkie used in World War II.

The research scientists in RCA Laboratories at Princeton, N. J., went to work on the development of such an instrument, with smaller parts and new circuits.

The engineers of the RCA Victor division figured out the specifications and blueprinted the parts for production.

We then took these specifications to Mr. Swanstrom and 118 other suppliers of precision parts—87 of whom are classified by the Government as "small business" firms—and worked out with them the details of production.

As a result, the Penn Engineering & Manufacturing Co. was able to make a contribution to the defense effort; we were able to begin delivery 2 months ahead of schedule, and the Army had the lightweight walkie-talkie it wanted when the hour of need came.

TOGETHER WE SERVE AMERICA

This is only one example of the way in which big business and little business team up for defense. The armed services have

long realized the value of such teamwork and are always encouraging the participation of little business in our defense program.

We at RCA are constantly calling on literally thousands of small companies to help with our military contracts. For instance, on just three of the contracts we are working on now for the Air Force, we need, and are using, the skills and facilities of 560 different suppliers—76 percent of whom are classified by the Government as "small business."

This same kind of teamwork in peacetime has made more and better television and radio sets, records and transmitting equipment. It has contributed materially to our standard of living—the highest the world has ever known.

We are proud to tip our hat to our 5,000 suppliers in all parts of the country. Some are large, some are medium sized, many are small, and still others, like Penn Engineering, are very small. As a matter of fact, 49 percent of all our suppliers employ less than 100 men and women.

Together, in peace and in war, we serve America.

RADIO CORP. OF AMERICA.

The Kings River Controversy

EXTENSION OF REMARKS
OF

HON. ALLAN OAKLEY HUNTER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. HUNTER. Mr. Speaker, under leave to extend my remarks, I include an article by Charles L. Kaupke, chief engineer and water master of the Kings River Water Association. This article appeared in the August 16, 1951, issue of Public Utilities Fortnightly. It tells clearly and forcefully of the fight of the water users along the Kings River (Calif.) to protect their water rights. Since 1939, the Bureau of Reclamation has been attempting by every means at its command to bring about the integration of the Kings River with the Central Valley project. The Kings River water users are strongly opposed to being absorbed in the Central Valley project. Here is why:

THE KINGS RIVER CONTROVERSY

(By Charles L. Kaupke)

Since 1939 the Bureau of Reclamation has been attempting by every means at its command to bring about the integration of the Kings River with the Central Valley project of California. The Bureau has made this effort despite evidence that the Kings River water users are strongly opposed to being absorbed in the CVP.

The Kings River section is the largest and most prosperous single irrigated area in the United States. Here is what William E. Warne, at that time assistant commissioner of reclamation, told a House subcommittee in 1947:

"The strategic position of the Kings River . . . makes it extremely important that satisfactory repayments be obtained on the Kings River project to protect the whole financial structure of the Central Valley project."

In this instance Warne has been quite frank. Let us examine briefly the strategic position of the Kings River. Over the last 50 years the river's average annual runoff has amounted to 1,700,000 acre-feet. The

area served is 1,100,000 acres, of which 900,000 at present are under irrigation.

Irrigation began in the Kings River area before the Civil War. At the present time there are 31 irrigation districts, mutual water companies, and other agencies engaged in diverting and distributing Kings River water. The system of wells, head gates, canals, ditches, gauges, and other structures required to effect this diversion and distribution was completed long ago and is all paid for. It cost the farmers of the service area about \$70,000,000 of their own money and not a dime of Federal money. The current average cost of water to the farmers is about \$1 an acre-foot.

Most of the land to be served by the CVP is in different category. The Kings River farmers own rights to the entire normal flow of the river; the various districts which have signed or are signing contracts for water with the Bureau of Reclamation either have no water rights or they have an insufficient supply. As we have seen, the Kings River farmers have a large, efficient distribution system; most of the CVP districts have no systems at all, and are being compelled to sign separate contracts with the Bureau for the construction of such works. It is no secret that some of these CVP districts never will be able to pay off on the basis of the Bureau's charge of \$3.50 an acre-foot for class I (or firm) water, plus the cost of their distributing systems. The latter cost runs as high in some cases as \$180 an acre on land that may be worth little more than that even if it should receive an adequate supply of water.

From this it should be clear what Warne meant in his statement concerning the necessary protection of the CVP's financial structure. The truth is that some of the units of the CVP, strictly speaking, are economically infeasible. It might be possible, however, by setting up a "basin account," integrating highly profitable areas now outside the CVP, and carrying on a complex operation with power revenues, to keep the over-all operation out of the red. But the Kings River water users are naturally indisposed to have their resources tossed into a common pool; the favorable position they occupy today is the result of the foresight, courage, prudence, and hard work of themselves and their predecessors. They do not care for the socialistic doctrine, "from each according to his ability, to each according to his needs."

But the CVP not only is short on feasibility; it also is in need of more water than is available from present sources. The project is supposed to furnish supplemental water to lands in Tulare and Kern Counties from the Friant Reservoir on the San Joaquin River. The water thus diverted through the Friant-Kern canal is to be replaced with Sacramento River water lifted 200 feet by the Tracy pumping plant and then brought up the valley to the Mendota pool some 30 miles west of Fresno.

The San Joaquin River has an average annual runoff of about 1,800,000 acre-feet. But the Bureau already has contracts signed or in prospect for 1,859,700 acre-feet of Friant water. The Bureau also is compelled to let a certain amount of water flow down the San Joaquin to take care of riparian rights between Friant and Mendota, which probably amounts to at least 50 acre-feet a day, or 18,250 acre-feet a year.

Both the San Joaquin and the Kings show many more years of less than average runoff than of over average. Occasional floods serve to raise the average but do not mean much in terms of water. For example, the season 1950-51 is the sixth in succession of less than average runoff, and this year the San Joaquin probably will not yield more than half the Bureau's commitment on Friant water. Consequently, if the Bureau can work out some way to get a little Kings River water for its oversize canal to Kern

County it will be in a less embarrassing position.

This brings us to the Pine Flat Dam, now being built on the Kings River by the Corps of Engineers, Department of the Army. This 1,000,000-acre-foot storage reservoir was authorized as a flood-control project with incidental irrigation benefits in the Flood Control Act of 1944. The act was approved unanimously by both Houses of Congress after 4 years of hearings and argument as to whether the project should be built by the Bureau of Reclamation or the Corps of Engineers. It provides that "the Secretary of War shall make arrangements for payment to the United States by the State or other responsible agency * * * for conservation storage when used."

The act was signed by President Roosevelt on December 22, 1944, and this looked to the Kings River water users like the end of the long road. They had begun working for a Pine Flat project as early as 1909. They had been represented at all the congressional hearings between the years 1940 and 1944. They had urged the immediate need for flood control on the river, but also had expressed their willingness to pay a fair price for whatever incidental irrigation benefits might accrue from Pine Flat. The Secretary of War had reported (H. Doc. 630, 76th Cong., 3d sess.) that the project was feasible for flood control alone. Congress, after 4 years of listening to Bureau arguments in opposition, had agreed unanimously with the findings of House Document 630. The Kings River people began preparing to negotiate and sign a contract with the Secretary of War.

But in September 1946, a letter signed by Reclamation Commissioner Michael W. Straus came to light, and the Kings River people were astonished to read, "The President has directed that I, as Commissioner of Reclamation, proceed forthwith to make the necessary repayment arrangements (for Pine Flat irrigation benefits)."

The Presidential directive here referred to is supposed to have been dated May 2, 1946, and signed by Harry S. Truman. But this is hearsay, the directive itself appears never to have been published—at any rate, the Kings River people have not been able to obtain a copy of it. However, since the Straus letter the Pine Flat repayment situation has been magnificently confused.

The confusion goes deeper; the question of who contracts with whom; it involves the whole problem of what becomes of local water rights under reclamation law, and what happens to the self-governing functions of irrigation districts and other agencies when they are subjected to the arbitrary decisions of appointed bureaucrats.

In California, water rights are based on beneficial use. The Kings River people have used all the normal flow of the river beneficially for many years, in some cases for three-quarters of a century. In 1927 and again in 1949, they agreed on their respective rights as among themselves and set up the Kings River Water Association to administer the diversion schedule in which those rights were embodied. This accounted for all the water in the river and all the agencies engaged in diverting it.

The water users, therefore, were in a completely satisfactory position before the Bureau reentered the picture on the strength of a reputed Presidential directive. Their own house was in order; they felt complete security when it came to dealing with the Secretary of the Army and the Corps of Engineers, since the Corps is concerned only with flood control and has no record of claiming or of interfering with local water rights outside the requirements of flood-control operations. But when the Bureau announced that a contract would have to be negotiated in conformity with reclamation law, all feeling of security vanished.

The Bureau repeatedly contends that it is bound by law to respect local water rights, and it is true that section 8 of the Reclamation Act requires it to do so. It also is true that the Flood Control Act of 1944 contains a provision intended to protect rights to the consumptive use of water on all projects west of the ninety-eighth meridian of longitude. But despite these statutory limitations the Bureau has a long record of interference with local water rights.

One citation from this record will be sufficient to illustrate the way the Bureau operates.

In 1949 some 1,100 farmers along the banks of the San Joaquin River went into court asking for an injunction to prevent certain bureau officials from taking their water without compensation by diversions at the Friant Dam. A preliminary hearing was held in Los Angeles before Federal Judge Pierson M. Hall. The United States contended that since the lower reaches of the San Joaquin are navigable the United States had complete jurisdiction under the commerce clause and that no private water rights could exist on the river. Judge Hall denied the injunction on technical grounds having to do with submission of insufficient engineering data by the plaintiffs. But in a memorandum of opinion dated April 12, 1950, he said of defendants' contention:

"The extension of such doctrine would put every water right in California, if not in the United States, in noncompensable jeopardy if somewhere some portion of the river system, upon which that right depended, was navigable or caused floods. * * * The mere statement of the contention is sufficient to refute it.

Judge Hall excoriated the defendant bureau officials for having acted in bad faith in the matter. He also said of the defendants' contention that the farmers had slept on their rights—those nonexistent rights, you will remember—that

"no extended discussion is necessary at this point * * *. The defendants and their predecessors have made repeated statements to them (the farmers) and to the public at large, and in public places, that their rights would not be taken and would be respected, and by means of threats and other coercive tactics have lulled them into a position of security * * *."

until the bureau suddenly notified these farmers that they had no rights and that their water would be taken without compensation.

So much for Bureau procedure in a case which is not unique or even unusual in its general outlines. The matter of public morality, like the defense contention in the quotation next above, probably needs no extended discussion. It should be as easily apparent why the Kings River water users want as little as possible to do with an agency that operates in this fashion.

The association takes the position, on advice of counsel, that Pine Flat is not a reclamation project and that the Bureau has no jurisdiction over it until given such jurisdiction by specific act of Congress.

The Kings River people are perfectly willing to pay a fair price for conservation storage at Pine Flat, and have said so many times. Let us see what such conservation storage would be worth. On long-term average about 10 percent of the river's mean annual flow is lost to the area through floods. That amounts to 170,000 acre-feet a year, and this is the water which actually will be conserved by the Pine Flat project, though 10 years may pass with no water behind the dam at all.

The State engineer of California and a board of engineers employed by the KRWA, taking these and other factors into consideration, arrived independently at \$10,000,000 as a fair price for the water users to repay as their share of Pine Flat construction costs.

The Bureau, however, first said \$14,250,000, and lately has been talking of reallocations based on higher construction costs, with repayment of \$20,000,000 to \$25,000,000 as its apparent objective.

The water users will not bind themselves to surrender the local-controlled administrative system which they and their predecessors have built up over the years. About 80 percent of the Kings River service area consists of irrigation districts, which are political subdivisions of the State, and whose directors are elected by the people. These directors have a trusteeship under which they hold the farmers' water rights—aside from what the law permitted them to do. The directors and officers of the other agencies, semipublic and private, which cover the remaining 20 percent of the service area are in a similar position.

The controversy over the Kings River has been further complicated by the fact that there are valuable hydroelectric-power sites above Pine Flat. The water users are primarily concerned to protect their water rights, but they have a secondary interest in power and have had such an interest for many years.

However, until the Pine Flat project was authorized in 1944 it never was possible for the Kings River farmers to do anything practical about power. Upstream hydroelectric development without subsequent reregulation of water stored and released for power would interfere with the natural regimen of the stream on which all water rights are based.

Having spent some \$70,000,000 on their irrigation system, the water users were in no position to finance two or three powerhouses and a regulatory facility as well. But when Congress authorized Pine Flat in 1944 they promptly applied to the Federal Power Commission for preliminary permits to make power-feasibility studies on the upper river and at Pine Flat.

The Pacific Gas & Electric Co. also applied to the FPC for licenses covering approximately the same up-river development.

This was in 1945. In 1948 extensive hearings on these applications were held in Fresno, with the Bureau of Reclamation appearing as a protestant. In the next year oral arguments were heard in Washington. On November 10, 1949, the Federal Power Commission issued a finding and order which granted licenses for upstream power development to the P. G. & E. and a preliminary permit for Pine Flat studies to the water users.

Shortly thereafter the new Secretary of the Interior Oscar Chapman requested permission from the FPC to become an intervener in the matter, and also filed a long argument urging the Commission to vacate its order and reserve the Kings River power sites to the United States. Oral arguments again were heard in Washington during March 1950. They were somewhat enlivened by the personal presence of the Secretary, but no new evidence was offered by him or the other applicants. The Commission did vacate its order of November 10, 1949, and took the entire matter under advisement. That is where, as far as the FPC is concerned, it now rests.

Two recent happenings may have influence upon the final outcome of this power argument. One is the enactment by the California Legislature of an act creating a single public agency which includes the entire Kings River service area and is known as the Kings River Conservation District. The California assembly approved the act by a vote of 57 to 14, and the Senate by one of 25 to 3. Gov. Earl Warren signed the act on June 8. The district is authorized, among other things, to issue revenue bonds and to develop, transport, sell, and use Kings River power.

The other happening is the issuance of a "preliminary draft of a proposed report" by the Bureau of Reclamation. Since this draft is stamped "confidential—not for public release," and since it also is quite remarkable for the engineering data it fails to contain, no extended comment on it is possible here. It may be said, however, that the report calls for far more extensive power developments by the Bureau on the upper reaches of the Kings River than the agency proposed to the Federal Power Commission. There also are foreshadowed in it many highly ingenious ways of getting control of the river and regulating its flow in accordance with what the Bureau may consider "reasonable" at any time.

It also should be noted that the Bureau's various proposals to develop power on the Kings River really amount to one "single-purpose project." The agency no longer is primarily interested in reclamation, and it hardly bothers to disguise the fact. As things stand today, the Bureau cannot legally construct single-purpose projects; but by integrating Kings River with the CVP, a multiple-purpose project, it might obtain for its North Fork Kings River plan sufficient protective coloration to enable it to survive congressional scrutiny.

There are three ways out of what today seems an impasse. First, the Bureau may offer the water users an acceptable contract for conservation storage in the Pine Flat Reservoir. Such a contract would have to be a straight repayment contract, based on a reasonable concept of benefits actually derivable from the project, and free from the administrative restrictions of reclamation law.

A second way out would be for Congress to enact legislation clearly defining the rights of the Kings River water users and the status of the Pine Flat project as outside the scope of reclamation law. As a last resort, the water users may attempt to have such legislation introduced and passed. But this would require a long, hard, and costly fight with, it must be admitted, not much chance of success.

The third method of bringing the matter to settlement is the one that has been pursued by the Bureau since the spring of 1949 when former Congressman White introduced his bill to integrate Kings River with the Central Valley project. If the Bureau can obtain legislation giving it control of the Pine Flat project, that will be the end of the controversy.

In that case, there will be no more negotiating. The Kings River people will be placed in approximately the position now occupied by reservation Indians. Their rights will be whittled away by administrative decision and action; their water will be at the disposal of an agency which cannot be reached by the voters. They will have come to the end of the cooperative endeavor they have followed so long and with, up to now, such productive results both socially and economically.

How can the Bureau accomplish all this? That will be easy. It is a truism that the man who controls the head gate is master of the water supply. Pine Flat dam will be a head gate; if the Bureau succeeds in its further plans for power development on the upper Kings River it will have control of half a dozen head gates. Meanwhile, all water rights on the river are based on its mean daily flow as measured by the United States Geological Survey gage at Piedra, so any interference with the natural regimen of the river will impair somebody's water rights. In this connection the Bureau has said it will not operate the dam so as to cause any unreasonable interference, but it will reserve the right to say what is unreasonable.

The Bureau also has numerous plans for laying its hands on Kings River water. There is space to mention only one, the device for creating what is called project water, which will in effect belong to the United States.

Commissioner Straus has defined "project water" as "all water developed by Pine Flat storage and water regulated at the request of the holder of a right, with the result that this regulation alters or adjusts the natural enjoyment of the right."

On this basis the water users could not possibly keep control of the river, for if they attempted to use the storage space they are supposed to pay for they would lose their water by the mere act of storing it. On the other hand, by the commissioner's definition they would lose all water stored—that is developed—behind the dam in the course of conservation or flood-control operations.

The documentation of this Kings River case would fill a large book, and all of it would support the simple thesis here advanced: that the Bureau of Reclamation is determined to get control of the "land and water resources" of the Kings River area in order to strengthen its socializing grip upon the Central Valley. Perhaps enough has been said in this brief account to suggest that local rights, moral principles, and a long history of constructive achievement may not be sufficient defense against the ambition of this Federal agency.

The Bankhead-Jones Farm Tenant Act

EXTENSION OF REMARKS OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. JONES of Alabama. Mr. Speaker, when we look back upon the actions of the Eighty-second Congress, I am sure one of its high lights will be the passage of the amendments to the Bankhead-Jones Farm Tenant Act. As the original House cosponsor of this bill, I first submitted this amendment in the very sincere belief that it was urgently needed by the farmers of my district, and the whole country.

As finally passed, the new amendment to the Bankhead-Jones Farm Tenant Act increases the amount which can be loaned to an individual farmer at one time from \$3,500 to \$7,000 for farm and home-operating needs. It permits that farmer to have a total indebtedness at any one time of \$10,000. It increases from 5 to 7 years the time he has to repay the loan.

For the farmer I believe you will all agree that this is a good bill. By today's prices, \$3,500 was all too little if a new farmer was to be allowed to make a start. If one of my constituents, say in Jackson County, wanted to change over from cotton farming to a combination of cotton and dairying, for example, it would take more than \$3,500 to buy the cows he needed, develop his pastures, and fix his barns so they would allow him to sell grade A milk. But he could make a good start if he were allowed to borrow \$7,000.

On the other hand this same farmer who wanted to change over to a cotton-dairy combination would need at least a year or two to get his pasture developed, and it takes three more years to grow a calf into an income-producing milk cow. In other words, this farmer who started from scratch would not really be making any income from those cows until the

fifth year. If he has to pay back the loan during those 5 years, he probably has to sell off some of his base livestock to make the payments. The extra 2 years for repayments allows him to pay from the milk checks he receives after the cows come into production.

As I said, then, this new law should help the farmer. But have you ever stopped to think how it helps the other people in the community, too?

Let us continue using that same farmer who converts from cotton to a cotton-dairy form of agriculture as our example. If he uses the Farmers Home Administration as his ladder up which he climbs to farming success, he starts by receiving a loan. Under the old law this loan might be for a maximum of \$3,500. Now it can be \$7,000. And where does he spend that \$7,000? Almost all of it is spent right in his own community.

Maybe he spends a thousand dollars of it to buy a tractor. If he obtained the loan in Jackson County, it was probably spent with an equipment dealer right there in Scottsboro, Ala.

Part of the money will be spent for fuel for that tractor. It would be bought in Jackson County, too.

He would probably need some feed for those new cows he has purchased, at least until he had developed his pasture. And some seed to plant that pasture. That is where our Scottsboro feed and seed dealers share in the loan check. Somebody right in the county probably sold him the new cows, too.

Because all Farmers Home Administration loans are made after a sound plan for operating both the borrower's farm and home is worked out, the \$7,000 loan probably included some money for a new refrigerator, washing machine, or other household equipment. Those items would be bought right in Jackson County, from local furniture or appliance dealers.

Those changes in his dairy barn, made so he could sell grade-A milk, required lumber—and labor—which made sales for local dealers or work for local carpenters.

Other items purchased with that \$7,000 loan check would be bought from local dealers; but I am sure I have made my point. The \$7,000 was new money coming into the community. There is an old saying that every dollar which comes into a community is spent 10 times before it leaves, so that would mean a total turn-over of about \$70,000 right in Scottsboro from that one loan. The Farmers Home Administration officials in Washington tell me they have allotted \$3,200,000 for loans this year under this program in Alabama, so it would mean that a \$30,000,000 turn-over within the State will be possible by June 1952.

Actually that is only one—but a very important—way that this new amendment will help both farmers and non-farmers. I would like to list a few of the others.

There will be more essential food and fiber produced on our farms. The farmer who could only borrow \$3,500 under the old law might end up with a dairy herd of about 6 cows. The milk from one of them would be used by his family, and he would be able to sell milk from about five. If they are average cows, his farm might produce 30,000 pounds of milk

during the year. That is about 4,000 gallons, roughly.

But if he had \$7,000 with which to start his farming operations, he could end up with about 20 cows, and his farm would produce about 15,000 gallons of milk per year. That means a lot more milk for the city people who depend on these farmers for their dairy products.

And of course it means more income for the farmer—and that income is spent right in the home community, too. Because the farmer earns more, he can spend more, and he spends it with the home-town merchants.

The amendment will make for better schools and churches in our rural areas and small towns. The church is always just as prosperous as the persons who attend it; and so if we improve the economic status of our farmers, we help the churches, too. Similarly, the children of these farmers will be able to attend school longer when their parents are more prosperous; and the parents will take a more active part in community affairs. They will become better citizens of their community.

The local banks will be helped, too. These loans are made to persons who cannot qualify for bank credit at the time the loan is made; but by the time the borrower has repaid his loan he has assembled the necessary chattels and has learned money management to the point where he becomes a good customer of the bank. I recently saw a report where a local banker was asked to look over a list of paid-up Farmers Home Administration borrowers who farmed near his bank. Of the 32 names on the list he identified 26 of them as persons who were then depositors or borrowers of his bank; and he said that none of the 26 would have been made a loan by him at the time they first came to FHA for credit. The same list shown to the implement dealer of the community showed some equally interesting facts. This dealer recognized twelve of the thirty-two as persons who had bought heavy farm equipment from him that year—and all 12 of them were ones he had personally financed because he considered them good credit risks. He, too, said that he would not have done so a few years earlier for the same families.

In a Mississippi county which adjoins my district and where the situation is very similar, a few years ago a carload of milk was brought into the county every day to supply local needs of the county-seat town. Today there are 19 farmers in the county who produce grade-A milk as compared to only one when this county was importing its milk. Today those 19 farms provide almost all the milk used in the county-seat town, and 18 of the 19 obtained their start in dairying through loans such as are now possible under this amendment. It took those 18 farmers several years to get started because they could borrow only \$3,500 to make that start, and had to build from that point. Today they could borrow \$7,000 if necessary, and with this larger loan could have started providing local milk much earlier. Their community would have prospered more, because it would have been buying local milk and the money would be spent over and over again in their home com-

munity. We have a lot of communities in my district which are sending their county dollars to Wisconsin or other dairy States and this new loan program will help them develop a local industry which will continue to be local. It is what my district—and the South—needs. I believe the recently enacted Magnuson amendment will go a long way toward doing the job.

I thought so when, during the Eighty-first Congress, I cosponsored this bill with Congressman Pace of Georgia. When that earlier bill was passed by the House of Representatives but was still in Senate committee when the Eighty-first Congress adjourned, I continued to believe it was necessary for my constituents, and was glad to have an opportunity to again cosponsor it in the eighty-second Congress. Like the Farm Housing Act of 1949, for which I fought for more than 3 years before it finally became law, this amendment represents a long, but a very worth-while struggle. I am, and I am sure all of my colleagues are, proud that the fight has been successful, and that our people—both farmers and those who live in the cities—can now benefit by its provisions.

States Should Win Tidelands Oil Fight

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. DOYLE Mr. Speaker, under unanimous consent previously granted me, I present for the consideration of all my distinguished colleagues in this great legislative body, an editorial which appears in the *Daily News*, Los Angeles, Calif., August 3, 1951.

My record on this matter, beginning in the Seventy-ninth Congress, shows that I have vigorously supported the premise taken in this editorial by Manchester Boddy, the distinguished editor of this great metropolitan American newspaper.

The editorial follows:

STATES SHOULD WIN TIDELANDS OIL FIGHT

The United States—one of the world's greatest oil countries—has been forced to import more than 1,000,000 barrels of oil a day. Domestic production is about 6,000,000 barrels a day.

In event of a major war, according to a statement to Congress in January by Secretary of the Interior Oscar L. Chapman, this country could boost production by 700,000 barrels but would still be 500,000 short of wartime needs.

The Middle East, which supplies oil to the free world is now rocked by political and social turmoil. If Middle East wells should be cut off or diverted to iron-curtain countries, the rest of the free world would look to the Americas for oil.

Nevertheless and despite repeated warnings that the United States and the Western World face a critical oil shortage, Congress and the Truman administration are still deadlocked over control of the tidelands oil fields; and exploitation of fields in the oil-rich Gulf of Mexico is at a standstill. Almost every State has entered the fight.

DISPUTE HOLDS UP NEW LEASES

No new leases for oil hunting or drillings in the Gulf have been granted since 1948. No new leases are in prospect until Congress and the administration settle these questions:

Who shall control the offshore oil lands—the Federal Government or the coastal States? How shall royalty payments from the oil companies be divided?

The dispute has been thrown into the lap of Congress.

States' rights spokesmen from 38 States are backing bills to quitclaim all rights to the rich underwater oil fields which were awarded to the Federal Government in a series of controversial Supreme Court decisions.

But administration supporters are fighting to nail down Federal control over the lands. They warn that President Truman will veto any quitclaim bill and claim a veto cannot be overridden by Congress.

Both sides have offered compromises. The administration is willing to accept temporary control just to get the oil flowing and has offered to use the oil money for aid to the Nation's schools. The States say they, too, would accept temporary control pending a final solution.

STATES BASE CLAIMS ON HISTORY

The coastal States base their claims to the lands on history. They say that States have owned the offshore areas since colonial times. The Federal Government claim hinges on the Supreme Court decisions, which in turn were based mainly on considerations of international law.

The States say there is ample evidence the original 13 colonies owned at least a 3-mile strip of water off their coasts, and no transfer of this area was made when the colonies voluntarily came together into a Federal union; nowhere in the Constitution does it specify the Federal Government owns the adjacent seas, and what isn't given the Federal Government by the Constitution automatically goes to the States.

The only way out of the costly stalemate, it seems to us, is for Congress to overrule the Supreme Court decisions. Administration bills, dealing with phases of the issue, have included specific disclaimers to inland waterways, to harbors, to piers and to other improvements built into the sea. One more step is in order; a disclaimer to the tidelands.

When the issue first came up, sponsors of Federal over State ownership attempted to rationalize their position with the argument that the Federal Government needed ownership of the oil lands in order to maintain adequate oil reserves for future use.

Experience through World War II and subsequent years has demonstrated that the major oil producers of the United States have cooperated with the Federal Government to the fullest possible extent and maintained a self-policing policy that went far beyond the system of controls imposed by Government over many other major industries. The oil industry in the United States has long since come of age. It is no longer an irresponsible collection of freebooters out to pillage for today and to hell with tomorrow.

But Congress is not faced with a public versus private ownership issue. It is a question of Federal versus State governments. Whichever side wins, private industry will produce the oil.

If State ownership prevails, as we think it should, the people of California will benefit from the production of California oil. If the Federal ownership side wins, you may be sure the politicians of 47 other States will have a grand time appropriating the take from California tidelands production.

MANCHESTER BODDY.

Judges Should Not Be Character Witnesses

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. KEATING. Mr. Speaker, widespread interest has been demonstrated in the bill to bar Supreme Court Justices from acting as character witnesses in the Federal courts. Typical editorial reaction is represented by the comments from the Danbury (Conn.) News-Times, Ansonia (Conn.) Sentinel, Atlantic City (N. J.) Press, Long Beach (Calif.) Press-Telegram, and Pittsburgh (Pa.) Post-Gazette, which I include below, under leave to extend my remarks:

[From the Danbury (Conn.) News-Times of July 11, 1951]

SUPREME COURT TESTIMONY

Probably Justices Frankfurter and Reed, of the Supreme Court, would be very happy to forget, and to have the country forget, that they both appeared as character witnesses for Alger Hiss. But a good many Americans still have a bad taste in their mouths as they recall this.

If the Keating bill should pass, no Justice of the Supreme Court will ever again be called as a witness in any Federal court proceeding. The bill has the approval of a subcommittee of the House Judiciary Committee. It should have popular support, and be enacted into law.

The Supreme Court, for many reasons, is not held in the greatest respect these days, either by the legal profession or by the public. And certainly the showing made by Justices Frankfurter and Reed in their defense of the unspeakable Hiss has not helped restore to the High Court any of its lost prestige.

[From the Ansonia (Conn.) Sentinel of July 13, 1951]

JUDGES AS WITNESSES

Justices of the United States Supreme Court would be barred from testifying as character witnesses, or on matters of opinion, under a bill soon to be considered by the House Judiciary Committee and endorsed this week by a subcommittee. Representative KEATING, Republican, of New York, who introduced the bill, has declared that he was motivated by the appearances of Justices Frankfurter and Reed as character witnesses for Alger Hiss in his first trial.

Justice Reed had been subpoenaed by the Hiss defense; Justice Frankfurter was a volunteer witness. Chief Judge Magruder of the United States Court of Appeals in the first district was also a character witness for Hiss.

An alternative bill, introduced by Representative SMITH, Republican, of Wisconsin, would provide simply that no Federal judge could be compelled to testify as to character or to appear as a witness if similar testimony could be obtained from other witnesses.

Representative KEATING points to the possibility of some smart lawyer subpoenaing most or all members of the Supreme Court as witnesses in a lower court trial. Then the Court would be unable to pass on an appeal in the case. Reed and Frankfurter both disqualified themselves in the Hiss appeal.

An earlier case of 1905 has been unearthed in which two Supreme Court Justices appeared on the list of witnesses but

there is no indication that they were ever actually called to the witness stand.

Prior to making its favorable report on the Keating bill the House subcommittee had received a letter from Chief Justice Vinson, declining comment on the measure. Vinson said he and the other Justices felt that they should not go on record. Deputy Attorney General Ford had advised the subcommittee that the Justice Department also preferred to make no recommendation.

Representative KEATING certainly has a point. Had there been such a law the Nation might not have been treated to the spectacle of a Justice of the Supreme Court of the land rushing down to give character testimony while the presiding judge bowed and scraped as if the Beatific Vision had entered the courtroom and the country wondered what effect such a rare scene might have upon the minds of the jury.

[From the Atlantic City (N. J.) Press of July 15, 1951]

WOULD BAR JUSTICES AS WITNESSES

Justices of the United States Supreme Court would be barred from testifying as character witnesses, or on matters of opinion, under a bill soon to be considered by the House Judiciary Committee and endorsed on July 9 by a subcommittee. Representative KEATING, Republican of New York, who introduced the bill, has declared that he was motivated by the appearances of Justices Frankfurter and Reed as character witnesses for Alger Hiss (in his first trial).

Justice Reed had been subpoenaed by the Hiss defense, Justice Frankfurter was a volunteer witness. Chief Judge Magruder of the United States Court of Appeals in the first district was also a character witness for Hiss.

An alternative bill, introduced by Representative SMITH, Republican of Wisconsin, would provide simply that no Federal judge could be compelled to testify as to character or to appear as a witness if similar testimony could be obtained from other witnesses.

Representative KEATING points to the possibility of some "smart lawyer" subpoenaing most or all members of the Supreme Court as witnesses in a lower court trial. Then the Court would be unable to pass on an appeal in the case. Reed and Frankfurter both disqualified themselves in the Hiss appeal.

An earlier case, of 1905, has been unearthed in which two Supreme Court Justices appeared on the list of witnesses. There is no indication that they were actually called to the witness stand.

Prior to making its favorable report on the Keating bill the House subcommittee had received a letter from Chief Justice Vinson, declining comment on the measure. Vinson said he and the other Justices felt that they should not go on record. Deputy Attorney General Ford had advised the subcommittee that the Justice Department also preferred to make no recommendation.

Under normal conditions there might not be so much objection to the calling of jurists as witnesses—particularly as "character witnesses"—for defendants, who until their trial had to all effects and outward appearances been good citizens. But these are critical times. Moreover, as Representative KEATING warns, the tribunals upon which the jurists sit may be called upon to act upon appeals for convictions of the very persons for whom the judges testified. Many citizens will believe the bill should be passed, and made law.

[From the Long Beach (Calif.) Press-Telegram of July 24, 1951]

CHARACTER WITNESSES

The Keating bill which would forbid the appearance of United States Supreme Court Justices as character witnesses in Federal

trials has won the unanimous approval of a House Judiciary Subcommittee.

The bill, sponsored by Representative **KENNETH B. KEATING**, of New York, was a result of public shock when Supreme Court Justices Felix Frankfurter and Stanley B. Reed took the stand as character witnesses in the first trial of Alger Hiss, who was later convicted as a perjurer.

The impairment of judicial prestige and dignity was involved. When the Hiss case went to the Supreme Court on appeal, both these Justices were plainly disqualified.

Many citizens, after what they saw in the Hiss case, will heartily approve the purpose of the Keating bill.

[From the Pittsburgh (Pa.) Post-Gazette of July 31, 1951]

SHADES OF THE HISS TRIAL

Admittedly with the famous Alger Hiss case in mind, Congressman **KENNETH B. KEATING** of New York is backing a bill that would ban Supreme Court Justices from testifying as character witnesses or on matters of opinion. It will be recalled that Justices Stanley F. Reed and Felix Frankfurter testified to the good character of Mr. Hiss in his first Federal trial for perjury. Subsequently, Mr. Hiss was convicted and both Justices disqualified themselves from his appeal to the high court.

Perhaps it is going too far to call, as does Mr. **KEATING**, the appearance of the two Justices "unseemly conduct." But their action certainly was not prudent from the standpoint of our court system. By appearing in behalf of the defendant they, in effect, removed themselves from having any part in deciding an appeal. Under such practice, the work of the high court could be seriously handicapped.

More importantly, as Mr. **KEATING** emphasizes, the appearance of a Supreme Court Justice could unduly influence a lower court. For example, the judge of that court could be expected to give wide latitude to so distinguished and illustrious a witness.

In the Hiss case, Justice Frankfurter appeared voluntarily while Justice Reed had been subpoenaed. But there is some question as to whether a subpoena in such an instance alters the circumstance, since it is not likely that a character witness would be called against his own will.

It would be just as well if Congress were to dispose of the problem once and for all. That it can do by passing a law along the lines recommended by Mr. **KEATING**—which, be it noted, would not affect the right and duty of Supreme Court Justices to testify, like anyone else, on matters of fact.

Proposed Synthetic Oil Plant

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. **HESELTON**. Mr. Speaker, on Wednesday afternoon at 2 o'clock the Interstate and Foreign Commerce Committee will hold an executive session to hear officials of the Department of the Interior on the subject of synthetic liquid fuels. In connection with that hearing I want to make readily available to the members of the committee, and to my other colleagues who may be interested in the matter, four articles which ap-

peared recently in the Christian Science Monitor. They are as follows:

[From the Christian Science Monitor of August 9, 1951]

CONGRESS FIGHT LOOMS OVER \$400,000,000 SYNTHETIC FUEL PLANT

(By Harlan Trott)

WASHINGTON.—Secretary of the Interior Oscar Chapman may be headed for another round of trouble with Congress over a plan of his to put \$400,000,000 of the taxpayers' money into America's first big synthetic fuel plant to be located in southern Illinois.

The project has caused almost a civil war inside the Bureau of Mines and finally obtained the approval of the Interior Department only after Bureau Director James Boyd was fired as Defense Minerals Administrator and replaced by W. C. Schroeder.

UNFAVORABLE REPORT

The difficulty arises not so much out of the idea of entering the synthetic fuel field as over selection of the particular process to be employed in the first big investment in this field.

Experts disagree over the merits of various synthetic fuel processes. Mr. Chapman has picked an old German patent process which some experts in the field believe is bound to fail.

Acting on the advice of Government coal-oil technologists and economists in the Bureau's experimental stations, Dr. Boyd had reported unfavorably on the project in Illinois on the ground that the process selected could not operate successfully with Illinois coal.

In spite of this unfavorable report by his own Department's experts, Mr. Chapman gave a green light to the Illinois project. He requested the Defense Production Administration to provide the necessary \$400,000,000. The request was made in a letter of July 28, 1951, addressed to Edwin T. Gibson, acting director. The letter stated that the project had the vigorous support of the Defense Department.

The Chapman project calls for construction and operation of the plant by the Koppers Co. of Pittsburgh. Financial promotion is being arranged by the New York banking house of F. Eberstadt & Co., Inc.

According to critics the project is so unsound and uncertain technically that Koppers and Eberstadt refused to accept any financial risks. The contract is so drawn that the Government will guarantee cost of production to the company under various conditions including "failure of the plant to operate at designed capacity."

CAUSE OF DISMISSAL?

Dr. Boyd's opposition to the project is believed by his friends to be the cause of his dismissal from the post of Defense Minerals Administrator on August 3, just a week after Mr. Chapman had requested defense production funds for construction of the Illinois plant.

Several Members of Congress have been interested in the matter and there is talk of a congressional investigation. Republicans think they might be able to show that Mr. Chapman picked the southern Illinois project in the hope of retrieving the damaged fortunes of the party in Illinois where Scott W. Lucas, former Democratic Party leader in the Senate, was defeated in 1948.

Dr. A. J. Abrams, manager of the chemicals department of the engineering and construction division of Koppers, said he had been authorized by his superiors to state that the company doesn't wish to comment at this time on the Illinois project.

One Government expert on mobilization contracts estimates that the project as endorsed by Secretary Chapman would insure to the private promoters of the project profits up to 2,100 percent on the 250,000 shares

of \$1 common stock in 12 years. Under the prospectus this \$250,000 worth of voting stock would control the enterprise.

EXPERIMENTS MADE

Experiments with the coal hydrogenation process have been conducted at the Bruce-ton experiment station of the United States Bureau of Mines near Pittsburgh. As a result of these experiments, Dr. H. H. Storch, director of the Bruce-ton station, reported to the Department of the Interior as follows:

"It is apparent that even a 30,000-barrel-day plant is a poor risk for private capital. It is therefore not surprising that the sponsors of this project plan to request guarantees from the Government for capital, interest, and product disposal at a satisfactory price. Because the sponsors refuse to take any risks whatever, it would seem undesirable for the Government to agree to their proposal."

Dr. Storch's memorandum was dated July 3, 1951.

[From the Christian Science Monitor of August 11, 1951]

CHAPMAN PLAN FOR FUEL PLANT STIRS ANXIETY

CHICAGO.—Spokesmen of the oil industry in Chicago have expressed alarm that the plan favored by Oscar L. Chapman, United States Secretary of the Interior, to finance the construction of a \$400,000,000 synthetic fuel plant in southern Illinois might go through.

Commenting on the Chapman project quoted in the Chicago papers by the Associated Press from the Christian Science Monitor, oil company representatives said that the building of the synthetic plant would (1) result in great waste of steel and money when both are scarce and (2) take the country another step down the road toward socialism.

Spokesmen look upon the proposed project, they say, as being similar to the Canol enterprise in Alaska during World War II in which an attempt to operate a refinery was tremendously costly and was a "great bust."

The building of the synthetic plant in southern Illinois, according to the oil company representatives, would be twice as costly as would be the methods to get petroleum in the usual manner from present sources. In their opinion, present techniques and supply are sufficient for normal consumption and defense demands.

PROJECT SEEN PREMATURE

As oil operators here see it, the building of a synthetic fuel plant in Illinois or elsewhere would be premature. They believe that pilot plants for deriving petroleum from coal such as the one in Louisiana, Mo., are sufficient in the present stage of development and that the attempt for production on a commercial scale would be unwise at this time. When the time for commercial production comes, they say they want to be in on helping provide it on a "sound private enterprise basis."

Oil industry spokesman had no comment on the probable political aspects of the proposed synthetic fuel plant in southern Illinois, but they affirmed that the industry is carrying on its own research in synthetic fuel production and will build needed plants when economically sound regardless of political considerations.

They point to an editorial in Platt's Oilgram, oilmen's publication put out by the National Petroleum News of Cleveland, as expressing their general views on the situation dated August 8, 1951.

It criticizes Mr. Chapman for going to the Defense Production Administration for permission to build the Illinois plant without

the advice or even the knowledge of the Petroleum Administration for Defense.

This would mean, said the editorial, that he had ignored the fact that his own order setting up PAD gives that agency responsibility for all liquid fuels, including any which might be produced synthetically.

ACTION IN FACE OF REPORT

"Also, patently, he moved without waiting for the National Petroleum Council to complete and file the report he requested on cost estimates his own synthetic fuels chief, Dr. W. C. Schroeder, claims show synthetics now to be competitive with petroleum. * * * He is understood to have sought to justify his request (for borrowing authority) on the grounds that the United States must immediately take out 'insurance' against the day when the petroleum industry can no longer keep pace with mounting demand."

"In this respect," says the editorial, "he flew in the face of the short-term (5-year) availability report * * * filed just 4 days previously and also of PAD's reports to him which have scouted the possibility of the United States running out of oil in the foreseeable future."

The editorial continues:

"If [Secretary Chapman] gets the borrowing authority, [he] and his top planners, including Schroeder, intend entering immediately into active negotiations with a private group looking to construction of the 30,000 barrel-a-day coal hydrogenation plant * * *. The one private group known to be interested in building a coal hydrogenation plant—provided the Government guarantees against loss—is represented by Ferdinand Eberstadt of New York. It has estimated \$400,000,000 as the cost of the * * * plant including \$50,000,000 for necessary power generating facilities.

INTERNAL DIFFICULTIES

"In dealing with the Eberstadt group, Interior Department officials reportedly are insisting on a cancellation clause in the contract under which, if the deal doesn't work out too well, the Government may take over and operate the plant itself after payment of certain costs."

The editorial pointed to "internal difficulties at the Interior Department which have seen Dr. Schroeder taking over from James Boyd as head of the Defense Minerals Administration with the latter being relegated to his old job of director of the Bureau of Mines."

The Secretary, the Oil Gram has been told, had issued orders under which Dr. Schroeder was responsible only to the Secretary, leaving Mr. Boyd "in the untenable position of having an assistant over whom he has no control and could have the result of actually forcing his resignation."

Chicago Oil Co. spokesman believe that if governmental assistance is given to the proposed Illinois project, it will result in Government ownership of the plant. They say that financing of a privately owned plant through Government sales contracts or subsidies was found to be unsound for the Government when examined in connection with the synthetic-rubber industry.

[From the Christian Science Monitor of August 11, 1951]

FUEL PLANT "INDEFINITE," INTERIOR SPOKESMAN SAYS

WASHINGTON—The Interior Department says plans for establishing a synthetic fuels industry are still in the indefinite stage.

A department spokesman described as incorrect a story in The Christian Science Monitor that is plans to finance construction of a \$400,000,000 synthetic fuel plant in Southern Illinois.

"We are still negotiating an agreement with private industry and we have not yet selected a site," W. C. Schroeder, chief of the synthetic liquid fuels branch of the Bureau of Mines, told a reporter.

"We are still testing coals that might be used, and Illinois is only one of several States from which coal is being tested at our Louisiana, Mo., demonstration plant."

NEWSPAPER ACCOUNT DENIED

The Monitor said that opposition to the project by Dr. James Boyd, director of the Bureau of Mines, led to Mr. Boyd's dismissal August 3 as chief of the Defense Minerals Administration. An Interior Department spokesman denied this and also denied reports that Mr. Boyd might be ousted as director of the Bureau.

Mr. Boyd has been on leave from the Bureau to serve as DMA administrator since last December. Last Friday, Secretary of the Interior Oscar L. Chapman relieved Mr. Boyd of the DMA post and appointed Mr. Schroeder to head DMA. At the same time Mr. Chapman promoted Mr. Schroeder within the Bureau of Mines, making him assistant director for programs.

It was learned that the commercial-scale project which Mr. Chapman and Mr. Schroeder want to get started would employ the coal hydrogenation process. This is more expensive than another method known as the gasification process, but there are contentions it is better.

Mr. Boyd is reported to have recommended that the choice of process be delayed a few months, pending completion of two studies now under way.

\$275,000 SPENT ON STUDY

The National Petroleum Council has spent \$275,000 on a study requested by Mr. Chapman, of comparative costs of various forms of synthetic fuel production. This report is due for completion October 1.

In addition, the Army Engineers expect to complete in about 2 months a study of several years on the synthetic fuel potential of United States coal fields.

Mr. Boyd also had proposed that Detlev W. Bronk, president of Johns Hopkins University, who is also president of the National Academy of Science, head a non-government technical group from the academy in a study of synthetic fuels, and advise on national policy in this regard.

In view of Mr. Chapman's plans to proceed along the lines of the coal hydrogenation process, however, this study proposal has been dropped.

[From the Christian Science Monitor of August 13, 1951]

FUEL PLANT PLAN HOW STORY WAS BARED

WASHINGTON—A Government clerk's mistake brought to light the fact that the Interior Department is advocating construction of a coal-to-oil plant that would cost approximately \$400,000,000 and already is a subject of intense controversy.

A carbon copy of a letter from Oscar L. Chapman, Secretary of the Interior, stating that it is "essential" for the Defense Production Administration to set up the \$400,000,000 plant was routed accidentally to a department official who should have been consulted on the undertaking and was not.

This was the first the official knew that the proposal requesting a guaranty of plant production had been approved and forwarded to DPA by the Secretary's office.

James Boyd, director, "surnamed" this letter from Mr. Chapman to DPA, but the related financial prospectus was never shown to him, according to an informed

source. Dr. Boyd thought he was signing a general endorsement, and not approving a specific commercial scale synthetic fuel project. The facts subsequently became known.

PLANT CONSIDERED POOR RISK

The routing list on the documents originating in the Secretary's office included the name of W. C. Schroeder, but not the names of his superiors in the fuels section of the Bureau of Mines.

Informed sources say it is not unusual for the Government to assume all the financial risk in an emergency undertaking, but they challenge propriety of the Secretary's office in negotiating through a subordinate official without letting his superiors know about it, particularly where technical advisers opposed the project as unsound.

While it is understandable that in this case perhaps the Government should assume all the financial risks, they question the wisdom of going \$400,000,000 worth on what many regard as a doubtful undertaking.

The proposed Illinois coal hydrogenation plant is considered such a poor risk by Koppers Co. and F. Eberstadt Co. that this condition of Government assistance was included in Mr. Chapman's letter to DPA.

"A purchase contract good for the starting up period and 12 operating years thereafter from the General Services Administration for all products guaranteeing a 'floor' at present market prices with escalator clauses covering increased cost of production due to (A) increases in the cost of labor, materials, power, (B) shut-downs and the idle time due to strikes, accidents, and other causes beyond our control * * * orders of the Government, hazards of war, and failure of the plan to operate at designed capacity."

The private promoters requested Mr. Chapman to "kindly treat this proposal as confidential, not for publication. The Koppers Co. have asked that their report, which has entailed much time and effort, be restricted to authorize Government personnel."

SKINNER MEMO

The Chapman endorsement was sent to DPA despite adverse reports to the Department's coal hydrogenation technologists.

Included in these negative reports was a review of Koppers' report on the Illinois project signed by L. C. Skinner, a Government economist at the Department's Louisiana, Mo., experimental station.

Mr. Skinner's memorandum to his superiors has this to say of the Illinois project:

"The financial plan outlined looks very good for someone, but if they are able to get the Government to guarantee everything as requested, with the operators assuming no risk for anything, I cannot see why the equity capital cannot be increased."

"The need for Government assistance is clearly shown. However, the guaranty asked for would relieve the operator of any incentive for efficient operation. I would like, also, to ask the question, 'should the Government guarantee everything, including a profit of sizable proportions, to the equity stockholders?'"

The Interior Department's economist also challenged the arrangements for a management fee. The report states that while such arrangements have been used with some success in industry, it is doubtful whether such a plan of operations offers the "incentive for good management" as would a share of the profits.

The memorandum was dated July 17, 1951, 11 days before Mr. Chapman requested DPA to set up the \$400,000,000 for a coal hydrogenation plant which the Department's technologists warn will not work using Illinois coal.

Industrial Dispersion

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 22, 1951

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial in regard to industrial dispersion, entitled "A Matter of Common Sense," which was published in the Washington Evening Star of August 13, 1951.

Some of the most significant warnings of our time, Mr. President, can be given in terms of old sayings that have been familiar for generations; for example, "Don't put all your eggs in one basket." That is the essence of the single idea behind the program for industrial dispersion developed by the National Security Resources Board, and announced by the President on August 10, 1951. It is a fundamental plan for national self-preservation.

The President's program is not one of moving essential industries from their traditional locations to parts of the country that, presumably, are safer from attack. Actually, a determined enemy can reach any part of the United States. The object of this program is to avoid creation of any new concentrations of industry anywhere in the country which are large enough to form attractive targets for intercontinental bombing. This can be done as well by careful spacing of new plants within an established industrial region as by moving them to a less industrialized part of the country.

The NSRB program is based on this premise. Its purpose is to show that an area can grow industrially without increasing the concentration of factories and population in any central city. The local chamber of commerce and the planning commission of a city and its county can collaborate in locating a series of potential factory sites dispersed 10 to 20 miles from the center of the city, or less distance in rugged terrain, yet well within its acknowledged trade territory. In fact, the local areas are asked to take the leadership in this program. The program suggests that the surrounding potential industrial areas should be surveyed and listed, each having the characteristics needed for the establishment of new manufacturing operations. These dispersed sites should be in each respective local marketing area, but outside the congested industrial centers which might be affected by any possible bombing of the central area—must not add to the expansion of that area and, therefore, make it a far less attractive target.

At the same time, the dispersed industries and all of the activities associated with them would be part of the greater central city and its economic complex. Their financing would be handled through the same channels as though they were located in the central city.

Shipping would be handled by the same railway, steamship, and trucking lines. Labor would be drawn from the same labor market, expanded by the inclusion of a number of outlying suburban communities. Payrolls would continue to be spent in the central city area, strengthening retail trade in the outlying suburbs and also flowing into the central city through the normal processes by which an active city serves its region. No city or area need lose business. All areas should grow and expand.

Such a survey would put the central city in a position of readiness for industrial expansion to take care of mobilization requirements. If one of their established industries, now somewhat cramped for space, needed to double or triple its floor area, it would not have to move away to do it. It could find ample space for a supplemental plant within easy driving distance of the home office. The same top management could supervise both plants, experienced personnel could shift over temporarily or permanently to help get the new plant going and the central city, not a competing city, would reap the benefit of the expanded activity.

The same readiness would help attract other plants, too, perhaps producers of new products looking for an ample site well separated from likely target areas or new service firms or suppliers set up by central city businessmen to help meet the mounting requirements of the region.

The conclusion reached by business and governmental leaders is that industrial dispersion carried out on such a local basis would hold no threat to their economy, but, on the contrary, would provide an opportunity to greatly expand and improve it. Dispersion offers a way for the area not only to grow industrially without increasing the risk of enemy attack but at the same time to improve economically and socially, solving the age-old problem of mounting in-town congestion and satisfying the American urge for more spacious and attractive home surroundings.

The protection and development of United States productive capacity is the key to strength for the free world and ultimately to peace. The late Admiral Forrest P. Sherman, in commenting on the reasons which might make the Soviet hesitate to start a war against the United States, said in a recent hearing:

The deterrent to war with us is the realization of our technical and industrial potential, the forces we have, our ability to expand them. * * * There is the realization on the other side that if a general war comes, they will be defeated.

Therefore we must do everything possible to decrease the vulnerability of our congested production areas by the use of space.

It is obvious that this appraisal is shared by the U. S. S. R. Everyone recalls Stalin's oft-quoted statement at the Churchill-sponsored dinner in Tehran in 1943 where the Soviet leader said that without American production the war would have been lost.

The NSRB has expended the best thinking at its command in outlining its industrial dispersion program to insure the safety of the Nation. In order to prove the practicality of its ideas, Mr. Jack Gorrie, Acting Chairman of NSRB, called upon Mr. Allen Peyser and the Seattle Chamber of Commerce to undertake the program as a pilot experiment in the Seattle, Wash., area before it was approved. Under Mr. Peyser's leadership a group of industrial and community leaders joined in planning for the practical protection of Seattle's production in case of atomic bombing. Their program is available now for other communities to follow. Their experience has been integrated into the final program.

The NSRB program challenges community leadership to initiate a task force to plan for its own protection. The title of the NSRB brochure "Is Your Plant a Target?" is pointed to local initiative and local leadership. Realizing this, the United States Chamber of Commerce has immediately cooperated by sending out thousands of copies of the brochure to its representatives.

In order to accelerate industrial dispersion the President has ordered all Federal agencies handling loans, tax amortization, and certificates of necessity to be guided by the program of the NSRB and has specifically stated:

I shall look to the Chairman of the National Security Resources Board to keep me advised on the progress of this program

Mr. Gorrie, Acting Chairman of the NSRB, in his foreword in the brochure describing the NSRB program, says:

The risk of an all-out atomic attack on the United States grows greater each day, since we are no longer the sole possessor of the secret of the atomic bomb. This means that no industrial area in the Nation can be considered safe from attack.

The protection of industrial production is essential to survival in case of war. Increased and sustained production is the backbone of national security.

This productive capacity must be protected. The dispersion (or deployment in space) of new plant development for war-supporting industries can make American production less vulnerable to attack.

Mr. Charles E. Wilson, defense mobilization director, has pledged his support for implementation of the NSRB program. In commenting on it he said on August 16:

Industry has much to gain and nothing to fear as a consequence of the industrial dispersion policy announced by President Truman last Friday.

It is a great program for the good of the country, for many years to come, in peace and war * * * and we are going ahead with it. It holds possibilities for every section of the Nation, including those already built up with industry. * * *

The present plan is different from any plan heretofore proposed because it is local in concept, and even encourages continued growth of present industrial areas—out from the edges.

We are relying upon private industry everywhere to see that new plants are dispersed, and effective dispersal can be accomplished within local marketing areas.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MATTER OF COMMON SENSE

There is little justification for the cries of indignation raised by a number of Congressmen—notably from New England—over the President's order directing all Federal departments and agencies to give active support to the administration's policy on industrial dispersion.

The policy—as worked out by the National Security Resources Board, the Office of Defense Mobilization, and the Munitions Board—has only one objective, which is simply this: To do everything that can be done now, within the limits of hard-headed practicality, to minimize what could happen to our gigantic productive capacity should the day ever come—as it may—when an all-out atomic attack is launched against us.

It is because of that very real possibility that the dispersal policy has been formulated. What the policy envisions is the use of special tax write-offs, priority allocation of materials, and other incentives designed to encourage new industries and expanding old industries to build their plant facilities as far from the heart of our cities as is feasible in terms of cost and operating efficiency. As matters stand, our country is peculiarly vulnerable to atomic attack because our great producing areas are concentrated in a relatively compact geographical complex. From the standpoint of practicality, we cannot break up and scatter this complex, or put it underground. But what we can do—and what we certainly ought to do—is take sensible action to keep it from increasing its present density wherever such an increase can be avoided.

Thus, by way of example, if an old industry in Pittsburgh or Detroit undertakes to expand itself, or if an investing group decides to establish a new industry in either of those cities, why should the plant facilities be erected right next door to facilities already existing? If they can be built farther out without seriously impairing efficiency or adding unreasonably to costs, why not build them farther out? By means of such decentralization—limited to the location and construction of factories and mills still in the planning or blueprint stage—a good part of our productive capacity would be given an excellent chance to survive an atomic attack. That is what the President's dispersal order is all about. It adds up to nothing more or less than simple common sense in an age when our Nation must think of itself as a highly concentrated and inviting target.

The congressional opposition to the order apparently is based on the fear that it would take industries out of regions like New England and shift them to desert spots or isolated wheat fields. But this is a misconception. For the dispersion policy—which at best can be regarded merely as a palliating preparedness measure—is aimed chiefly at promoting the construction of new plant facilities at points only 20, 10 or even fewer miles from present concentrations. There is certainly nothing spectacular or revolutionary about that.

In the event of an atomic attack, however, these relatively short decentralizing distances could spell the difference between full and partial stoppage of the productive capacity of any target city. We ought to act accordingly. To argue otherwise is to take a shortsighted view of the nature of the dangers confronting us in this epoch of Red aggression, intercontinental bombers, supersonic flight, A-weapons and kindred instruments of mass destruction.

Appropriation for the National Science Foundation

EXTENSION OF REMARKS OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 22, 1951

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD an editorial from the Washington Post of August 22 entitled "Foreclosing Science," and also a letter to the editor of the Post, published in the same edition, both of which comment on the proposed reduction in the appropriation for the National Science Foundation.

In this critical period, when our survival is largely dependent upon our technical superiority, it seems very shortsighted to reduce the appropriation for the organization which has only recently been established for research in basic science. I believe that it is generally recognized that our security at the moment rests largely on our proficiency in the field of nuclear fission. The fact that the west has remained free is, I believe, due to the scientific contributions which were made by the great scientists of the western world in the development of the atomic bomb.

Although we are a great nation and have excelled in the application of scientific discoveries to modern living, I firmly believe that the United States must concentrate on basic research if the superiority of the west is to be maintained. It simply does not make sense to spend billions for rearmament in conventional weapons and at the same time virtually wipe out a small but important effort to support basic research.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows.

FORECLOSING SCIENCE

It is astonishing in this day of \$56,000,000,000 defense budgets that the House Appropriations Committee should boggle over a \$14,000,000-fund designed to replenish the armory of scientific ideas from which defense draws its strength. In cutting the request for the national science foundation by 98 percent—from \$14,000,000 to \$300,000—the House committee has virtually shut the door on any effort to stimulate more basic scientific research. The \$14,000,000 asked was below the 15-million annual authorization set by Congress when it established the foundation last year. In view of the many difficulties which preceded the establishment of the foundation, this new blow is profoundly disheartening.

The foundation, under direction of Dr. Alan T. Waterman, had proposed to spend \$8,000,000 in support of basic research and \$5,000,000 for 2,100 graduate fellowships in the sciences and engineering. Some basic research is being done—by universities, by the Atomic Energy Commission, Public Health Service, Department of Agriculture and to a limited extent by the Armed Forces themselves. But there is no coordination, no effort to survey the field and plug the gaps. Likewise, the demands of the military are

constantly increasing the need for scientists, but the supply is diminishing.

In these circumstances \$14,000,000 for the science foundation is not a luxury, but a remarkably small and prudent investment. The United States has been a Nation of applied science; Americans have been geniuses at developing the basic ideas borrowed from others—as, for example, on the atom bomb. But Dr. James B. Conant, who heads the foundation's advisory board, has repeatedly pointed to the need to concentrate more effort on the fundamental research of which applied science is made. The science foundation needs help in its job of promoting the raw material of scientific ideas without which technology alone would soon falter.

NATIONAL SCIENCE FOUNDATION BUDGET

While debates and action proceed in Congress on appropriations of billions of dollars for immediate defense needs, inadequate attention has been attracted to the action of the Appropriations Committee of the House of Representatives a few days ago in recommending the complete denial of the 13-million-dollar appropriation request by the National Science Foundation to initiate its scientific research and scientific fellowship programs. This action is short-sighted penny wisdom and it is hoped that it will be reversed before final passage of the appropriation bill.

The National Science Foundation was created by the Congress as an outgrowth of the experience of World War II in demonstrating the vital importance of science and scientists to the national defense. Under a distinguished board and an exceptionally well qualified director, the foundation's organization and plans began to take shape early this year.

The functions of the foundation may be described broadly as (1) to support and encourage basic scientific studies and (2) to increase the supply, over the years to come, of trained scientists. The former is to be accomplished through contracts with existing scientific institutions, principally universities; the latter is to be accomplished through a program of fellowships at universities in scientific and engineering fields, to be awarded on a merit basis and in amounts sufficient merely to defray on a modest scale the actual educational costs of advanced study by distinguished young scientists and engineers.

These functions are important in peacetime, vital for wartime. It is true that their significance is relatively long term. These programs would have no appreciable value in a war that may be fought this year or next year, but they may have a decisive effect on a war which may be fought 5 years or more in the future—or in preventing a war which might otherwise be fought at such a future time.

Basic scientific studies, as distinguished from applied science and engineering, have never been popular in this country and we have relied heavily on the basic research of foreign scientists. Both for peace and for war, basic scientific studies must be fostered; they are the foundation upon which applied scientific and technological developments may be built.

Both for peace and for war we must have a major increase in our national resources of advanced scientists and engineers. The existing shortage is well known and readily demonstrable. A fellowship program by the National Science Foundation, if based on practical, long-term planning and if well integrated with existing privately financed fellowships, can be a major element in strengthening the national defense and increasing the national standard of living over the years to come.

In properly expending our principal energies in defense against the immediate danger, we should not forget that the danger is a long-term one as well. We are expending our resources of scientific knowledge and of scientists on this immediate mobilization effort, just as we are expanding our resources of metals and other critical raw materials. We cannot stockpile scientists or scientific knowledge but we can and should replace and increase the seed corn we are now consuming. This is a matter for judgment and sense of proportion.

The National Science Foundation's request for less than \$15,000,000 for the fiscal year 1952 is self-evidently modest in relation to the national need and the national budget, the House Appropriations Committee's recommendation of \$300,000 is patently shortsighted. It is not yet too late to remedy this lapse of judgment and it is hoped that the Congress will do so.

WILLIAM T. GOLDEN

NEW YORK.

The Central Arizona Project

EXTENSION OF REMARKS OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. POULSON. Mr. Speaker, Mr. Harry A. Lawson, editor of the Eagle Rock Sentinel in my district has written a succinct article on the importance of protecting Colorado River water due to southern California and the necessity of defeating the fantastic central Arizona project. I wish to include this article in the RECORD.

TOWN TALKS

(By H. A. Lawson)

Nothing is dearer to the people of Eagle Rock, Los Angeles, and all southern California than just plain and unadulterated water. Without it, it might be said, they would perish. Water tables are dropping drastically everywhere. While floodwater goes to extravagant waste in territories tributary to the great waterways of the Mississippi and Missouri Rivers, all southern California literally finds itself with its tongue hanging out from thirst for its great agricultural and horticultural areas that need it so drastically. Lack of sufficient snows on the mountains that form our watersheds, years of light rainfalls, make water just about the most important item on southern California's agenda. Yet there are agencies that would rob us of the little supply that is available to us. They would divert it from the heavily populated and productive lands of southern California to the sparsely occupied desert lands of Arizona, known as the central Arizona project. This project is located near Phoenix, comprises but 226,000 acres, and if authorized by measures now before the lower house of Congress, would cost our Government \$1,838 an acre for irrigation alone, or 1,100 percent greater than the average for all other western reclamation projects to date.

The central Arizona project is nothing more or less than a speculator's dream. It is fantastically expensive. Only 420 land-owners would benefit. These favored few would receive benefits averaging half a million dollars each. It would cost a minimum of \$708,000,000 where 17 of our reclamation States have received slightly over

\$993,000,000. It calls for the almost impossible lifting of water 985 feet to irrigate lands at that level. Such a proposal for the irrigation of field crops is economically fantastic.

The Colorado River water that Arizona wants would serve more than 5,000,000 people in California who need it badly to augment their dwindling water supply. And our people own this water by virtue of long-standing contracts with our Federal Government. Two measures—S. 75 and H. R. 1500—pending before Congress would rob us of our water. Write your Senators and Congressmen demanding the defeat of both. Do it now.

Saving Asia for Freedom

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer, noted foreign correspondent:

[From the New Leader of August 15, 1951]

SAVING ASIA FOR FREEDOM

(By Edgar Ansel Mowrer)

I believe that Asia can be saved from communism without a third world war. It can, in my judgment, be saved by the immediate creation of local anti-Communist forces roughly equal in strength to the local Communist forces.

Most Americans can surely agree on one point. The weakness of the free world in Asia is that it is forced to use its chief armies—American, British, and French—against satellite Asians—North Koreans, Chinese, Indochinese and Malaysians—while the U. S. S. R. preserves its forces intact.

This is the U. N. and United States position in Korea. And, with apologies to the Joint Chiefs of Staff, it was not our position in Greece. In fact, to save Greece we equipped, mobilized, and assisted Greek forces to do the job without any direct military contributions from us. Just this should be our aim in Asia.

Now quite obviously, because of a number of historical errors, chief of which were imagining that the U. S. S. R. could become a peace-loving democracy and that Chinese Communists would be Chinese first and Communists afterward, the western democracies got caught off base. When the Communists attacked in Korea, Indochina, and Malaya, they had to be stopped by the United States, France, and Britain, or by nobody. For, in Asia, we had never created strong local anti-Communist forces. Until such forces exist, the United States, Britain, and France cannot withdraw their forces from the Far East without exposing that vital area to new attacks.

Secretary of State Acheson may find it convenient to say that "if aggression [in Korea] would end and you had reliable assurances that it would not be resumed . . . I think that you have a real possibility of working out a stable situation." The point is that there can be no reliable assurances that North Korean and Chinese forces, having achieved a partial victory, would not embark upon a new aggression somewhere else in Asia, say, against helpless Burma, whenever it seemed convenient. Against such utterly untrustworthy enemies, there can be but one reliable assur-

ance, namely, enough opposing forces to defeat them.

If this reasoning is correct—and during a recent trip through the Far East I met literally no westerner who even sought to refute it—then the \$64 question is: Are there available in the Far East enough local forces to stop Communist expansion?

I am sure that such forces exist potentially. The reason we do not all see them is that the Reds got the jump on us, not only militarily but propagandistically. They not only almost took Asia away from us by force, but "sold" a lot of us a number of phony stories which it was in their interest to have us believe. One of these was that we could not find adequate local forces to checkmate the Communists.

This is fundamentally false. I am convinced. There is, however, just one speck of truth in it. We cannot organize local Asians for freedom until we have first done a number of things that we should have done before the Communists launched their attacks; such as:

1. Hold on in Korea until the French and Vietnamese have smashed the Communist rebels in Indochina, the British have crushed them in Malaya, and the Filipinos have eliminated them from their islands.

2. Settle the Kashmir dispute on any reasonable basis, thus freeing Pakistan's great energy and influence for use elsewhere and giving Indian opponents of neutralism a chance to assert themselves.

3. Bring Burma, Siam, and free Vietnam into a Southeast Asian alliance to include India and Pakistan as soon as either is ready to join.

4. Extend the new Pacific pact among the United States, New Zealand, and Australia to include the Philippines and a rearmed Japan. At the appropriate time, link it with the Southeast Asian alliance.

5. Instead of recognizing Red China, create all possible difficulties for that regime. This means supporting Chiang Kai-shek on Formosa and encouraging any other anti-Communist forces that emerge.

6. Urge the Japanese, once they again become independent, to create a sizable military force.

I believe that carrying out these six undertakings would save Asia, and that nothing less will.

Two obstacles have, I think, prevented this blunt fact from being recognized by everybody. One has been the inconsistency of American policy—first in favor of, then against, now again in favor of, military intervention in Asia. The second obstacle is the absence of a common attitude toward Asia on the part of the United States, Britain, and France. So long as these countries do not agree upon a common policy of over-all defense, the Communists will continue to progress despite our disunited efforts to stop them. Until recently, it has presumably been impossible to achieve such a common policy. Now, in my judgment, the moment has come when agreement on a common line can and should be reached.

Death of Col. Karel Lukas in Prison in Czechoslovakia

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 22, 1951

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in

the Appendix of the *REROD*, an article entitled "Refugees Recall Torture Death of Colonel Lukas in Czech Prison," which appeared in the *Washington Evening Star* today.

There being no objection, the article was ordered to be printed in the *RECORD*, as follows:

REFUGEES RECALL TORTURE DEATH OF COLONEL LUKAS IN CZECH PRISON

Warnings voiced in Congress that Associated Press Correspondent William N. Oatis may be killed within "a matter of weeks" from tortures in a Czech prison have recalled to Czechoslovakia refugees here and others the tragic story of Col. Karel Lukas.

Colonel Lucas, former Czech military attaché here, was arrested after the Communists came into power in Czechoslovakia, despite the fact that he was a patriot and hero of both World Wars I and II.

Before his death in prison, he reiterated an account of the brutal beatings and tortures to which he had been submitted to a cellmate. That cellmate, one of the few to escape, eventually brought the story to Colonel Lukas' friends in America. They disclosed it in connection with the Oatis case.

OATIS SERVING 10-YEAR TERM

Mr. Oatis, 37-year-old chief of the Associated Press bureau in Prague, is serving a 10-year sentence on trumped-up spying charges. He is said to be confined in the notorious Pankrac prison in Prague, where Colonel Lukas met his death.

Those who know the Lukas story have been wondering if Mr. Oatis, a former Indiana newspaperman, may not be occupying the same cell that once held Colonel Lukas, along with other political prisoners.

It is, according to the Lukas story, a cell in which there are no beds. Prisoners are forced to lie on the stone floor. Often, it is said, the cell is deliberately flooded to prevent prisoners from resting, even after being beaten and tortured during their interrogations by the KVSTB (state security organs).

That was the fate of Colonel Lukas. He managed to escape from Czechoslovakia after Hitler seized the country, and he joined the Czech Army in France at the beginning of World War II. Toward the end of the war, after being wounded in Africa, he came to Washington as military attaché. In April 1947 he was recalled to Czechoslovakia and placed in command of an armored division.

SEIZED AFTER RED COUP

Then came the Communist coup in February 1948. All those who had served with western armies during the war became "unreliable." One of these was Colonel Lukas. It was charged that, as a recruiting officer in France, he had not accepted into the newly formed Czech Army some Communist Czechs from the loyalist forces in the war in Spain, and these Communists had been executed later by the Germans. So he was arrested and sent to Pankrac.

This is in essence the story that was later related to Czech refugees here:

On May 4, 1949, at 4 p. m., the door of cell 334 was opened, admitting the most hated executioner of the prison, the SNB Sgt. Frantisek Vinlsky. With him were three members of the SNB, carrying the limp body of a seemingly old and wrecked man.

This man wore a disarranged civilian suit. Apparently he had been dressed in haste. His stockings feet left traces of blood on the cell floor. The shoes were carried by one of the SNB men, who threw them on the floor.

HUMAN WRECK AT 52

The prisoner's suit was clean and bore no traces of blood. But on his skull was a gap-

ing wound. His face was covered with black and bleeding blotches. His graying hair hung in blood-stained wisps over his face. This human wreck was Colonel Lukas, the 52-year-old veteran of two wars.

Other men, the story relates, brought a straw mattress into the cell and dropped the body on this meager bed. Sergeant Vinlsky, the story continues, bellowed to others in the cell: "Here you have one of your colleagues who has not been cautious enough and met with an accident. Try not to let him die."

When Colonel Lukas was undressed his cellmates were appalled by the sight they saw. His feet and legs were shapeless and bleeding, and no ankles and knees were discernible. It was evident to the cellmates that he had been beaten with rubber clubs all over the feet and legs. The soles of his feet showed traces of systematic beating, and the old wound from the war was opened.

CLUBBED IN STOMACH

The whole body, it was said, was covered with bruises. The stomach bore signs of recent proddings with clubs. The prisoner's face had, it seemed, been battered with closed fists. The lips and eye were bleeding, and an extended trace of cudgeling marked his right cheek. There was an open wound on the forehead, and the arms, too, showed marks of severe beating.

Despite his battered condition, Colonel Lukas was conscious. When he was left alone with his cellmates he said his interrogation had started at 8 a. m. in the STB headquarters in Bartolomejska Street No. 6, in the office of Dr. Dolek-Belecky, the chief of the section. When he refused to disclose any information he was systematically tortured.

Before the interrogation began Colonel Lukas was blindfolded, and when he refused to answer questions the torture began.

First was what was called the "bear game." Members of the STB formed a circle, with Colonel Lukas in the middle. He had to walk around, and the men beat him whenever they could reach his body. Then he had to walk on his toes to strain the muscles and was beaten across them.

BEATEN ON BARE FEET

Another method resorted to after a 5-minute break to give him time to consider "confessing" was the so-called "bastonade." He had been made to kneel on a wooden chair and lean over with his hands on the back. His bare feet were closely tied to it, and the soles were hit alongside and across until all the nails were torn off.

During this part of the torture, Colonel Lukas told his cellmates he had lost consciousness and did not remember what treatment followed. He was revived with buckets of water and remembered later being beaten over the head and stomach.

The whole torture lasted 4 hours, with a few 5-minute breaks devoted to interrogation. When being taken from the room, he was warned that so-called electric method of interrogation would be used. When the bandage was removed from his eyes, according to the story, Dr. Dolek remarked, "These soldiers did a thorough job on you."

NO MEDICAL AID FOR DAYS

For some days, while Colonel Lukas tossed feverishly and helplessly on his mattress, he received no medical attention. On May 8, a doctor came to see him with another SNB sergeant, whose name, from his cruelties, was Deadhead or Deathshead.

The doctor asked for details of his injuries, and Colonel Lukas said he fell down a stairs after his interrogation. When the doctor pressed for details, the sergeant kicked him and indicated he was to ask no further questions. "Ah, so," the doctor said understandingly.

Colonel Lukas was left without medical aid until May 15 or 16, when his condition became even worse and he was transferred to a hospital. There he died shortly afterward and his last words were said to have been: "They gave it to me. What a shame that they call themselves Czechs."

A Birthday Tribute to Bernard M. Baruch

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. MULTER. Mr. Speaker, the following well-deserved tribute to that very distinguished elder statesman, Bernard M. Baruch, written by Harry H. Schlacht, appeared in the *New York Journal American* of August 19, 1951, and in other newspapers throughout the country:

A BIRTHDAY TRIBUTE TO BERNARD M. BARUCH

(By Harry H. Schlacht)

America, he has honored thy name. Add him to the roll of thy children whose names and deeds bid the world to demand justice and freedom.

America will observe on Sunday the eighty-first birthday anniversary of Bernard M. Baruch.

We place a crown of laurel upon his head. We invest him with the noble character of an apostle of Americanism.

America honors his ever-growing fame as one of its noblest treasures.

The story of his life makes us proud of our country. It brings to us renewed faith and renewed hope. It strengthens our love for the Republic.

He is a friend of humanity. He is a foe of tyranny.

A virile Americanism is the characteristic of his soul. It is the philosophy of his life. It is the mentor of his actions. It is the touchstone of his thoughts.

In every act and utterance his only motto is "My Country."

His towering integrity, his mighty heart, his greatness of soul exercise far-reaching influence on world affairs.

He was born without an iota of prejudice. He lives without an evil thought.

Wherever truth needs an advocate, wherever right needs a defender, wherever suffering needs a healer, there you will find Bernard M. Baruch.

He is a great and good man. He is a rare and reverent man.

He walks humbly and justly with his God. A magnetic individuality, coupled with a magnetic personality, endears him to all.

His generosity knows no bounds.

He ranks among the foremost leaders of the common good of the Nation.

Mr. Baruch's superb courage is never halted by the magnitude of the task before him, or by the criticisms of those who differ with him.

He is a man of unique stature in American life.

He has never held public office, but he is one of the head coaches of his country.

He has never held any title, and no title could ennoble him.

Mr. Baruch is known as a President-maker, as a humanitarian, statesman, and patriot.

All who believe in honor and morality, in virtue, and in fine public service, must say today: "There walks Bernard M. Baruch,

an illustrious American, a fine American gentleman."

We join with all Americans in wishing him many happy returns of the day, many more years of fruitful service to God, to country, to humanity.

Investigation of Crime in the District of Columbia

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 22, 1951

Mr. WILEY. Mr. President, I was glad to see an editorial in this morning's Washington Post endorsing the stand which I have taken on behalf of a thorough probe into crime in the District of Columbia. This editorial clearly and briefly points out the reasons why it is so important that the Senate Interstate Commerce Committee, after September 1, make a thorough exploration of the material which we of the Crime Committee have partially analyzed, relating to vice and corruption in our Nation's Capital.

I ask unanimous consent, therefore, that the text of the Post editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FACTS ON CRIME

Senator WILEY's call for a full airing of crime and corruption in the District ought not to go unheeded. The Wisconsin Senator again makes a point that events have amply demonstrated—that the Senate Crime Investigating Committee barely scratched the surface. The same may be said for the earlier probes of crime in Washington, as evidenced by the fact that the large-scale numbers operations of Mr. Charles E. Nelson were apparently unknown or disregarded by those in authority until 2 weeks ago.

A further investigation by the Senate Interstate Commerce Committee, which will take over the Crime Committee's powers, is important for two reasons. First, it would serve as an independent check upon the work of the District grand jury, which is hampered by the fact that it must rely upon police as investigators even though police may be involved in the situation it is considering. Second, a Senate investigation would serve to tie together the pieces of evidence as they affect nearby Maryland and Virginia as well as the District.

Such an investigation would not, of course, be a substitute for local action, and in this respect the continuing indifference of Prince Georges County officials to the need for immediate grand jury action there, not to mention the complete lack of observable action in Arlington and Alexandria, is mystifying. Nonetheless, it has become apparent that local crime is part of an integrated pattern which does not stop at State or city lines, and it needs to be approached on this basis. We hope Senator WILEY is successful in persuading his colleagues to make a broad search for the facts of organized crime in and around the Nation's Capital—without politics or punch-pulling.

Investigation of the Reconstruction Finance Corporation

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 22, 1951

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in this morning's Washington Post with regard to the final report of the subcommittee which has just completed a study of the Reconstruction Finance Corporation. The editorial is, I believe, a very fair one in view of the position which the Washington Post has taken in urging the abolition of the RFC.

I also ask to have printed an editorial entitled "Report No. 2," published in the Dayton Daily News of August 21, 1951.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Post of August 22, 1951]

RESCUING RFC

The raucous criticism by Senators CAPEHART and BRICKER should not obscure the fundamentally good work of the Fulbright subcommittee in its investigation of the Reconstruction Finance Corporation. In no sense can the final report of the Fulbright group to the Senate Banking and Currency Committee be considered a gloss. It refers only briefly, to be sure, to the specific charges of favoritism and influence in the RFC—for the reason that these charges have been copiously aired in four interim reports. As is proper under its mandate, the Fulbright subcommittee directs its attention at specific reforms embodied in a bill before the Senate.

Some of these reforms already have been made by RFC Administrator Symington, as for example, the provisos for full publicity and a showing of public interest in the granting of every RFC loan. Two other proposed correctives seem to us eminently sensible. One would remove the requirement that the Civil Aeronautics Board and Interstate Commerce Commission must pass upon RFC loans to air carriers and railroads, respectively. This has been a deterrent to objectivity, especially in the case of the CAB, for obviously after approving a loan the CAB has been under pressure to grant enough subsidy to insure repayment. The other corrective is a prohibition against the employment by borrowers of any RFC personnel within 2 years of the time they have received a loan. This would be protection against such improprieties as disclosed in the cases of E. Merl Young, John Haggerty, and Allen Freeze, who went at substantially higher salaries directly from the RFC to borrowing firms whose loan applications they had processed.

The Republican minority, in its separate report, starts off with the premise that the RFC should be abolished—a question beyond the subcommittee's province. From there it proceeds to develop a political campaign document lambasting President Truman. The reasons that this is possible, of course, are that the administration is extremely vulnerable, and that the President's attitude toward indiscretions by his subordinates has hardly invited confidence. Nevertheless, the minority goes pretty far afield from the purpose of the investigation when it observes

of Mr. Truman and Democratic Chairman Boyle: "Both are graduates of one of the most corrupt political machines in the history of any State. They have transferred Pendergast politics to the national level." Nor does the minority serve any constructive purpose by dwelling repetitiously upon cases already thoroughly exposed. Significantly enough, as Senators FULBRIGHT and BENTON pointed out, the minority report completely fails to mention an instance of impropriety on the part of a Republican—Senator MCCARTHY's acceptance of a \$10,000 fee from the Lustron Corp., an RFC borrower, for the use of his name on a pamphlet.

Despite the bad taste left by the negative carping of Senators CAPEHART and BRICKER, the work of the Fulbright subcommittee stands up as a balanced, thorough job. It ought to be a warning against lapses of morality on the part of public officials and against complacency in the White House.

[From the Dayton (Ohio) Daily News of August 21, 1951]

REPORT NO. 2

The same motives that inspired the report of the eight minority Senators on the Foreign Relations and Armed Services Committee clearly inspired Senators BRICKER and CAPEHART as they wrote their minority report on the RFC hearings before the Fulbright committee.

Again it can be said that their records remove the element of surprise from this blast which is characterized by Senator FULBRIGHT as a scurrilous indictment and a political diatribe, by Democratic Senate Leader McFARLAND as an exercise in smirking plety and demagogic political inference and innuendo, and by the ruggedly independent Democratic Senator DOUGLAS, of Illinois, as a prosecutor's brief against the Democratic Party.

But the significant fact was this. The Fulbright committee as a whole, as reflected in its majority report, had conducted a rigorous and fair investigation and had denounced specific unethical practices of Donald Dawson, F. Merl Young, and other men with close White House connections. A committee with a majority of Democrats had been, in short, unsparing in its criticism of a Democratic administration. This was a remarkable example of an unpolitical approach to a problem seething with political implications.

It would have been good enough for any Republican Senator of a mentality less blindly political than that of CAPEHART and BRICKER. But it wasn't good enough for them. And so, in order to fry political fish of their own, they have launched out with extravagant and unverifiable charges the only result of which can be to increase acrimony and to depreciate the value of the truly splendid job that was done by the Fulbright committee.

Beyond the Call of Duty

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. POULSON. Mr. Speaker, last week, a subcommittee of the Interior and Insular Affairs Committee went to Fallbrook, Calif., for a hearing. The purpose of this hearing was to get the facts concerning the attempt of the Department

of Justice to confiscate all water rights on the Santa Margarita River. This sermon of the Fallbrook minister, Rev. Marshal Ketchum, truly summed up some of the issues involved. I commend it for your reading.

BEYOND THE CALL OF DUTY

(A sermon by Rev. Marshal Ketchum)

Sometimes a military man is given special recognition by his country for service beyond the call of duty. The award is given to the man who does more than is expected of him—who goes beyond the usual requirements.

While going beyond the call of duty is usually considered to be exceptional and unusual, according to Jesus, going beyond the call of duty should be the normative and established practice. He says to us, in effect, "Here are the publicans and the pharisees who do what is expected of them. But you who would follow me: you must go beyond the bare minimum requirements. What do ye more than others?"

He spoke of going the second mile. The first mile is your duty; the second mile is because you are a Christian. He said if someone would borrow your coat, give it to him, but don't stop with that—give him your cloak as well. He severely criticized the Pharisees who very carefully followed the letter of the law but didn't go a whit further than just what the law required.

NECESSARY IN MARRIAGE

Going beyond the call of duty is certainly necessary in marriage. No marriage would last long if it were based only on the mere performance of the minimum cordialities out of a sense of duty. Marriage, to be sure, is a legal contract, but it is infinitely more than that. It must include doing things without being asked, performing little acts of kindness that are not expected. A marriage that is just a business arrangement cannot last for long.

This principle is also true in the realm of our daily work. There are certain standards which we are required to meet in our work. But too often we are satisfied with just meeting the minimum standards. Would Michelangelo's name be remembered if he had been content to do just what was barely required? He went far beyond the minimum. As Adam Bede said "I hate to see a man's arm drop as if he had been shot the instant the clock strikes six."

There is another application of this principle. God expects us to also live above and beyond the minimum moral and ethical requirements of law. Many things we do may be absolutely legal, but very immoral. Passing a law doesn't create morality. Laws are simply reflections of the judgment of humanity upon universal truths.

SUIT IMMORAL

This matter of morality being greater than law has a direct application to the suit being filed against people of Fallbrook for water rights. The suit is being filed in a very legal manner. It may be that the Government will win its case—if it does it will be a very legal decision handed down by a very legal court. But let me ask, "Does the fact that it may be proven legal thereby mean that it is moral?"

The Fallbrook Methodist Church has been accused by the United States Government of stealing. According to the suit, all of us, because we have put water in our flower baskets and washed dishes in our new sink, and watered our lawns, have been stealing water from the Government. We, according to the suit, have broken the eighth commandment. We are put in the same class as the man who breaks into a bank and opens the safe and steals the money. It may be legal for the Government to do this, but is it moral?

1. Is it moral for the Government to confiscate our water which, in Fallbrook, amounts to the same thing as confiscating land without payment. The fifth amendment to the Constitution clearly states: "Nor shall private property be taken for public use without just compensation."

2. Is it moral for Government to deny our right of water which has been recognized for almost 100 years and in doing so, destroy our farms and homes and churches and futures and invested savings?

3. Is it moral for Government to say it needs water for Camp Pendleton when the commanding general at the camp and high Navy officials have stated in writing that they didn't need it because future needs would be met from water through the metropolitan water district from the Colorado?

TESTIMONY CHANGED

4. Is it moral for an Assistant Attorney General to say before a House Judiciary Subcommittee that most water users would not be required to answer the suit, and then, after pencilling in changes in his testimony, send letters saying they would have to answer, causing inestimable confusion and expense and trouble?

As I say, it may be legal. But is it moral? Government as well as individuals should not consider itself to be beyond morality. Certainly the overwhelming majority of Government officials are thoroughly upstanding, fine, and morally conscientious. And yet there are evidently some who have lost their sensitivity to moral requirements—who believe you can do whatever you want to do, providing you make it legal, and who have substituted minimum legality for morality to the extent that 16,000 small landowners have their property, their homes, their savings, and their futures put in jeopardy.

LIKENED TO PHARISEES

Thus we have a vivid illustration of what happens when the principle is lost. That God asks of us more than just the minimum legal requirements—that the Pharisees in all their goodness, were still in danger of Hell because their righteousness stopped with the minimum requirements. To anyone who would make a contribution to society and be a follower of the way called Christianity, these words have tremendous significance: "Except your righteousness exceed that of the scribes and Pharisees, ye shall in no case enter into the Kingdom of Heaven."

The Eighty-second Congress

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 22, 1951

Mr. WHERRY. Mr. President, an editorial in the Washington Star of yesterday appears under the headline "Congress: Worse and worse." I ask unanimous consent that the editorial be printed in the Appendix of the Record, and I might say that I concur in the sentiments expressed in the editorial.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

CONGRESS: WORSE AND WORSE

If, as the New York Times reports, the President is keeping a box score on the Eighty-second Congress, it will be interesting to see what use he makes of the statistics.

The Eightieth Congress, which the Republicans controlled, was the "do-nothing" Congress, according to Mr. Truman in 1948. He went all around the country amplifying that dismal theme. It was, he said, one of the worst Congresses in history. That seems to have made a great hit with the people, because Mr. Truman, and a Democratic Congress, won the election.

But the Eighty-second Congress, with Democratic majorities in control, is getting worse and worse, according to the statistics. By this time in the session of the Eightieth Congress, 388 public laws had been approved. The Eighty-second has approved only 110. By this time the Eightieth Congress had approved all the big appropriation bills. But the Eighty-second Congress, to date this year, has sent the President only one big Federal appropriation and all the rest are bottled up while the Government is operating by authority of stop-gap resolutions making it temporarily legal to pay Government obligations. The Eighty-second Congress did pass a controls bill. But the President said it was "the worst" bill he had ever had to sign.

If the Eightieth Congress was the worst, and the Eighty-second Congress is worse than that, just what is the President going to say about it if he decides to take to the hustings and spread these grim facts before the people? The moral of the story well might be that under the Truman administration the functioning of Congress is becoming progressively worse. Mr. Truman might offset that deduction with the explanation that the Eighty-second Congress was the victim of an unholy alliance between the Republicans and the Southern Democrats. But with numerous Truman Democrats, as distinguished from Southern Democrats, already under indictment in Mississippi, who is the President going to ask southern voters to send to Congress?

But that is probably an unimportant detail. The President may simply say that while the Eightieth was the worst, the Eighty-second is worse, and let it go at that. If it worked once, it could work again. There seems to be votes, in them thar worst Congresses.

Question of the Week

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. BENDER. Mr. Speaker, whom will the Dixiecrats support in 1952? And whatever happened to Henry Wallace?

Americanism: A Definition

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. BROOKS. Mr. Speaker, I wish to call to the attention of the Members a stirring address delivered in Des Moines, Iowa, on August 5 by Rabbi David Lefkowitz, national chaplain of the American Legion. Speaking to the Legion De-

partment of Iowa, Rabbi Lefkowitz gave a sound, forthright speech on down-to-earth Americanism.

The address follows:

How Do You Define Americanism?

Comrade Commander, comrades of the Legion, ladies and gentlemen, my fellow Americans, it is particularly appropriate, in this critical and crucial hour of our country's history, that we reevaluate the meaning of the word and the ideal of Americanism, about which so much has been said but precious little understood. It is appropriate, first, because your great State has contributed more than its share of patriotic Americans and national leaders. But, my comrades and friends, it is appropriate, too, because we need a rebirth of that Americanism, that old-fashioned patriotism that sent our forebears into battle whenever freedom and dignity and justice were threatened—either on our home soil or abroad—where men looked to America to uphold or to restore their precious liberty.

But you know, my comrades, my task at this hour is not an easy one. For what can I say about Americanism that has not already been said by far more eloquent men? Then too, Americanism has been defined in countless ways—from the heroic example of Nathan Hale who regretted that he had but one life to give for his country—to the clarion call of Patrick Henry who fanned alive the flickering spark of our national freedom. The immortal Lincoln made Americanism into a thing of the spirit—even as the rugged Teddy did in his robust way. True, the marine sergeant put it into different words at Belleau Woods when he cried out his undying challenge: "Come on, you so-and-so's, do you want to live forever?" and General McAuliffe, the hero of Bastogne, would undoubtedly blush when we call his answer to the German surrender team a definition of Americanism—but his one word reply of "Nuts" will forever stand as the typical and proper American answer to any demand for surrender or appeasement.

But, comrades, let us reflect for a moment. Must Americanism always be measured in terms of sacrifice or bloodshed? Can it not be exemplified in a more peaceful way? Somehow, it seems to me, that whenever we speak of Americanism and cite deeds that are representative of it—we ignore so many of those who make up America, and whose daily lives compose the Americanism we hold so dear.

For it seems to me that Americanism cannot and must not be the restricted possession of heroes. It belongs to the millions of people whose everyday lives constitute the America we live in—the America for which so many of our contemporaries and forebears have died. In our periodic tributes to those who died in defense of America, we often say that they died so that liberty and Americanism might live. Let us, then, measure Americanism not in the light of the honored few, but in the way of life of the millions for whom the few have died.

Now then, comrades, what is Americanism? It's not just a parcel of land, or a mountain, or rivers or woods. Rather, as I see it, it is a principle—it is the eternal spirit of the chainless mind—it is the liberty you can't have unless you give it to others. You may well say to me: "That's all well and good, chaplain; but these are only abstract terms and definitions"—and I'd have to admit that you were right. But let us see if we can't translate them into our everyday lives—not for us alone, but in the lives of our neighbors, our children, and even those we today regard as less than friends.

For example, when the parade comes down the street, the stirring sight of Old Glory prompts most men to remove their hats and to stand firmly until the flag passes by. In all too many cases, however, they await the

marchers, the floats, the pretty drum majorettes; and in a sense, the act of doffing one's hat is as automatic as the same gesture when meeting a lady on the street. It is the result of training rather than real tribute.

And then, when the national anthem is played at a sports event, men uncover and they and the women stand; and then as the last strains fade away, they noisily call for the main event or whatever the sports feature is. When we salute the flag and pledge allegiance we mumble the words we learned as children, and we join in a gesture that has become as automatic as the repetitive words. The point I am trying to make, comrades, is that there are certain symbols which we have adopted as a display of Americanism, and that these symbols have largely become automatic.

I'm sure that you realize that I could very easily criticize the fact that these symbolic gestures are rendered without meaning; and ask that people give more thought to the significance and the true meaning of these gestures. You'd probably expect that from a chaplain, wouldn't you? But again, let us reflect—is this truly the basis for criticism? We all know that many people pray automatically, without sensing the true and immediate meaning of the words in the prayer service or prayerbook—and yet they both can be (and are) truly God-fearing men and women.

In the same sense, those who doff their hats or rise purely because of habit, these people are not (because of this habitual tribute) any the less American. God forbid. Because Americanism is a way of life, a way of life for millions of people; and if a man or a woman lives as a true American, then automatic participation of the ritual salutes is not to be criticized, by me or by anyone else.

You see, comrades, Americanism is a collective thing—it requires two or more people. For example, if I lived alone, without neighbors or family, isolated in some manner by hundreds of miles from another human being, could I live Americanism? The answer, of course, is "No," because one of the basic concepts of Americanism is the manner in which one lives with others. As an isolated individual I have no need of Americanism or liberty; because, being alone, I am unfettered and truly free. I can do anything I please; and in my selfish acts I affect no one.

But Americanism, comrades, has a meaning if I live so that my acts can affect others. Then, the true measurement of Americanism can begin. The regard for my neighbor, his rights, my rights as they affect his rights—those are the things that require Americanism; and I say that without such a situation, without these factors being present, Americanism is but a hollow and an empty sound. It is for this reason that I feel that we must measure Americanism in the daily doings of the millions—not alone in the hallowed sacrifice of the few. Why—from the time I get up in the morning until I have finished my day and go to bed at night, I carry the banner of Americanism with me—along, of course, with the millions of people who live about me.

Let us understand something, comrades. The liberty that I cherish is not liberty for me—it is liberty for my neighbor. He, in turn, does not have liberty for himself—but liberty only as he accords it to me. If I go to the church or the synagogue—and my choice is not his—he might, if he were stronger physically, stand in my path and bar my way; saying that, since I do not go to his church, then by his sheer physical strength, he will stop me from going to mine. But—because he doesn't do so, because he doesn't interfere with me even though he doesn't

agree with me—he grants me liberty—no, not liberty for himself, but liberty for me to do as I please.

And then, in turn, if we lived in a city where there were two newspapers—both opposite in political belief—and he takes one while I take the other, it would be very simple for me to steal his paper after the boy delivers it, so that he couldn't read it. I know that the editorial in his paper will be in conflict with my belief; but by my act of not interfering with his right to read what he pleases, I grant him liberty. So you see, comrades, liberty and Americanism are not what one has for one's self, but rather what one has for another—a friend, an enemy, a stranger, any person—even a non-American.

Let us go back for a moment to the thought of the heroes who fought and died that Americanism might live. It is easy to see why our daily lives, our living of Americanism every moment of the hour and every hour of the day—should constitute the Americanism for which our comrades have died. However, in almost every case, these men and women gave their lives because of the threat from without—from a force outside our own country. Yes, they most certainly died in line of duty. And, comrades, it is equally our duty, as Legionnaires and as patriotic Americans, to fight against the destructive and subversive forces from within.

True, an act of enemy sabotage can be most destructive; but even at the point of greatest destruction it does little more than impede. If a factory is destroyed, an assembly line disorganized, a ship blown up—these are all mechanical destructions that can ultimately be replaced. To be sure, they are damaging acts; but their effect is only temporary. You see, the mineral wealth of our country combined with our technical know-how and ingenuity can fast replace that which has been demolished.

But, my comrades, what about an act against liberty—an un-American act? Let us compare this with enemy sabotage. When I infringe on a man's liberty I have done irreparable damage. True, I may insist that a man refrain from doing something, and then a few minutes later make reparations by permitting him to act as I should have at the beginning, but the loss is as the loss of time. It can never be replaced. I have destroyed a man's liberty and the destruction, even for a second, is a threat to Americanism, because, being one of millions, I must multiply my weakness by millions to truly measure the potential damage.

And so, as I see it (and of course, I may be wrong, though in this case I doubt it), the greatest threat to Americanism is not from enemy shores but from those who live under the very flag for which we once risked our lives. Because each man who lives in this country bears a trust—he has in his way of life the means to destroy Americanism, and if he betrays that trust (and his is but one of many)—then Americanism has fallen. But if each one of us, as Legionnaires and as thoroughgoing Americans bears well our trust—if we live daily as the doctrines of Americanism dictate—then our very lives strengthen and preserve the bastion of freedom for which so many have died, that same bulwark of freedom which today must combat the most ruthless, the most unprincipled dictatorship the world has ever known.

Now, my comrades of the Legion, you and I and the millions we represent have a peculiar (and I feel an enviable) position. We once served our country in time of war, and in our own way and day echoed the spirit of Nathan Hale as we dared death in defense of freedom. Now, however, we belong to that growing body of Americans who, though civilians, feel a close kinship with those who have answered their country's call. In fact, a great many of us may well be called again. We know the feeling of men going into battle, be it on land, afloat, or in the air. We

know what it takes to insure victory, whether it be superior equipment or superior morale.

I said that each one of us bears a sacred trust, and, comrades, it's truer today than ever before. As I see it, we must bear our privileged burden of labor and taxation to pay for the equipment through which our Armed Forces are guaranteeing our lives. We must sacrifice many of the luxuries which Americans have so long taken for granted—so that those who fight won't have to serve as bait until we here make up our minds that, regardless of terminology and diplomatic amenities, we are at war. We must endure both priorities and controls, distasteful though they may be to the rugged individual American, in order that our fighting men may be spared the shame of another Bataan or the humiliation of another Korean retreat. The world today abounds in trouble spots, and our gallant men must be given the tools from which the ultimate victory is to be forged. Freedom has never come cheap to real Americans. Our forebears paid for it in full with their means and by their lives. We must be ready and willing to do no less.

I mentioned the need for morale and, of all people, this group should know how vital that is. But, comrades, morale comes not only from fine equipment or letters and packages from home—important though we know them to be. No—the morale about which I speak comes from the faith of a fighting man that his people back home are behind him every inch of the way. It comes from knowing that the freedoms he is defending are being held sacred at home—that whether he returns alive or dead—his children and dear ones can still worship God as they choose, can still read whatever they please, can still gather wherever and whenever they so desire. This morale comes from knowing that he is not being made the "fall guy" for those at home who cry loudly for "business as usual"—who seem to care more for ballots than for the bullets that might be coming the soldier's way. And finally, this morale comes from knowing that while he is standing up to godless communism abroad, his people are burning out the nests of the fellow travelers back home.

I realize, my comrades, that I risk your impatience and displeasure by waving the flag. But, by all that's holy, I am getting weary of the smugness and complacency of those who are perfectly willing to sit back and wait for others to carry their load, or if I may be permitted, to shoulder their cross. I served in the last war and soon will be serving in another. You might say that I represent the younger generation. Yet, as God is my witness, if we don't revive some of the old, unblushing, unsophisticated patriotism that wasn't ashamed to stand up for American ideals—if we don't quickly and decisively rid ourselves of the pseudo-liberal termites of a foreign regime—then I warn you—never again may we meet as Legionnaires and free Americans—never again will Americanism so stir the hearts and minds of men. My comrades, we have a sacred trust. Let us, under God, keep that faith—and by so doing and with the Almighty's help, keep our beloved America strong, and just—and forever free.

submitted in January; in the second column, the budget estimates submitted for action by the Appropriations Committee; in the third column, the figures that passed the House; in the fourth column, the figures as they passed the Senate, on the bills that have so far passed; in the fifth column, the public law or the result of the conference.

As soon as the first appropriation bill was reported out, a concerted effort was made to reduce the appropriations on the floor of the House.

This effort had the effect of stiffening the back of the Appropriations Committee and helping it to make substantial reductions and, in addition, it had the effect of reducing the estimates that the President submitted for expenditure in his final requests to the House of Representatives, which were acted upon in almost every instance.

The total reductions below the President's estimates, in the bills that have passed the House, amount to \$3,549,000,000.

I feel that the Republicans can claim a very considerable share in that because of the efforts that we have consistently made to save money.

With the single exception of the Labor-Federal Security appropriation, the Senate figure is way above the figure passed by the House. The House figure was reduced, on the floor of the House, by very substantial items, and the total reductions on the House floor amounted to \$160,687,585, exclusive of what has resulted and will result because of the Jensen amendments on personnel. Those figures may run as high as \$250,000,000.

The figures finally submitted by the President in the January budget upon different items exceeded the final submission by \$6,015,785,131. There are still pending before the Congress the estimates of approximately \$4,500,000,000 for military construction, and approximately \$7,500,000,000 for foreign aid of one type or another, a total of at least \$12,000,000,000.

The actual net receipts from taxes going into the Treasury for 1951 were \$48,142,000,000. The expenditures were \$44,632,000,000. Of these items, foreign relief and military assistance amounted to \$3,700,000,000. The military operations aggregated \$19,200,000,000, a total of \$22,900,000,000. These three items next year will probably run \$45,000,000,000 and the other expenditures of the Government will probably run at least \$22,000,000,000, a total of about \$67,000,000,000.

More war activities than are presently envisaged or have yet been presented to the Congress might increase this figure. On the other hand, if conditions drift along about as they are, the \$40,000,000,000 expenditures estimated for the Defense Department by the President, which I have taken, probably will be less because of slower completion of projects than the rates on which the \$40,000,000,000 was estimated.

The revenue, allowing \$5,000,000,000 increase in the miscellaneous tax and the income tax because of inflation, and \$5,000,000,000 additional tax because of the tax bill, would probably produce a total of receipts of about \$58,000,000,000, which is not very far from what the result must be expected to be.

Appropriation comparisons of items acted on as of Aug 22, 1951

	As per original budget document	Request to House	Passed House	Passed Senate	Public law
1951 items combined.....	\$10,951,581,848	\$7,317,195,131	\$6,932,218,274	\$6,864,605,382	\$6,798,410,382

Appropriation Comparisons

EXTENSION OF REMARKS OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. TABER. Mr. Speaker, I submit herewith a table indicating, in the first column, the original budget estimates

The Mutual Security Bill

EXTENSION OF REMARKS OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. MANSFIELD. Mr. Speaker, it was quite late last Friday night when the decision was made to take an additional

\$350,000,000 from the committee report on the foreign-aid bill. I must confess that I felt it was not a wise decision at that time, and in the intervening days the enormity of the decision has increasingly bothered me. Moreover, I read in the press threats of even more serious cuts.

The chairman of the Foreign Affairs Committee, the gentleman from South Carolina [Mr. RICHARDS], in opposing the Friday night cut, emphasized what I believe to be a most valid reason. If

we want to get out from under the heavy load in Europe in 2 or 3 years, we have got to build up Europe's defense potential to the point where they can carry their own burden.

The gentleman from South Carolina also noted that for every dollar of economic aid we extend in Europe, General Eisenhower will have in support of his efforts \$2 worth of European production. I have with me some case examples adding to that point.

In Denmark they can make \$1,125,000 worth of .30 caliber ammunition if we will supply 25 percent of the cost, which is to say \$285,000, in special carbon steel, copper alloy, and powder. In other words, \$1 worth of contribution of special materials will get the North Atlantic Treaty forces \$4 worth of .30 caliber ammunition. If we supply certain machine tools and materials, costing us \$81,000, Denmark can produce \$452,000 worth of 9 millimeter submachine guns.

If we can supply France with certain quantities of copper, nickel, zinc and machine tools, costing us \$312,102, France will produce \$8,000,000 worth of 12-ton tank destroyers. Our contribution, the cost of those tank destroyers, will, thus, run just under 4 percent.

You can carry this argument out to its ultimate extension. We are proposing to spend in this country upwards of \$60,000,000,000 to convert a part of our production and to do the other things which will make effective more than 3,000,000 soldiers. We propose to spend in the mutual security program in Western Europe around \$7,000,000,000 to supply the tanks and guns and the marginal assistance required so that Europeans can build their own arms, and convert their economies and take the other steps which will have the end result of making effective about the same number of soldiers—3,000,000.

Obviously, without what is perhaps rather inaccurately called economic aid, Denmark cannot make the ammunition and machine guns, and France cannot make the tank destroyers. Without our marginal assistance it is entirely possible that a substantial portion of the 3,000,000 soldiers cannot be mobilized and, if they are mobilized, they will lack essential arms and support.

Just what so-called economic aid means has been projected for two of the larger NATO countries. We had proposed to give these two countries \$565,000,000 in so-called economic aid. With this aid they expected to make military expenditures of \$3,905,000,000. Without our aid their defense expenditures would run more than \$1,000,000,000 less—\$2,825,000,000. What this means in more specific detail is revealed in the fact that if we give these two countries economic aid, they can make \$226,000,000 worth of ammunition and explosives. Without our aid they can make only \$53,000,000 worth. It is the difference between having armies well supplied with ammunition or inadequately supplied. Without our aid it is estimated they can make \$167,000,000 worth of aircraft. Without our aid—and aid does not mean just dollars, it means the materials and tools represented by those

dollars—they can make only \$82,000,000 worth of airplanes.

The same story applies to electronics, ships, combat vehicles, and other major matériel.

Surely no more false economy was ever devised by man than the proposal that we should cut off the help which will make the difference between Europe having a truly effective defense and a defense lacking in matériel. For that reason I feel it has been quite wrong for us to call this measure the foreign-aid bill. The true fact is that this mutual security bill is not a measure to aid foreigners. It is a carefully contrived plan to improve the defenses of the United States, for our borders are not on the Atlantic and Pacific. The true border is that intangible line in the minds of men where the totalitarianism of the East meets Western civilization. We must not for a single minute forget that Europe and all it stands for is important to us. In my opinion it is the balancing power in the world today. Spiritually, Western civilization represents all we hold dear. Materially, if we have the skills and resources of the people of Europe with us, the free world is safe. If those skills and resources are lost, we are in great jeopardy.

Western Europe has almost 50,000,000 tons in annual steel production. Russia and her satellites have an estimated 28,000,000 tons. If you add those 50,000,000 tons to our American 90,000,000, you get a total of 140,000,000 tons. But if you add those 50,000,000 tons to the production of Russia and her satellites, you find 78,000,000 tons ranged against our 90,000,000 tons. That is an oversimplification of the problem, of course, but it does reflect the basic facts, and the urgency, of the situation.

What will be the consequences of the heavy slash in economic aid funds which this House approved last Friday night?

It will mean less defense of our allies and of ourselves. It will postpone the day when we will have power in Europe sufficient to deter the Russians.

It will mean that they will provide less military end items for themselves; and we will be left with the alternative of giving them more equipment or leaving them defenseless.

It will mean less men under arms in Western Europe.

It will mean fewer modern airbases from which fighters can fly in defense of American and European boys.

If, for example, most of this cut were applied to economic aid for France we would face the French with the alternatives of sharply curtailing the forces they have promised General Eisenhower or abandoning all or part of the defense of Indochina—a defense which is costing her hundreds of millions and several thousand lives a year. If the cut were applied proportionately to Italy we would have to plan against the day when the valiant government might be taken over by the Communist rising in protest against less food, less housing and more unemployment.

This deep cut in economic aid also has serious consequences for our plans to deny the Soviet Union things produced in Western Europe. How can we tell our

allies on one hand that they should not trade with the east for such things as wheat and coal and lumber, yet on the other hand refuse to supply them with these needs?

We all know that armies march on their economies, and unless we provide the economic aid to build up a much stronger economic base in Europe, the armies will not be ready to march in the defense of the American frontiers which General Bradley has told us now lie in the heart of Europe.

Finally, gentlemen, I ask you to lay aside for a moment the reluctance many of us feel to face up to America's new responsibilities for leadership. We have sent one of our most illustrious soldiers and one of our most popular leaders to command the forces of freedom in Europe as a symbol of American leadership and energy and optimism. He is there on the ground, and every one of us must support him wholeheartedly. If at this crucial moment in the build-up of the forces which are designed to prevent a third world war we falter the whole cause would fail. If at the very moment when he has started building momentum for defense we cut off the economic aid which fuels his defense forces we may stop him before he starts on his second crusade for peace through strength.

I ask you to face frankly the dangers which confront us. I ask you to search your hearts and then quietly to consider again whether this House is serving the United States by cutting the mutual security bill—by cutting it to a point where a sound, highly useful, and acutely needed mission cannot be performed. In this situation our best military leaders, our most highly respected economic thinkers have developed a program tailored to the minimum needs of ourselves and our European allies. The program is to be carried out by men who have shown they can be trusted to do an economical and businesslike job.

I urge you with all the power at my command to reconsider our tired, despairing action of last Friday night. I urge that this House be ready to come forward and agree to an amount of economic aid which does not strike despair in the hearts of our allies, which does not cause great joy in the Kremlin, but which demonstrates again that America stands at the lead of her allies in the free world.

Mr. Speaker, I am inserting at this point in my remarks certain statistical tables which the Congress should find of interest in its consideration of the mutual-security bill.

Projected European military expenditures, fiscal 1952, with and without United States economic aid for two NATO countries

(Millions of dollars)

Category	Without United States economic aid	With United States economic aid	Increase

United States Wasting Russian Refugees

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Drew Pearson, from the Washington Post of August 22, 1951:

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

UNITED STATES WASTING RUSSIAN REFUGEES

EN ROUTE THROUGH EUROPE.—Here are some spot observations gathered in various parts of Germany regarding one of the most important problems we face either in preventing war or winning a war after it gets started:

Frankfort: High Commissioner Jack McCloy, who is performing a remarkably fine job, is supposed to be the top man in Germany. He can and does set aside German court decrees. He can give or withhold American money, the life blood of Europe.

He can order the American Army to get out of this area or into that.

But when it comes to Russians escaped from behind the iron curtain, McCloy has no influence with the American Army. It flouts his orders.

Perhaps because of this, the amateur detectives in counterintelligence do such a successful job of alienating these Russian escapees that a lot of them decide that Russia is better than the much-vaunted West and return home.

Just outside Frankfort is a Russian refugee camp. Its name, its exact location, the number of Russians in it are supposed to be top secret. Not even McCloy knows how many Russians are in it, nor has he ever visited it. If the Army is ordered by McCloy to let anyone into this camp, the Army says "No."

In this camp at one time were about 2,000 Russian officers who, disgusted with the Red army, had fled to the American zone of Germany, anxious to help the United States. But for months they simply sat, ate, and were interviewed by young counter-intelligence agents—ate, sat, and were interviewed; ate, slept, and were interviewed.

Some were flown to the United States amid a flurry of excitement to report on conditions inside Russia to higher-ups in the Pentagon. Some were promised haven in the United States. In the end, all were reduced to sitting, waiting, and going to seed—thanks to the sterility, inefficiency and lack of imagination of the Army.

Restless Red Army

Berlin: Beyond the invisible iron curtain in the east zone of Germany are about 300,000 members of the Red army. Living in Germany, a country with which they all too recently fought a bitter war, these troops long had to camp behind barbed wire.

This was not to keep the German population away from them, but to keep the Russians from deserting. Even so, many of them did desert—and more would desert if given encouragement or any kind of favorable treatment after their arrival in the west.

Obviously, Moscow knows that these troops, living near the west and with no tight border control between east and west, constitute one of the potential weaknesses of the Red army. It also knows that the same thing is true in Austria where Russian troops also live near the west and temptation is strong to drift over and sample western glamour.

Undoubtedly, Moscow also remembers what many Americans have forgotten—that it was not the Kaiser's army that defeated the Czar in 1917, but the shrewdness of the German general staff in sending Trotsky and Lenin in a sealed train from Switzerland into Russia. Moscow certainly should remember it, for that was what started the Bolshevik revolution and put Stalin where he is today.

And, remembering it, Stalin certainly doesn't want it to happen—in reverse—again.

Kerensky unites

Munich: Dining in Munich the other night, I discussed some of these things with gnarled, spritely Alexander Kerensky, father of the first Russian revolution, who, if not upset by Lenin, Trotsky, and the German general staff, might have saved Russia and the world the scourge of communism.

Kerensky had come to Munich to do a job that has needed doing for years—wrapping all the diverse Russian exile groups into one close-knit body in order to do to Stalin what Lenin and Trotsky once did to Kerensky.

In Munich with Kerensky were three other top Russians from the United States—Vladimir Zenzinov, Prof. I. Kurganov, and Boris Nikolayevsky; also, the League of Struggle for National Freedom, the National Labor Alliance, the Russian National Movement, the Union of Soldiers of the Liberation Movement, and the Union for the Liberation of the Peoples of Russia.

These groups and leaders are about as diverse as and difficult to get along with as some of the groups within heterogeneous Russia; and some, such as the Ukrainians, want to solve all "New Russia's" problems even before the New Russia is created.

However, it seemed to me that this meeting of Russian factions in Munich was the most encouraging thing that has happened for a long time. For if and when they get together, they can do two things:

1. Beam propaganda into Russia that comes from Russians, not from Americans who have an ax to grind.

2. Work out a system for screening recent Russian escapees.

Let We Forget the Anniversary of Hitler's Attack on Poland

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. MACHROWICZ. Mr. Speaker, it is said that human memory is short. I therefore believe it fitting and proper to remind ourselves and our Nation that September 1, 1951, will mark the twelfth anniversary of a dark day in the annals of world history.

On September 1, 1939, the world was shocked by Hitler's brutal and completely unjustified attack on Poland, an innocent and peace-seeking republic. At the time, the world little realized what would be the tragic effects of that attack. There were some here who thought it was no concern of ours and could not affect us, seemingly safe and secure, thousands of miles away from the attack.

The fallacy of their thinking was soon evident and we should be reminded of it today, as it seems to have been forgotten by some who again would like to return to the policy of American isolationism. The attack on Poland brought about and directly caused World War II, the bloodiest holocaust ever recorded in human history, bringing tragedy and suffering on all the freedom-loving world, including the United States.

While we think and plan for a new Europe with a free German people participating in it, let us not forget the Nazi gas chambers, their human incinerators and their dastardly inhuman plot to completely extinguished the Polish nation. Let us make sure that in the new free Germany the ugly steel glove of Nazism will not be able to get its grip again.

It would also be worth while in our actions today to remember that without a promise of support from Stalin, Hitler would not dare to launch his attack on Poland, that Hitler's Nazism was the associate and accomplice of Stalin's communism.

At the very first opportunity, Stalin joined Hitler in dividing Poland between them and in the barbaric plot to torture and exterminate its people, a plot which is continuing today just as it did then. Concentration camps, executions and deportations to Siberian camps continue without abatement.

The end of World War II brought no liberation to Poland. Its people today suffer as much as or more than they did under Nazi slavery. But let us remember, too, that the Polish people have not accepted defeat and enslavement. The underground movement of rebellion in Poland continues stronger than ever.

Let us on this 1st day of September 1951, rededicate ourselves to vigilance and preparedness and pledge ourselves never to relax until the international conspiracy, hatched out simultaneously in Berlin and Moscow, has been completely wiped off the face of God's earth.

The people of Poland reject the role of satellite of Russian communism and demand to be restored to their well-earned place among the people of the free world. Justice and our own national security require that we do everything possible to wipe out the dark spot on the history of the world which appears under date of September 1, 1939.

"Winds" Penetrating Iron Curtain

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Drew Pearson, from the Washington Post of August 21, 1951:

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

"WINDS" PENETRATING IRON CURTAIN

(Drew Pearson is again on a tour of Europe, studying conditions there. His column today takes the form of a letter to his wife.)

MUNICH, Germany.

DEAR L. W.: Driving up toward the Czech border the other night, about dusk, I noticed a big van lumbering along with a little car behind it. The van looked like it was lost from our convoy, and we stopped it to inquire.

In the little car behind was your son. He was pushing the driver of that big van like a terrier biting the heels of a recalcitrant bull, because that van contained the most important part of our "Winds of Freedom" operation—the messages we were sending that night to the people of Czechoslovakia.

I left the car full of VIP's where I was riding and joined your son, not only because I enjoy his company, but to see what it was all about. What happened was that the friendship messages to the Czech people had been late arriving in Munich from Cincinnati, and we had to get new messages printed in Germany. The latter also were too late to join the main truck convoy which had left Munich at noon, so Tyler was commissioned to remain behind to see that the most important part of our operation got to the border on time.

An eerie spectacle

The trucks were parked on a narrow road on the Bavarian hillside almost on a straight line toward Pilsen and Prague, the two largest cities of Czechoslovakia.

Arranging a convoy is a complicated operation, somewhat like loading a circus train, and it reminded me of my old tent-wreck-

ing days. Electric generators are at one end of the convoy, though far enough away so that no sparks can reach the hydrogen tanks used to fill the balloons. These are filled inside the truck and launched from its rear end. Next come four side-gate trucks for rubber balloons. The latter are so big that they cannot be filled inside the trucks, so the hydrogen tanks are laid sideways with a hose extending to the balloon-launching tables on the side of the road.

Tyler operated the valve on the hydrogen tank, supervising a crew of three Germans. The balloon is inflated with hydrogen until it touches two inverted table legs about 4 feet apart. When it reaches this diameter, it is tied at the bottom and sent on its way across the iron curtain. I autographed one of these balloons for Gottwald and Stalin.

The long line of trucks parked alongside a Bavarian wheat stubblefield made a fascinating, eerie spectacle in the night—the guttural German voices, the swish-swish of the flowing hydrogen, and the steady, silent launching of the big bags as they slipped off into the darkness.

The boys were getting off their missives to Prague pretty regularly—about 1,300, all told—when it started to drizzle. We kept going for a while, since rain does not impede the balloons. They rise above the clouds in no time, but it does get the men wet. So at 2 a. m. we finally laid off; everyone was pretty well soaked.

I sat in the car for a while waiting for the rain to stop, but when it didn't I used the excuse that I had to get to the cable office, and at 3 a. m. headed back for Munich. I am getting old, I guess, and cannot take it.

Before I left, however, I went down the line of murky trucks, trying to find your son. I finally located him sitting inside a truck, listening to German veterans and former prisoners swapping war experiences with American GI students—men who had once been fighting each other but who now worked together launching friendship messages to another people whom they hoped they wouldn't have to fight.

Pacifist youth

Germans, incidentally, supposed to be the military master race, seem to me completely pacifist. German youngsters are just as unenthusiastic about raising an army as your son and other American youngsters are about the draft. Sometimes I think it's chiefly the old dodos who are complacent about the prospect of war.

However, I'm convinced that Moscow wants to wait a considerable time before it plunges the world into war. Its satellite peoples are too restless and would turn against the Kremlin in case of war. That's why I think this balloon deal, coming at this particular time, may help. It's only a drop in the bucket, of course, and lots of people will pooh-pooh it, but you have to make a start some way or other in penetrating the iron curtain. We've taken the first step.

I am very lonesome and anxious to get home. It's rained a lot here and I hope you've had some of it at home. When I left, the pastures were just about burned up. See you soon.

DREW.

West Virginia Veterans' Bonus

EXTENSION OF REMARKS

OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD,

I should like to insert the following letter from His Excellency the Governor of the State of West Virginia:

AUGUST 18, 1951.

HON. M. G. BURNSIDE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I am indeed pleased to learn that you have introduced a concurrent resolution concerning the granting of permission to West Virginia to pay the veterans' bonus.

Of course, as you know, we have been working very hard on this matter, and it is my sincere hope that the voluntary restraint committee will permit us to sell these bonds. I heartily commend you and our other Representatives for your efforts in behalf of obtaining permission to sell these bonds. We all appreciate anything you can do to aid us in the matter.

With kindest regards and best wishes, I am

Sincerely yours,

OKEY L. PATTERSON,
Governor.

The Fraternal Order of Eagles Fights the Drug Menace

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. MANSFIELD. Mr. Speaker, I am happy to call to the attention of my colleagues an article by Hon. A. A. Scott which appeared in the Eagle, the official publication of the FOE, for September 1951.

Once again the FOE is in the forefront of the fight to help our youth in the current campaign against the drug menace. My congratulations to this great fraternity and to Judge Scott for the great work they are doing and my best wishes for their success. They can be assured of the full support of the Congress in this worth-while endeavor.

The article follows:

YOUTH AND THE DRUG MENACE—EAGLES EVERYWHERE CAN PLAY AN IMPORTANT ROLE IN THE CAMPAIGN TO SAVE AMERICA'S YOUNG PEOPLE FROM THE EVILS OF THE SPREADING NARCOTIC TRAFFIC

(By A. A. Scott)

Every day we see in our local papers some story featuring juveniles, and now, the latest phase of that problem, juveniles involved in narcotics. Just how serious is it, and what can we, as Eagles, as good American citizens and as parents, do to help solve this problem? The question is a real challenge to each of us.

How many really know how serious a situation the country is facing today with those unfortunate people who are addicted to narcotics? Very few realize what effects drugs actually have on individuals when not properly prescribed by a physician and know less about what the drugs really are.

Years ago we were concerned principally with opium, cocaine, morphine, and heroin—all dangerous and habit-forming. Today we are faced with a new drug evil—marijuana. In some ways it is the worst we have met.

Prior to Pearl Harbor, most illicit opium was smuggled into this country from ships arriving from the Orient. Opium is consumed by its addicts chiefly by way of the

pipe, and as it burns, it gives off a sickly sweet odor. Opium smokers say they experience pleasant dreams and hallucinations. These effects are responsible to a great degree for the continued use of the drug.

The cocaine habit is not only one of the most seductive but one of the most injurious of all drug habits. Cocaine is definitely habit-forming, but the habit is in no way comparable to that produced by the overindulgence in any of the opiates—like opium, morphine, and heroin—and may be broken without great physical discomfort.

Morphine, like opium, the drug from which it is derived, has a tolerance which builds up very fast. The average addict, turning from the opium pipe to the salts of morphine, will dissolve the drug in a small amount of water, usually in a spoon. That solution is slightly heated over the flame of a match or a candle and then drawn into a hypodermic syringe through the needle.

Then there is heroin. Tolerance for this drug builds up very rapidly and its dangers for addicts are definitely greater than those of the other opiates. For this reason, the Government has prohibited the further importation of opium for the manufacture of heroin. There is at this time a very limited amount of heroin in this country for legitimate medicinal purposes.

The traffic in illicit heroin has been extensive throughout the world. In the United States it has been the prevailing drug on the eastern seaboard, morphine over the years having been the prevailing drug on the west coast. In recent years—particularly since Pearl Harbor—Mexican heroin seems to have gained a foothold in Canada and the Western States.

Heroin is used by the addict in much the same way as is morphine—usually by means of the hypodermic needle.

Juveniles, like adults, have their varying likes and dislikes, and cycles are apparent in crimes and drug practices. First, we had careless parents, leaving their nembuto or sodium amytal pills lying around for youngsters to find. These are often referred to by teen-agers as "goof balls" or "yellow jackets." Then we had the benzedrine inhalers which kids would break open and soak in Cokes. All of these fads or fancies were experimented with to make the youngster "feel high" or "get a kick out of life," as the kids put it.

Now, we are confronted with the most popular type of dangerous narcotic—marijuana. I definitely feel that public enemy No. 1 is no snarling human criminal, but the marijuana traffic that is growing rapidly in this Nation and throughout the world. This drug disrupts and destroys the power of the brain and produces visions of grandeur and ruthless power that result in crime and degeneracy.

In recent years the peddlers of this drug have been trying to give marijuana to school children, knowing that once the habit is formed they will have a new victim and a steady customer. In my opinion, this is a crime worse than murder because, deliberately and for profit, it breeds degenerates and murderers.

There was a time when law-enforcement officers felt that the best way to deal with the increasing popularity of marijuana was to say little or nothing about it. They felt that to discuss this product would only lead to increased curiosity about it and cause adventurous young people to experiment with it.

I feel that the time for silence is now long past. During recent years this menace has spread like wildfire throughout the United States. It seems to have started in the South and it has spread throughout the Nation and to Canada as well.

By way of contrast, opium, morphine, and heroin are hypnotic drugs. Their effects are sedative. All the opium user wants is his opium and to be left alone. From opium,

however, he usually goes on to the use of morphine, which is about 10 times as strong as opium, or to heroin, several times more potent than morphine.

At first the result of his addiction is a mere stupor. Then his appetite for food disappears, resulting in a pallor and an emaciated appearance. He loses his sense of cleanliness and the power to differentiate between right and wrong. These effects become more and more pronounced until finally the result is complete physical and mental deterioration.

Almost from the beginning he is lost to society and his dear ones. All sense of obligation vanishes and he becomes incapable of working or obtaining a livelihood in a legitimate manner. The plight of his family, even its suffering or starvation, does not touch him, and he is completely immune to the tears and pleadings of his dependents.

Almost all such addicts eventually become criminals, and their crimes represent the direct results of their addiction and the direct results being their mental deterioration, together with the uncontrolled craving for the drug which must be satisfied at all costs.

Unlike the opiates, marijuana is an excitant drug. It attacks the central nervous system and violently affects sensory perceptions. Singularly enough, there is no way of knowing what effect it will have in a particular case, as it may affect one person in one way and another in the opposite manner.

A person under the influence of marijuana may believe himself so small that he is afraid to step off a curbstone into the street. Or he may feel himself of enormous size and of superhuman strength and passion, and in that condition he is likely to commit crimes foreign to his normal personality. Time and space are obliterated or perceived in fantastic fashions.

The user of this drug may not feel the restraints of gravitation. He may suddenly get the idea that his best friends or his own family are about to take his life, under this delusion he may kill them. Passions may become uncontrollable, resulting in revolting crimes. In fact, no act is too bizarre or horrible for the crazed user of marijuana. And because of its peculiar effects, this drug, unlike opium, morphine, and heroin, is the immediate and direct cause of the crimes committed.

Marijuana is obtained from a weed commonly known as Indian hemp. It is used in cigarettes. These are, in the language of the street and the underworld, referred to as reefers, muggies, weeds, hot hay, or Indian hay. In recent years the habit has been taken up by young people—sometimes by mere children who would not have occasion to encounter other forms of narcotics.

Fortunately, marijuana is not habit-forming to the extent that most other drugs are. A person addicted to other narcotics will experience actual physical pain—sometimes excruciating torture—when deprived of his drug, while the marijuana user will at most feel a mere craving much like the user of tobacco or alcohol.

Until 5 years ago my own State—California—experienced few, if any, problems relating to the use of narcotics by juveniles. However, an alarming percentage of our cases in the past few years have involved persons under 21 years of age. This is generally in the use of marijuana, but it has been noted that many of these youngsters have graduated from that drug to the use of heroin, which is recognized as the most dangerous of all narcotics to use.

So far as narcotic drugs are concerned, there appear to be three definite steps in the juvenile problem—alcohol, then marijuana, and then the third and final step, one of the opiates, usually heroin.

It may be interesting to note that in Los Angeles County during the year 1950, 615

cases involving marijuana were handled by our superior court, as compared to 414 cases involving heroin, opiates, cocaine, and others. This gives the reader some indication as to the prevalence of marijuana.

As compared to this large number of cases in the adult court, 55 boys and 7 girls under the age of 18 figured in cases handled in the Los Angeles Juvenile Court over the same period.

This brings me to a point that I think should be stressed: We should not glamorize cases of youngsters involved with dope—and particularly we should not emphasize the statements of unfortunate juveniles who try to justify their use of the drug by telling of the thrill that they obtain by its use. After all, we must not forget that they are kids, anxious to try something new, and if we are going to remind them constantly of the unfortunate experiences of other children who have fallen into this habit, we should, at the same time warn them of the terrible effects these drugs have on their bodies and minds.

I think the challenge which we must face is that of full cooperation with law-enforcement agencies to see to it that all peddlers are brought to the attention of the law and prosecuted to the utmost. Most enforcement officers are always happy to receive help from interested citizens.

In our national youth-guidance program we have emphasized the need for close cooperation with law enforcement on the part of all subordinate agencies. What better way can we serve our community, and particularly our children, than by sitting down with our chief of police or juvenile officers to ascertain if such a problem exists in our community, and offer our assistance in destroying this drug cancer that endangers our future citizens?

The Coming Betrayal of Japan

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I include the following communication I have from Ex-Naval Lt. W. H. Evans, Jr., because of his comments upon the proposed Japanese peace treaty:

EDGEWATER, MD., August 23, 1951

The Honorable B. CARROLL REECE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN REECE: In spite of the fact that the Trumanites have revoked my commission as a naval officer, they cannot revoke my oath of allegiance to my country.

Consequently, I feel that it is my duty to send you the enclosed article on the Coming Betrayal of Japan, which I have written in an attempt to arouse our countrymen to the impending disaster.

My answer to the Acheson Democrats and Truman Republicans is God bless Gen. Douglas MacArthur. He is for the United States first, last, and always.

Most respectfully,

W. H. EVANS, Jr.,
Ex-Naval Lieutenant.

THE COMING BETRAYAL OF JAPAN

The proposed Japanese Peace Treaty that is to be signed in San Francisco is a clever plan designed for the purpose of enabling communism to triumph in Japan. As a

quick glance, this peace treaty may strike the unsuspecting reader as being a fair and generous offer. However, upon careful examination and consideration of all the possible implications of the various articles, it becomes clearly evident that the State Department once again is placing the interests of Communist Russia above those of the United States.

There are four major betrayals in this treaty which should be pointed out to the American people before it is too late:

1. ACKNOWLEDGMENT OF ROOSEVELT'S YALTA BETRAYAL

Section (c) of article 2 of the impending treaty states:

"Japan renounces all right, title, and claim to the Kurile Islands, and to that portion of Sakhalin and the islands adjacent to it over which Japan acquired sovereignty as a consequence of the Treaty of Portsmouth of September 5, 1905."

According to this cleverly worded statement, the secret agreement of the Yalta betrayal whereby Communist Russia was given the Kurile Islands and southern Sakhalin is acknowledged as binding. So secret was this protocol that it was not released until 1 year after Roosevelt's sell-out at Yalta in February 1945 when Japan already was beaten and sung for peace.

Naturally, the Acheson Democrats and Truman Republicans will deny that this article acknowledges the Yalta betrayal but they cannot whitewash the facts.

If this article does not acknowledge Communist Russia's claim to the Kurile Islands and southern Sakhalin then why is Japan being stripped of these two pieces of her territory which are so essential to her defense and important to her economy? The whole world knows that no other nation could conceivably get the Kurile Islands and southern Sakhalin except Communist Russia. It is a subtle way of legally giving the territories to the U. S. S. R. without directly admitting it.

Everyone who reads this section should immediately get a map of the Far East and spread it before them. It can plainly be seen that the Kurile Islands and southern Sakhalin are two daggers pointing at the Japanese home island of Hokkaido. Kunashiri, the southernmost Kurile Island is only about 10 miles from Hokkaido, southern Sakhalin is separated from Hokkaido by the narrow Soya Strait which is only 25 miles wide.

The Treaty of Portsmouth of September 5, 1905, ending the Russo-Japanese War awarded southern Sakhalin to Japan because President Theodore Roosevelt clearly saw that it was essential for Japan's defense against the surging tide of Tsarist imperialism. Moreover, Japan had and has just as much claim, if not more, to territory in this region because Russia looted all of it from China in the first place.

Moreover, there are important fishing grounds in the Sea of Okhotsk that were an important part of the Japanese economy. The Japanese are now barred from these areas since the Kurile Islands and Southern Sakhalin are in the possession of the Communist enemy.

This territorial provision of the peace treaty with Japan is keeping in line with the Roosevelt-Truman-Acheson policy of making the world safe for communism.

2. TROOP WITHDRAWAL

Section (a) of article 6 reads:

"All occupation forces of the Allied Powers shall be withdrawn from Japan as soon as possible after the coming into force of the present treaty, and in any case not later than 90 days thereafter. Nothing in this provision shall, however, prevent the stationing or retention of foreign armed forces in Japanese territory under or in consequence of

any bilateral or multilateral agreements which have been or may be made between one or more of the Allied Powers, on the one hand, and Japan on the other."

The possible implications of this proposal present the most immediate danger to the retention of Japan as a member of the anti-Communist nations. It could readily force Japan into going Communist. A careful analysis of the above quotation shows that events could be made to follow this pattern.

All American troops could be withdrawn after 90 days at the request of a Japanese Government that felt unable to accept certain intolerable conditions of a bilateral agreement intentionally forced upon it by the American pro-Communist State Department. The Japanese would have to reject such conditions or else lose a vote of confidence. Without American bases and troops in Japan, the Japanese would be an easy prey to communism from within or without. Remember how close southern Sakhalin and the Kuriles are to Japan and the Communist Japanese army, reported to be training in Sakhalin.

Another fact to bear in mind is that it would be possible for the U. S. S. R. to offer to return the Kurile Islands and Southern Sakhalin to Japan under a bilateral agreement in exchange for the withdrawal of all foreign troops and bases from Japan. The Communists are willing to execute a minor strategic retreat now in order to be able to cleverly bring Japan into the Communist orbit. The Soviet Union has nothing to lose and everything to gain by such an arrangement.

Perhaps this speculation may sound fantastic but it must be remembered that the same thing was said about China when the inevitable conclusions of Yalta, the Marshall mission to China, and the effects of the embargo upon supplies to Nationalist China were pointed out.

The pro-Communist tactics of the State Department are repeating themselves again in Asia.

3. IMPOSSIBLE REPARATIONS

The first two paragraphs of article 14 state: "It is recognized that, although Japan should in principle pay reparation for the damage and suffering caused by it during the war, nevertheless Japan lacks the capacity, if it is to maintain a viable economy, to make adequate reparation to the Allied Powers and at the same time meet its other obligations."

"However, (1) Japan will promptly enter into negotiations with Allied Powers so desiring, whose present territories were occupied by Japanese forces and damaged by Japan, with a view to assisting to compensate those countries for the cost of repairing the damage done, by making available, the skills and industry of the Japanese people in manufacturing, salvaging, and other services to be rendered to the Allied Powers in question. Such arrangements shall avoid the imposition of additional liabilities on other Allied Powers, and, where the manufacturing of raw materials is called for, they shall be supplied by the Allied Powers in question, so as not to throw any foreign exchange burden upon Japan."

Section (a) clearly admits that it is utterly impossible, from an economic viewpoint, for Japan to pay any reparations whatsoever for the simple and realistic reason that the Japanese economy cannot stand the added burden of reparations.

Nevertheless, the very next paragraph demands that the Japanese process raw materials into finished products, do salvage work, and "other services" (the joker covering a wide field which perhaps is another type of reparation or loot). In plain language, the Japanese economy must pay reparations in the form of using their industrial plants, labor, salvaging facilities, and other services without receiving any compensation.

Not only would these services be profitless for Japan and actually wear down her economy without compensation, but also a tremendous portion of her industrial facilities would have to be diverted from engaging in profitable trade to sustain the nation.

In one paragraph, the State Department views the situation from a realistic and pro-American viewpoint, but follows it up immediately in the very next paragraph with a plan designed to wreck Japan economically in order to force her into the Communist orbit more rapidly.

4. SIGNERS OF THE PEACE TREATY

The last major proof that the peace treaty favors communism is the provision allowing Japan to sign either with Nationalist or Communist China or neither one.

Now, it is time to remember that the Pacific war began in 1937 when Japan invaded China, and ended in September 2, 1945, with the surrender aboard the U. S. S. *Missouri* in Tokyo Bay. The Nationalist Chinese fought the Japanese for eight long and bitter years while the United States sold war materials to the Japanese invaders and gave no effective help until after Pearl Harbor.

After Roosevelt and his clique had baited the Japanese into fighting the United States, Great Britain, and the Netherlands in order that he could save Britain and Communist Russia, Nationalist China still was neglected even though it detained Japanese troops that otherwise would have conquered India and Australia thereby prolonging the war and perhaps making the Japanese Empire impregnable.

Chiang Kai-shek could have had peace with Japan any time after 1941 on honorable terms and he would have been much better off than he is today after being betrayed by the Roosevelt-Truman-Churchill-Acheson-Marshall combination. In spite of the tempting offers proposed by Japan, Nationalist China remained a faithful and important ally in the war against Japan.

China's reward was Yalta, the Marshall mission to China, embargo, and now exclusion from the Japanese peace treaty. The next step will be the expulsion of Nationalist China from the UN and the loss of Formosa.

The record of the Pacific war proves that only the following should be eligible to sign the Japanese peace treaty in the following order:

Nationalist China, for being the nation that fought Japan for the longest period of time even when her future allies sold war materials to Japan and who never thought of betraying her allies.

The United States, for saving Asia from Japanese conquest and defeating Japan almost singlehanded.

Great Britain, for fighting an important delaying action and later returning to the offensive against the Japanese.

Australia, its fine record speaks for itself. Canada, same as Australia.

New Zealand, same as Australia.

The Philippines, loyalty to the United States, defense of Bataan, fought bravely as a free nation, for its independence was already promised, extremely effective underground, fought as free men and not colonial subjects.

The Netherlands, heroic although hopeless defense against the Japanese.

No other nation should sign the treaty as they did not give any assistance noteworthy of rendering them eligible to determine the treaty provisions or sign it.

These nations should not have the privilege of signing the treaty for the stated reasons.

Burma, never at war with Japan as a nation and part of the British Empire until after VJ-day.

Ceylon, same as Burma.

India, same as Burma.

Indonesia, never at war with Japan as a nation and part of the Dutch Empire until after VJ-day.

Pakistan, same as Burma.

Soviet Union, 6-day looting of an already defeated Japan. Communist Russia has no right whatsoever to sign the treaty.

It is a complete farce to allow the above nations to sign while not allowing Nationalist China to do likewise.

In reference to Communist China, that government is merely a satellite of the U. S. S. R. so she can be included under the Soviet Union.

The "joker" in the treaty signing is the statement that Japan can refuse to sign with either Nationalist China or Communist China, the province of the U. S. S. R. As Japan wants to trade with the mainland, she must have relations with the controlling power there.

If and when Japan signs with Red China, then the clamor for admission of Red China to the pro-Communist United Nations will increase. The plan to recognize Red China and abandon Nationalist China takes another step near completion.

The administration is already pro-Communist with particular emphasis upon the State Department. If the Senate ratifies this treaty, then it also falls into this same classification.

This is an appeal to all Americans to protest this treaty designed to force Japan to go Communist and, with Japan, all of Asia will inevitably follow.

With her Asiatic flank secure, the U. S. S. R. will no longer have the threat of a two-front war thereby enabling her to concentrate against Europe.

Federal Deposit Insurance Corporation

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. KELLEY of Pennsylvania. Mr. Speaker, with permission to extend my remarks, I am including two editorials, one from the Philadelphia Inquirer and one from the Pittsburgh Post-Gazette. One day last week news came to me that the president of a bank in one of the towns in my district had taken illicitly from his bank over a period of years more than \$600,000, double the amount of its capital and surplus.

In years gone by, this news would have resulted in panic throughout the community, in individual inconvenience or suffering while affairs of the bank were investigated and liquidated, and even in harmful repercussions in banks there or in other communities where there existed no need for alarm.

In the present case, no depositor need fear any loss nor will there be any disruption of the economic life of the community. Federal Deposit Insurance Corporation as soon as it heard of the situation, stepped in promptly, pledged its resources to prevent loss to depositors of the bank and arranged that all deposits be taken over by another insured bank in the community.

The legislation creating the Federal Deposit Insurance Corporation was sponsored and passed in 1933 during the

Democratic administration of Franklin D. Roosevelt.

Not enough can be said about the splendid record of FDIC in protecting depositors in insured banks during the past 17½ years. When you consider that no depositor of an insured bank has suffered a penny's loss since May 1944, and that depositors' losses during the preceding 10 years were infinitesimal—when you realize that Federal Deposit Insurance Corporation has repaid to the Treasury its initial Government capital of \$289,000,000 plus more than \$80,000,000 in interest, all in addition to carrying for deposit insurance losses and administrative expenses while accumulating a deposit insurance fund that today exceeds \$1,250,000,000.

As evidence that mine is not an isolated opinion, I should like to insert in the RECORD editorials from representative newspapers in Pennsylvania which reflect the esteem in which FDIC is held by the people of that State:

[From the Philadelphia Inquirer of August 17, 1951]

NEW KENSINGTON AND THE FDIC

Embezzlement of \$600,000—one-fifth of its resources—from the Parnassus National Bank, of New Kensington, Pa., is a grim personal tragedy to the accused bank president, his family, his friends and associates.

Twenty years ago, this affair would have been a tragedy as well to thousands of depositors, for it would have meant closing of the bank. Today the bank remains open, checks of depositors are honored, and not one, it is announced, will lose a penny.

This is due to one of the most sensible reforms of our times, the insurance of bank deposits, through the Federal Deposit Insurance Corporation. This agency, created in 1933, is supported by payments of member banks. In an emergency, it can borrow from the Treasury but never has done so.

Before 1933 the closing of a bank was a disaster of the first magnitude, often to a whole community. Beginning in 1933, depositors of insured banks were protected up to \$5,000 of deposits, and more recently up to \$10,000. In many cases, the FDIC also saved the bank, by reorganization.

A few comparative figures are interesting. United States bank failures ran from 500 to 900 a year from 1925 to 1929. In 1930 there were 1,352, in 1932, 1,456, in 1933, 4,004. By 1941 there were only eight, in 1944 only one, in 1945 and 1946 none, in 1947 one, in 1948 none, and so on. What a difference the FDIC made.

New Kensington knows that, gratefully, today.

[From the Pittsburgh Post-Gazette of August 18, 1951]

PROGRESS IN BANKING

There was a time not long ago when a \$600,000 bank embezzlement would have caused more dismay than astonishment. Now, happily, the situation is reversed. Thanks to the Federal Deposit Insurance Corporation, depositors in the Parnassus National Bank of New Kensington will lose nothing as a result of the bank president's incredible defalcations.

The FDIC was organized under authority of the Banking Act of 1933. All banks which are members of the Federal Reserve System are, under the law, insured under the permanent insurance plan and are subject to periodic checks by Federal examiners. That being the case, depositors must wonder how the president of the Parnassus Bank could get away with his manipulations over a period of 16 years. They must conclude that the examiners were woefully inept or

that the bank official was a wizard at covering his thefts.

Actually, banks probably never will reach a point at which their funds are theft-proof. Periodically, we must learn to our amazement that some trusted pillar of the business community has hit upon a scheme by which he can, for a time, rob his customers.

There is satisfaction, however, in the knowledge that insured banks are closely supervised and that techniques for detecting thefts are constantly being improved. It is becoming increasingly difficult to loot a bank from within and, in those rare instances where it is done, the depositor is not ruined. That represents considerable progress in banking.

Use of Anthracite Coal in the Northeastern Part of the United States

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Sunday Independent of August 19, 1951:

ANTHRACITE IS USED TO HEAT MILLIONS OF HOMES IN NORTHEASTERN PART OF UNITED STATES—WYOMING VALLEY OUTSTANDING PRODUCTION CENTER IN FIVE-COUNTY REGION OF STATE

All but an insignificant amount of the anthracite produced in the United States—something over 99 percent—is mined in a small section of Pennsylvania.

You could put all the mines of this anthracite-producing area in a circle with only a 12¼-mile radius—but that little circle has enriched the United States so far with \$10,000,000,000 worth of hard coal.

Also, there are 150 years of mining still left in the five-county region of northeastern Pennsylvania at current production rates.

Anthracite is one of two principal types of coal. There are four distinct, rather narrow, canoe-shaped anthracite fields of northeastern Pennsylvania in which are located many cities and towns, including this city, Scranton, Pottsville, Shamokin, Hazleton, and Mahanoy City.

VARIETY OF USES

Anthracite's place in American history ever since hard coal began to be mined in considerable quantities early in the nineteenth century has been of the greatest importance. It has heated millions of homes, powered scores of industries in war and peace, and has contributed to the well-being of the whole country.

Coal is used in prodigious quantities because, directly or indirectly, it heats a large percentage of all buildings, drives a large portion of all factory engines, railroad trains, streetcars, and steamships, and must be used in about the same quantity to make steel as iron ore itself.

Over half of all the electricity and most of the manufactured gas are made from coal. Electricity provides much of our artificial light and power and makes possible our movies, radios, and countless appliances. Coal, gas, and electricity together cook the food of city folks and of many more in towns and in the countryside.

NEW DISCOVERIES FROM COAL

In addition, many of the newest discoveries of science stem from a lump of coal.

Modern chemistry has employed coal for such useful things as sulfa drugs, vitamins, fibers, rubber, fertilizers, dyes, perfumes, disinfectants, insecticides, and paints.

In 1930, 32 producing companies in the anthracite field formed the Anthracite Institute for the purpose of protecting and increasing the market for the product through research, equipment development, trade and consumer education.

Located in this city, Anthracite Institute obtains technical information on all uses of anthracite, develops new methods of burning hard coal with greater convenience at lower cost, and tests equipment designed to help manufacturers maintain high performance and improve their products.

All but 10 percent of the anthracite mined in northeastern Pennsylvania is sold in the northeastern section of the United States, a 12-State area including the District of Columbia. The rest goes to Canada, which takes 7 percent of production, and other States.

More than half of the people engaged in commodity production through the anthracite region are employed in the hard coal industry. A high level of employment in anthracite invariably means a high level of prosperity throughout the entire Nation.

The immediate outlook for anthracite is encouraging, primarily because of the large over-all demand for all fuels. Most people who burn anthracite are in the lower middle and low income groups, equal to 70 percent of the population. Although these people do not have as much money per family unit as those in the higher brackets, there are a great many more of them and, consequently, they burn more coal.

Anthracite's fortunes have risen and fallen with the tides of national prosperity. It has been shown that the annual output of all our gold, silver, lead and zinc mines is worth less than two-thirds of the value of anthracite production.

By the time anthracite has heated 5,000,000 homes in a dozen States, these black lumps of coal have added to the economic well-being of the railroads which carry it, the dealers who sell it, all the employees involved in its mining and distribution, and the benefit of mankind.

Socialism Is Not for Us

EXTENSION OF REMARKS OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, August 23, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Socialism Is Not for Us," written by Ralph S. Yohe and published in the August 18, 1951, issue of the *Prairie Farmer*.

There being no objection, the article was ordered to be printed in the Record, as follows:

SOCIALISM IS NOT FOR US (By Ralph S. Yohe)

When I sailed for America recently, after several months' study of European agriculture, our ship put in at Bergen, Norway, at 4 o'clock in the afternoon. It was loaded with American tourists.

People streamed off the ship to make their last purchases before leaving Europe. But all the stores were closed. Norway needed those American dollars.

Why were all the stores closed at 4 o'clock? Because that's the time the Government says stores must close. The stores might have remained open late under special permit from the police. But they would also have needed a permit from the labor department to work their people overtime.

And it is doubtful if the clerks would have worked overtime anyway, because the Government would take that much more of their pay in taxes.

A man making \$2,500 in Norway, a very good wage there, must pay nearly \$1,000 income tax. Fifty-nine percent of Norway's national income goes for taxes. "What can I do with my money?" the clerk would say. "I can't buy an automobile or any of the other things I would like to have. The prices are just completely out of reach. Then I probably could not get a permit. Really the only luxury that I can afford is time off. The Government can't tax that."

And so the Norwegian workman has one of the most liberal vacation systems in the world. He just doesn't see any sense in working overtime. So he takes time off.

Yet, this is the one national luxury Norway cannot afford just now.

"Sure, I'm against socialism," you say. "The people will never vote in socialism in this country." But hold on. Let's see what is happening right here at home.

Congress has just passed a controls bill. Many politicians scream that it is not enough. We need stronger and tighter controls to cure inflation, they say. Even so, the bill will control the price you pay for a new suit of clothes, a new dress, a can of tomatoes, or a new automobile. Indirectly it will control the price you can get for a bushel of wheat, a veal calf, or a dozen eggs.

Many economists have urged that it would be far better to control inflation by curbs on credit and money supply, thrift in Government spending, and pay-as-you-go taxes.

But instead of using these, we are galloping into price fixing, rationing, and subsidies. Anyone who puts up a voice in opposition finds himself labeled a tool of vested interest.

Before you buy this pig-in-a-poke, let's look at what the so-called planners have done in other parts of the world. Let's see where we are headed.

Here is what happened in Britain.

All prices and wages were fixed by government during the first part of the war, at about 1939 levels. British troops were being pushed off the French coast at Dunkerque. Frowning packs of submarines were sinking supply ships. One could hardly argue that Britain did not need controls.

The war was won, controls stayed on. And this could happen here.

If we in America accept a controlled economy for the duration of world tension, we may never be able to shake it off. We've set the stage for the economic planners in Washington.

Let's see how these controls have worked out in Britain.

Allan Bridger works in a steel mill in Wales. His wage is stabilized according to the cost-of-living index. His wife goes down to the grocery and buys their food at what the government says she can afford to pay.

Nearby the government buys Farmer Fraser's wheat and milk at "cost of production" prices. The difference, a big difference, comes out of taxes.

But both Steel Worker Bridger and Farmer Fraser are taxpayers and their taxes are not a part of the cost-of-living index.

Businessman Smith has a drug store on the corner in the village. He doesn't have to worry about someone putting a drug store on the opposite corner. To start a new business, the other fellow would have to have a permit.

And so long as Smith is on this corner, the other fellow would have a pretty hard time getting a permit. With such lack of competition, small wonder Druggist Smith

carries few lines of merchandise and the customer waits to be served.

The operator of a moderately sized filling station in Scotland told me he kept one person busy merely filling out forms, checking rations and dealing with Government control officers. For the Government has set up bureaus which check and countercheck all permits and rations.

Taxpayers Bridger and Fraser find more of their tax money going to support a growing staff of Government employees. And what is equally bad, when they buy a gallon of gasoline, a suit of clothes, or a new house, the manufacturer, the retail store, and the contractor has added to the price the salaries of almost an equal number of people who do nothing but negotiate with the people in the Government.

Socialism supplies its own opiate. Actually, steel worker Bridger is afraid to see controls lifted. It might upset his world and make him work harder. Farmer Fraser doesn't want the Government to step out of agriculture.

It would mean that he would have to become more efficient and stop farming on a cost plus basis. Businessman Smith without his permits to limit competition would find he would have to get down and dig to stay in business. He shudders at the thought.

And in the end everyone is worse off, for there are fewer bushels of wheat and less meat, fewer suits of new clothes, fewer new schools, and not only that, they cost more.

An act of the British or Norwegian Parliament cannot make more eggs, more meat, more milk, or more houses for its people. There is only what has been produced. Parliaments may divide, but this doesn't create more. The only way the British or Norwegians can have more meat or more milk is through productive work.

These countries can guarantee security to their people only to the extent of their total production. The road to abundance lies through greater production.

Nor will controls, regulations, price ceilings and rationing cure inflation in these countries or in our country.

When production is stifled, these socialistic devices are at best only dams that must be built higher and higher to hold back a mounting flood of excess money.

GOVERNMENT RUNS THINGS

In most European socialistic countries the government runs the coal mines, the power companies, the railroads, the bus companies, along with other public utilities. They run them just as we do our post-office system here, and, like our own post office, they have their hands deep in the taxpayer's pocket.

For it is much easier to subsidize these industries than put in efficient methods that will make them pay.

It can't happen in America? Have you noticed Washington's recent promotion campaign for Government-owned electric-power plants?

The European Socialist Party member can give long reasons why their planned economy is far better than a haphazard free economy.

But, more often than not, the economy is not planned on hard, cold economics. It is just plain politics.

Some formula adopted on the spur of the moment becomes a religion. Government is afraid to change it.

CAUSES OF SOCIALISM

Bad practices by business, labor, and agriculture can make the time ripe for socialism. When businessmen resort to monopolies, when labor does the same by slow-down techniques and padded jobs, and agriculture demands special government protection, socialism gets ready to move in. This is a lesson we should remember in America.

The greatest bulwark against socialism is an active industry, highly competitive, that brings more good things to more people.

In my travels from country to country, I ran into large numbers of young people who wanted to come to America. When I asked them why, they would answer, "There is opportunity there." I never heard anyone say he wanted to go to Great Britain or Norway because "there is security there."

You see, though clothed in the garb of liberalism, the Socialist is actually a conservative at heart. He is afraid of the future; he fears a dynamic, expanding economy because it involves risk, he is afraid of risks; he will settle for freezing the present pattern of things and he buys a kind of security for today with the opportunity of tomorrow.

Socialism is an aspirin economy. For a time it makes the country's faltering economy feel better. What at first seems to be a stabilization of the economy turns out to be the first symptoms of rigor mortis, and business continues to lie in bed, afraid to exercise its weakened muscles, taking larger and larger doses of economic aspirin.

Let's not let it happen here.

Investigation of the Reconstruction Finance Corporation

EXTENSION OF REMARKS OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, August 23, 1951

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Unethical Conduct Is Still the Big Issue," which appeared in the Philadelphia Inquirer, Philadelphia, Pa., on Wednesday, August 22, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNETHICAL CONDUCT IS STILL THE BIG ISSUE

In objecting to the gloves-off, hard-hitting report by two Republican members of the subcommittee which probed the Reconstruction Finance Corporation, the Democratic majority of that group appears to be laboring under the misapprehension that ethics and morality in Government constitute a strictly partisan issue.

It is nothing of the sort. Unethical or corrupt conduct by Government officials can—and should—become a campaign issue if one side is guilty, and does nothing about it.

But falling standards of ethics in Government involve much more than partisan considerations. They involve a tolerance of wrong which any political party seeking support of the voters should combat vigorously as an evil that can do untold harm to our system of government.

For this reason, the anguished cries of "politics" coming from the three Democratic RFC probers sound hollow. Their intimation that Senators CAPEHART and BRICKER nailed down instances of favoritism and shabby ethics in connection with RFC loans only to embarrass a Democratic administration scarcely does justice to the record.

The same record was available to both groups of probers. It was the basis for both majority and minority reports. But where the majority employed gentle remonstrances and general language urging a better system for making RFC loans, the two minority members struck out at individual cases of unethical conduct, and at the administration's disgraceful failure to condemn such conduct.

It is significant to recall that the interim report on the RFC issued by the subcommittee last February was denounced as asinine by President Truman, although it cited numerous cases of improprieties, and urged that the five-man board of directors be abolished in favor of a single administrator. Mr. Truman at first refused, and then later made the changes urged by the committee.

It is also significant that Donald Dawson, a White House aide who admitted before investigators that he accepted free hotel accommodations at a Florida hotel which got a big RFC loan, is still at the White House. Yet Dawson's remark that he saw nothing wrong with this, but wouldn't do it again, stands as a deflection of ethical standards most Americans don't share.

There hasn't been any dispute over the activities of E. Merle Young, a former RFC examiner who achieved remarkable success later as an employee of an RFC borrower, or over the fact that his wife, then a White House secretary, received a \$9,540 "royal pastel blue" mink coat from an outfit interested in an RFC loan.

These facts on the present are not altered by Senate majority leader McFARLAND's digging back to the Teapot Dome scandals of the Harding administration and the more ancient malpractices in the post-Civil War administration of Ulysses S. Grant. Nor is their meaning lessened by McFARLAND's stalwart defense of President Truman's honesty.

Nobody has charged the President with dishonesty. What has been charged and demonstrated by the RFC investigation is that other administration officials have peddled real or fake influence, that they have shown favoritism, that they have departed from the rigid code of ethics which should guide all Government officials. And whether because of misplaced loyalty, anger at criticism, or some other reason, Mr. Truman hasn't cracked down on them as he should.

Adherence to high standards of ethics and morality is absolutely essential if Americans are to have confidence in their Government. It is something that must be required on an individual basis of each official, not something that can be achieved by juggling agencies as has been done with the RFC.

We won't get it by indulgent, tap-on-the-wrist reproofs for those who fail to measure up. The Nation will get proper ethical standards in Washington only when both parties and the administration make it plain that nothing else will be tolerated.

Pioneers of Western North Dakota

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, August 23, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Pioneers in Western North Dakota Carved a Living From the Wilderness," written by Nellie B. Noyce and published in the Hettinger County Herald, of New England, N. Dak., on July 26, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PIONEERS IN WESTERN NORTH DAKOTA CARVED A LIVING FROM THE WILDERNESS

(By Nellie B. Noyce)

The Missouri Slope area of western North Dakota is not an old, settled country. In

fact, it is still very young as far as we pale faces are concerned. Our extension of home building in the Missouri Slope area can be attributed almost entirely to the last 80 years.

In the late nineteenth century when the fear of Sitting Bull's warriors subsided the first white settlers came to establish homes on the prairie sweep west of the big Missouri River. The country was indeed a wilderness. The several Indian tribes who had lived here found it difficult to make a living although buffalo, deer, and antelope roamed the hills and prairies in herds. Wild meat and berries were plentiful and herbs for food and medicine were obtained from the buttes and mountains such as Killdeer and Tracy Mountains and Rainy, Block, and Sentinel Buttes. It was to such a wilderness that our pioneers came from the north, east, and south. Ranching was in their blood so they brought not a bushel of grain or a single plow to turn the grassy sod. They came in covered wagons driven by horses or oxen, buckboards, buggies, bicycles, horseback, and on foot. Men, women, and children looked hopefully upon miles of sweeping prairies and hills. They knew they would have to work, save, and sacrifice to make a success of this new venture in a wilderness. Log cabins were erected by some while others made dug-out houses or built houses of stone.

Very soon cattle and horses were roaming the free, open ranges. In the 1880's towns began to spring up along the Northern Pacific Railroad track. In 1881 the railroad reached the Montana line. The towns that were growing consisted of business places such as grocery stores, livery stables, hardware stores, blacksmith shops, saloons, and banks. Grocery-store operators sold big wagon loads of supplies to ranchers who paid cash or arranged to pay in the fall when grass-fed range cattle were shipped to eastern markets. Livery stables provided shelter, feed, and water for horses belonging to ranchers, drifting cowboys, and new home seekers who stayed in town overnight.

Hardware stores sold buffalo guns, rifles, revolvers, ammunition, horseshoes, nails, rope, stovepipe, wood and coal stoves, kerosene lamps and lanterns, hay forks, repairs for buckboards, wagons, haymowers and rakes. Blacksmith shops were restricted mostly to horseshoeing or repairing buckboards, wagons, and haymowers. Saloons were patronized by men and were usually small in structure with hitching racks outside for horses.

Banks were the last of the group to appear in the western towns but the larger towns also had saddle shops and barber shops. As far as saloons were concerned in the eighties and nineties and later, it is well to paint a clear picture. Ranchers shipped beef cattle only once a year and received only \$25 or \$35 a head for 3- or 4-year-olds. First they would pay their debts and get a load of supplies. This left very little money in their pockets. Saloonkeepers did not get wealthy and many were forced to close their doors because of lack of customers. Cowboys' salaries were \$25 or \$35 a month and much of that was spent for fancy riding paraphernalia or put into savings so they could start a herd of cattle of their own.

Women and children fulfilled their homemaking duties where life was of a rugged nature. Furniture was plain and often homemade. Women were prepared to cook meals and supply sleeping quarters for cowboys who might drop in any time and stay for a night, a week, or a month. During range round-ups a dozen or more extra men would stay at the rancher's home and enjoy his wife's cooking unless the men had a regular chuck wagon along. Indians often asked for food but they rarely ate a meal in a ranch house. They would go to the ranch house and ask for chunks of meat so they could combine it with buffalo or June berries and cook it over their campfires. Often the ranchers would go to fight sweeping

prairie fires that swiftly engulfed the range grass. Rattlesnakes were numerous and children were cautioned about gray wolves that might come prowling. In winter terrible blizzards swept the unprotected prairie space and women were faced with the responsibility of keeping the coal fires burning but under control so they would not cause a fire that would destroy the only shelter the family had against the elements.

These courageous pioneers were thoughtful of one another. No man would speak disrespectfully of a lady and marriages were permanent and usually happy. Schools lasted 4 or 5 months and the family often had to hire and pay its own teacher. Religion was taught in the home and a few men, of various faiths, preached the gospel.

In 1905 a new group of people began to migrate into this region. Farmers from the South, East, and North established homes where the soil was suited to agriculture. Even people who had come from across the ocean made their homes here because at this time America, as a land of opportunity, was attracting a large number of foreign immigrants.

The new settlers laid valid claim to homesteads and with the law on their side forced the ranchers to do the same. The ranchers also had to purchase much of their range land in order to keep it. In a short time farming, especially the growing of hard spring wheat, became as great an industry as cattle raising in the area. Even the ranchers began raising some tame feed to compensate for the loss of prairie hay. The farmers had to work just as hard as the early ranchers had done to make a living. There were a few wealthy people in the West, among them Theodore Roosevelt. He often rode the range when he lived in this area and he was well liked by the pioneers who knew him.

As early as 1901 our pioneers began to observe the new conveniences that were being introduced and gradually they began to recognize their worth. A good example of this new development occurred one day in the summer of 1901. Two cowboys, George Clark and Bill Taylor, were standing in downtown Dickinson. An automobile came plugging along and came to a sudden stop. Cowboys flocked around to inspect the strange new vehicle and remarks like the following were heard:

"Beats a horse."

"Needs no range to run on."

"Won't buck you off on a cold morning."

"I wonder how much it cost."

Bill Taylor turned to his friend and asked, "What do you think of it, George?"

George was slow to comment because he stuttered. "Why this thing might be pulling people's houses all over the United States some day," he said. Perhaps he envisioned the trailer houses that are so common today.

These men who shaped our country never had a great amount of money on their hands. One early rancher sent a letter to a Dickinson banker in 1918 asking for a loan of \$200 to tide him over the spring. He received a check for \$100 and a brief note that read: "Dollars are as big as wagon wheels this spring, so try and make ends meet with 100 of them."

Today, 1951, we are living in a world of machines and atoms where the push of a button does work that once required a great deal of human labor. But it is also a world of war and insecurity, of tension and mental strain that often tax man's endurance far more than physical strain ever could. As we move forward it is wise to look back and try to revive those pioneer characteristics that have proven to be good in society. There will never be a button to push that will rear children. Rearing children in pioneer days was a minor duty, because the children knew hardship and appreciated even small pleasures.

So if we combine all the problems that face the people of today, we find that they outnumber the problems that our pioneers experienced.

Wages and prices for our produce have more than tripled themselves since 1900, but prices for food, clothing, and shelter have also tripled. The man who makes \$200 or \$300 a month today is no wealthier or not as wealthy as the cowboy whose monthly salary was \$35 and board a half-century ago because the modern worker must also meet the modern cost of living. In these times we must also pay and give generously in order to protect our country and preserve the democracy that our forefathers founded for us. Perhaps things have not changed so drastically after all in our Missouri slope area. The following story will help show that the past is not so remote from the present as we may sometimes think. Recently a housewife, thinking she heard a strange noise in the night, aroused her husband. "That's probably just an old cow looking around the house for a bone," he mumbled sleepily.

"There aren't any cows in the city," she said impatiently.

The husband sat up in bed and remarked, "Of course, there are cows in the city. I ought to know, when I saw 1,200 head go through the sales ring today."

Address of Capt. P. D. Gold, Jr.

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address made by Capt. P. D. Gold, Jr., commander of the Boston Naval Shipyard, Boston, Mass., at the installation of officers of Boston Naval Shipyard Chapter of the Disabled American Veterans, held at the Parker House in Boston on Friday, May 25, 1951.

The speech is an excellent one, and stresses the need for, and desirability of the utilization of the services of the physically handicapped.

The address follows:

REMARKS BY CAPT. P. D. GOLD, JR., USN, AT INSTALLATION OF OFFICERS OF BOSTON NAVAL SHIPYARD CHAPTER OF DISABLED AMERICAN VETERANS, AT THE PARKER HOUSE ON FRIDAY, MAY 25, 1951

Mr. Toastmaster, Commander Sullivan, national officers, State department officers, officers-elect, distinguished guests, and friends of the Disabled American Veterans, it is a great honor and real privilege for me to be here tonight at this installation of officers of the Boston Naval Shipyard Chapter of the Disabled American Veterans. My pleasure in being with you tonight is greatly increased by the fact that you and I stand shoulder to shoulder in striving to preserve our Christian and democratic way of life. You, the Disabled American Veterans, know and value highly the traditions, customs, and freedom of this country and its ideals, and you have shown your loyalty and devotion to those liberties that are our priceless heritage.

I am happy to have had the good fortune of knowing many of your people, who by their superior performance of duty, have made and are making a significant contribution to the welfare of our Nation.

May I congratulate the Disabled American Veterans for their excellent achievements in advancing the interests of all disabled veterans, and for the untiring efforts of your organization in stimulating a feeling of mutual devotion, helpfulness, and comradeship among all veterans.

You, the members of the Boston Naval Shipyard Chapter of this great organization, have reasons to be boastful of your superior accomplishments in the sponsoring of State and Federal legislation so necessary in the proper rehabilitation of the disabled veteran. By your zealous endeavors in making possible the enactment of these laws, you have instilled in these men that will to win. They, themselves, have proved that they possess that will to fight; having both, your and their success is assured.

It was gratifying to learn that the high office of State commander of the Disabled American Veterans has been held on three occasions by Boston naval shipyard personnel. First was Mr. Edward J. Walsh, who was one of the charter members and organizers of your present chapter. Mr. Albert F. Sears, who left employment as supervisor at the shipyard to assume duties in the Veterans' Administration as training officer in order that he may be able to better assist disabled comrades. The third, Mr. Anthony D. Tieso, who is presently a key member of our shipyard team, I am happy to say, and who was a national officer under your past national commander, General Wainwright. I understand that our toastmaster here this evening is the possessor of the Distinguished Service Cross.

The Boston naval shipyard also boasts that among its former employees we can count Mr. Paul J. Sullivan, your present chapter commander, and Mr. James J. Sayre. Both of these gentlemen left the shipyard in 1946 to become members of the Disabled American Veterans' staff at the Veterans' Administration, where they are presently rendering professional services to disabled veterans.

At a time like this it is essential that our country use all its productive resources. Our national strength is the chief reliance of the world in its effort to overcome the forces of tyranny and aggression. For that reason this Nation of ours needs the contribution that each of its citizens is capable of making. Your association was among the first to realize that those who have physical handicaps can work as effectively as those who have no handicaps, provided they have jobs fitted to their capabilities. Those persons are needed today in the great productive efforts of our Nation. Our country is strong. It is loved by its citizens. We love our country not as an abstraction or a theory, not because it is ours, but because it offers us the opportunity to lead useful lives and to do what we can to assist those around us. It offers us security yet independence. Those who are physically handicapped are sometimes unable to make their own independent contribution and are therefore dependent upon others. In many instances this is entirely unnecessary. I understand that out of 30,000 ways of making a living, there isn't a single job that requires all the bodily functions or all five senses. Usually the physically handicapped can do as much and earn as much as the unhandicapped if they are guided to the right job. It is in this way, and this way only, they can share in the greatest satisfaction of life—to be independent and self-supporting.

Federal, State, and local government agencies have set good examples in the employment of the handicapped. A program for selective placement for physically impaired persons in Federal civil service positions has been in effect approximately 9 years. It has resulted in the placing of more than 100,000 persons with serious, permanent physical disabilities. This program is sponsored by the United States Civil Service Commission, and is now an integral part of the Commission's recruiting and examining functions.

To the question, "Can this physically handicapped person perform the duties of the job without injury to himself or to others?" the United States Civil Service Commission, by using methods of selective placement, has answered "Yes" more than 100,000 times in the last 9 years. Experience from operating this program has firmly convinced the Commission that physically handicapped persons, selectively placed, are excellent employees, and that it is good business to employ them.

The Navy Department at Washington periodically issues directives to all naval and Marine Corps activities concerned reemphasizing its desires to employ physically handicapped personnel, particularly veterans, and inviting the attention of all activities to the procedures that have been developed by the Navy Department for determining the physical demands of jobs and matching these demands with the physical capacities of workers.

I make it my business to follow the yard's program for the utilization of physically handicapped personnel. On March 30 of this year, approximately 62 percent of the total employment of the shipyard were veterans. Of that percentage, 1,589 have service-connected disability, 283 of these are from World War I and 1,306 from World War II. In addition, we had a total of 61 wives and widows of disabled veterans, and, last, we have 70 nonveterans on our rolls with serious permanent physical handicaps—not including many others with lesser disabilities.

Physically handicapped workers are employed in almost every activity of the shipyard. We know them to be efficient and dependable. In one particular shop alone, we have two amputees and one crippled by polio. In another activity, we have three amputees. All performing excellent work. The employee who has fallen prey to polio performs his day's work in a wheelchair. His efficiency rates among the highest of the personnel employed in his activity. He, like all the other physically handicapped employed at the yard, has refused to let his handicap throw him for a loss.

Recently, I have had the handwriting of an employee brought to my attention. This particular employee lost his right arm in the performance of his duties at the shipyard compelling him to learn to write with his left hand. Through perseverance and patience, he now has mastered this difficult task by being able to write and print equally as well as previously.

In one of our offices, among the personnel, we have two physically handicapped employees; one of whom has lost the use of both of her legs and the other the use of one. They too, do exceptionally well at their jobs and are definite assets to the office.

In our Apprentice Training School, we have at present 74 disabled veterans, including 32 severely handicapped. The majority of these men are standing well up in their class.

I was more than delighted to hear recently the favorable reports from the various supervisors in the shipyard regarding the general aptitude and efficiency of our handicapped personnel. I have found that in my discussions with these supervisors that no instance of lowered efficiency nor morale was reported as a result of employing the physically handicapped worker, and several specific examples were given where the morale of the group, as a whole, has been raised. It is inspiring to realize not only that we are able to assist our fellowman, but that we are letting those persons realize that they are suitable and fit for the jobs they are performing and contributing their full share.

I am proud to state that the physically handicapped workers of the Boston Naval Shipyard in their work habits and attendance records have proved themselves equal to or above the average of the nonhandicapped in production and dependability. They should take pride in their important contribution to the economic and military strength of our country.

Your organization is responsible to a large degree for the success of the campaign for the employment of the physically handicapped. Nothing is more important in the rehabilitation of a disabled person than the final step—the acceptance of employment as normal members of a productive society. I know this is your goal. The altruistic efforts of the Disabled American Veterans has resulted in the gainful employment of many.

In our society, human life is precious. It is the purpose of our society to enable the individual to attain the highest achievement of which he is capable.

Your organization has been successful. People such as yourselves who give so generously of time and effort in this noble philanthropic work deserve such success.

Rehabilitation of the disabled into employment is an indispensable service to your fellowman and to your country. You have replaced sympathy with realistic human understanding and intelligent support.

You have put life into the slogan that it is the ability not the disability that counts.

A Bill To Prohibit Imports of Furs From Soviet Russia

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. MACK of Washington. Mr. Speaker, I have introduced, today, a bill amending the Reciprocal Trade Act of 1951 in order that all fur imports from Soviet Russia and Communist China may be prohibited.

The need for enactment of my amendment is this:

The President, on August 3, 1951, signed an Executive order prohibiting the importation of furs from Russia. The President's order contained a "joker." The order does not say that "the importation of all furs from Russia is prohibited." It says that the importation of certain furs, listing them by name, is prohibited.

Oddly, the names of two furs, Persian lamb and squirrel, are strangely absent from the list of banned furs, despite the fact that these two furs, the names of which are omitted from the prohibited list, constitute more than one-half of all Russia's fur sales in the United States.

Fur imports from Russian in 1950 totaled \$20,936,126, of which \$10,675,128, or more than one-half, were Persian lamb and squirrel skins, importation of which are not banned.

Unless my amendment is adopted, Russia can continue shipping Persian lamb and squirrel furs into the United States, thereby retaining more than one-

half of her fur business, despite the President's order, and thereby get more than \$10,000,000 a year in American dollars with which to buy war goods in other nations.

The omission of Persian lamb and squirrel pelts which in money value head the list of all furs shipped into the United States by Soviet Russia came about in this manner. The House and the Senate both passed reciprocal trade bills. The two bills went to conference. The clauses in the two bills seeking to ban fur imports from Russia were different. To compromise this difference in the two bills a new clause was written to cover the subject. Whoever wrote this clause and recommended it to the conference committee proposed listing the banned furs by name. This was accepted. When the clause was written, somewhere along the line the names of the two furs, Persian lamb and squirrel, which comprise the bulk of Russia's fur business with us, were omitted. The bill was approved by the conferees and adopted by both Houses of Congress without the omission of Persian lamb and squirrel being detected. It was signed by the President without the omission being discovered by him or his staff.

Later, on August 3, 1951, someone wrote an Executive order for the President banning the importation of the furs from Soviet Russia listed in the Reciprocal Trade Act, without the omission of Persian lamb and squirrel being discovered.

It was, I am sure, the intention of Congress and of the President to prohibit all fur imports from Soviet Russia. If so, it is necessary that my amendment to the Reciprocal Trade Act be adopted to accomplish that purpose. Unless this amendment is adopted, Soviet Russia can continue shipping Persian lamb and squirrel skins into the United States and thereby obtain large numbers of American dollars for these luxuries to spend in acquiring war materials essential to Russia's military effort.

Here is a list of fur imports from Russia for 1950 and for the first 4 months of 1951 showing that Persian lamb and squirrel furs topped the list of all furs exported from Russia into the United States:

United States fur imports from U. S. S. R.

	1950	January to April 1951
Persian lamb.....	\$5,462,382	\$1,568,181
Squirrel.....	5,213,746	917,693
Fox (except silver and black).....	437,187	155,058
Kolinsky.....	1,455,862	473,298
Marmot.....	1,720,640	1,335,676
Marten.....	1,142,275	292,714
Muskkrat.....	1,940,625	678,549
Sable.....	1,559,270	273,457
Other furs.....	2,004,139	295,839
Total.....	20,936,126	5,694,626

In addition to adopting my amendment in order to correct the mistake which has been made, the conferees on the Reciprocal Trade Act should investigate the circumstances of how Persian lamb and squirrel came to be

omitted from the clause in the bill that proposed to ban fur shipments into the United States. The person or persons responsible for the omission of these two important fur items from the banned list of furs, whether the omission was due to carelessness or done by design, should be fired.

Are We All Hypocrites?

EXTENSION OF REMARKS OF

HON. CHARLES R. HOWELL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of the Members of Congress a very thoughtful editorial entitled "Are We All Hypocrites?" which appeared in the Bordentown Register on August 17, 1951. Bordentown Register is published in Bordentown, N. J., which is located in my congressional district. Its editor, James McGee, Jr., has a reputation for writing very excellent editorials of which the following is one:

ARE WE ALL HYPOCRITES?

America is becoming very conscious of crime in high places. Communists in Government, and the general disregard of the law of the land. We are conscious of the crimes that others commit but we have not yet grown self-conscious of the crimes which we, the public, are guilty.

We have had our Kefauver investigation and shown our concern because of the known hook-up between big-time gamblers and local, State, and National political and law-enforcement officials. We are against sin. However, in the State of New Jersey our State government makes a report weekly on the amount of money taken in by the State from its four legal race tracks. This money is a rake-off from the horse-race bets, which run into millions of dollars, yet it is admitted that the race tracks are the source of most of the big gamblers' activities.

Just how hypocritical can we be? In a Philadelphia newspaper on Tuesday Westbrook Pegler attacks the Government, the social-security system, and the financial responsibility of the United States Treasury. (Incidentally, this ulcerated individual has been opposed to social security for the past year or two.) He makes the very rash and unproved statement that "the Roosevelt-Truman administration have squandered every dime (of social-security funds)." This great patriot (?) and spokesman for the privileged classes also urges the women of the country to refuse to collect social-security payments from their domestic help. He also urges businessmen to refuse to make the collections from their employees.

We are disturbed because the Communists flout our laws and would wreck the country, but Pegler speaks for another breed of cats who would just as surely wreck our Government and throw the working people back on the bread lines and jump for joy to see them squirm.

Social security is working for the oldsters. In Bordentown, every day more men and women are retiring from jobs in industry. With their social-security checks, their small

pensions, and their meager savings of other years they are independent, not rich, just independent.

The Constitution of the United States has served us well for the past 175 years, but during this period the majority of the American people were God-fearing. Today, there are generations who know no God and who know no moral laws.

We, the people, must preserve our own democracy. There is no use passing the buck.

Frank Kirkpatrick: Hard-Hitting Milwaukee News Commentator

EXTENSION OF REMARKS OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, the crying need in America today is real leadership. A few short years ago the United States was the strongest country in the world. Now many of our leaders who were in power then and are still in power now are cringing with fear and saying that we must be cautious on how we tread because we are now unprepared to properly defend ourselves.

How did all this come about? Perhaps some of it is due to the strange outlook of a President of the United States who could say of the atomic bomb that had been dropped on Hiroshima, "this is the greatest thing in history."

I include herewith the talk given by a Milwaukee radio commentator, Mr. Frank Kirkpatrick, on August 6, 1951:

AS I SEE IT

(By Frank Kirkpatrick)

It is good to be back with you. And, I know many of you are curious as to why I have been off the air. That's a long story, with many chapters. Some of it probably need never be told, and part of it you can readily guess by the new manner in which I am introduced. Anyway, so many of you have stopped trying to tune me in, that it will be better if we let explanations go for a later date when more of us are back together.

For tonight let's just be old friends who have been separated, who have come together again—and who postpone explanations until calmer moments.

I do want to say, however, that I've missed our little visits each evening. And, the hundreds of telephone calls and letters and cards asking what happened to me would indicate that maybe you missed me, too. I haven't been able to take all the calls or even begin to answer your letters and cards—but I've been glad to have them. And, someday, I hope to get around to answering you.

In the meanwhile, pass the word to your friends and fellow listeners. Tell them I'm back on the air, at the same time, same station. If you don't do this, I don't know how I'll get the message to everybody.

Now, let's get to the news. The very latest item at 5:54 is a bulletin from the United Press stating that the President of the Russian Soviets, Nikolai Shvernik, has

proposed to President Truman that the Big Five powers sign an antiwar treaty to end the cold war. This will be huge headlines tomorrow, but—tonight and tomorrow—I suggest that it is about as important as the man who sent the message. His name is Shvernik, and he is the President of Russia, but I doubt many of you ever heard of him. But, I suppose the top news has to do with this business of the off-again-on-again truce talks in Korea. Right now they are off temporarily. It would be hard to prove, however, that this is the top news from the reactions of the average man in the street. As I see it, most of us are apathetically indifferent to what is going on at Kaesong—and it's my guess that this stems from a conviction that whatever happens we are going to lose. At least, we will lose face, lose prestige, and probably lose the little toe-hold we still have on our Pacific defense line.

When I was writing this script I first said at this point that we would lose all that we fought Japan to gain, but I had to stop and cross out that statement because we long ago lost the free China for which we fought Japan. And because this is the anniversary of the dropping of the first atomic bomb, it is appropriate that we think of the present in terms of the past.

TEN YEARS AGO AMERICAN PRESTIGE HIGH

So, let's look back 10 years to August 1941. Ten years ago today, Hitler's armies were sweeping across Russia faster than any enemy force ever moved across another country in all history. Roosevelt and Churchill had met and were about to issue a statement which came to be known as the Atlantic Charter. President Roosevelt had pledged all possible aid to Russia.

Nationalist Chinese forces were fighting Japanese invaders as they had been for 4 years. The Chinese Communists, in turn, were betraying their homeland by forcing Chiang Kai-shek to fight them instead of the Japanese, just as the French Communists had betrayed their nation to Hitler.

Rudolph Hess had flown to Britain in his quixotic attempt to convince the British that Hitler's aims were against Russia, not Europe.

The moderate Cabinet of Prince Konoye was in power in Japan, and was considered friendly to America. It was soon to be replaced by Tojo's Cabinet, however.

Throughout the world we were respected as a potentially powerful nation. We had great prestige in the Far East and China, particularly. American marines were stationed in China, and American gunboats sailed in China seas and on Chinese rivers. When Japanese guns fired on an American gunboat and American sailors were killed, the Japanese promptly apologized and paid millions of dollars indemnity.

That was August 1941.

SIX YEARS AGO AMERICAN POWER GREATEST IN HISTORY

Now, let's come to August 1945. That's only 6 years ago. Between August of 1941 and August of 1945 we had become the greatest military power the world had ever known. And, because we, and we alone, had the atomic bomb at that time—we were the most powerful single nation the world will ever know.

We had fought a great global war on two fronts and had won it almost single handed. For it was our industrial might which had enabled Russia to make a stand at Stalin-grad. It was our production which had given both Russia and Britain the food and planes and ships and guns and tanks that had enabled them to halt the Axis armies in Europe. And, it was our troops as well as our armed might which had finally diverted

those armies and forced Hitler's withdrawal from Russia.

In the Pacific and in Asia we, and we alone—under the inspiring leadership of MacArthur—had made our island hopping return to the Philippines and had brought Japan under direct attack. And the Nipponese were begging for permission to surrender.

This power, this prestige, of a great people (the American people) was ours, just six short years ago today.

This was not six centuries ago. Not six decades ago, but just 6 years ago. So short a time, in fact, that everybody old enough to clearly understand what I am saying, has this recollection as part of his memory. I repeat, that was 6 years ago today.

Six years ago today, literally, August 6, 1945, the men to whom leadership of this great and powerful Nation was entrusted were speeding back to America. They were on the American Cruiser *Augusta*, returning from Potsdam. Just before noon, the Chief of that leadership, Harry S. Truman, was handed the message that an atomic bomb had been dropped on Hiroshima. And, according to Admiral Leahy, Mr. Truman then said: "This is the greatest thing in history." Yes, conscious of the power this bomb gave to the great Nation he led; Truman said, "This is the greatest thing in history."

SAME LEADERS STILL IN CONTROL

Among the principal personalities who shared with Mr. Truman the control of our destinies 6 years ago were the most important of the men who share that control with him today. At Potsdam and presumably on the *Augusta* were Truman, Marshall, Eisenhower, Averell Harriman, and Omar Bradley and, holding down the fort at the State Department, as Under Secretary, was Dean Acheson.

These were the men to who were entrusted this great power that we had built with our natural resources, with our sweat, with the blood of our young men, with the tears of their families, and with the sacrifices of all of us.

WHAT HAPPENED TO AMERICAN PRESTIGE AND POWER?

And, these are the men, Mr. Truman and his assistants, who for the past 6 years have had control of that power. The power entrusted to them for use in protecting the men and women whose sacrifice created it.

So, today on the anniversary of Hiroshima it is proper to ask: What of their leadership? What of their stewardship?

And, the answer, as I see it, is to be found at Kaesong in Korea; at Kaesong behind the Communist lines, where our unarmed delegates are surrounded by armed Communist guards. There under the first white flag ever carried by a United States field commander, excepting only at tragic Corregidor, there at the direction of Truman and Marshall and Acheson and Harriman and Bradley, there in Communist-held Kaesong, there under a white flag lies the power, the dignity, and the sacred honor of the American people; and that means you and me.

Address of Donald R. Burgess

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the

RECORD, I wish to include the following address made by Mr. Donald R. Burgess, Director, Office of Publications, Department of Commerce, at a panel discussion at the annual convention of the American Society of Newspaper Editors at the Hotel Statler, Washington, D. C., on April 19, 1951:

I greatly appreciate the privilege of being on this panel and of meeting with you.

There are many things I should like to bring under discussion, but I have decided to concentrate on the one I consider to have the most far-reaching significance. This subject is the importance of creating an attitude toward Government information work which, while deploring actions not in the public interest, will encourage development of, and give support to, a career information service with solid traditions of objectivity and integrity.

The significance of this proposition is far-reaching because misdirected criticism of the Federal information services is tending to create exactly the conditions I hope they are intended to prevent.

I believe that few things besides the integrity and public responsibility of the press itself are more vital to the support of democratic government than is the presence of those qualities in the Government information service.

Obviously, scrutiny of those services must be close and continuous, but unless criticism is sound and constructive it will turn good men from the information field and open the way for the very type of person who should not be trusted with its responsibilities. It will also tend to drive the information services into a defensive anonymity that would make their ramifications unfortunately difficult to trace.

Twelve years ago in his excellent book on Government Publicity, James L. McCamy indicated that a start had been made on building a career group of specialists. I think information workers are tending more and more to professionalize themselves and their work and that codes of ethics, quality standards, and practices are becoming fairly well defined.

In the face of this development, and greatly tending to reverse it, there has been a series of attacks on what is referred to as "the administration's army of press agents" or the "Government's horde of propagandists." This sort of charge, usually linked with charges of huge waste in printing, lump up to 45,000 persons and leave the impression that the Government information services are filled with ward heelers grinding out tons of political propaganda.

I hope you will take it from one who never paid a nickel to any political party or any political candidate and who never obtained or held a Federal job through influence that such attacks do not help the morale of men who believe that the title of Information Specialist carries with it an obligation to ethical and professional standards as high as those attached to the title of Managing Editor.

Now I have no intention of whitewashing the Government or Government information. I do not want or advise forbearance when criticism is due. What I do want is to take you on a few minutes' tour on the information man's side of the fence and show you where I think much of the criticism has been misapplied:

First, propaganda. Let us stipulate that the word propaganda covers improper attempts to influence action or opinion. I think it is highly probable that most of the propaganda that has been criticized was carried out over the protest or without the knowledge of the information services. Certainly my office is expected to stop every bit

of propaganda on the part of well-intentioned operating people that it finds.

It is true that you and we might differ to some extent on the definition of legitimate areas of public education. However, I see little danger in public education on any of the so-called common-consent programs or even in certain more controversial areas provided it is carried on largely through the press, radio, and magazines, which are well able to sift the material.

So I suggest that observers might well consider first whether the thing they are examining is propaganda in the worst sense or whether, broadly speaking, it really is legitimate education concerning a program that is in the national interest. Then they should find out who is responsible for it rather than assume that it is an information office. Finally—if propaganda is found—their vigilance should extend to how far the Government is using techniques designed to carry the propaganda around and over the heads of the great public information media such as you represent. It must be recognized at this point, however, that expecting the Government to reach and serve the people largely through private media creates a special obligation to public service without political bias on the part of those media.

Next, staffing: Paul Leach, of the Detroit Free Press, apparently investigating reports that there are more than 45,000 propagandists on the Federal payroll, wrote that he could find only about 2,000 information workers in Washington and in the field—including stenographers. The last official count that I know of was made by the Civil Service Commission in 1947 and showed 2,357 persons on the Government payroll in what was known as the "1230" information and editorial classification. This covered all specialists in press, radio and magazine work and all editorial clerks in all grade classifications from CAF-5 through CAF-15. Because editorial clerks are low-salaried employees whose work is mostly statistical or clerical, they should be excluded from the figure we are considering. This makes Mr. Leach's estimate very close to today's actual employment if the information staffs of new defense agencies are not counted. I think his figure is about right. At the ratio of professional to clerical workers existing in my group, Mr. Leach's count of 2,000 would mean 1,200 professional workers to gather, report, edit, distribute, legitimately promote, and answer questions on the full report, service, and research output of the entire United States Government.

The larger figures, which show up in political debate, are arrived at by including the large foreign propaganda staffs and adding statistical specialists and technicians who don't know the difference between a deadline and a release date.

This brings us to publications. Almost all Government publications are the physical embodiment of operating programs approved in some detail by congressional Appropriations Committees. They are not written by information staffs. People who think their titles sound trivial should first read them and find out what the books are intended to do. Then, if they still don't think them proper, they should criticize the operating program of which they are a part. I have criticized a number of operating programs myself and my office, for example, last year suspended or prevented publication of material with a printing cost of \$176,500 and put limiting conditions on 30 other publication projects.

A Budget Bureau study in 1947 indicated that fewer than 10 percent of Government Printing Office orders that year were for public-use publications and that the cost of these was only \$4,000,000, or about 7 percent of total printing and binding obligations of the executive departments. To this must be added the cost of publications reproduced

by offset—a cost which is lumped with administrative printing and cannot easily be ascertained. In any case, the amount is not excessive when considered as the cost of converting the entire Government's operating programs into usable form.

Waste in distribution is becoming less and less of a factor in distribution as more publications are distributed through sale. The Superintendent of Documents last year took in \$3,809,000. Sales of Commerce Department publications have averaged more than \$1,000,000 a year for 3 years, or almost \$1,500,000 if sales of Coast and Geodetic Survey charts are included.

You may have gathered from what I have already said that information offices perform a multitude of functions. The charter of my own office says that it is to exercise functional supervision over all information activities of the Department's 15 bureaus and offices and provide service for those bureaus without information units, analyze the market for and usefulness of the Department's publications and services, provide a good distribution system, operate the departmental pressroom and clear all news releases, exercise general control over the preparation and issuance of all publications and establish for them standards of policy, style, content, format, and essentiality; maintain relations with the press and radio, conduct or approve all promotional campaigns, clear speeches, and supervise information work in the field.

Most information offices perform all or most of these functions. The degree to which they emphasize one or another of them and to which they influence top policy decisions varies with the administrator and with the director of information. It must always be recognized that the information office is never autonomous and is, as it should be, subject to the final decisions of the agency administrator.

I well realize that I have skimmed over topics which could occupy several panels. However, I want to speed us to the discussion period.

I have tried to show that the Government's information staffs are very, very small in relation to their duties, that they probably are not responsible for improper promotional actions and propaganda but in general act as a guard against them, and that in most cases legitimate criticism of publications should be diverted from the information staffs to the operating programs which produce the material.

I believe your Government information services do a conscientious job for you and the public. I repeat that they deserve your support and that with it there will be a continued professionalization of information work.

I thank you.

Karamu House in Cleveland . . . Where All Races and Creeds Contribute to a Program of Meaningful Life . . . Fulfilling the American Heritage

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mrs. BOLTON. Mr. Speaker, we li- cosmopolitan Cleveland take great pride in the many creative and constructive activities built because of the vision and

the courage of individuals and groups that make up our population.

One of those which has taken on both national and international stature is Karamu House, recently celebrating the thirty-fifth anniversary of the first meeting of its board of trustees.

What is Karamu House? Begun on less than a shoestring, it is today recognized as "one of the greatest democratizing forces in our America."

So, Mr. Speaker, I rise today to pay tribute to Karamu and to the two gentle, indomitably hope-filled people who conceived it, who lived it, who have guided it down the years until it is recognized throughout the world as a demonstration of the fact that all men and women are equally children of a loving Father who is indeed a universal and living God.

"Karamu," in the Swahili language of Africa, means "a place of recreation," and "the center of the community"—Karamu House in Cleveland has come to mean all of that and more. It is a center directed toward the creative growth and development of human beings, a center fostering successful human relationships, demonstrating democratic understanding between peoples and reaching out toward the far horizons of human relationships. Our Karamu is a living proof of the realization that members of all races and all creeds have a meaningful life in our country and can offer much to the American heritage. We are both proud and humble in its accomplishments.

Karamu House was conceived in the hearts and minds of Rowena and Russell Jelliffe. It was brought into being through their efforts. Bit by bit their inspiration found answering chords in the great heart of Cleveland. Little by little their devotion to an ideal bore fruit. A year ago a beautiful new theater, built of solid bricks and mortar, took the place of the ramshackle makeshifts of the past. The opening night was one of the most moving experiences Clevelanders have ever had. To me it was unforgettable. To the Jelliffes it was proof of the validity of their faith and a challenge to future achievement.

Thirty-five years and now a little more ago these two native Ohioans came quite alone to the most poverty-stricken area of the city to open a recreational and athletic center in an old funeral parlor. Their funds, given by the Second Presbyterian Church, were very modest. The people of the neighborhood received them coldly and with suspicion. But gradually the poor and repressed people came to the center, growing in numbers until the Jelliffes were forced to expand to a few dilapidated neighboring buildings.

Soon the founders noticed unmistakable signs of creative talent: shy efforts to help decorate the barren walls with a charcoal painting; a self-conscious attempt to compose music; the persistent rhythm of a dance; and an almost hidden sense of make-believe and fantasy. Inhibited attempts to brighten an otherwise dull and drab life, they were nonetheless real and vital in spirit. From these crude origins came the artistic genius that is Karamu today.

It was 30 years ago that the late Charles Gilpin came to Karamu to attend one of the first theatrical presentations. To the small number of eager Negro actors who crowded around him, he said:

Learn to see the drama in your own lives, and some day the world will come to see you.

And today the world has come to see them not only to esteem the renowned dramatic productions, but also to applaud the rhythmic, skilled, Karamu dancers, to listen to the Karaleers, the nationally famous men's quartet on CBS, and to appreciate the Karamu art shows.

But between the lines of favorable press notices and behind the glare of the amber-tinted footlights is the real heart of Karamu—the meaning it has for the thousands who come from all parts of the city to become members of the Karamu family. The intrinsic contribution of Karamu is encompassed within its many clubs, organized crafts, and group activities.

The Karamu Children's Theater and the Junior Theater give the youngsters of the neighborhood and beyond a unique opportunity for youthful expression. Choral groups and instrumentalists, while supplying the music for many of the theatrical productions, also form an interest group in themselves.

Small children are cared for in the Karamu nursery school, while their working mothers maintain their jobs away from home. The nursery school program also offers evening discussion groups and a series of topics and projects to broaden the understanding of the parents of their responsibilities.

The activities in the arts and crafts building include printing, ceramics, sculpture, and wood cutting. The first Negroes to have their paintings displayed in the International Print Show received their original inspiration as members of the Karamu art classes.

It is activities such as these, serving the needs of all from the preschool age through all the stages of life, that enable Karamu House to give hope to those who have lived in despair. It is also the spirit of such activities that inspired others to come to the Karamu staff as faithful teachers and directors.

While the Jelliffes have been the guiding light, loyal members of the board of trustees, civic-minded people, have also given their constant and willing service. The many names of illustrious national sponsors are further proof of Karamu's fame and meaning.

An integral part of the Cleveland community, Karamu works actively with the Cleveland Museum of Art, the Museum of Natural History, Western Reserve University, the fine arts division of the Cleveland Public Library, and the Cleveland Playhouse.

But Karamu no longer belongs to Cleveland alone. The Karamu idea is rapidly spreading to all of the leading industrial centers of the Nation. And even our State Department, recognizing and appreciating Karamu House as one of our greatest examples of a working democracy, has sent foreign students to Karamu from all parts of the world.

They will carry the Karamu message to all nations.

Thus our Cleveland Karamu House has become not only a thrilling art center in a great cosmopolitan industrial city, but also the symbol of what life in a free country has in store for all its people as bit by bit the barriers are dissolved by a better understanding of the meaning of beauty in the universe of God.

Address by Hon. Alexander Wiley, of Wisconsin, Before Convention of National Association of County Officials

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 23, 1951

Mr. WILEY. Mr. President, on Friday, July 6, it was my pleasure to address the National Association of County Officials who were gathered in convention in Milwaukee, Wis. The following day I left for Europe for a 2 weeks' trip as a member of the Foreign Relations Committee.

In the course of the speech in Milwaukee that night, I mentioned the Kaesong peace talks—the negotiations which have now apparently broken down because of the bad faith of the Communist aggressor.

At this time I ask unanimous consent that the text of my talk be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PHONY OR REAL ARMISTICE

The Nation and the world follow with bated breath the latest developments in the arranging for a cease-fire in Korea. The American people, like all the peace-loving peoples of the world, trust that there will come out of the negotiations a successful cease-fire order which will banish bloodshed once and for all from that ravaged peninsula. Even with such a cease-fire, however, there must be no slackening of the home-front production effort.

THERE MUST BE NO PHONY ARMISTICE

In our zeal to see the bloody fighting end and to see the lives of servicemen and civilians saved, we should not forget that a Korean cease-fire or armistice would be phony if certain conditions were not attained in the subsequent settlement. Remember that the cease-fire would be negotiated between

- (a) General Ridgway, the UN Commander,
- (b) The North Korean commander; and
- (c) The commander of the Chinese Red so-called volunteers.

On the other hand, the subsequent peace talks would have to be between the main parties at interest, namely, Russia (which is pulling the puppet's strings), Red China, and the UN. Such subsequent conditions would have to be—

1. A commitment as binding as could possibly be made, to the effect that at no time would there be a resumption on some flimsy pretense of the Chinese Red-North Korean invasion of South Korea.

Now, of course, the question arises as to whether any agreement signed by a Communist or Communist satellite state will ever be worth the paper that it is written upon. A binding contract in times past according to the Anglo-Saxon concept, meant just that. But in this day and age, a binding commitment is held as long as it pleases the Communists to do so.

ARE WORSE KOREANS IN THE MAKING?

2. An understanding as binding as could possibly be obtained in Korea, Moscow, and Lake Success, that Chinese Red forces would not use the opportunity "after a breather" to send their forces into French Indochina, into the Malayan Peninsula or other lands in southeast Asia.

I want to point out that this question of possible invasion of those lands is of course, independent in a certain sense from the more immediate question of peace in Korea as such. And yet it seems to me that we cannot simply close up the Korean chapter, ignore other parts of the chessboard and merely permit the Chinese Reds to start a new and bloodier Korea in the southeast portion of Asia.

SACRIFICES OF HEROES MUST NOT BE IN VAIN

The American people are, I believe, firmly determined that there shall be no appeasement of the Chinese Reds. The American people are determined that the Korean cease-fire shall not be a Munich. As much as they shudder at the thought of continued bloodshed, they rebel even more the thought that after 12 solid months and 150,000 battle and nonbattle casualties, the sacrifices of our heroes might be rendered in vain by an ignoble agreement.

WATER SHOULD BE SQUEEZED OUT OF FOREIGN AID

As I have indicated, we are all aware that the Korean settlement is but one element on the world chessboard. In the Foreign Relations Committee, there is now pending an \$8,500,000,000 foreign-aid bill, most of which is for military aid. We of the committee are going to go over that bill with a "fine tooth comb" in order to make sure that every dollar to be authorized is necessary and justified.

At the present time, I for one, say that no figure requested of us by the administration or anyone else is sacred and untouchable. If we can squeeze water out of that \$8,500,000,000 figure, then I say it is essential that we do so, just as we can squeeze water out of our domestic budget.

OPPRESSIVE TAXES CAN RUIN AMERICA

The American people cannot stand indefinitely mammoth governmental expenditures and governmental taxes at the rate they have experienced them for so many years. Sooner or later, there is a point beyond which "the goose that lays the golden egg", namely, the businessman, the laboring man, the white-collar worker, the farmer, whose taxes have been raised to the highest point in history—will cease to function in the free enterprise system because of the oppressive tax burden.

ATTITUDE OF SELFLESSNESS NEEDED AT HOME

And while I am on this subject may I say that hand in hand with our foreign program goes the question of anti-inflation action here at home. You all have read about the tremendous debate in the Senate and House of Representatives on the issue of extending price and wage controls. I, for one, voted for temporarily extending controls because it is obvious that Uncle Sam cannot continue to pump out \$60,000,000,000 of war orders without having severe consequences on our economy—on our life insurance, bank deposits, and so forth. I want to point out, however, that if stabilization action is to be successful, it will take the united cooperation of every group in American society. There must be less of an atti-

tude of "how much can our own group profit from the present situation," less of an attitude of "Let the other fellow take price cuts or wage cuts" and more of an attitude of "What can I do," "What sacrifices can I make to do my share?"

Naturally the sacrifices must be fair and equitable. It is completely understandable that any individual in our society would feel that it is wrong for him to suffer a compulsory cut in his standard of living while other individuals or other groups are profiteering. That is why I say it will take unified, selfless cooperation on the part of all of us.

FOREIGN RELATIONS COMMITTEE TRIP

Now, on the foreign-aid issue, which I had previously mentioned, tomorrow morning I am flying back to Washington in order to join with my colleagues on the Foreign Relations Committee on a brief official trip to Europe. We have been designated to make a first-hand study of military, economic, and political conditions of Western Europe so that in turn we might be able to report back to the Senate. This, I assure you, is no pleasure lark. We will be busily conferring with top officials every single available minute, working in the interest of the American people as much, if not more so, as when we are in Washington laboring in your behalf. Out of the official, on-the-spot surveys such as this, hundreds of millions of dollars have been saved for the American people. Why? Because it is next to impossible for a Congressman sitting in Washington, D. C., to know accurately how the ECA or State Department is spending our money, 3,000 or 6,000 miles away. A good business sends its field agents out to explore what is going on, and that is what your Congress is doing in sending this delegation to see how your money is being spent abroad.

TRIBUTE TO YOUR GROUP

Now, my friends, I should like to pass to other matters. I am sure that it would be difficult indeed to assemble a more representative collection of grass-roots leaders of our country than can be found in this splendid association. I am glad indeed that there is such an organization as yours because through it, you can accomplish collectively what would be very difficult to accomplish individually.

Within the last two decades America and the world have witnessed a major phenomenon, the gathering together into central governments of increasing power, authority, prestige, taxes, and appropriations.

SOURCES FROM WHICH UNCLE SAM TOOK AUTHORITY

In our country, such power was taken over from various other sources. It was taken over from the following:

(a) From the State governments, which found the Federal Government increasingly depriving the States of regular sources of State tax revenue. Then, because the States found themselves financially unable to handle various types of aid programs, they had to come hat in hand to Uncle Sam and beg him, so to speak, for the very aid which he alone could give, because he had gobbled up the State's tax sources.

(b) A second source from which powers were taken were the major municipalities of our country. With constantly increasing populations and ever higher costs for public services, more and more they found themselves sending their representatives to Washington in order to appeal for this or that appropriation, this or that power to be exercised by Uncle Sam in their jurisdiction.

(c) A third source from which the power was taken was from the counties of America which found themselves becoming increasingly the servants or at best, co-partners of

Federal officials in dispensation of funds and power.

(d) A fourth source of authority was the American people themselves. In other words, more and more, the Federal Government took over powers from the people—powers which had never been exercised by Government at all.

FACTORS WHICH LED TO CENTRALIZATION

Now, we might well ask ourselves: What are the principal factors which have contributed to this increase in Federal power? They are the following:

1. Of course, the greatest single factor was the Second World War, and in fact, the whole national emergency between the years 1939 and 1945. Everyone recognized that during that emergency, Uncle Sam had to exercise increased powers and spend vastly increased sums.

2. A second factor was the depression, which began with the stock-market crash in October 1929, and which continued right on into the national emergency of September 1939, when we still had some 10,000,000 unemployed.

3. A third factor was, of course, the crisis with the Soviet Union which existed from practically the end of the Second World War right on through the start of the Korean conflict and up to the present time—1945 through 1951.

Because of each of these factors, the Federal Government has taken increasing power and jurisdiction.

POWER HAS BEEN HISTORICALLY DIVIDED

Now this whole phenomenon must be understood in terms of the background of the American system of constitutional government. We all recognize that power in the American scheme of things is divided three ways among the legislative, executive, and judicial branches of the Federal level. But power is also divided among the Federal, State, and local levels, and just as important, the residuum of power was left by the wise founding fathers of our country in the American people themselves. Down through the years, the area of those residual powers has been increasingly narrowed, while the area of Federal power has more and more been increased.

WE SHOULD TRY TO CHECK CENTRALIZATION TREND

It would be unwise indeed if one were to assume that, merely by passing a resolution, we in the Congress or anyone else could easily reverse the historic trend, particularly amidst a grave national emergency. But while one cannot end this centralization trend, one can certainly slow the trend, keep it in check, and indeed attempt to balance it by securing a return of certain powers to the States, cities, and counties which they once had but which they now no longer possess.

WE SHOULD HAVE NATIONAL COMMISSION ON INTER-GOVERNMENT RELATIONS

In order to do so, one must basically return certain fiscal powers—tax-collecting powers—to the people at the grass roots. So long as Uncle Sam continues to take such a tremendous proportion of certain types of taxes, so long as he continues to “dry up” sources of local tax revenue, just so long will the financial position of the localities be dangerous indeed. That is why for many years I have sponsored legislation to establish a National Commission on Inter-Governmental Relations. This Commission (on which county leaders would serve with others) would be along the lines of the famed Hoover Commission on Governmental Reorganization. Its purpose would be not only to analyze the duplication of authority between the Federal Government, States, and localities but to recommend what pow-

ers could be returned to the States and communities. Moreover, it would analyze which level of the Government should collect which type of taxes. In other words, there are certain taxes which should be best handled practically exclusively at the local level.

On the other hand, other taxes are such that they can best be collected exclusively by Uncle Sam. No one has ever suggested, for example, that the Federal Government should get into local property taxes. It is obvious that the property tax is peculiarly suited to local revenue raising. However, such things as gasoline taxes and other levies were long held to be within the domain of the States and localities, but have now been increasingly preempted by Uncle Sam.

I am indeed hoping that this National Commission on Inter-Governmental Relations might be activated during the Eighty-second Congress, and that it might make a report to us sometime during the Eighty-third Congress. I think that it could become a major means by which the continued integrity of county government in the United States might be assured.

ATTITUDE OF “LET UNCLE SAM DO IT”

Although we have described various phenomena which have accounted for the centralization of authority in America, perhaps the greatest single factor has been a changed attitude on the part of the American people. I refer to the attitude which has developed during the last two decades by which the old phrase “Let George do it” has turned into a new phrase “Let Uncle Sam do it.”

Somehow, the American people have gotten the curious notion that Uncle Sam can do things better, more economically, more accurately, more carefully than can be done either by themselves or by other levels of the Government. Nothing could be further from the truth.

As a matter of fact, we have usually found out that when Uncle Sam does something, he does it with more extravagance, with more overhead, more recklessly, more dangerously, than if it were performed by the American people themselves or by other levels of government.

DANGER OF POTOMAC FEVER

This is not because Federal Government servants are by and large unworthy. On the contrary, the great mass of Federal workers are honest, hard-working, sensible and they try to do a faithful job in accordance with their responsibility. But there is a bureaucratic disease known as Potomac fever which serves to distort performances of Federal functions when they are directed exclusively from Washington, D. C.

I say that it is practically impossible for some seat warmer in Washington to know varying conditions in Door County, Wis., or in Alameda County, Calif., etc. I say that officials at the county level are in an infinitely better position to know the character of their own people, the background of their people, the local economic, political and social conditions, needs, etc.

UNCLE SAM MUST TAKE FROM PEOPLE TO GIVE TO PEOPLE

Of course, if you have unlimited billions of dollars to spend, as Uncle Sam is supposed to have, then this shower of Federal gold can accomplish a good deal. However, let not the American people kid themselves that Uncle Sam possesses a single cent except for the money which he takes from out of the pockets of the American people themselves, either in the present or future generations. Government itself can only spend what it collects, or what it mortgages from the future.

DECENTRALIZATION OF INDUSTRY NECESSARY

Now, my friends, I have spoken to you about one of the serious problems that is

confronting America, and that is the problem of centralization of power in the Federal Government. Of course for years, some of us have talked about the need of decentralization—decentralization, for example, of our industries, so that in this atomic age we might find ourselves adequate to meet whatever challenge arises. If our heavy industries are all centralized, as they are at present, we may find that we will not be able to meet the challenges of a possible world war III as we should, if, Heaven forbid, war comes.

But this subject that we have been reviewing today is the matter of the centralizing of power. History demonstrates that power in the hands of a few, corrupts them and injures the rights of the common man. As we all appreciate, the big challenge to the Federal Government in this period is that of defense, and so, the Federal Government should return, as I stated heretofore, to the States and the communities—those functions that the States and communities can more adequately look after than the Federal Government can.

TRAINING OUR YOUTH RIGHTLY

Let us look now at another of the challenges of our day. Recently, I heard President Plaza of Ecuador tell how before the second World War, Germany had at Quito built a propaganda school there, where the Ecuadorian children attended and were impacted by the doctrines of Nazism. President Plaza said to antidote that (and I might mention at this point that President Plaza was born in the United States and educated here), he built an American school so that the Ecuadorian leaders of tomorrow would understand the American way of life. This brought to my attention the need for all of us to see to it that our youth are well trained in the American concept and ideas, that they understand our governmental mechanism of checks and balances, our American economic system of free enterprise, and above all, that we recognize the need for high moral standards in the home, in the State, and in the Nation.

THE FOUR ABSOLUTES
